"That accounts for my impression of having seen him before. But it doesn't begin there, Philip. It began," said Felicia, laughing until the tears stood in her eyes, "with your shabby old dressing gown. I wrote the story with the faint hope of getting you a new one," passing her hand fondly over the warm folds of the "new one." "So now we have traced it really back to its source."

"Small beginnings make great endings," quoted Philip, smiling.

"And all things work together for good," added Felicia, softly.—New Orleans Times-Democrat.

Whale Hunt By Indians.

Neah Bay Indians returned Saturday from their most successful hunt in recent years. Thursday night fifty Indians in six canoes camped on Cape Flattery, starting Friday morning for whaling grounds fifteen miles off in the Pacific Ocean. They were rewarded by sighting immediately a school of between fifty and sixty big gray whales, traveling southward. The party divided into three crews of two canoes each. Each crew singled out a big whale, and the battle began in earnest. The whales' bellowing frightened the balance of the school, which kept some distance apart. All the canoes were overturned, part of them several times, by the whales coming under them and the struggling of the whales while towing the boats, which were fastened to harpoons and spears.

Neah Bay Indians are at home in water, and none was drowned. Two boats were towed over five miles by the largest whale, and it took six hours' hard work to finish him. The tug Holyoke, whose crew had watched the operations, was engaged to tow the whale and canoes to Neah Bay, arriving Saturday morning. The entire population of 400 Indians met the returning party. They first took off the thick black skin, and then, with hatchets, axes and saws, fell to work stripping off the blubber. By night only the whale's bones remained. The tribe has enough oil to last a year, and the government will be saved considerable expense for food.—Tacoma (Wash.) Correspondence St. Louis Globe-Democrat.

Marriage in the Italian Style.

An Italian gentleman arranges his marriage in a respectful and formal manner. Having found and met a girl simpatica, he charges some friend to find out whether his suit will be acceptable, and if he has not sufficient means of his own, to see whether her dot will make the marriage possible. Also many of them are particular about birth.

Victor Baillot, who was a sergeant at Waterloo, is still living in the village of Carisay, in France, at the age of one hundred and four.

TRAVELING SHEEP.

HOW FINE WOOLED FLOCKS ARE PASTURED IN TENNESSEE MOUNTAINS.

Spring Migration From the Valleys to the Cool Mountainous Regions—The Shepherds and Dogs—Plenty of Salt for the Sheep, But no Hail Water.

When the world exhibited its finest specimens of wool at the London Exposition of 1849–50, the prize medal was won by Col. Mark Cockrill of Tennessee. Wool grown in Tennessee is pronounced as near perfection as can be attained. It is a well-established law that the wool of a sheep in the torrid zone degenerates into a species of hair, and in very cold regions, though fine near the roots, becomes coarse towards the ends. Tennessee seems to occupy a happy mean.

The fine-wooled flocks—and they are merinos—of the Tennessee Mountains are called traveling sheep, in contradistinction to the stationary flock herded in the plateau lands. These travelling sheep migrate every spring from the warm plains and valleys to the cool mountainous regions. where they pass the summer, to return again in the autumn. The parts of the country where the sheep graze are divided into pastures, each capable of maintaining 2,000 sheep, watched by five under shepherds and five dogs. The chief shepherd is required to be the owner of 400 or 500 sheep, and capable of attending to every duty. He has absolute control over the under-shepherds, whom he chooses or discharges at will. While travelling, and when the ewes are giving birth to their young, two or more extra hands are allowed to each "tribe." In time of shearing, 125 shearers are required for a flock of 10,000 sheep. The pay of the chief shepherd is $600 a year; the under-shepherds receive $300 and board. They have comfortable little huts to sleep in when upon the mountains.

The dogs are generally black and white, of the size of a wolf, with a large head and thick neck, and are allied to the mastiff breed. They are allowed two pounds of bread each a day and as much milk and meat as can be spared. These dogs are so fierce and strong that no wolf can resist their attacks, and to render them doubly secure their necks are protected with heavy collars armed with spikes. There are still some bears in the Tennessee Mountains. The dogs rarely bark except when an enemy is at hand. They are also taught to guard the sheep, on the road, and to prevent the mingling of different flocks. Should a sick or wearied sheep lag behind on the way, unobserved by the shepherd, the dog always protects it until one of the under-shepherds brings relief.

The first thing a shepherd does when his flock reaches the mountain pastures is to give them as much salt as they will eat. Each "tribe" of a thousand sheep is allowed 2,500 pounds of salt, which they consume within five months. They eat none on their journeys nor are they allowed any in winter. The shepherd places fifty or sixty flat stones about five paces apart, strews salt upon each, leads the sheep slowly among them, and they eat of it at pleasure. When sheep feed upon limestone land they require no salt.

One of the shepherd's chief cares is not to suffer his sheep to imbibe in the morning, the frozen dew or melted frost, and never to approach a pond or stream after a shower of hail. For, if they should eat the dewy grass or drink the melted hail, it is believed the whole tribe would become depressed in spirits, lose their appetites, pine away and die, as has often happened. Hail water is looked on as so pernicious to man in that climate, that the people have learned not to drink from a stream until some time after a violent storm. Towards the close of September, the shepherd smears the sheep with a heavy, irony earth common in the mountains. It is first mixed with water and then daubed on their backs. This operation serves three purposes: mingling with the oil of the wool it becomes a varnish impenetrable to the cold and rain; its weight keeps the wool down and prevents it from growing long and coarse, and it acts as an absorbent, receiving part of the perspiration, which would otherwise foul the wool and render it rough.

At the end of September, the sheep begin their journeys toward the lower plains, their itineraries being as well regulated as a march of troops. Each tribe is led by a dozen wethers, which are obedient to the voices of the shepherds who give them small pieces of bread to encourage them. The sheep feed freely in all the wilds and commons through which they pass, and often travel fifteen or twenty miles a day, from one pasture to another. They walk slowly all the time, never stopping till they get to their journey's end. The chief shepherd is cautious to see that each tribe is carried to the same district in which it fed the winter before, for this is thought to prevent a variation in wool. As soon as they return home their winter pens or yards are prepared.

In March the shepherds perf[orm] four operations on the lambs. T[hey] first cut off part of their tails, br[and] them on the nose, and saw off a p[art] of their horns to prevent the [m] from hurting each other. The fo[urth] operation is to prepare certain of [the] lambs for bell-wethers to lead [the] flocks. As soon as April comes, wh[ich] is the period of departure to the mo[un]tains, the sheep manifest by very [un]easy motions a restlessness to be o[ff]. Often some of them break over [the] pens and start for the mountains the[m]selves, pursuing the road by wh[ich] they returned the autumn befo[re]. There are records of sheep walk[ing] eighty miles to the pastures wh[ere] they fed the preceding year.—N[ew] York Post.

MEDICINE PRACTISED BY ANIMAL[S]

How Beasts Cure Themselves of Sickn[ess] and Hurts.

The lower animals with few exce[p]tions, practise a very well-develop[ed] system of materia medica. Most [of] the beasts can diagnose and prescrib[e] for their ills more successfully th[an] many men holding physicians' d[e]grees. These animal doctors are, [of] course, self taught and practise en[]tirely without fees.

Dogs are the most remarkable do[c]tors among domestic animals. This [is] probably accounted for by the fa[ct] that of all animals the dog is most le[ft] to care for itself. A dog suffering from loss of appetite or a like ill wi[ll] refuse human remedies and run, or [if] necessary drag itself, for miles to find a particular herb that is a specific f[or] its complaint. Dogs may often b[e] seen in suburban fields chewing at [a] species of wiry grass, known as dog's grass, or chilndent. This, they know, will cleanse the system and restore appetite in a way that would bring envy to the heart of patent medicine men. Similarly when other ailments attack them their canine nature crave oily or fatty substances, and they will eat these greedily, turning from the most tempting morsels of any other sort.

The common ant, when one of its horns is torn off in a battle or otherwise, seeks out a companion, who bathes the wounded part with an ointment, also home made—which heals it. The mongoose is noted for its enmity to the deadly cobra snake. When the mongoose is bitten by a cobra it plunges into the nearest thicket or jungle, bites off and swallows an herb, known only to itself, and having thus taken an antidote, goes back to renew the combat.

The chimpanzee, following a like course when wounded, stanches the blood with its hand and quickly seeks a certain sort of grass and leaves. Mixing them, it makes a poultice, which is clapped over the wound, and, unless a vital spot is touched, soon effects a cure. Should the ape be too badly hurt to dress its own wound, its mate will do it, working as carefully and with probably as good effect as any human doctor. However long the invalid's convalescence, the mate prepares fresh plasters as often as necessary, and by instinct knows just when the poultice on the hurt should be replaced. It also serves its patient with proper cooling diet, suited to a convalescent's needs.

A far more clever feat of surgery is performed by the ordinary red squirrel. When the squirrel's paw is torn off in a trap or its leg broken by a gunshot, the suffering animal drags itself to the nearest safe place, and, after bracing itself on some broad branch, or in its own nest, begins the work of amputation. The broken or torn paw is neatly bitten off. The sufferer seems to think that for the time the work is ended, and that the skin will cover the end of the broken stump. But instead the flesh shrinks back, leaving the sensitive, jagged bone protruding. Back goes the three-legged squirrel to his dissecting room. The bone is carefully gnawed, not only until it is even with the flesh, but much farther down. The bits of flesh and skin thus hang far beyond the bone, and in time heals over, covering it completely. It took the human race some centuries to learn that simple trick in surgery which the very stupidest squirrel understands from the time he is born.

Largest Auto-Mobile Carriage.

Australia claims the largest automobile carriage ever constructed for actual service. This car utilizes seventy-five horse-power, on unheard-of amount for any such vehicle. The car travels from Coolgardie to the coast for the transportation of merchandise to the mines. Besides the load on the car itself, it drags two "trailers" over a distance of 400 miles. A railroad was too expensive a luxury to indulge in that country, and so the idea of the big motor was conceived. So scarce is water along the route traveled that the steam is not exhausted into air, but saved, reconverted into water, and thus used over and over again.

The biggest poultry ranch in the world is to be located near San Francisco. It is expected to yield 90,000 broilers and 2,000,000 eggs a year.

Reading, Penn., has a baby eleven inches long that weighs a pound and a half.

Waycross, Ga.
"Having obtained a box of Tetterine of ... Wright, of Louisville, Ga., which I used on a case of itching piles of five years' standing. I spent $25 for different kinds of remedies and the skill of doctors, all for no good, until I got the Tetterine. I am now well. Accept thanks." Yours, W. R. King.
By mail for 50c. in stamps by J. T. Shuptrine, Savannah, Ga.

In several of the farming districts of Nebraska corn is used as fuel.

LYON & CO. TOBACCO WORKS, DURHAM, N. C.

Am. N. U. No. 28. 1897.

Anaxagoras, the philosopher, who maintained himself by keeping a school, being asked if he wished for anything, replied: "Give the boys a holiday," and died. St. Lawrence the Martyr, who was broiled alive on a gridiron, A. D. 258, may be said to have spoken the most strangely recorded dying words. Having laid for some time upon the gridiron, the martyr addressed the Emperor, who was present, in a kind of jocose Latin couplet, which may be thus translated:

"This side is broiled sufficient to be food
For all who wish it to be done and good."

On this the executioner turned him, and yet he triumphed over the tyrant by telling him, with great serenity, that he was roasted enough, and only wanted serving up. The next moment he died.

A Courteous Retort.

One may be excused for feeling a little joy when the man who goes out of his way to make a rude remark in order to show his wit receives a rebuke that is as courteous as it is effective.

The retort given by a certain learned scientist must have been more amusing to the onlookers than to the learned gentleman's antagonist.

It happened at dinner that one of the guests began to deride philosophy, and went on rudely to express the opinion that philosopher was but another way of spelling fool.

"What is your opinion, Professor?" he asked. "Is there much distance between them?"

The Professor, with a polite bow to his boorish vis-a-vis, responded gravely: "Sometimes only the width of a table."

THE AMERICAN HORSE.

He Finds Favor in Several Foreign Countries.

There has been a remarkable increase in the export of horses from the United States during the last few years, writes W. E. Curtis to the Chicago Record. In 1893 the total number shipped to foreign countries was only 2,967. In 1894 it increased to 5,246, in 1895 to 13,948, in 1896 to 25,126, and during the first six months of the present fiscal year, ending Dec. 31, the total was 14,232; so that if the same proportion is continued during the remaining six months the total for the year will be 28,464. Nearly half the entire exports in 1896 went to Great Britain, the exact number being 12,022; but it is believed that 1,000 or more additional were sent through Canada, the exports to the dominion being 5,305 horses. The trade with Great Britain in horses has shown a remarkable increase, for in 1893 the total exports were only 564 head. The increase in exports to Germany was even greater, notwithstanding the laws of that country, which are very annoying to importers of live stock and quite expensive. In 1893 we shipped only thirty-three horses to the German empire. In 1896 we shipped 3,686.

Among other countries now receiving American horses is Belgium, which imported none in 1893, and 1,134 in 1896. France took very few, only 397. Italy bought one of our horses in 1893, two in 1894, three in 1895 and four in 1896. We sent 987 to Mexico last year, and a good many to the West India Islands, with the exception of Cuba, where, strange to say, we sold none at all. Two American horses went to Japan, four to China, one to Samoa and one to Africa.

New York is the largest horse market both for the export and the domestic trade, but a good many are shipped from Baltimore. Exports of mules have increased in a corresponding ratio, the number for the last few years being as follows: 1893, 1,634; 1894, 2,063; 1895, 2,515; 1896, 5,918, and for the first six months of the present fiscal year, 3,854.

So far as the Department of Agriculture is aware there has been no special effort on the part of American horse breeders to extend their foreign trade. The growth has been natural and the result of low prices in this country.

How Old are You?

You need not answer the question, madam, for in your case age is not counted by years. It will always be true that "a woman is as old as she looks." Nothing sets the seal of age so deeply upon woman's beauty as gray hair. It is natural, therefore, that every woman is anxious to preserve her hair in all its original abundance and beauty; or, that being denied the crowning gift of beautiful hair, she longs to possess it. Nothing is easier than to attain to this gift or to preserve it, if already possessed. Ayer's Hair Vigor restores gray or faded hair to its original color. It does this by simply aiding nature, by supplying the nutrition necessary to health and growth. There is no better preparation for the hair than

AYER'S HAIR VIGOR.

The University of Alabama.

The new President, Dr. Jas. K. Powers, reached Tuskaloosa at noon on the 1st day of July and went immediately to work. He called the faculty together, and appointed a committee to revise the courses of study, for presentation to the board of trustees for approval on the 8th. These courses as arranged and approved are up to date in every particular. While certain things are required for any degree, considerable latitude is allowed in the matter of election. This latitude increases as students advance in the courses.

EXPENSES REDUCED.

The fees were materially reduced. A year's expenses were cut from $172.50 to $130, exclusive of uniform.

YOUNG LADIES

may now enter the freshman class. Such board in private families and pay no college fees except in the several laboratories. The University is now open to women, but they must be 18 years old. It is hoped they will take advantage of the fact.

JUDGE W. S. THORINGTON.

has been chosen as Dean of the Law School, and he will devote his entire time to the duties of his position. Prof. Ormond Somerville is his assistant. These gentlemen are now preparing a course of study.

In a few days a supplement to the catalogue will be issued, setting forth these facts, as well as other necessary information. This, together with the catalogue, can be had on application to the President, whose address is University, Ala.

Turned to Stone.

The Superstitious Mountains loom up from the arid desert to the east of the Salt River Valley. On the crest of this unique range, and in full view of the rarefied atmosphere for an immense distance from the plain, are hundreds of queer figures, representing men in all attitudes. When you look first you are sure they are men, and a second glance confirms the impression. They represent ball throwers, outlooks, mere viewers of the country roundabout, men recumbent and contemplate, others starting on a foot race, and in every conceivable posture and position. They are not real flesh and blood, however—nothing but stone sienite—yet it is impossible to convince the Indians, and some white men, that they are not genuine. They say they are real mortals turned to stone, petrified by the peculiar condition of the air on the mountains. The Indians will have nothing to do with the mountains. Their belief has grown out of an Apache legend handed down for hundreds of years. They have it that an ancient chief, who had learned of the curious character of the Superstitious Mountains, forbade any of his people to go there. A large band, however, one day discovered a way to get in by a precipitous route, and finally reached the top. It resulted as the chief had said—they never got down alive.

"Three Cheers and a Tiger."

As to the origin of the use of the word "tiger" in the phrase "Three cheers and a tiger!" the following story is old: In 1822 the Boston Light Infantry visited Salem, Mass., and encamped in Washington Square. They indulged in a good many rough-and-tumble sports, and one day a visitor exclaimed to one of them, "Oh, you tiger!" The phrase became a sort of playful reproach, and on the way to Boston some musical member of the company sang a line, "Oh, you tigers, don't you know?" Thus they acquired the name, and they soon began to imitate the growl of that beast. Then at the end of three cheers a "tiger" was always called for. This company visited New York in 1826, and at a public festival they astonished the New Yorkers by giving the growl, which tickled the fancy of the hosts so much that the custom became fixed.—San Francisco Chronicle.

London Policemen.

The London policeman goes on the force at a salary of $6 per week, with the assurance of a raise to $8 at the end of eight years' service. He has, in addition, his uniform, boots, coal money and some other extras, as well as the promise of superannuation pay at the end of twenty-six years' service.

Obsolete English War Ships.

England offers for sale as old and obsolete the following war ships: The four-decked wooden battle-ship Conquistador, the wooden battle-ship Vengeance, the iron battle-ships Grampus and Trincomalee, the cruisers Bacchante and Canada and three eighteen-year-old torpedo boats.

Probable Fortune for President's Brother.

Abner McKinley, the President's brother, has just secured control of an invention which he believes is worth millions of dollars, and his friends trust that his hopes may not be ill-founded. It is a process for adulterating silk with a fiber made from wood pulp. A fabric half-silk and half-fiber is difficult to distinguish from the genuine article, and is said to be even more durable for dress goods and linings than pure silk.—New York letter to the Chicago Record.

GROVES

TASTELESS CHILL TONIC

IS JUST AS GOOD FOR ADULTS.
WARRANTED. PRICE 50 cts.

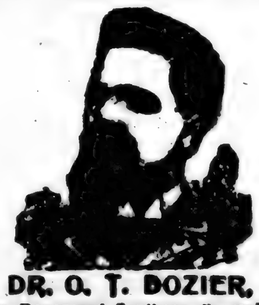
HOUSE BUILDING

Is the order of the day in Thorsby. We are now prepared to keep up with the procession. Our new planing mill, which has recently been put in, and is now run in connection with our saw mill, enables us to furnish all kinds of lumber for building purposes. Our prices are more reasonable than those of others, and, being prepared to turn out an order on short notice, we can save the builder a large amount of inconvenience and expenses. By buying at home you have no freight to pay and you are helping ageing home industries. We also are prepared to ship lumber by the car load or in small quantities.

THORSBY LUMBER CO.

THORSBY, ALA.



DR. O. T. DOZIER,

(The Renowned Southern Specialist)

Birmingham, Ala.

Successfully treats, at office or BY MAIL AT YOUR OWN HOME, all forms of Chronic, Nervous, Blood, Skin and Private Diseases of Men and Women.

CURES GUARANTEED.

All Chronic Diseases of Lungs, Liver, Blood, Kidneys, Bladder, and all diseases of the Genito-Urinary organs are in my line of practice. Diseases peculiar to women, and all venereal diseases of either sex positively cured by mild and safe remedies. Impediments to marriage, as Stricture, Varicocele, Impotency, Emissions and all evil results of self-abuse or excessive indulgence quickly and permanently cured. I guarantee satisfaction in every case I treat. My valuable "Book for Men Only," and Symptom Blanks for men or women will be sent free in plain, sealed envelope to all who apply. Consultation free, whether in person or by letter.

A FEW EXTRACTS FROM PRESS ENDORSEMENTS

Hundreds more of like character, and thousands of high testimonials from patients can be furnished if necessary.

(Atlanta Constitution.)

Dr. O. T. Dozier, the head of the Southern Medical Dispensary of Birmingham, Ala., is a specialist of nearly twenty years' experience in the treatment of female, nervous and private diseases and his unique process has given him a leading position in the medical profession.

(Masonic Guide.)

Dr. Dozier can be relied upon to treat diseases in the most successful manner, and he is known all over the south.

(The Southern Odd Fellow.)

We cannot add anything to the reputation Dr. O. T. Dozier has already acquired in the line of his profession, but we know him to be a brother Odd Fellow that can be relied on to carry out every promise he makes to those needing his services.

(Age Herald.)

• • • Dr. Dozier has resided for many years in Birmingham, and each successive year has added to his reputation, to his usefulness and to the esteem in which he is held by our best citizens. His long record and approved abilities entitle him to the proud distinction of standing at "the head of his profession."

(People's Weekly Tribune.)

As a specialist Dr. Dozier is unexcelled by any living physician. • • • He is a Georgian by birth, a high bred, cultured, Christian gentleman, strictly honest in all his dealings and financially responsible for all his contracts.

(Daily News, Birmingham.)

Dr. Dozier is a physician and surgeon of education, skill and experience, a man of culture and high literary attainments and a gentleman respected by all who know him. He can be relied on in all matters pertaining to his profession.

(Alabama Christian Advocate.)

His (Dr Dozier's) professional standing is unimpeachable and his character as a gentleman and citizen is above reproach.

Address

DR. O. T. DOZIER,

Lock Box 113. BIRMINGHAM, ALA.

The State of Alabama, Chilton County.—In Chancery at Clanton, Alabama, Seventh District Northeast Chancery Division—June 21, 1897.

Amanda Martin, pro ami, Complainant, vs. Jack Martin, Defendant.

In this cause it is made to appear to the Register by the affidavit of A. C. Smith, solicitor for complainant, that the Defendant, Jack Martin is a non-resident of the State of Alabama, and that his postoffice and residence are unknown to affiant, and further, that, in the belief of said affiant, the defendant is over the age of twenty-one years.

It is therefore ordered by the Register, that publication be made in the Chilton County Call, a newspaper published in Chilton county, once a week for four consecutive weeks, requiring him, the said Jack Martin, to answer or demur to the same within thirty days after the 26th day of July, 1897, and failing so to do a decree pro confesso will be taken against him in said cause.

Done at office in Clanton, Alabama, this, 21st day of June, 1897.

W. E. STEWART.
Register in Chancery.

PROF. M. C. WILSON

Elected President of the State Normal College.

A meeting of the trustees of the State Normal College was held here Wednesday afternoon, the chief business being the election of a president of the college to succeed Prof. J. K. Powers. Those present were: Hon. Geo. P. Jones, of Florence, Chairman; Hon. W. I. Bullock, of Russellville, Secretary; Gen. John D. Rather, of Tuscumbia; Hon. Chappel Cory, of Montgomery, Hon. J. Kirk Jackson, of Montgomery, Hon. John. F. Proctor, of Scottsboro.

There were a number of applicants for the presidency, including prominent educators outside of the state. After mature deliberation, the board selected Prof. M. C. Wilson, of Florence, to fill the vacancy.

Mr. Wilson is a graduate of the University of Virginia, and has filled a chair in the faculty of the college since 1881. He is an accomplished scholar, a polished gentleman and possesses the necessary qualifications to maintain the high standard of the school and further advance its usefulness. The fact that he was chosen out of the number of prominent educators whose names were before the board is, of itself, ample evidence of his eminent fitness. The Standard-Journal, from the first, urged his election, and we are confident that under his wise, prudent, progressive management, the institution will extend its influence and usefulness, and continue to grow in popularity.

The chair of mathematics will be filled later on.—Florence Standard-Journal.

Judge Thorington.

Judge Thorington's selection as dean of the University of Alabama will no doubt give general satisfaction.

William S. Thorington was born in Montgomery July 30, 1847. His father was Col. Jack Thorington, a distinguished citizen of Montgomery, William Sowell Thorington was educated at the private school of William F. Slaton at Oak Bowery, at Auburn, and at the State University. While he was still at the University the corps of cadets of which he was adjutant, took the field for active service. Colonel Thorington served about a year, being stationed principally at Mobile, at Blakely, and at points in north Alabama. He was engaged in forming a company of cadets to join the army of Gen. Joseph E. Johnston, when the war came to a close. Immediately after the war he began the study of law under the late Chief Justice Chilton, and in January, 1867, was admitted to the bar of the supreme court after passing an examination whose excellence is still a tradition of the court. He was associated at various times in practice with Judge W. P. Chilton, with Senator John T. Morgan, Hon. W. L. Bragg, and Hon. Lester C. Smith. Col. Thorington has held various offices of dignity and profit. He was for many years a trustee of the University of Alabama. He was judge advocate general on the staff of Gov. O'Neal during that governor's administration, 1882-86. In 1886 he was elected city attorney of Montgomery, and by continuous re-elections held the place until 1892, when he resigned to accept a much higher post. When Justice David Clopton, of the supreme bench, died in the early part of 1892, and Gov. Jones saw fit to appoint Col. Thorington to fill out his unexpired term, the appointment was received everywhere througout the entire state as an eminently proper one to have been made. Judge Thorington's discharge of the duties of this high office was marked by his customary devotion to a high ideal of duty, and his work marked him out as one who is more than likely to be called upon to assume judicial honors in the future. He was not a candidate to succeed himself, and after the expiration in November, 1892, of the term he was fulfilling, he returned to the practice of the law in Montgomery. His services on the supreme bench merely followed repeated designations of him by various governors to act as special judge of the court where one of the judges was disqualified to hear the particular cause. Judge Thorington was married on October 24, 1867, to Miss Chilton, daughter of the late Chief Justice Chilton. He has a large family of children.

This brief sketch ought not to be brought to a close without a tribute to Judge Thorington's exceptionally high character. He is a man of scrupulously sensitive integrity, and is universally esteemed for the entire probity of his nature. He has throughout life acted on the knightly principle that, when his honor was concerned, a stain was a wound. No man in Alabama is better entitled to the designation of being the state's Chevalier Bayard, sans peur et sans reproche.

WANTED.—Persons to accept, gratis, in view of future orders; rubber stamp of their own name for making clothing, books, etc. Write plainly and enclose four postage stamps to defray mailing, packing, etc. H. The hotel and a private residence at Thorsby.

A NEW AND NOTABLE COLONY.

THORSBY AS SEEN THROUGH THE SPECTACLES OF OUTSIDERS.

WHAT A LEADING MAGAZINE OF SOUTHERN PROGRESS SAYS CONCERNING OUR COLONY

In Speaking of the more prominent and progressive points in this section. The Illustrated South, of Birmingham, Ala., has the following to say of Thorsby:

A number of Northern colonies have been founded in the South within the last double decade, and we know of none that has failed to realize the brightest dreams of its promoters.

Thorsby is one of the newest and most notable of these colonies, and merits special mention because it is more advanced for its age than any of its competitors. In fact, it is a fin de siecle revelation in the matter of community building, and we know of no place in the wide and wonderful sweep of our Southland that possesses a more promising future.

It is situated in the highlands of central Alabama, on the picturesque and prolific Chilton plateau, and has direct communication with the seaports of the South and the markets of the North through the medium of the Louisville & Nashville Railway, one of the great grand trunk lines of our continent.

Speaking of Thorsby a recent writer remarks: "In June, 1895, Messrs. Thorson and Peterson came to this country on a prospecting expedition, and finally decided to settle their colony on the present site (in Chilton County, Ala). It was several months before any work was begun, but within the last eighteen months a beautiful village and settlement has sprung up like magic. The Concordia Land and Improvemnt Association was organized, with Mr. Thorson as President, and Mr. Peterson as Secretary. They bought up about 2,500 or 3,000 acres of this land, laid off a town into lots and the surrounding country into ten acre blocks and at once began improvements, naming the new settlement Thorsby. Every obstacle vanished before the hand of energy, pluck and industry, and now there are at Thorsby a fine hotel, three stores, a postoffice, a newspaper, a saw-mill, a shingle and lath mill, blacksmith-shop, two churches and a two-story school-house, about thirty-four dwellings and as many families, and more coming all the time. A green-house and experimental garden is a new feature for this year, at which I saw tomato-plants a foot high. This colony seems to be making grape culture a specialty, and now have about 30 acres in grapes, and I understand, are putting out this Spring 18,000 cuttings. Young orchards are being set with all kinds of fruit, the houses are substantial and well-built, mostly two story. The urgent need now is a canning-factory, and negotiations are pending looking toward the establishment of one in the near future."

The Concordia Land and Improvement Association, spoken of in the foregoing excerpt is incorporated under the laws of Alabama, possesses a capital of $150,000, and has land for sale in all directions from Thorsby—some of it adjoining the town limits and some of it further out to a distance of nine miles.

From a booklet lately published by the Association we learn that "this land is of different varieties, but it is all very productive. Some parts are level, while other parts are more rolling. That which is not under cultivation is covered with timber of many different varieties, such as the long leaf yellow pine, all kinds of oak, hickory, chestnut, persimmon, poplar, beach, all kinds of gum trees and black walnut.

"Therefore fuel costs nothing but the labor of cutting it, and lumber is very cheap. Good, fine, hard pine lumber is bought here for only $5 to $7 per 1000 feet. This growth of timber sufficiently shows the good quality and strength of the soil. The Association has some improved farms for sale at very reasonable prices. It has the land surveyed in tracts of from ten to eighty acres each, so that the purchaser may have his choice also in this respect, but it is to be remembered that twenty acres of this fertile farm and fruit land is a good-sized farm, because the crops are so abundant. Each tract of land has a road laid out at least on one side."

The proximity of Thorsby to the Gulf, and the fact that it is 790 feet above tide-water, combine to make its climate ideally equable. It is never too hot, never too cold, and one season melts into another with none of the abruptness that is so unpleasantly common in the higher latitudes. This fact, together with the absolute absence of malaria, and the purity of the freestone water, combine to make this locality one of the healthiest that can anywhere be fond.

The soil of Thorsby and Chilton county cannot be surpassed for fertility. They are of the rich, dark, grayish, red and brown loam lands, with a proper mixture of sand on a clay subsoil, and are adapted for general farming, stock-raising and fruit-growing.

Where the North can only raise one crop of corn, potatoes and other hardy products in a year, this part of the South can raise two, and can raise, at the same time, cotton, sugar-cane and all the other semi-tropic staples, to [illegible] nothing of fruit!

Let the new-comer select a spot like Thorsby for his home, let him set to work with a stout heart and a steady hand, and he will find that Fortune will change her frowns to smiles and reward him according to his deserts, no matter what they may hap to be.

NEWS OF THE WORLD.

AN EX-ALABAMA JUDGE SENTENCED TO DEATH IN COLOMBIA.

Miss Winnie Davis Invited to Chicago—Georgia Editors at the Exposition—A Jealous Woman's Crime—Three Boys Killed at Austin, Texas.

Still Shipping Silver.

The steamship Campania sailed from New York Saturday for Europe with 522,000 ounces of silver.

Pana Miners Stand Firm.

The 2,800 miners in the Pana district, Illinois, were offered increased wages by the operators, but declined to return to work.

Spanish Anarchists at Work.

Two dynamite bombs were exploded Thursday at Guadalajara, capital of the province of that name in New Castile. Several persons were killed and others seriously wounded.

Will Wheel Around the World.

Ernest R. Taylor and Will H. Tolbert, of Los Angeles, Cal., have started on a cycling trip around the world from that city. They will be without funds and undertake to return in eighteen months.

Three Boys Killed.

Friday morning at two o'clock a freight train on the International and Great Northern yard at Austin, Texas, ran over four white boys who were sitting on the track asleep, killing three of them instantly and badly wounding the fourth.

Tore Down the Stars and Stripes.

An American flag flying on the city hall in honor of the visiting delegates to the Epworth League convention, in Toronto, Ont., was torn down by an ultra-British artisan Friday. The man was at once arrested and locked up.

Wants Hawaii.

The Trans-Mississippi congress has adopted resolutions as follows: Favoring the annexation of Hawaii; favoring the construction of the Nicaraguan canal; recommending recognition of Cuba as a nation; providing for a national board of arbitration and for fostering the best sugar industry.

Wells-Fargo Robbed.

J. T. Burgoies, agent of the Wells-Fargo Express Company at Tampico, Mex., has been arrested on the charge of robbing the company of $6,000 in currency. Two other employes of the office have also been arrested for alleged complicity in the robbery.

A Speedy Cutter.

Under the most favorable weather conditions at Boston, Mass., on Thursday, the new revenue cutter, Daniel Manning, proved herself to be a valuable addition to the revenue marine, by making an average of nearly 17 knots an hour in a four-hour speed test.

Terms of the Greeco-Turkish Treaty.

It was stated in Athens, Friday, on reliable authority, that the powers have fixed the indemnity to be paid to Turkey by Greece at $4,000,000 and have accepted a compromise giving Turkey a more liberal line of frontier. Turkey and Greece have been left to settle the question of the capitulations between themselves.

Better Times Predicted.

At the meeting of the London Joint Stock Bank at London Thursday, the chairman said there were evidences of a gradual improvement of trade in the United States, and if the currency question could be settled, and the stationary engineers' dispute arranged in England, both countries, the United States and England, might speedily enjoy better times.

Many People Homeless.

Floods caused by the heavy rain of the past few days have done great damage in the southern part of Quebec. Many people are homeless, and much damage has been done to early crops. The town of St. Hyacinthe has been flooded, and business there is almost at a standstill. At Wickham the business portion of the town is flooded. Communication with Richmond, Quebec, on the main line of the Grand Trunk system to Quebec, is cut off.

A Jealous Woman's Crime.

Assignment at Sheffield.

The Colbert Iron Company, operating a furnace at Sheffield, Ala., made an assignment Friday, R. J. Thurmond being named as assignee. Liabilities are given as $70,000 and assets consist of pig iron and unfilled orders sufficient to meet liabilities. The furnace will not shut down. Inability to realize on pig iron and slow collections caused the assignment.

Georgia Editors at the Exposition.

Over 100 members of the Georgia Weekly Press Association, arrived at Nashville, Tenn., Thursday, and will remain there for several days visiting the exposition and other places of interest adjacent to the city. Many ladies are in the party. Friday afternoon the Georgia visitors were entertained at lunch at the exposition, J. J. McCann being toastmaster and host.

May Lose Heavily.

The importers in New York city are confronted by the prospect of a heavy loss on their importation of fifteen to twenty million pounds of tea, which began arriving in New York city about the 1st of July. It was ordered when the general impression was that congress would put a duty on tea. It is of the first crop, the finest tea of the year, and to forestall the tariff the importers took all they could get. When the tariff was abandoned it left the second crop and every other inferior grade of tea free to come in, and consequently there is a large stock of high grade tea to be sold at a sacrifice.

An Embezzler's End.

Two years ago Probate Judge Frank Randolph, of Montgomery, Ala., became a defaulter and absconded. He made his way to the United States of Colombia, where he assumed the name of Charles Radford. The next heard from him was that he had been arrested and put in prison on the charge of killing a German merchant in that country. A letter was received in Montgomery, Thursday, from the Department of State at Washington, giving the information that a dispatch had been received from the legation at Bogota saying: "Radford sentenced to death." Randolph was a prominent politician in Alabama.

A Colorado Flyer.

The announcement is made authoritatively that William D. Felts will make an aerial excursion from the summit of Pike's Peak to Colorado Springs, a distance of ten miles in an air line and a drop of 8,000 feet. In making the flight Mr. Felts will use a series of rigid aeroplanes, modelled after the wings of a condor, the great South American bird. The body of the voyager will hang suspended from an easy harness. In order to steer the apparatus, Felts has provided a moveable vane, which will be operated at the will of the navigator. Mr. Felts announced that he would first alight on Cameron's Cone, a distance of five miles and a drop of 4,000 feet more to Colorado Springs, where he would alight.

Winnie Davis Invited to Chicago.

Efforts are being made by the committee in charge of the Logan day ceremonies and the Ex-Confederate Association, of Chicago, to secure the presence of Miss Winnie Davis, the "Daughter of the Confederacy," at the dedication exercises which take place on the 22nd. An invitation has been sent Miss Davis through Miss Lucy Lee Hill, a personal friend, and ex-World's Fair commissioner from Kentucky. The formal invitation was followed by a telegram from Miss Hill and others from the Ex-Confederate Association, urging Miss Davis to come, if it was possible to do so. It is believed that at least 500 men who fought under the stars and bars of the Confederacy will take part.

Levee Commissioners Order a Tax.

The following tax order was made by the Mississippi Levee commissioners, in session at Greenville last week: "Ordered by the Board of Mississippi Levee Commissioners, that there is hereby levied and assessed a uniform tax of five cents an acre on each and every acre of land in the counties of Bolivar, Washington, Issaquena, Sharkey, and Warren, included in the Mississippi levee district, and not in any incorporated city, town or village in said district, and divided into lots of less than one acre. And a tax of five cents is hereby levied and assessed on each lot of less than one acre in each city, town or village in said district. And there is hereby levied and assessed a uniform ad valorem tax of five mills on the assessed value of all property, real and personal, lying and situated in the counties of Bolivar, Washington, Issaquena, Sharkey and Warren, included in the Mississippi levee district, as the same may appear upon the assessment rolls of said counties respectively. And a tax of one-fifth of one cent is hereby levied on all lint cotton grown in said district during the year 1897; and a tax of one-fifteenth of one cent per pound be and is hereby levied on all seed cotton grown in said district during the year 1897, and not ginned therein. And a tax upon railroads in said district is levied and assessed as provided by the act of the legislature, entitled "An act for the payment of levee taxes by railroads in the Mississippi levee district of this State," approved March 12, 1896, said levee taxes for the fiscal year from September 1, 1897, to September 1, 1898, being hereby now levied and assessed for said fiscal year by said board of Mississippi Levee Commissioners. Ordered this, the 14th day of July, 1897."

TO REIGN UNTIL DEATH.

QUEEN VICTORIA PRACTICALLY SAYS SHE WILL NEVER ABDICATE.

Letter to Home Secretary — England's Ruler Expresses Her Deep Love for Her Subjects and Refers to Their Loyalty—"I Shall Ever Pray God to Bless Them."

A special supplement to the London Gazette publishes the following letter from the queen to Sir Matthews White Ridley, the home secretary, dated Windsor, July 15th:

"I have frequently expressed my personal feelings to my people, and though on this memorable occasion there have been many of the expressions of my deep sense of the unbounded loyalty evinced, I cannot rest satisfied without personally giving utterance to say to these sentiments. It is difficult for me on this occasion to say how truly touched and grateful I am for the spontaneous and universal outburst of loyal attachment and real affection experienced on the completion of the sixtieth year of my reign.

"During my progress through London on June 22d, this great enthusiasm was shown in the most striking manner, and can never be effaced from my heart. It is, indeed, deeply gratifying after so many years of labor and anxiety for the good of my beloved country, to find that my exertions have been appreciated throughout my vast empire. In weal and woe I have ever had the true sympathy of all my people, which has been warmly reciprocated by myself.

"It has given me unbounded pleasure to see so many of my subjects from all parts of the world assembled here and to find them joining in acclamations of loyal devotion to myself, and I would wish to thank them all from the depths of my grateful heart.

"I shall ever pray God to bless them and to enable me still to discharge my duties for their welfare as long as life lasts."

CUBAN REBELLION.

Insurgents Said to Have Been Defeated at Plantanos.

Official reports from Cienfuegos, where Captain General Weyler is announced to have arrived, state that the Saguna Squadron has defeated the insurgents at Plantanos, forcing them to retire, leaving nineteen of their number dead upon that field. The Spaniards captured a quantity of arms and munitions of war, besides a splendid outfit of surgical instruments.

An engagement is reported to have taken place at Bahia Honda, province of Pinar del Rio, in which the insurgents were defeated with a loss of eighteen killed, among them a major. Seven more of the insurgents are reported to have surrendered.

Reports from Pinar del Rio state that seventy-eight rebels surrendered in that province. Thirty-three of those who gave themselves up were armed and forty-five unarmed.

Spanish Loan Going Begging.

The subscriptions to the proposed Philippine loan of 100,000,000 pesetas thus far total only 20,000,000 for the whole peninsula.

...ge at Thorsby.

...the time. A green-house and experimental garden is a new feature for this year, which I saw tomato-plants a foot high. This ...unty seems to be making grape culture a specialty, and now have about 80 acres in grapes, ...d I understand, are putting out this Spring ...000 cuttings. Young orchards are being set ...th all kinds of fruit, the houses are substan...l and well-built, mostly two story. The ur...nt need now is a canning-factory, and negotiations are pending looking toward the establishment of one in the near future."

The Concordia Land and Improvement Association, spoken of in the foregoing excerpt is ...corporated under the laws of Alabama, poss...es a capital of $150,000, and has land for ...e in all directions from Thorsby—some of it ...joining the town limits and some of it fur...r out to a distance of nine miles.

...rom a booklet lately published by the As...iation we learn that "this land is of differ...t varieties, but it is all very productive. ...me parts are level, while other parts are more ...lling. That which is not under cultivation is ...vered with timber of many different varie...s, such as the long leaf yellow pine, all kinds ... oak, hickory, chestnut, persimmon, poplar, ...ich, all kinds of gum trees and black walnut. ...Therefore fuel costs nothing but the labor of ...tting it, and lumber is very cheap. Good, ...e hard pine lumber is bought here for only ... to $7 per 1000 feet. This growth of timber ...cently shows the good quality and ...ength of the soil. The Association has some ...proved farms for sale at very reasonable ...ces. It has the land surveyed in tracts of ...m ten to eighty acres each, so that the pur...ser may have his choice also in this respect, ...t it is to be remembered that twenty acres ...this fertile farm and fruit land is a good...d farm, because the crops are so abundant. ...ch tract of land has a road laid out at least ... one side."

...The proximity of Thorsby to the Gulf, and ...e fact that it is 700 feet above tide-water, ...mbine to make its climate ideally equable. It ...never too hot, never too cold, and one season ...lts into another with none of the abruptness ...at is so unpleasantly common in the higher ...titudes. This fact, together with the abso...te absence of malaria, and the purity of the ...esting water, combine to make this locality ...e of the healthiest that can anywhere be ...nd.

...The soil of Thorsby and Chilton county can...t be surpassed for fertility. They are of the ...ch, dark, grayish, red and brown loam ...rds, with a proper mixture of sand on a clay ...bsoil, and are adapted for general farming, ...ock-raising and fruit-growing.

...Where the North can only raise one crop of ...rn, potatoes and other hardy products in a ...ar, this part of the South can raise two, and ...n raise, at the same time, cotton, sugar-cane ...d all the other semi-tropic staples, to ... ...thing of fruit!

...Let the new-comer select a spot like Thorsby ...r his home, let him set to work with a stout ...art and a steady hand, and he will find that ...ortune will change her frowns to smiles and ...ward him according to his deserts, no matter ...hat they may hap to be.

THREE DAYS.

So much to do; so little done!
Ah! yesternight I saw the sun
Sink beamless down the vaulted gray—
The ghastly ghost of yesterday.

So little done; so much to do!
Each morning breaks on conflicts new;
But eager, brave, I'll join the fray,
And fight the battle of Today.

So much to do; so little done!
But when it's o'er—the victory won—
Oh! then, my soul, this strife and sorrow
Will end in that great glad Tomorrow.
—[James R. Gilmore.

ADMIRABLE ARRANGEMENT.

"I don't want him at all," said Mrs. St. Julian.

"Then why not tell him so?" returned her husband from behind the outspread Times. "Surely you needn't stand upon ceremony with Ted."

"But I must get some one to talk to him, Tom. I can't have him on my own hands all day. Let me see. Maud Affleck's at home—I think I'll ask her over. She knows nearly as much about the Mongols as he does. I will write to her at once. She must come on Monday afternoon. Ted proposes to arrive by the 7:15."

The house party assembled for the Cumberleigh cricket week—consisting of the famous Cambridge Double Blue—Norman Harding and his eleven; the maidens invited to admire the prowess of these heroes: Miss Affleck, and the St. Julians themselves—was gathered together in the long library when Prof. Alleyne entered it at 8 o'clock on Monday evening. His entry, very quietly made, was followed by a general sensation of disappointment. The youthful company hungrily awaiting his appearance to adjourn to its dinner, had expected to find in him a more typical specimen of the professional genus; it had looked for a long-haired scholar of fifty, who should have stooped and worn spectacles and an ill-fitting coat. Now Alleyne (who appearad to be about five and thirty and was by no means ill-looking) had a singularly upright figure; his clothes were perfectly well cut; he used no glasses and actually boasted a mustache. Maud Affleck, who had been promising herself deep draughts at the fountains of his erudition, reflected sadly that his profound knowledge of all things Mongolian had probably been much exaggerated by report.

Miss Affleck, wise in her generation, let the Mongols severely alone—and not for that evening only. She refrained from mentioning them for two whole days, during which she made herself so unobtrusively agreeable that the Professor began to forget she had ever studied at Girton, and to wonder how his cousin Laura could have described her hair as "odd." But on the third morning she commenced the subject, in a fashion that showed she meant business. No sooner had the great Harding and his team (attended by Mrs. St. Julian and her bevy of girls) started for the cricket ground after breakfast than she descended upon the Professor, who was peacefully smoking under the great cedar tree on the lawn, with her arms full of papers, and her fine eyes alight with eagerness.

"Mr. Alleyne—you are so kind—I'm sure you won't refuse to help me?"

This appeal was uttered with a tremulous confidence, which some men would have found extremely engaging. Not so the Professor. He knew too well all that such an appeal portended. Reluctantly he made room for the newcomer on the bench beside him and looked ruefully at his pipe;

"I wanted to ask you—oh, please go on smoking! I like it. Your cousin tells me you are writing a great book on the people of Northern Asia."

The Professor could have groaned aloud. Perfidious Laura! What! even this last secret delivered into the hands of the enemy. Perhaps, he thought, this very pushing young woman would presently demand to see his unfinished manuscripts.

"Because," the pushing young woman continued, "I am writing something on that subject, too. Oh, not a great book, of course. Quite a small one. And I thought, perhaps you would kindly help me with the spelling af the proper names. You see, I know nothing of the dialects."

There was nothing for it but to accede to this exceedingly cool proposal. Alleyne took the sheets and began to run his eye over them, indicating an error here and there. Suddenly, at the bottom of a page, he stopped short.

"That is a novel idea."

"Which? Where?"

"Here, on page ninety-one. You suggest that the Ostyaks——"

The approach of a servant with a note for Miss Affleck caused the Professor's sentence to remain unfinished. Maud, when she had glanced over the scrap of paper addressed her, heaved an impatient sigh.

"Laura wants me to join her; I suppose I must go. There is nothing I hate quite so much as a cricket match. May I leave these with you? or shall I——"

"Pray leave them—by all means." The Professor's tone had grown quite cordial. It seemed this girl did know something of the Mongolian problem after all, and had opinions of her own on certain varied points connected with it. He turned the page with some curiosity.

"Very good. Very good, indeed. Remarkably well worked out." The Professor read on, ignoring the misspelt proper names, and was covered with confusion when the owner of the manuscript returned to claim it.

"I'm afraid," he stammered, "that there are still some corrections to make. The truth is, I grew interested in the subject matter. Perhaps you will leave the sheets with me a little longer?"

Maud accepted this kind offer with alacrity, and went to get ready for luncheon. The Professor remained behind and took out his note book. That hint about the Ostyaks wandering had set him thinking, and he felt that his thoughts were worth setting down.

Suddenly the pencil fell from his hand. Good heavens! What was he about? This train of ideas was absolutely new. But for Miss Affleck's manuscript it would never have risen in his mind. The Professor was a man of honor; a cold sweat of dismay broke out upon his forehead as he realized the nature of the crime he had been near committing. He, to pick a girl's brains. He shuddered at himself.

He shuddered. Yet he was sorely tempted to look again at the half-read chapter. For, if the theory put forward in it would hold water, well, the best half of his second volume was just so much waste paper. He pushed the temptation from him to the opposite end of the bench. Then he fell to writing busily on certain slips of paper.

These slips—together with her manuscript in a neat parcel—he took occasion to present to Miss Affleck the same afternoon at tea time.

"What is the meaning of these hieroglyphics?" she inquired. (The Professor wrote an execrable hand.) He explained, reddening slightly, that they were "rules for transliteration, which he thought she might find helpful."

"They will enable me to correct my spelling myself, I see. I suppose you did not read any further, Mr. Alleyne?"

"I left off," returned the professor, getting redder than before, "in the middle of the chapter on the Ostyaks. Will you take toast or tea cake?"

Maud was bitterly chagrined. She made no secret of her mortification to Mrs. St. Julian, and that impulsive young woman, moved with indignation, seized the first opportunity of finding herself alone with her cousin to remark:

"Ted, how could you be so horrid to that poor girl about her book?"

"I suppose you are speaking of Miss Affleck. I gave her all the assistance she asked."

"Yes, and refused to discuss the subject any further. Let her performance be ever so contemptible——"

"I did not say it was contemptible."

"You might have condescended to speak of it, one would think! What has Maud done that you should snub her so unmercifully? If she were a rival authority on—what do you call them?—Mongols, you could hardly have treated her worse."

The Professor was silent.

"Ted! Do you consider her a rival authority?"

"An 'authority'! My dear Laura! It's impossible for any young woman of Miss Affleck's age to have more than the most superficial acquaintance with such a large subject. But a novice occasionally stumbles — by chance—on a solution of some difficulty that has long been a puzzle to experts."

"And that is what Maud has done! I understand! Forgive me for laughing; but really this is too funny!"

"I do not see—to use your friend Mr. Harding's favorite expression—where the fun comes in exactly, Laura. The labor of two years rendered vain by a girl's random guess, which it probably took her a couple of mornings to elaborate!" muttered the poor Professor, casting dignity to the winds in his irritation.

Mrs. St. Julian heroically stifled her amusement.

"There is only one thing for it that I can think of. You two must marry, and—fuse your warring books into one."

"Laura!"

"Why not? She is pretty and well bred. Eventually she will come into a good deal of money."

"If this is intended for a joke, Laura," the Professor interposed severely, "excuse me for saying that it is an extremely bad one."

"I never was more serious in my life," his cousin protested. "It would be an admirable arrangemene. Do think about it."

But this the Professor indignantly declined to do.

It was well for his pride that he showed himself thus obdurate from the beginning, for Miss Affleck's demeanor for the next few days made it plain that his thinking—supposing he had weakly consented to take Laura's unscrupulous plan into consideration—would have been to no purpose. The ex-student of Girton, having had quite enough of learned society for the present, proceeded to unbend her mind in the company of Mr. Norman Harding, who had by this time awakened to the charms of her hair.

The Professor often glanced at her across the table—Mrs. St. Julian no longer sent them into dinner together—wondering how any woman with a mind could endure the irresponsible prattle of that brainless giant. Miss Affleck endured it with cheerful stoicism. She exposed herself voluntarily to the infliction, accompanying the big man on rambles in search of wild flowers and suffering him to give her billiard lessons on rainy mornings.

By the end of the week Alleyne had serious thoughts of going back to Oxford. He made up his mind to this step on Monday morning (Mr. Harding having shown himself peculiarly insane, and Miss Affleck more than ordinarily tolerant of his insanity on the preceding Sunday), as he smoked his after-breakfast pipe in the shrubbery. And he had no sooner done so than a sudden winding of the shrubbery path brought him plump upon Miss Affleck, seated upon a rustic bench. She had a writing board upon her knee and a pencil in her hand.

"The book?" inquired the Professor, with a sickly smile.

She nodded. "My poor little book! which you wouldn't even deign to criticise."

Her garden hat was very becoming and her blue cambric dress gave the utmost "value" to her auburn locks.

"I didn't—feel confident," stammered the Professor.

"Was that why you wouldn't read it?"

"No."

Miss Affleck's expressive face was one large note of interrogation.

You wish to know why? Well, it was because I found you too full of suggestion. You put me upon new trains of thought. It wouldn't have been fair to you—to go on reading."

"But—but I should have been so glad to be of any use to you!" she cried.

The Professor stiffened. "You are very good."

"I wish," she murmured, "I knew what I had done to offend you."

The Professor looked at her hard—for perhaps half a minute; then he, too, took a seat on the bench. "You have not offended me at all," he said.

"How beautiful!" Maud Affleck sighed, ten minutes later.

"What is beautiful? The day? Or your hair? Or the dispensations of Providence? They are all beautiful, in different ways."

"Nonsense! I was thinking that—that you would let me help you with the book, now."

"The Professor started guiltily. To do him justice he had quite forgotten the book.

"We will collaborate—we will write it together," he murmured. Then he kissed her, and rose to new heights of magnanimity. "And publish in our joint names — Edward and Maud Alleyne."

Maud blushed. "Oh, no! It must remain your book. Perhaps you might put a note in the preface saying you had been assisted in your researches——"

"By my wife. That sounds charming. But"—he kissed her again, and was pricked in conscience—"would that be giving you your due share of credit? You see, in that matter of the Ostyaks——"

"I should like it best so," she declared.

"Of course, it must be as you please," said the Professor.—St. Louis Times-Democrat.

In Boys' Reformatory Institutions.

I visited several of the reformatory institutions to see what was being done for the younger boys in regard to manual training. I found very little systematic instruction. The principal occupation was caning chairs, knitting stocking by machinery and other purely mechanical work. In none of the schools was there systematic instruction in manual training as it is now carried on in educational institutions. In fact, there were so many young boys who could not be kept busy at machine work that a large part of the time which might have been usefully employed was spent in idleness. During these hours the boys found occupations on their own account for their hands to do to a limited extent.

In one institution the boys had taken from their hatbands the broad steel wires which kept them in shape, broken them into pieces from three to six inches in length, ground these upon the door-steps or walls of the buildings and usen them as knives to whittle such bits of wood as they could pick up about the yard or secure from the janitors when they made the fires. They made a handle by winding on the ravelings of stockings or binding two bits of wood on either side. Little boats, paper knives and household furniture were rudely shaped by these crude instruments. Some of the boys were put there for wrecking trains, for burglary, etc., and their tendencies were sometimes expressed in the things they tried to make, for instance, pistols, small knives and weapons such as boys might use in Indian raids, etc. —Altruist Interchan

The head of Liberty, which adorns the silver dollar, is a reproduction of the features of a beautiful young school teacher of Philadelphia.

INVISIBLE MONKEYS.

A New Family Discovered in Africa Which Can Scarcely Be Seen.

Dr. J. W. Gregory, of the Natural History Museum, of London, reports the discovery of a family of African monkeys that adds another curiosity to the wonders of the zoos, provided they are fortunate enough to obtain specimens. These monkeys are found in certain districts of East Africa, and pass most of their time in the dense forests clothing Mount Kilima Njrro and other districts of that sections.

The black stemmed trees in which they make their homes are thickly draped with gray beard moss or lichen, which reaches for several feet below the boughs. As the monkeys hang from the branches Dr. Gregory says that they so closely resemble the lichen that he found it impossible to recognize them even when only a short distance away.

These monkeys are known to the natives of certain districts of East Africa by the name of guereza. They belong to the group of thumbless apes which are restricted to the African continent, where they take the place of the langurs, or sacred apes, of India and other Oriental countries. From the other thumbless apes the guerezas, or the species to which that name properly applies, are distinguished by their long, silky, black and white coats, which are much sought after by the natives of Africa as articles of their scanty costume and for purposes of decoration.

In the typical Abyssinian guereza the greater part of the fur of the body and limbs is of a deep, shining black, but from the shoulders there depends a mantle of long, white, silky hair, extending down each side and meeting on the lower part of the back, so as to hang down over the sides of the body as well as over the hips and thighs. The terminal third of the tail is also clothed with long white hairs. Strikingly handsome as is this species it is excelled in this respect by the East African guereza—the one met with by Dr. Gregory—in which the base of the tail alone is black, the whole of the remainder of that appendage being developed into a magnificent white brush, which may be compared to an Indian chowri or fly whisk.

Black and white is a type of coloration so conspicuous and at the same time so rare among the larger mammals, that whenever it occurs we may be sure it is developed for some special purpose, although, unless we have an opportunity of seeing the animals in their native haunts it is almost impossible to divine what that purpose may be.

It is met with elsewhere in the zebras and also in the remarkable parti-colored bear of Thibet. Although the former animals are conspicuous enough in a stall at the Zoo, or when stuffed in a museum, travellers tell us that when seen in the haze of an African desert their black and white stripes fade at a very short distance to an almost invisible gray. This may even be observed in a hot summer when the grass is burned brown in some of the private English parks where several of these beautiful animals are allowed to roam at will during the summer months.

Dr. Gregory's observations have fully solved the problem of the use of the remarkable coloration of the guerezas, which has so long puzzled the brains of naturalists. Decisive evidence is apparent that the black and white coloration of these animals protects them by a close resemblance to their inanimate surroundings. There are, however, certain smaller animals with a similar type of coloration in which the startling contrast of black and white seems to be for the purpose of rendering them conspicuous, and as some at least of these creatures are endowed with a most disgusting odor, their conspicuousness has been regarded as warning other animals from attacking them.—New York Herald.

One Day in the Wildwood.

A couple of Pennsylvania newspaper men took a trip into the wilds of Clinton and Centre counties the other day. They went for trout. Here is what they did besides: Fished three runs (with the full consent of the streams); crossed the steepest and highest mountain in the Alleghenies; found on top the tomb of an Indian chief, whose name they deciphered to be Young-Man-Not-Afraid-of-His-Mother-in-Law; started a deer that had "Hiawatha" tattooed on its flanks; put out a forest fire and saved a sawmill; saw a black snake switch a rattler to death, and were chased half a mile by a panther.—New York Telegram.

Fly Paper Catches a Rat.

A well-known Topeka (Kan.) grocery man has been in the habit of placing several sheets of the familiar tanglefoot paper on his counters at night to entice the flies. When he opened his store the other morning he found a couple of the sheets of tanglefoot paper partially rolled up on the floor, and tangled up with them was a good-sized rat that was endeavoring to get away but made a miserable failure of it. It had evidently got its feet fast in the paper in such a manner as to prevent its running, and then in lying down to free itself gave the stickiness a good grip upon its hairy coat.

THE JOKERS' BUDGET.

Jests and Yarns Made and Told by Funny Men of the Press.

FAIR UNDERSTANDING WANTED.

Wife (8 A. M.)—I believe I will run over to Mrs. Gossip's for a minute.

Husband—Will you be back before noon?

BLISSFUL IGNORANCE.

Mr. Buffum—Is it a fact that you can neither read nor write?

Illiterate—Don't know. Never tried to do either.

TIT FOR TAT.

Mr. Fussy—I don't see why you wear such ridiculous large sleeves? There is nothing to fill them.

Mrs. Fussy—Does your head fill your high hat?

PAINFULLY CORRECT PRINCIPLES.

She—I've told her repeatedly that I wanted steak rare!

He—Oh! Well, I suppose she thinks that whatever is worth doing at all should be done well.

EASY CURE.

The Wife—Doctor, can you do anything for my husband?

Doctor—What seems to be the matter?

"Worrying about money."

"Oh, I can relieve him of that all right."

A FINANCIAL MISFIT.

"Did Mrs. Jinks's traveling gown fit well?"

"Yes, but it cost so much she had to give up her trip and stay at home."

WILLING TO TRY.

"And do you think you can make my daughter a happy woman?" asked the father.

"I guess so," replied the young man. "What make wheel does she prefer?"

GOOD ADVICE.

"I hope I see you well," he said fluently to the old farmer leaning on his hoe.

"I hope you do," was the unexpected answer; "but if you don't see me well, young man, put on specs."

PERFECTLY TRUE.

"Mrs. Skimmills says that her husband never spoke a hasty word to her in his life," said the lady who gos-ips.

"That's perfectly true," replied Mrs. Cayenne. "The dear man stutters."

CORRECT UNDERSTANDING AT THE START.

"Would you die for me?" she asked sentimentally.

"Now, look here," he returned in his matter-of-fact way, "are we supposed to be planning a cheap novel or a wedding?"

UNSENTED.

"Well?" said the assistant in a chemist's shop to an Irishman who pointed to a pile of soap.

"I want a lump of that," answered the Irishman.

"Thank you. Will you have it scented or unscented?"

"I'll take it wid me."

TOO MUCH TO TACKLE.

Hills—Say, Griggs, walk down to the Bureau of Incumbrance with me, please. Will you?

Mills—What in the world do you want down there?

Hills—I want them to send up half a dozen strong men to discharge my cook.

CORRECT.

The master was asking questions. Masters are apt to ask questions, and sometimes, too, the answers are apt. This question was as follows:

"Now, boys, how many months have twenty-eight days?"

"All of them, sir," replied a boy in front.

NOTHING NEW.

Adorer (nervously)—Isn't that your father's step on the stairs?

Sweet Girl—Yes, but don't mind that; it's only a scare. He won't come down. He always stamps around that way when I sit up with young men after eleven o'clock.

DISCRETION.

Customer (in "twenty-five-cents-a-meal" restaurant, out West)—Gimme a glass o' milk.

Waiter (cautiously)—Got yer gun wid ye?

Customer (disgustedly)—Naw! D'ye expect me ter go out an' shoot a cow fer ye?

Waiter (imperiously)—You've got coffee, an' we don't give milk an' coffee too.

A BOTHERSOME LANGUAGE.

"What's the matter, Jack?" asked his uncle. "You look bothered."

"I am," said Jack. "This English language is too much for me. Ma told me to stop in at Mrs. Perkins's as I went by and leave this letter. Now if I go by I can't stop in, and if I stop in, why, don't you see, I can't really go by."

SOCIAL DISTINCTIONS IN THE SUBURBS.

"I suppose you know Jinks, who lives out in your suburb," said the new acquaintance, pleasantly, in an effort to be agreeable.

"I know of him," returned the suburbanite, coldly, "but the fact is, we don't move in the same set."

"No?"

"Oh, dear, no. I go home two trains ahead of him at night, and come down one train later in the morning."

THE PERMANENT ABODE OF LAW.

Cholly Tenderfoot—Is this a law-abiding community, my friend?

Earless Eddie—Why, say, podner, there's more law abidin' in this community than you've any idee of. There's fourteen lawyers, five Judges, an' six prosecutin' attorneys, ter say nuthin' uv deputy sheriffs an' bill collectors, all planted over in that cemetery.

Koumiss, the stimulating and intoxicating drink invented by the Tartars, is made from fermented milk; that of the mare being generally preferred.

It is said that salmon, pike and gold fish are the only fish that never sleep.

GOSSIP FOR THE FAIR SEX.

Items of Interest on Feminine Topics.

Consuelo's Queer Pets—Mrs. Cleveland a Devotee—Hat Made of Hair—A Stock for Maidens, Etc., Etc.

CONSUELO'S QUEER PETS.

The young Duchess of Marlborough has a great fondnes for pets. At Blenheim she has set up a menagerie, containing two ostriches, several eagles and vultures, and an ibis. But the strangest of the young bride's pets is a garter snake, which she purchased on the banks of the Nile while on her honeymoon. It is so tame that when she approaches it crawls towards her.

MRS. CLEVELAND A DEVOTEE.

Mrs. Cleveland, while an occupant of the White House, always went to weekly prayer meetings, and Miss Willard, afterward Mrs. Baldwin, who was her roommate at Wells college, generally accompanied her. Sometimes Mrs. Thurber would go with her, and unless it was very stormy, or there was some important official engagement, she could always be found Thursday night in the lecture-room of Dr. Sunderland's church.

QUEEN OF ITALY.

Strangely enough, the Queen of Italy has no ladies of the bedchamber and of the wardrobe, such as are to be found at the British court, and is very much at the mercy of slipshod, inexperienced girls for assistance in her toilet. Once a servant is engaged for the royal palace she is never dismissed, and this, perhaps, is the reason that Her Majesty is so poorly served. Court etiquette demands many elaborate toilets being made each day by the Queen, and it is said that Her Majesty suffers much from this regulation, combined with the inefficiency of her maids.—New York Journal.

HAT MADE OF HAIR.

From Vienna is reported the invention of a new hat for women which has the merit of novelty and cheapness. It is built of the wearer's hair.

The method of evolving the hat out of the hair is as follows: The human hair, as it lies naturally, is fastened on the crown of the head with a band, then a slight wire frame is fitted on the part of the crown included in the band, and the hanging hair is parted in the middle.

One-half is combed over the frame so as to cover it completely and form the brim and is fastened into the band; the other half forms the trimming, being separated again in two parts, one in braids and coils on the outside, with flowers, feathers or ribbons to finish the coiffure, and the other inside the brim forms a roll next the face. This is known among Viennese hairdressers as the "Coiffure a la Louise."

A STOCK FOR MAIDENS.

The soft stock is the newest neckwear. A wide and sometimes padded collar, from two and a half to three inches wide, with soft ends that cross at the back and tie in a four-in-hand in front makes the soft stock. As a rule this stock matches the material of the bodice, and in some cases is a permanent collar. White satin shirt waists, with white satin soft stocks are very stunning for the semi-tailor girl. This stock will be rather warm wear for the summer, but won't it be a relief from the stiff-as-a-board neck harness in which we have been putting ourselves? These stocks will be shown in piques and ginghams, but in all cases stock and tie are of one material.

The very latest form of this accessory is black chiffon, knotted well below the neck, after being wound about the throat. Above it at sides and back is a lace collar.

SELECTING A BICYCLE SKIRT.

Selecting a bicycle skirt appears to be a difficult thing with many riders, and in this instance, like matters of street dress, the advice of other persons is frequently sought.

Of course, there are certain dresses used for street wear that could not be used for the bicycle, but, then again, there are some dresses that are suitable for both purposes. As soon as a skirt gets worn at the bottom, mainly due to trailing on the ground, the industrious girl makes the dress over again in another form. A good many, however, discard the dresses. It is suggested that the skirts which are worn or soiled at the bottom be used for a bicycle skirt. This can be done by cutting off five or six inches, or perhaps more—to make the skirt long enough to suit the taste of the wearer—and using the goods cut off for patching purposes, in case a snag appears in the skirt, due to its getting hooked in the wheel or through an accident of some sort. The color of a bicycle skirt need not be limited, and any pretty color can be used. However, most ladies the writer has seen

THE JOKERS' BUDGET.

Jests and Yarns Made and Told by Funny Men of the Press.

FAIR UNDERSTANDING WANTED.

Wife (8 A. M.)—I believe I will run over to Mrs. Gossip's for a minute.

Husband—Will you be back before noon?

BLISSFUL IGNORANCE.

Mr. Buffum—Is it a fact that you can neither read nor write?

Illiterate—Don't know. Never tried to do either.

TIT FOR TAT.

Mr. Fussy—I don't see why you wear such ridiculous large sleeves. There is nothing to fill them.

Mrs. Fussy—Does your head fill your high hat?

PAINFULLY CORRECT PRINCIPLES.

She—I've told her repeatedly that I wanted steak rare!

He—Oh! Well, I suppose she thinks that whatever is worth doing at all should be done well.

EASY CURE.

The Wife—Doctor, can you do anything for my husband?

Doctor—What seems to be the matter?

"Worrying about money."

"Oh, I can relieve him of that all right."

A FINANCIAL MI-FIT.

"Did Mrs. Jinks's traveling gown fit well?"

"Yes, but it cost so much she had to give up her trip and stay at home."

WILLING TO TRY.

"And do you think you can make my daughter a happy woman?" asked the father.

"I guess so," replied the young man. "What make wheel does she prefer?"

GOOD ADVICE.

"I hope I see you well," he said fluently to the old farmer leaning on his hoe.

"I hope you do," was the unexpected answer, "but if you don't see me well, young man, put on specs."

PERFECTLY TRUE.

"Mrs. Skimmills says that her husband never spoke a hasty word to her in his life," said the lady who gossips.

"That's perfectly true" replied Mrs. Cayenne. "The dear man stutters."

CORRECT UNDERSTANDING AT THE START.

"Would you die for me?" she asked sentimentally.

"Now, look here," he returned in his matter-of-fact way, "are we supposed to be planning a cheap novel or a wedding?"

UNSENTED.

"Well?" said the assistant in a chemist's shop to an Irishman who pointed to a pile of soap.

"I want a lump of that," answered the Irishman.

"Thank you. Will you have it scented or unscented?"

"I'll take it wid me."

TOO MUCH TO TACKLE.

Hills—Say, Griggs, walk down to the Bureau of Incumbrance with me, please. Will you?

Mills—What in the world do you want down there?

Hills—I want them to send up half a dozen strong men to discharge my cook.

CORRECT.

The master was asking questions. Masters are apt to ask questions, and sometimes, too, the answers are apt. This question was as follows:

"Now, boys, how many months have twenty-eight days?"

"All of them, sir," replied a boy in front.

NOTHING NEW.

Adorer (nervously)—Isn't that your father's step on the stairs?

Sweet Girl—Yes, but don't mind that; it's only a scare. He won't come down. He always stamps around that way when I sit up with young men after eleven o'clock.

DISCRETION.

Customer (in "twenty-five-cents-a-meal" restaurant, out West)—Gimme a glass o' milk.

Waiter (cautiously)—Got yer gun wid ye?

Customer (disgustedly)—Naw! D'ye expect me ter go out an' shoot a cow fer ye?

Waiter (imperiously)—You've got coffee, an' we don't give milk an' coffee too.

A BOTHERSOME LANGUAGE.

"What's the matter, Jack?" asked his uncle. "You look bothered."

"I am," said Jack. "This English language is too much for me. Ma told me to stop in at Mrs. Perkins's as I went by and leave this letter. Now if I go by I can't stop in, and if I stop in, why, don't you see, I can't really go by."

SOCIAL DISTINCTIONS IN THE SUBURBS.

"I suppose you know Jinks, who lives out in your suburb," said the new acquaintance, pleasantly, in an effort to be agreeable.

"I know of him," returned the suburbanite, coldly, "but the fact is, we don't move in the same set."

"No?"

"Oh, dear, no. I go home two trains ahead of him at night, and come down one train later in the morning."

THE PERMANENT ABODE OF LAW.

Cholly Tenderfoot—Is this a law-abiding community, my friend?

The color of a bicycle skirt need not be limited, and any pretty color can be used. However, most skirts the writer has seen worn by bicyclists are of plain colors, with no design, though it does not necessarily follow that no designs can be used in the skirt material.

THE TRAINED NURSE.

If for no other reason the schools for the training of nurses would be entitled to public gratitude for having done away with that class of people whom Dickens so laughingly portrayed in dear old Sairy Gamp, Betsy Prig and the mythical Mrs. Harris.

The popularity of these institutions is shown by the fact that their number has grown from 30 in 1889 with 1,100 students to 132 in 1895 with 4,100 students, and that between 1889 and the present day over 14,000 trained nurses have been graduated from the various institutions of the United States.

Our own city has the largest number of these schools, and when it becomes the Greater New York it will even eclipse its present record in this respect, but the largest single school is in Chicago, attached to the City Hospital.

Boston, Philadelphia, Brooklyn, Baltimore, Toronto and Buffalo have all won golden opinions by the excellent training afforded in their respective schools. The education given in these institutions differs curiously from that afforded by ordinary schools. Instead of paying for their tuition in money they pay by their labor. After a time this becomes so valuable that, besides receiving their board, lodging, washing and tuition, they also get a small wage or salary, ranging from $5 to $20 per month. This forms a very attractive picture, but, as might be supposed, the consideration they give for these advantages is a very heavy one.

In some schools they have a day off in a week, in others they have a day off provided the case to which are assigned will permit their absence. They do night work as well as day work, and do beside all the menial work of the sick room.

They must look unflinchingly on the most unhappy diseases and must be unmoved outwardly by the sight of a painful operation, the prayers and tears of a patient, or the screams of a little child.

They must render the same obedience to the superior physicians that a soldier does to his commanding officer. They must learn how to make and apply bandages, to stop bleeding, to cleanse wounds, to cook dainty and delicate dishes for invalids, and to recognize every system and to keep an accurate record of every change in the patient's condition.

When they finally secure their diploma after their course is finished, they are sometimes better versed in medicine, hygiene and other topics than the regular practitioner.—New York Mail and Express.

WRINKLES.

We all become interested, sooner or later, in the subject of wrinkles. They are the "irreparable outrage" of Racine; but although they are so universal, few have endeavored to explain their origin and progress. Wrinkles are produced in the first instance by the frequent repetition of some muscular contraction or by sickness. They are not merely superficial, but appear when the epidermis is removed, and are found not only in the face but all over the body. They do not run in any regular direction, and no law has been found including all their directions. It has been said that the life-history of a man can be written from his wrinkles, but physiology hardly agrees in this instance; for it has still to be proved that a general's wrinkles differ from those of a physician's, or a laborer's from a lawyer's. A man does not always, or even generally, carry about a faithful autobiography in his face. Although no part of the body is free from them, they visit chiefly the face, particularly round the eyes and lips. They run in all directions—horizontal, vertical and oblique; straight, curved and crossed. Going in the sun with the face insufficiently covered brings them on prematurely. But they are in every case normal at forty, or even earlier. Vertical wrinkles between the eyes come quickly to men who study or worry themselves. This can readily be imagined; the eyebrows contract naturally when in deep thought; grief or worry produces the same action, which, when repeated frequently, produces a fold in the skin, marking emotion undergone many times. Between these and the straight lines on the forehead, already mentioned, come the arched wrinkles of the forehead, found above the root of the nose. These often tell of long and painful mental torture. They arise from a cruel physical suffering, or of still more great development of the vertical wrinkles, and the resistance of the skin above. The crow's-feet mark the passing of the fortieth year, and are characterized by furrows which diverge from the external angles of the eyes in all directions, like the claws of a bird, from which they are named. The wrinkles of the nose, which descend from the nostrils down each side of the mouth, are, perhaps, the first to appear. These furrows are created in laughing and mastication; a simple smile is sufficient to produce them, so it is not surprising that the repetition of the constant acts should soon be graven on the face. They are also hereditary. The wrinkles of the cheeks and chin follow the oval of the face, and are caused by a diminution of the fatty substance under the skin, which then falls into folds. The small wrinkles, which form a network in the lower parts of the cheeks near the ears, have the same origin, and only appear in old age. Those found in the upper eye lids, and sometimes in the lower which give the eyes an air of fatigue are the results of hard living, grief or worry.—New York Ledger.

FASHION NOTES.

The gown of soft silk has yoke and epaulettes of Irish loce.

Colored linen edges the turned-over points of the white linen collar.

Plaids, checks and stripes in ribbons will all find favor in the fall.

Gauze ribbons with gay flowers scattered over them and with edges of satin, are especially beautiful.

The satin ribbon with tiny chiffon edge is quite as popular as are the gauzy ribbons with satin edge.

Toques all in one color, trimmed to give a sideway tilt-in effect, are the latest note in millinery in Paris.

The parasol with quiet cover and gorgeous lining is the most stylish; the stick is a neatly carved wood.

The embroidered, lace-edged lawn ties are wound round the neck twice and tied in front in a four-in-hand knot.

For all practical purposes—yes, both looks and wear—much of the Valenciennes edging is superior to the real article.

Dark blue veils are all the rage in Paris, with cornflower blue hats trimmed with feathers in two shades of blue, blue chiffon and green roses.

Perhaps next to white the delicate pinkish grays are the most refined and beautiful of all the fashionable colors that the summer has brought forth.

A dressy afternoon gown is of tan colored barege over rose silk with narrow velvet ribbon for trimming. A full ruching of lace finishes the neck and sleeves.

The large number of narrow leather belts with harness buckles worn is evidence that this style has taken well. The rich greens with gold buckle are exceedingly neat.

Tailor-made costumes have a much shorter coat than those worn last year, and are more closely fitted to the figure, so it is an easy matter to bring a last season's jacket up to date.

The abbreviated jacket is especially suitable for coat and skirt costume of material that will crush. It will keep its shape far longer (and need no pressing) than the coat with a skirt that will crush every time you sit down in chair or car seat.

The up-to-date bicycle footwear is a boot fifteen inches high, of dark tan or brown. These are the popular colors, though for those whose costumes are braided in black the black boots reaching only to the calf of the leg are considered very stylish.

Every dress skirt needs beneath it a petticoat of excellent material—one cut and ruffled in a manner to encourage the slight flare at the back. In this way a skirt that is a little the worse for wear may be made (if neat and clean) to look fresh and hang well.

Feather boas have taken a new lease of life and bobbed up again as one of fashion's special favorites. Gray and clay are the pet colors. Black and white are both worn, however, and all the new boas are rather short, very fluffy, and supplied with three ends in one.

Black lace forms the only decoration of a pure white organdie. Stripes of the lace run perpendicularly from the belt to the foot of the skirt and there is a pretty arrangement of it on the bodice that gives the effect of a square neck, but in reality it is very high with a wide frill at the sides and back topping it off. The lining is lilac taffeta.

Nature's Balance Destroyed.

Through ignorance or blindness the nice balance which nature has provided has been destroyed and great waves of insect pests sweep over the country, eating everything green in their path. The destruction of birds has interfered with the delicate operations of the laws of nature. Audubon states that a woodcock will eat its own weight in insects in a day, and many other birds are equally ravenous in their appetite. Although the English sparrow, because of their quarrelsome habits, have aroused so much dislike, they were introduced at a time when other birds were rapidly decreasing in number. Their wonderful multiplication in the past twenty years has probably been the means of saving millions of dollars worth of crops. It is unwise policy to kill toads, lizards, and friendly insects. It is considered that the latter destroy many more noxious insects even than the birds.

A mile of railway permanent way, with two sets of rails, takes up two and one-half acres of land.

SURPRISES WITH GUNS.

SHARPERS FACED BY A MISSOURIAN GRAYBEARD ON A TRAIN.

Quick Work Made of Two Brothers by a Quiet Cattleman on a Train. A Slim Man's Mastery of a Rowdy Bent on Mischief.

"What is known as a bad man in the far West is not necessarily a man of an unvaryingly evil disposition, or of disposition evil at all; he may be uniformly and cussedly bad, or bad only in the sense of being dangerous to those who offer him unjustifiable provocation. I have met many varieties of the species in my twenty years of travel west of the Mississippi," said a former commercial traveller.

"One of the occurrences that amused me most was the experience of a gang of confidence men with an old man on a Kansas railroad. At the station in Atchison one afternoon, just before the Santa Fe train pulled out for Topeka, the sharpers tried to work a game on some one, but were interrupted, and their scheme fell through. They piled aboard the train as the bell rang, and set in to work off their ill temper by chaffing and maltreating the passengers about them. Presently there entered at the rear door of the coach a typical Southwestern farmer, a tall old man, with a grizzled, patriarchal beard, steeple-crowned hat, and long linen duster. As he strode along the aisle, his gaze bent on the coach ahead, one of the sharpers reached from behind and pulled him back by the coat tail.

"'Hold on, old fellow," he said, 'Don't hurry! D'ye think you're bound somewhere, or going to stop awhile with us?'

"The old man turned, his beard bristling, his eyes flashing fire. His hand went down to his hip pocket and came back clutching the butt of an extraordinarily long-barrelled revolver.

"'I'm from Cass county, Missouri.' ——he said, but he got no further. The sharper let go the coat tail and threw up his hands.

"'I see you are,' he gasped. 'I only wanted to find out. For God's sake, let the rest of that pistol stay where it is and go along as soon as you want to. Never mind us.'

"The old man glared a moment on the confidence men as if undecided whether to let the matter drop at that; then turned, pushed the pistol back where it came from, and, still keeping his hand on the butt of it, went on through the car. The sharpers subsided, and were perfectly orderly during the rest of the trip.

"I was in the train in which it happened, although I did not see the occurrence, when two thieves came to grief in trying to rob a cattleman. It was in the C., B. and Q. station in Chicago, or rather just beyond the station. The thieves evidently had planned the robbery beforehand, knowing that the cattleman had a large sum of money with him, and they had followed him to the train and aboard a coach. He had seated himself near the middle of the car. After the train had started and got under good headway, one of the thieves suddenly grappled him from behind, pinioning his arms to his side, while the other drew his pocketbook from his inner breast pocket. Then the thieves ran in opposite ways toward the car doors, with the intention, of course, of jumping from the moving train. But they hadn't reckoned rightly on the quickness of the cattleman's pistol. Drawing his revolver, he brought down one of the thieves, half way to the door, mortally wounded, with a bullet through his back. Turning, he fired at the other, just dashing out at the door, shooting him through the heart so that he fell dead on the platform.

"The whole thing was done so quickly that few of the passengers in the coach were aware that anything unusual was going on until the pistol shots rang out. Then, naturally, there was jumping up and confusion and hysterics. The cattleman, pistol in hand, went at once to the first thief he had shot, searched him, and, not finding his pocketbook, went back through the car to where the other thief lay dead on the platform. The crowd gave him free passage along the aisle, you can bet. At the door a brakeman handed him the pocketbook, which the thief had dropped when he fell. The cattleman ran his eye over the contents, satisfied himself that they were all right, then went back to his seat where he remained quietly until the next station was reached. Here he got out, asked the telegraph operator to notify the police that he was waiting for them to arrest him and stayed until they came. The Coroner's jury exonerated him for the killing, and his case, if ever it came before a court, was quickly dismissed. I met him afterward in Wyoming, a quiet everyday sort of man of no particular reputation as a shot, who had got along with little trouble in a fighting way before and after his exploit at Chicago. But he showed himself great at this one time when nerve and promptness and good marksmanship were needed.

"I saw a rough fellow taken down by a man who was not a bit rough to look at once on a passenger train of the Southern Pacific road, west of Deming. It was in a smoker car, and the tough had arrived at the stage of drunkenness where he felt it necessary to get out his pistol and shoot at telegraph poles along the side of the track. He got ugly when the conductor spoke to him and allowed he'd do pretty much as he pleased, and that the man who interfered with him wouldn't turn up for his vituals next day or at any time after. It is probable that the train hands would have brought him to rights, but a passenger, a slim, quiet, refined-looking man, took the business in hand and saved them the trouble.

"The fun began when the tough's pistol went off in the car, by accident, quite likely. At this the slim man got up and walked back to him, carrying a slender walking stick in his hand.

"'There has been enough of this business,' he said. 'Put that pistol up.'

"The tough jumped up from his seat.

"'Say,' he shouted. 'Do you know who you're talking to? You git!'

"He started to cock the pistol as he spoke, but the hammer didn't get half way up. The thing was done too suddenly for my eye to follow, but the pistol clanged down on the floor between them, knocked from the fellow's hand by a blow with the stick. The tough swore and clutched with the other hand at his hand that had been so smartly rapped; the slim man stooped, picked up the pistol, and threw it out of the window.

"'Now, will you behave yourself?' he asked, looking the fellow in the eye with the expression of a wild beast tamer, and holding the stick as a fencing master holds his foil 'at ready.'

"'You bet,' was the prompt answer, and the tough man sat meekly down. He was very much on his good behavior for the rest of the trip. He even tried to make friends with the slim man. The slim man's name, by the way, was E. T. Hallam, an agent for a millinery goods firm. He received the lionizing of the other passengers modestly, acknowledging, however, that he fenced and sparred some and could play a little at singlestick.

Only One in the World.

So far as obtainable information goes, Mrs, Louise Jewell Cabel, of East Lowell, Me., is the only woman Justice of the Peace in the world. Mrs. Cabel first saw the light of the world fifty-eight years ago last December. At the tender age of 2 1-2 years her devoted parents sent her to school, her mother having previously taught the child to read the Bible. School occupied her attentions until she was fifteen years old, when she became a tailor. Afterward she became a school teacher. At the age of twenty-four she was confined to her bed for three years by illness, and during that time took up the languages and became proficient in French and German. For the six years following her convalescence she averaged 1,000 vests a year, finally becoming the bride of Mr. Cabel. She finally became interested in prohibition, and became a contributor to a score of magazines and papers, keeping up that line of work until 1888, when she was granted a commission by Sebastian S. Marble, then Governor of Maine, to "solemnize marriages, administer oaths and take acknowledgments of deeds." She then began to do the work of a Pension Justice, or Notary, as they are called in Maine. She has ridden thousands of miles after affidavits for the soldier and his poorer dependents in their claims before the Pension Department. She does her own housework all the time. She is now acting under her third commission. One year ago last September her husband, who is an organ and sewing machine vender, was stricken helpless with paralysis.

Commercial Use of Garnets.

"The average man, I presume, imagines that garnets are used in our line of business exclusively," remarked a State street jeweller the other day, "whereas in fact the jewelry trade cuts a small figure in the garnet industry. About 3,000 tons of garnets are used every year in this country for making sandpaper. A very small proportion of the garnets have any value to the lapidary, and the best are only semi-precious stones. The costliest come from the Adirondack regions and from Delaware county, Pa. Up in Alaska, near the town of Wrangel, is a veritable garnet mountain, and a corporation has recently been organized to develop it. The Alaska garnets are said to be unusually fine."—Chicago Times-Herald.

The Most Inconsiderate.

Several British Indian papers print the following, written by a native subordinate in his diary while in a very trying position:

"Up a tree where I adhere with much pain and discomfiture while big tiger roaring in a very awful manner on the fire line. This is very inconsiderate tiger, and causes me grief as I have before reported to your honor.

"This is two times he spoiled my work, coming and shouting like thunder, and putting me up a tree and making me behave like an insect. It is a very awful fate to me and the tiger is most inconsiderate."

CHILTON COUNTY CALL.

M. E. TAYLOR, Editor and Prop.

Published every Friday at Thorsby, Alabama.

Subscription price, $1.00 per year in advance.

Entered at the postoffice at Thorsby, Ala., as second-class matter.

The French are wrathy at Russia for not sending back the guns and flags abandoned on the retreat of Napoleon in 1812. France has returned to Russia her trophies of the Crimea.

In the last four years statistics show that the consumption of spirits has been cut down more than one-third and of wine nearly one-half. This decrease is credited by the Atlanta Constitution to the spirit of economy induced by the hard times.

Some years ago Stanley calculated the consumption of ivory at 750,000 pounds a year in Europe, 130,000 in India, and 75,000 pounds in the United States; that is, 1,000,000 pounds in a year; but the average consumption of ivory from 1889 to 1898 was 1,500,000 pounds, of which America took 200,000.

Florida probably has a hundred or more survivors of the Seminole wars, for whom Congress has provided a yearly pension of $96 since 1892, and the money is appropriated. Few survivors, however, can prove their cases for want of muster rolls. The State Legislature refuses to appropriate $1700 to get copies from the War Department.

A Detroit preacher told his congregation on Sunday that people should not be deterred by poverty from marrying. "If a man has $3 left after buying his marriage license," he said, "and is fortunate enough to secure a good, economical wife, one who knows how to warm over cold meats, and is satisfied with ordinary hats and dresses, he is destined to live a pleasant married life; indeed, eternity is too short for such a couple."

An objection was made in the British House of Commons the other day to the grant of a right of way to a new railroad, on the ground that "the proposed railway, if constructed along the line mentioned in the bill, would seriously injure the scenery of the valley of the Earn and the lake along which it is to pass;" and by the persuasive support thereof by James Bryce (the historian), the House was induced to recommit the bill to the appropriate committee.

Among the countries of the European continent, illiteracy is most prevalent in the slavic States of Russia, Servia and Roumania, the Latin races in Italy, Spain and Belgium being also very backward in education, while in the purely Teutonic States the percentage of illiterates is merely nominal. In Switzerland it is 2.5 per cent., in the whole of German empire only one per cent., and in Sweden, Denmark, Bavaria, Baden and Wurtemberg there is practically no one who cannot read and write.

In view of the anticipated exhaustion of the quarries of lithographic stone at Solenhofen, Bavaria, the use of aluminum as a substitute in engraving has been suggested, and the German journal Neueste Erfindungen und Erfahrungen enumerates the qualities that may render that metal suitable for the purpose. The National Druggist, of St. Louis, points out, however, that there are lithographic quarries in Tennessee which can furnish immense quantities of stone fully equal, for all the purposes of engraving, to the very best Solenhofen.

When the charter for Greater New York goes into effect the salaries of three of her municipal officers will be greater than is paid to any other public servant, with the exception of the President of the United States. The Mayor will receive $15,000 per annum, which is $5000 more than Governor Black gets. Even the Comptroller will be paid $10,000, which is as much as is paid a United States Supreme Judge, $2000 in excess of the salary of a cabinet officer, and $1500 greater than General Nelson A. Miles of the United States Army is allowed. The Corporation Counsel's salary will also be $15,000.

About three hundred Western cities have the curfew ordinance.

England is dependent for seventy per cent. of her food and raw materials upon foreign lands.

Business firms pay for the best talent they can find in advertising their wares, and cities do not hesitate to refuse master-pieces offered as donations. It begins to look to the Washington Star as if, after all, the real hope of the artist were in commerce.

Says the San Francisco Bulletin There is something in the atmosphere which an earthquake brings with it that defies analysis. It sets nerves in a flutter that under other conditions of much greater peril pursued the even tenor of their way. Earthquakes create a greater sensation in proportion to the harm they do than any other manifestation of nature's power.

Admiral Colomb has startled the naval world by declaring before the United Service Institution that England will soon cease to build war vessels of the present type. He declares that fifteen torpedo-boat destroyers acting together, could command any fleet afloat. This is an uncomfortable reflection for England just after the greatest naval spectacle in her history.

El Comercio, of Havana, thinks that "the United States and Spain are gradually drifting into a situation in which the Turco-Grecian struggle will be repeated," Spain replacing Turkey and this country replacing Greece. That Cuban paper may as well understand right at the outset, however, protests the Chicago Times-Herald, that the United States doesn't play the game according to Grecian rules.

A new way to pay old church debts has been developed in New Orleans. It is novel, modern and out to do the business. Ten churches of the colored brethren have placed the financial obligations in the hands of a regularly organized corporation called "The Church Debt Liquidating Company," and the company will undertake to pay up all the debts of its patrons by means of entertainments and "other sources."

An experiment is being tried in Washington which may result in changing the colors of street letter boxes all over the country from a grayish red to a silvery hue. Street letter boxes are being painted with aluminum composition, which, it is claimed, will stand the wear and tear of time and exposure to the elements for at least four years without tarnishing or peeling off. Work is being done at the owners' expense, the boxes being covered with the white material, while across the front will be the words "U. S. Mail" in bright red letters.

The United States Military Academy is turning out officers faster than the army needs them. Sixty-five young fellows have just graduated from West Point and there is not a vacancy in the army for one of them. It is probable that these graduates will not be provided with commissions for a year and a half to come, and next June the surplus of officers will be still further increased. A serious problem is presented here. The main reason why there are now no vacancies in the army is to be found in the fact that the number of enlisted men who win promotion to lieutenantcies is increasing.

J. Y. Meri, the Vice-President of the Noippon Railway Company, of Japan, now in this country, says: "Our roads are narrow gauge, and are operated in the European style, but we are open to receive improvements, and I have no doubt will gain valuable pointers on the present journey. Japan has 3000 miles of railway in operation, and the country is quite prosperous at the present time. We are building war vessels as fast as our finances will allow, but Japan is a small country and cannot hope to keep pace with such countries as the United States. China and Russia are competing vigorously for our trade, and we must keep wide awake if we continue in the advancement which has within the last few years."

A RAILROAD TANGLE

Which Chairman Caldwell Will Try to Unravel.

R. D. Caldwell, chairman of the Western Passenger Association, arrived in San Francisco Friday morning. He will try to straighten out the tangle into which the different lines have got into over the Christian Endeavor business.

Mr. Caldwell said that he did not anticipate any difficulty, as the lines through Ogdon and the lines of the association to Colorado points had decided to refuse to accept any excursion tickets issued after the agreed selling date and had also issued bulletins to their conductors to refuse to accept Endeavor east bound excursion tickets with stop-overs. He expects the cooperation of the Southern Pacific in the carrying out of the conditions of the contracts between the roads, and anticipated an amicable adjustment of the difficulty.

The local agents do not seem to think that Mr. Caldwell will be able to accomplish anything. He will be in San Francisco about a week, and the outcome of his visit will probably determine whether an agreement entered into by the Western Passenger Association is of any force or value.

Vice-President Crocker Dead.

Col. Crocker, vice-president of the Southern Pacific railroad company, died at his home Saturday night. Young Crocker first served as a clerk in the general freight office of the Southern Pacific in San Mateo, Cal. To further advance him, the office of third vice-president of the company was created and conferred upon him. From this he rose to the first vice-presidency. His father having died, he successfully managed the estate, valued at over $20,000,000. He was popular with his associates and the general public. He died at his country home, Uplands, San Mateo county.

Wants a Rabbit's Foot.

Ex-Secretary of the Interior Hoke Smith has received from United States Consul Parker at Birmingham, Eng., a request for the left hind foot of a graveyard rabbit, to be placed in the Pitts Rivers Museum, of which Prof. E. P. Tyler is curator. Tyler, it seems, is an authority on superstitions, and has recently received an American buckeye charm against rheumatism. He needs a rabbit's foot to complete the collection, and Mr. Smith is asked to supply one that has actually been worn by a believer in the charm. Mr. Smith has advertised for it.

Colored Troops Wanted Pullmans.

Considerable excitement was occasioned at the Chicago and Alton depot at Springfield, Ill., Saturday by the colored troops, Ninth Battalion, I. N. G., Chicago, refusing to ride on their return trip in old coaches provided by the Chicago and Alton Road, claiming they were condemned and demanding Pullman chair cars. Violence was narrowly averted by the conductor giving the signal to go. The troops boarded the train as it pulled out.

Tennessee Farmer Commits Suicide.

James Freeland, a young farmer living near Chattanooga, suicided Thursday by shooting himself through the heart with a Winchester rifle. Despondency over enforced idleness was the cause. Freeland had been out of work for some time. He came with his parents from Clarksville, Tenn., to this section some time ago.

A Wealthy Cattle Thief.

John D. Harless was Saturday evening sentenced by the United States court, by Judge Homas, of Muskogee, I. T., to five years' hard labor in the penitentiary at Leavenworth, Kas. Harless was convicted of receiving stolen cattle. His sentence created a sensation, his character having heretofore been untarnished. He is estimated to be worth $60,000.

Thrust a Pencil Down His Throat.

John Scott Oliver, the California deputy sheriff, who was recently indicted in New York City for abduction, attempted suicide in the Tombs Prison Thursday afternoon. He thrust a lead pencil down his throat. He is not seriously hurt. This is his second attempt at suicide since his arrest.

Hotel Gutted.

The Rising Sun Hotel, at Altoona, Pa., was gutted by fire Friday. The servants who occupied that portion of the building where the flames originated, narrowly escaped with their lives. Loss about $20,000, covered by insurance.

Will Have Another Pugilistic Carnival.

Dan Stuart writes to his Carson agent from Chicago that he has signed Sharkey and Maher, and McCoy and Creedon for the fistic carnival in Carson this fall, and has four other fights in view which he says will be "corkers," but mentions no names.

Race Between Rival Steamers.

The Mallory Line steamer Lampasas and the new Lone Star Line steamer Miami left New York City Saturday evening on a race for Galveston under great excitement. There is fierce rivalry between both boats, which are burning rosin and taking freight at the lowest rate ever made.

SOMETHING NEW

For the public in general to rest their eyes on. Our fine new stock of General Merchandise is very pleasing to the eye. New Goods, such as were never brought into Chilton county before. We have everything the housewife desires to do good cooking with. We have not only good, fresh groceries, but a fine line of Dry Goods, Hardware, Farm Implements and everything that can be expected in a first-class

SUPPLY STORE.

We are Money Savers for the people, "Low Prices and Good Goods" is our motto. All kinds of farm produce bought.

HOME HITS AND HAPPENINGS.

NEWS BOILED DOWN AND ADMINISTERED IN BROKEN DOSES.

What came near being a fatal accident occurred at the lath mill, Wednesday morning. While sawing shingles something went wrong with the saw and Nels Johnson climbed down under the machinery while it was in motion to make the necessary repairs. His clothing got caught, and in trying to extricate himself he came in contact with the saw. A large gash was cut across his back, a part of the flesh torn off of his shoulder and the bone in his wrist crushed to splinters. Drs. Givhan and Stewart were called and after several hours work had the patient resting as well as could be expected. Mr. Jonson is now lying very low at his home, but the indications are that he will recover.

An L. & N. excursion train will be run from Birmingham to Pensacola, Fla., Sunday, Aug. 1. This train will leave Birmingham at 7.30 a. m., and will stop at Thorsby at 9.05 a. m., arriving in Pensacola at 5 p. m. Returning will leave Pensacola at 9 p. m. Monday evening. This will give a part of Sunday and all day Monday in Pensacola. The return trip ticket from Thorsby will only cost $2. This is the cheapest excursion ever run on the L. & N. and everyone should take advantage of it.

J. F. Peterson, Secretary of the Concordia Land Company, left here last Thursday for the North. He will first go to Des Moines, Ia., and from there will travel through the Northwestern States for about six weeks. Mr. Peterson goes North in the interest of the Company, and when he returns will no doubt bring a large number of Northern people to Thorsby with him.

Miss Eliza Gay, a girl of 15 years, who made her home with the Benson family, one mile from town, took a dose of morphine, with suicidal intent, on Monday evening and died on Tuesday. An examination made by the doctor after her death, showed that she was expecting trouble.

C. A. Peterson has commenced laying the foundation of a new residence which he will build on the vineyard tract that he recently purchased of the Concordia Company. As soon as the building is completed he will send North for his family.

W. H. Wilson, of Lomax, has been re-appointed United States Commissioner for this district. Mr. Wilson is a staunch republican and has done a great deal of hustling for his party. He rightfully deserves the appointment.

One of the handsomest structures in the county is W. L. Sampey's new brick store building in Clanton, which will, in a few days, be ready for occupancy.

The following is a fair sample of a great many letters that are being received at Thorsby, and ought to be a very strong argument as to whether the farmer can find sale for his products, after going into the fruit raising business:

Chicago, Ill., July 7, 1897.

Mr. A. M. Johnson, Thorsby, Ala.:

Dear Sir—Will there be any shipments of grapes, peaches or pears from your section this year? Kindly advise us at your earliest convenience. We should be glad to handle shipments of this kind, and feel that for your early shipments we should be able to offer you some encouragement.

EARL BROS.,
Commission Merchants.

RAILWAY SYSTEM TIED UP.

No Street Cars Are Running in Saginaw, Michigan.

The Saginaw, Mich., street railway system was completely tied up Saturday as a result of a several months' fight between the city and the Union Street Railway Company, which culminated recently in a decision by the supreme court, sustaining the right of the city to take any measure to compel the railway company to settle for certain special improvement taxes. Following this, the common council declared the company's franchise forfeited. Action like of that of Saturday was not expected, however, until later. During Friday night the police placed a big steam road roller across the car tracks leading to the main lines and are guarding the machine against any molestation. The bondholders and stockholders of the company have vainly tried to agree on a basis of settlement of the trouble, the bone of contention being a debt of $45,000, which the bondholders were unwilling to assume.

CONDITION OF TRADE.

EVERY FEATURE OF THE BUSINESS OUTLOOK ENCOURAGING.

Wheat Closes Four Cents Higher for the Week—Speculation in the Wool Market Continues—A Slight Decrease in Failures Against that of Last Year.

R. G. Dun & Co's. weekly review of trade, issued Saturday, says:

Excepting the great coal miners' strike, which may terminate at any time, there is scarcely a feature of the business outlook which is not encouraging, the season considered. Crop reports have been improved by needed rain in some regions and foreign advices continue to promise a large demand. In many home industries, particularly in building, there is more activity than in any year since 1892, and the week has brought a better demand in boots and shoes and in woolens, while the movement in freight, mainly iron ore, through the Sault Ste Marie canal is the largest in its history. With money markets unclouded, there is nothing in sight to hinder rapid improvements when uncertainty about legislation has been removed, for the miners' strike could not last long if business and industries should become active. There is much less apprehension of a failure of fuel supply than there was during the first few days, when prices rapidly advanced, and large quantities of coal from West Virginia have reached Northern markets, but some of the miners in that State have struck.

The advance of wheat to 81 1-8c was not due to the government estimate, which was followed by a decline, but to foreign advices and considerable buying for export. Demand is already felt from Australia, South Africa, Brasil and even Argentina, while the prospect for European crops is not considered bright. The disposition of farmers to keep back wheat for higher prices may affect the outward movement, but Atlantic exports during the month of July, flour included, have been 3,115,343 bushels, against 2,953 last year. Wheat closed 4c higher for the week and corn half cent higher. Cotton is one-sixteenth higher, the closing or partial stoppage of important New England mills hardly neutralizing in market estimation the apprehensions of injury from drouth. The cotton goods market does not yet reduce the accumulated stocks, as the curtailment of production shows, but is growing a little more healthy, without a change in prices. Woolens for the coming season have not been generally shown, though on some low priced goods advances of 7½ per cent. are asked and presumably will be asked on better grades. There is rather more business in re-orders, and the tone is more confident. Speculation in the wool market continues, with prices at all points stronger, at Boston advancing with signs of a boom among dealers, in which manufacturers are taking little part at current prices; and at the west, where holders are looking for a great advance. Imports at Boston were 28,862 bales in the two weeks and the dealers are said to have bought 100,000 bales more in London. Sales were 10,452,300 at the three markets for the week and 24,575,800 in two weeks, of which 12,607,200 were domestic. The output of iron furnaces July 1 was 164,064 tons weekly, against 168,380 June 1, but several furnaces have gone into blast since July 1, and the output is large for the season. Presumably an unprecedented share of it is to supply the great steel companies, which are even now putting more furnaces into blast, and have heavy orders taken when prices were dropped while the demand for structural shapes and plates is large, and for bars improving, though steel bars are now at the lowest quotation ever known in Pittsburg, 87½ to 90c, with Bessemer pig quoted slightly lower.

Tin plates are also lower at 3.10 for full weight and less than $3.00 is paid for one hundred pound boxes. Failures for the week have been 268 in the United States, against 269 last year, and 27 in Canada, against 39 last year.

Steamer Sinks.

The steamer James Montgomery sprung a leak and sank in shallow water at one o'clock Friday morning at Madison, Ind.

Deadly Sink Holes in the Beach.

The body of Chas. Williams, who was drowned Friday night while bathing in the Gulf at Galveston, Texas, has not been recovered. He was a native of Leeds, Yorkshire, England. He was thirty-three years of age, and leaves no children. This makes six lives that have been lost in the Gulf since the bathing season opened here by sink holes in the Gulf.

Hanna Will Take a Hand.

Senator Hanna has replied to the request of the State arbitration commissioners asking his assistance in settling the coal strike. His response was that he would be very glad to cooperate in a settlement and that a representative of his was now on the ground, ready to act and forward a settlement.

HID HIS CONSCIENCE.

Opposed to Tobacco as Sinful, He Sells His Plant and Retires With a Fortune.

Major A. D. Reynolds, of Bristol, Tenn., who has made more than half a million dollars net profit as a tobacco manufacturer during the last twenty years, sold his plant Saturday to a syndicate of local capitalists for $30,000 and will retire from business. The sale was due to Major Reynolds' religious and temperance convictions. He has long advocated the prohibition of the sale of spirituous liquors, and finally came to regard the tobacco business as incompatible with his religious life.

HOUSE BUILDING

Is the order of the day in Thorsby. We are now prepared to keep up with the procession. Our new planing mill, which has recently been put in, and is now run in connection with our saw mill, enables us to furnish all kinds of lumber for building purposes. Our prices are more reasonable than those of others, and, being prepared to turn out an order on short notice, we can save the builder a large amount of inconvenience and expenses. By buying at home you have no freight to pay and you are helping along home industries. We also are prepared to ship lumber by the car load or in small quantities.

Drennen & Co.,

BIRMINGHAM, ALA.

A NEW AND NOTABLE COLONY.

THORSBY AS SEEN THROUGH THE SPECTACLES OF OUTSIDERS.

WHAT A LEADING MAGAZINE OF SOUTHERN PROGRESS SAYS CONCERNING OUR COLONY

In Speaking of the more prominent and progressive points in this section, The Illustrated South, of Birmingham, Ala., has the following to say of Thorsby:

A number of Northern colonies have been founded in the South within the last double decade, and we know of none that has failed to realize the brightest dreams of its promoters.

Thorsby is one of the newest and most notable of these colonies, and merits special mention because it is more advanced for its age than any of its competitors. In fact, it is a fin de siecle revelation in the matter of community building, and we know of no place in the wide and wonderful sweep of our Southland that possesses a more promising future.

It is situated in the highlands of central Alabama, on the picturesque and prolific Chilton plateau, and has direct communication with the seaports of the South and the markets of the North through the medium of the Louisville & Nashville Railway, one of the great grand trunk lines of our continent.

Speaking of Thorsby a recent writer remarks:

"In June, 1896, Messrs. Thorson and Peterson came to this country on a prospecting expedition, and finally decided to settle their colony on the present site (in Chilton County, Ala). It was several months before any work was begun, but within the last eighteen months a beautiful village and settlement has sprung up like magic. The Concordia Land and Improvemnt Association was organized, with Mr. Thorson as President, and Mr. Peterson as Secretary. They bought up about 2,500 or 3,000 acres of this land, laid off a town into lots and the surrounding country into ten acre blocks and at once began improvements, naming the new settlement Thorsby. Every obstacle vanished before the hand of energy, pluck and industry, and now there are at Thorsby a fine hotel, three stores, a postoffice, a newspaper, a saw-mill, a shingle and lath mill, blacksmith-shop, two churches and a two-story school-house, about thirty-four dwellings and as many families, and more coming all the time. A green-house and experimental garden is a new feature for this year, at which I saw tomato-plants a foot high. This colony seems to be making grape culture a specialty, and now have about 80 acres in grapes, and I understand, are putting out this Spring 18,000 cuttings. Young orchards are being set with all kinds of fruit, the houses are substantial and well-built, mostly two story. The urgent need now is a canning-factory, and negotiations are pending looking toward the establishment of one in the near future."

The Concordia Land and Improvement Association, spoken of in the foregoing excerpt is incorporated under the laws of Alabama, possesses a capital of $150,000, and has land for sale in all directions from Thorsby—some of it adjoining the town limits and some of it further out to a distance of nine miles.

From a booklet lately published by the Association we learn that "this land is of different varieties, but it is all very productive. Some parts are level, while other parts are more rolling. That which is not under cultivation is covered with timber of many different varieties, such as the long leaf yellow pine, all kinds of oak, hickory, chestnut, persimmon, poplar, beech, all kinds of gum trees and black walnut.

"Therefore fuel costs nothing but the labor of cutting it, and lumber is very cheap. Good, fine, hard pine lumber is bought here for only $5 to $7 per 1000 feet. This growth of timber sufficiently shows the good quality and strength of the soil. The Association has some improved farms for sale at very reasonable prices. It has the land surveyed in tracts of from ten to eighty acres each, so that the purchaser may have his choice also in this respect, but it is to be remembered that twenty acres of this fertile farm and fruit land is a good-sized farm, because the crops are so abundant. Each tract of land has a road laid out at least on one side."

The proximity of Thorsby to the Gulf, and the fact that it is 700 feet above tide-water, combine to make its climate ideally equable. It is never too hot, never too cold, and one season melts into another with none of the abruptness that is so unpleasantly common in the higher latitudes. This fact, together with the absolute absence of malaria, and the purity of the freestone water, combine to make this locality one of the healthiest that can anywhere be found.

The soil of Thorsby and Chilton county cannot be surpassed for fertility. They are of the rich, dark, grayish, red and brown loam lands, with a proper mixture of sand on a clay subsoil, and are adapted for general farming, stock-raising and fruit-growing.

Where the North can only raise one crop of corn, potatoes and other hardy products in a year, this part of the South can raise two, and can raise, at the same time, cotton, sugar-cane and all the other semi-tropic staples, to say nothing of fruit!

Let the new-comer select a spot like Thorsby for his home, let him set to work with a stout heart and a steady hand, and he will find that Fortune will change her favors to smiles and reward him according to his deserts, no matter what they may hap to be.

THE FARM AND GARDEN.

Items of Interest on Agricultural Topics.

Millet as a Catch Crop—Poultry in French Orchards—Bottom Heat for Planting, Etc., Etc.

MILLET AS A CATCH CROP.

Millet is a valuable catch crop; can be sown late and yet give a large yield of good hay if cut in season—about the time the seeds form and before they are sufficiently matured to grow—and the hay properly cured and secured. Bipe millet makes poor hay, the nutritive elements having entered the seed, which, by the way, should never be fed to horses because of its effect upon the kidneys. —The Epitomist.

POULTRY IN PEACH ORCHARDS.

Except when its fruit is ripening, the peach orchard will not be injured, but only benefited by being made the free range for fowls. If the soil around the tree is kept loose, and an occasional handful of grain thrown in, and covered, the fowls will spend much of their time scratching around the trees, and will effectually prevent the borer from depositing its egg. The hens like a change of diet, and with some grain will eat all kinds of insects they discover in the soil or around the trees.

BOTTOM HEAT FOR PLANTING.

The difficulty with early spring planting is always because the soil is too cold. This causes the seed to germinate too slowly. But so soon as the seed begins to sprout warmth is generated by the act. Carbonic acid gas is developed, and this aids in making the soil warmer. Hence the advantage of putting some manure under the seed when it is planted early, so as to hasten germination. There is the further advantage of doing this early in spring, because the abundant rains that fall then make the manure soluble, and greatly increase its effectiveness.

STOCK IN RAINY WEATHER.

Stock at pasture in summer often suffer more from cold in wet weather such as we have lately been having than they do from the cold of winter. The constant evaporation of moisture which is hastened by the warmth generated by the body chills the skin, and gives the animal what is known as cold, but is really internal fever. Milch cows and those heavy with young suffer most, as they cannot so well run around and thus keep their blood circulating. Every farmer has noticed that after rain has fallen all day the milk yield shrinks if the cow has been exposed to the wet. For this reason a shed in the pasture field may be a good investment. Better still is it to get the cows up to the barnyard under shelter and cut some grass for them, giving a bran mash to increase the nutrition. Wet grass in field or cut does not have the proportion of nutriment to its bulk that the same grass has in dry weather with only its own natural juices in it.

ODOR IN MILK.

To determine whether an odor in milk is due to bacteria or otherwise, writes F. W. Mossman, set a pail of the milk at a temperature of say seventy degrees in a room known to be free from odor. After three or four hours go to the milk, stir it briskly, and notice whether the odor has increased or not. If the former, then the trouble is of bacterial origin. If the latter, it is an odor from some outside source and can probably be traced to the stable or milk room. At all events clean everything thoroughly. If the cause is bacteriological, that is, there is an undesirable ferment present in the milk and the cleaning does not remove it, go to some one who has milk that is known to be all right. Get a quantity after it has become sour, bring it home and put a little into all the pails, vats, strainers, churn, etc. In fact, wash them in this sour milk, leaving some in to act as a starter to correct the bad fermentation when more milk is introduced. The most troublesome ferments may be got rid of by such a course. Bad ferments betoken uncleanly work. By far the best of all remedies is prevention, and prevention is obtained by cleanliness.

COW PEAS FOR SEED.

Before harvesting let the pods of the peas get fairly dry, but do not allow them to stand until shattering will result. Of course all will not ripen evenly. Some pods will bedry before there are fully formed. Judgment must be used as to the exact time of cutting. Peas do not shatter very readily, so it is best to let them get pretty thoroughly ripened. Cut with a mower, rake up and pile in small cocks until the vines have dried. If the weather is not rainy or damp they will dry out completely. But it is best to haul to some clean shed or the barn and spread out on the floor or stake until threshing time. If there is any tendency to mold, turn over occasionally. With dry air there will be little difficulty in getting them thoroughly dried.

If a bean thresher is owned in the neighborhood, run the peas through this and they will come out cleaned and ready for storing. The straw will probably be so wooly that stock will not eat it readily, but put it somewhere in the feed lot so that the animals may pick it at will. If no regular bean thresher is available, an ordinary wheat thresher can be used by taking out about half the concave, then properly arranging the screens. If a barn floor is available, the peas can be tramped out with horses and cleaned with a fanning mill. This, of course, is a somewhat tedious process, but where only a few bushels are wanted for seed it answers very well.

Store the peas in a dry place, putting in sacks or bins. If there is any danger from the pea or bean weevil, put into a tight bin, or better, a tight box and place an open vessel containing carbon bisulphide on the top. The bisulphide being heavier than the air, will settle down through the peas, effectually destroying all insect life.—New England Homestead.

HARVESTING OATS ON A SMALL SCALE.

I like to cut oats before they are fairly ripe. If harvested when the kernels are just beginning to harden, the straw will be almost as good to feed as hay and the grain will be bright and rich, says F. L. Vincent, of New York.

I usually let my oats lie in the swath for a day or two, until well dried out. Then they are raked, bound and set up in shocks of ten bundles. There is room for a great deal of care in this part of the work. Grain carelessly put up will in stormy weather become wet easily. My way is to set up eight bundles "two and two." Then I take two bundles and standing them on the butt end, split them by pulling the heads down toward the ground until half the bundle has been treated in that way. Then I turn the handles over the top of the shock, one on one end, and one on the other, butts together. These form a cap which will, after fairly settled, greatly protect the shock from injury by storm. Some hold the bundles against their bodies while preparing them for caps, and others bind part of their bundles with the band nearest to the butt, and use these for caps. No doubt they do make better caps. The Dutch cap is made by setting the bundles in a round shock, and opening one large bundle so that it will stand with the butt upward, covering the entire top of the shock. This is a good way to put up grain.

After the grain has stood for a week or two, depending upon the weather, it will do to go in. If the shocks seem damp, it may be necessary to set them apart for a few hours in the sunshine.

Of course, if one has a large crop, and uses a reaper and binder, it may be necessary to let the grain stand a little longer before cutting, but even then it may be done before the crop is dead ripe. It will not shell then, the grain will be much finer, and the straw a great deal nicer. Oat straw is coming to be valued much more highly than formerly. It used to be common to see great stacks of straw rotting or burning down in the field or near the barn. We have learned that straw has a good market value, and that we may add many dollars to our receipts for the year by cutting oats early and properly caring for them.

PREPARE EARLY FOR DROUTH.

Almost every season, no matter how abundant the supply of moisture in the early months, there comes a period of drouth in July, August or early September which shortens many crops, taking away all the profit. The effect is usually more noticeable if the drouth follows a spring and summer marked by excessive precipitation, for the ground has been packed by the heavy beating of the rain and the chances are that in the anxiety to get to work in the spring, the fields have been plowed and harrowed while wet. Such land is in poor condition to withstand dry weather later in the season unless very judiciously handled. If the rain should continue throughout the season, of course there will be little need of special treatment, but this condition of affairs seldom exists.

The best possible preparation for drouth is to plow the ground to a good depth, thoroughly pulverize the seedbed, compact it and then with a light harrow loosen the upper two or three inches of soil.

For small grain crops as well as newly seeded grass fields, this is about all that can be done. In other words, the drouth has to be prepared for entirely before seeding with these crops. But not so with corn. The method of culture has much to do with the ability of the crop to withstand drouth. Cultivate as little and as shallow as possible consistent with the keeping down of weeds and preservation of a dust mulch. It is a common error to cultivate deeply the first time, but if the corn has attained a height of four or five inches, roots a foot or more long will have been formed and many of these will be broken by the cultivator shovels if they are run deep the first time. The best way for the grower to convince himself of this is to trace out the root systems of corn plants at different ages. It will be an object lesson and do more to prove the necessity of shallow culture than hours of scientific explanation.

Cultivate the corn as often as the surface becomes compact. This may seem unnecessary at times, but determinations of soil moisture in fields stirred frequently and those given ordinary cultivation show that the frequent stirring conserves water much the best and the crop yields are correspondingly greater. After the crop is "laid by" a heavy beating rain will frequently form a hard crust, to the great detriment of the corn plants. If this crust can be broken up the increased yield will more than pay for the labor. This work can only be accomplished by using some implement that one horse can draw, so that the rows of tall corn will not be injured. One section of a spring toothed harrow answers very well. There are several single cultivators on the market which do the work very nicely. Where corn is raised on a large scale, this loosening the surface soil after the crop is too large for the cultivator is seldom practiced, but it pays, and in neglecting this one of the great leaks on the farm remains unstopped.

With small fruits and orchards the cultivator or weeder, the latter consisting of a beam to which is fastened a large number of springy, heavy wire teeth, must be kept going from spring until fall, at least until the fruit has been gathered. Blackberries and raspberries are especially susceptible to drouth and require particular attention. Young orchids and nursery stock, thrive best when given such treatment, and the same is true of currants and gooseberries.

Gardens flourish under the same treatment. As a rule, garden soils are in very high tilth and do not suffer so much from lack of careful culture in dry weather. Where the soil is very loose and friable it may be necessary to compact it, then loosen up the surface to prevent evaporation. A constant stirring will prove beneficial to those garden crops which grow through the late summer months.

TALES ABOUT TABBY.

In Naples cats are kept in the many churches to catch the mice that infest them. They are supported by the authorities, and they may be often seen during the services sometimes walking sedately before the altar during mass or purring at the feet of the worshippers.

A cat was brought to Shelbyville, Ind., some months ago from Topeka, Kan., but becoming dissatisfied with its new location went back to his old home, performing the journey on foot, a distance of 600 miles.

Some time ago a learned professor made the important announcement that cats possess a distinct language which he declared is much like that of the Chinese, being "musical, mellifluous, and pleasing to the senses." He claimed to have discovered sixty primitive words in the cat language, and spent most of his nights in the back yard looking for more.

The cats on the Isle of Man have no tails. This singular circumstance is accounted for by a tradition which says that a cat while going on an errand of mercy had its caudal appendage seized by the devil, who pulled that member off close to the body. Since that time Manx cats have been tailless.

Solomon is said to have had a cat which he taught to hold a candle so that he could read at night. One evening while thus engaged an attendant entered with some mice, which he liberated in the room. When the cat saw them she gave chase, candle in hand, but, finding she was very much handicapped, she threw the light on the floor, leaving the wise man in darkness, while she proceeded to the extermination of the rodents.

In Lorraine, if parents wish to discourage the addresses of a young man to their daughter, they send him a kitten. But sometimes love laughs at kittens as well as locksmiths.

According to Australian mythology, the moon was formerly a cat, who fell in love with another man's wife, was discovered and beaten by the injured husband, and ran away and has been wandering ever since.—Chicago Tribune.

Caffed by a Rooster.

At Ansonia, Conn., mail carrier Charles Rotteck had a lively experience while delivering mail. He is frequently warned to be cautious as he approaches houses on his route, owing to dogs and playful boys, but never had he been tackled by fowls. The moment he opened a gate a large Plymouth Rock rooster flew at him and jabbed one of its large spurs into his left side. A drop of blood was drawn, and Rotteck had a lively battle with the pugnacious fowl before he left the walk.—New York Telegram.

A Brainy Estimate.

If the entire population of the world is considered to be 1,400,000,000, the brains of this number of human beings would weigh 1,922,712 tons, or as much as 96 ironclads of the ordinary size.

HUNTING THE JAGUAR.

A ROYAL SPORT THAT IS ENJOYED IN VENEZUELA.

The Natives Use Only a Short Stabbing-Spear to Kill the Ferocious South American Tiger—A Plucky Indian's Exploit.

The July Century has several articles devoted to the hunting of big game. One of them is "Hunting the Jaguar in Venezuela," written by William Willard Howard. Mr. Howard describes the method of the native hunters in killing the jaguars with short spears, and relates the following experience of his native guide:

In a moment a great brown-and-yellow beast, spotted and ringed with black, strode leisurely into view, looking upward at the screaming birds. It was the fierce and cruel jaguar, the South American tiger, king of all beasts south of the Isthmus of Darien, and matched in ferocity and courage only by the wounded grizzly bear of North America.

The monstrous creature suddenly paused, with a massive foot lifted from the ground. He had seen the hunter.

Trife was as one turned to stone, a sort of bronze image that might have stood neglected in the wilderness since the days of the Chibchas, whom Quesada conquered to found the viceregal state of New Granada.

The tiger's long tail swung slowly from left to right, and from right to left again, while over his yellow face crept a look of mild surprise and inquiry, as though he had asked the meaning of this strange thing which had the figure of flesh and blood and the inscrutable stillness of inanimate rock.

It was splendid courage that this dumb brute did not turn tail and bound away. I know of no other animal that would have stood his ground. Even the grizzly bear, more terrible to meet than the lion of Africa or the monarch of the Bengal jungle, would have growled savagely and retired.

Matchless in his calm courage, the great jaguar put down his uplifted paw and advanced a few steps, half crouching, with lowered head and neck, as a cat creeps upon its prey. Then he paused, swinging his long tail slowly from side to side. Terife stood like a stone, superior in courage even to this remarkable ruler of the forest.

Slowly, cautiously, the tiger came on again, hanging his head and neck low between his shoulders, and never for an instant taking his green-and-yellow eyes from the strange thing in the path. He was a beautiful creature—wonderfully beautiful in his sinewy strength and graceful curves.

As the tiger drew near, a step at a time, his tail swung more rapidly, with a vicious jerk at the end of each swing. Apparently he was giving way to the idea that the strange thing in the path was flesh and blood. Still, he was not quite certain, and he meant to investigate. The Indian had seemingly petrified where he stood. Not even the loose folds of his cotton shirt stirred in the breeze. The birds circled and wheeled for a few moments, and then flew away, caring little for the impending death-grapple, now that their own domestic arrangements were no longer imperilled. Puzzled, undecided, watchful, the tiger walked slowly to the hunter, his green eye searching craftily for some undetected sign of life. When he had come to the end of his uncertain path the yellow monster bent his head and sniffed suspiciously at the Indian's feet.

Like a steel spring the great beast recoiled. The strange, still thing was flesh and blood.

A step at a time—alert, wary, fierce—he withdrew his massive paws, measuring the distance with the savage instinct of the forest. The Indian made no sign.

Then the tiger crouched in the path; his giant muscles quivered in tense knots, his red tongue curled stiffly between his keen fangs, his tail thrashed viciously, and his spotted skin moved in bristling waves of anger, as a quick squall races across standing grain.

In an instant all would be over: a lonely tragedy far away in the South American wilderness—a tragedy for beast, or a tragedy for man.

The tiger gathered himself for the spring, his sinewy length all a-tremble; but just as his bunched muscles were quivering with the first impulse of upward motion, the hunter came back to life. Terife snatched the loose handkerchief from his neck, and cast it full in the tiger's face. In an ecstasy of surprise the beast threw up his head and shoulders, and pawed insanely at the cloth. In the catching of a breath Terife aimed the upraised spear at the rounded yellow throat, and drove it home.

Tiger and spear rolled in the dust together, the blood spurting over the spear-shaft and staining the narrow trail. The king of the Cordilleras was conquered. He died as he had lived, fierce, cruel, savage, with no abatement of his splendid courage.

Married Seventy Years.

On May 4th the Rev. Andrew Patrick and his wife, Olivia, of Grays, Knox County, Kentucky, had been married exactly seventy-two years. Both are in good health and in enjoyment of all their faculties. He is ninety-two years old and she is eighty-six. He has living descendants in the fifth generation.

Mr. Patrick was born in North Carolina in 1805, and at an early age he moved to Tennessee. At Elk River, that state, he met his wife, then Olivia Minor, and they were married when she was a little less than fifteen years old.

Thirteen children were born to Mr. Patrick and his wife, six boys and seven girls. The oldest of their children is now seventy. He, like his father, is a Baptist minister.

The Rev. Andrew Patrick has 428 living descendants. There are 104 grandchildren, 304 great grandchildren, and 20 great-great-grandchildren. He has a grandson fifty-three years old, who has grandchildren five or six years old.

Mr. Patrick has been preaching for sixty years, and during that time has had many interesting experiences.—Winston (N. C.) Sentinel.

ANTS BURY THEIR DEAD.

An Exhibition Showing the Admirable Municipal System of the Insects.

Among the million and one attractions which will be offered this Summer in London to charm the festive shillings out of the pockets of sightseers there will be none more interesting in its way than the exhibition of the Working Ants at the Crystal Palace.

The domestic economy of ant life is wise and well considered, and as builders the ants are possessed of an acumen which is nothing short of marvelous. Columns erected in their architecture are almost round. In the great hill of the formica rufa one sees that the pine needles which are used in its construction are placed at various angles to give strength to the dome, exactly as a human architect would have employed them. It is estimated that fifty thousand ants comprise the community of this great nest, and all are busy constantly, their labors never seeming to cease. The structure contains an enormous number of chambers for the accommodation of the larvae, pupae, cocoons, queens and males.

The heaviest of the ants' labor is in attendance on the larvae and pupae in the interior chambers. Therefore of all this densely populated city of 50,000 inhabitants but few are seen outside. The apterous, orwingless queens, remain in state in their commodious chambers at the bottom of the nest, and are never seen in public; but a heavy duty with the workers is to drag the winged males for a promenade outside the nest for a few turns and then disappear.

The strength of these ants is enormous. The pine needles which are furnished them for building are ten times longer than themselves, but the ants move them about with the greatest ease. An entomologist in attendance at the show will pick up any one of these ants as it runs about in its work and will cause it to hold by its mandibles a weight three thousand times heavier than itself, or equal in proportion to a man holding two hundred tons in his teeth. These ants secrete great quantities of formic acid. Chloroform was at one time distilled from the formic acid furnished by the formica rufa.

The hill ants are of great service in preserving forest trees, it being estimated that one hundred thousand insects are destroyed daily by one nest of this species.

An ant has two compound and three simple eyes. The number of facets in the compound eye reach twelve hundred in the male of the formic species. The life of a male ant rarely exceeds twelve months, but a worker has been known to live seven years. Ants have memory and affection; they recognize their friends after long absences. Sir John Lubbuck speaks of an ant which recognized him with signs of pleasure after an absence of two years.

The queen of the white ants is often four inches in length, three ounces in weight, and has been estimated to lay eighty thousand eggs per day. These eggs are very small, just discernible to the naked eye, and are immediately taken charge of by the workers, who make them into clusters of ten to twenty, so that one ant may carry a number into safety, in case of the nest being attacked.

Origin of the Races.

The Bible says the whole human race sprang from the individual, Adam. Virey affirms there were two original pairs. Jacquinot and Latham divide the race into three primordial stocks; Kant into four; Blennanbach into five; Buffon into six; Hunter into seven; Agassiz into eight; Pickering into eleven; Bory St. Vincent into fourteen; Desmoulins into sixteen; Morton into twenty-two; Crawford into sixty and Burke into sixty-three. Now comes Quartrejages, the French ethnologist, who says all mankind came from a central mass in Northern Asia, and that there were three fundamental types—black, white and yellow, which scattered over the world and intermingled, forming, in course of time, seventy-two distinct races of human beings. The world is waiting for another opinion.

We invite all the good people who desire to change locality to come and see our lovely place.

Another Vanderbilt scion has married a chorus girl. The trouble is not with the rich young men of New York, but with the rich young women. They must be hopelessly homely or hopelessly stupid, else they would never be cut out by chorus girls.

Woman in the East.

An old Arab proverb declares, "The best son-in-law is the grave." You cannot insult a Moslem more than to ask after the health of his wife.

If a woman is so much as mentioned in conversation, even though she may be the speaker's own wife, politeness requires one to add the words, "May God elevate you"—that is, above the contamination of such a subject. The same expression is used after the mention of a dog, a donkey, a pig, or a shoe, all of which are held vile and unclean. Nor is this feeling confined to Mohammedans. Doctor Jessup tells how a Greek Christian in Tripoli came applying for help to an American physician. Said he:

"There is a woman here who is ill. I beg your pardon for mentioning so vile a subject to your excellency."

"Who may it be?" inquired the doctor.

"May God elevate you, it is my wife."

Dr. Jessup also tells of overhearing the following conversation between a Mohammedan and Doctor Van Dyck:

"Your excellency must be aware that I have a sick man at my house. May God grant you health! He has pain in his back, headache, and he will not eat."

"Has he any fever?"

"A little."

"I will come and see her this afternoon, perhaps."

"May God increase your goods."

Men tire of everything else; it is a wonder they do not tire of life.

If It Only Helped a Little

It would be worth 50 cents. One hour's freedom from the terrible irritating itch of tetter is worth more than a whole box of Tetterine costs. It will cure—sure, and it's the only thing that will cure. 50 cents at drug stores, or by mail from J. T. Shuptrine, Savannah, Ga.

Over 700 people assembled near Atchison to engage in a wolf hunt. They captured about 200 jack-rabbits, but not a wolf was seen.

If afflicted with sore eyes use Dr. Isaac Thompson's Eye-water. Druggists sell at 25c. per bottle.

Albert Burch, West Toledo, Ohio, says: "Hall's Catarrh Cure saved my life." Write him for particulars. Sold by Druggists, 75c.

Mrs. Winslow's Soothing Syrup for children teething, softens the gums, reducing inflammation, allays pain, cures wind colic. 25c. a bottle.

Piso's Cure for Consumption is an A No. 1 Asthma medicine.—W. R. WILLIAMS, Antioch, Ills., April 11, 1896.

Fits permanently cured. No fits or nervousness after first day's use of Dr. Kline's Great Nerve Restorer. $2 trial bottle and treatise free DR. R. H. KLINE, Ltd., 931 Arch St., Phila., Pa.

DULL ACHING PAINS

Palpitation of the Heart—All Cured by Hood's Sarsaparilla.

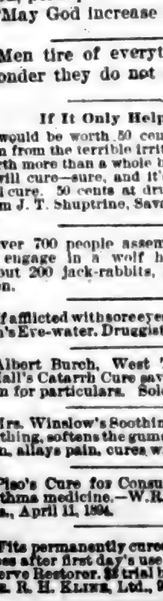
"I was troubled with a dull aching pain in my right kidney, and I also had palpitation of the heart. I began taking Hood's Sarsaparilla and since then I have never been troubled with either of these complaints. Hood's Sarsaparilla is also helping my wife very much." H. B. SCOTT, Mariboro, New York. Remember

Hood's Sarsaparilla

Is the best—in fact the One True Blood Purifier.

Hood's Pills cure indigestion. 25 cents.

A COOL BOTTLE



of Hires Rootbeer on a sweltering hot day is highly essential to comfort and health. It cools the blood, reduces your temperature, tones the stomach.

HIRES Rootbeer

should be in every home, in every office, in every workshop. A temperance drink, more healthful than ice water, more delightful and satisfying than any other beverage produced.

Made only by the Charles E. Hires Co., Philadelphia. A package makes 5 gallons. Sold everywhere.

Wanted—An Idea Who can think of some simple thing to patent? Protect your ideas; they may bring you wealth. Write JOHN WEDDERBURN & CO., Patent Attorneys, Washington, D. C., for their $1,800 prize offer and list of one thousand inventions wanted.

GET RICH quickly. Send for "300 Inventions Wanted." EDGAR TATE & Co., 345 B'way, N. Y.

Am. N. U. No. 29. 1897.

PISO'S CURE FOR CURES WHERE ALL ELSE FAILS. Best Cough Syrup. Tastes Good. Use in time. Sold by druggists.

Mr. Patrick was born in North Carolina in 1805, and at an early age he moved to Tennessee. At Elk River, that state, he met his wife, then Olivia Minor, and they were married when she was a little less than fifteen years old.

Thirteen children were born to Mr. Patrick and his wife, six boys and seven girls. The oldest of their children is now seventy. He, like his father, is a Baptist minister.

The Rev. Andrew Patrick has 428 living descendants. There are 104 grandchildren, 304 great grandchildren, and 20 great-great-grandchildren. He has a grandson fifty-three years old, who has grandchildren five or six years old.

Mr. Patrick has been preaching for sixty years, and during that time has had many interesting experiences.—Winston (N. C.) Sentinel.

ANTS BURY THEIR DEAD.

An Exhibition Showing the Admirable Municipal System of the Insects.

Among the million and one attractions which will be offered this Summer in London to charm the festive shillings out of the pockets of sight-seers there will be none more interesting in its way than the exhibition of the Working Ants at the Crystal Palace.

The domestic economy of ant life is wise and well considered, and as builders the ants are possessed of an acumen which is nothing short of marvelous. Columns erected in their architecture are almost round. In the great hill of the formica rufa one sees that the pine needles which are used in its construction are placed at various angles to give strength to the dome, exactly as a human architect would have employed them. It is estimated that fifty thousand ants comprise the community of this great nest, and all are busy constantly, their labors never seeming to cease. The structure contains an enormous number of chambers for the accommodation of the larvae, pupae, cocoons, queens and males.

The heaviest of the ants' labor is in attendance on the larvae and pupae in the interior chambers. Therefore of all this densely populated city of 50,000 inhabitants but few are seen outside. The apterons, orwingless queens, remain in state in their commodious chambers at the bottom of the nest, and are never seen in public; but a heavy duty with the workers is to drag the winged males for a promenade outside the nest for a few turns and then disappear.

The strength of these ants is enormous. The pine needles which are furnished them for building are ten times longer than themselves, but the ants move them about with the greatest ease. An entomologist in attendance at the show will pick up any one of these ants as it runs about in its work and will cause it to hold by its mandibles a weight three thousand times heavier than itself, or equal in proportion to a man holding two hundred tons in his teeth. These ants secrete great quantities of formic acid. Chloroform was at one time distilled from the formic acid furnished by the formica rufa.

The hill ants are of great service in preserving forest trees, it being estimated that one hundred thousand insects are destroyed daily by one nest of this species.

An ant has two compound and three simple eyes. The number of facets in the compound eye reach twelve hundred in the male of the formic species. The life of a male ant rarely exceeds twelve months, but a worker has been known to live seven years. Ants have memory and affection; they recognize their friends after long absences. Sir John Lubbock speaks of an ant which recognized him with signs of pleasure after an absence of two years.

The queen of the white ants is often four inches in length, three ounces in weight, and has been estimated to lay eighty thousand eggs per day. These eggs are very small, just discernible to the naked eye, and are immediately taken charge of by the workers, who make them into clusters of ten to twenty, so that one ant may carry a number into safety, in case of the nest being attacked.

Origin of the Races.

The Bible says the whole human race sprang from the individual, Adam. Virey affirms there were two original pairs. Jacquinot and Lathac divide the race into three primordial stocks; Kant into four; Blennanbach into five; Buffon into six; Hunter into seven; Agassiz into eight; Pickering into eleven; Bory St. Vincent into fourteen; Desmoulins into sixteen; Morton into twenty-two; Crawford into sixty and Burke into sixty-three. Now comes Quartrejages, the French ethnologist, who says all mankind came from a central mass in Northern Asia, and that there were three fundamental types—black, white and yellow, which scattered over the world and intermingled, forming, in course of time, seventy-two distinct races of human beings. The world is waiting for another opinion.

We invite all the good people who desire to change locality to come and see our lovely place.

Another Vanderbilt scion has married a chorus girl. The trouble is not with the rich young men of New York, but with the rich young women. They must be hopelessly homely or hopelessly stupid, else they would never be cut out by chorus girls.

Woman in the East.

An old Arab proverb declares, "The best son-in-law is the grave." You cannot insult a Moslem more than to ask after the health of his wife.

If a woman is so much as mentioned in conversation, even though she may be the speaker's own wife, politeness requires one to add the words, "May God elevate you"—that is, above the contamination of such a subject. The same expression is used after the mention of a dog, a donkey, a pig, or a shoe, all of which are held vile and unclean. Nor is this feeling confined to Mohammedans. Doctor Jessup tells how a Greek Christian in Tripoli came applying for help to an American physician. Said he:

"There is a woman here who is ill. I beg your pardon for mentioning so vile a subject to your excellency."

"Who may it be?" inquired the doctor.

"May God elevate you, it is my wife."

Dr. Jessup also tells of overhearing the following conversation between a Mohammedan and Doctor Van Dyck:

"Your excellency must be aware that I have a sick man at my house. May God grant you health! He has pain in his back, headache, and he will not eat."

"Has he any fever?"

"A little."

"I will come and see her this afternoon, perhaps."

"May God increase your goods."

Men tire of everything else; it is a wonder they do not tire of life.

If It Only Helped a Little

It would be worth 50 cents. One hour's freedom from the terrible irritating itch of tetter is worth more than a whole box of Tetterine costs. It will cure—sure, and it's the only thing that will cure. 50 cents at drug stores, or by mail from J. T. Shuptrine, Savannah, Ga.

Over 700 people assembled near Atchison to engage in a wolf hunt. They captured about 200 jack-rabbits, but not a wolf was seen.

If afflicted with sore eyes use Dr. Isaac Thompson's Eye-water. Druggists sell at 25c. per bottle.

Albert Burch, West Toledo, Ohio, says: "Hall's Catarrh Cure saved my life." Write him for particulars. Sold by Druggists, 75c.

Mrs. Winslow's Soothing Syrup for children teething, softens the gums, reducing inflammation, allays pain, cures wind colic. 25c. a bottle.

Piso's Cure for Consumption is an A No. 1 Asthma medicine.—W. R. WILLIAMS, Antioch, Ills., April 11, 1894.

Fits permanently cured. No fits or nervousness after first day's use of Dr. Kline's Great Nerve Restorer. $2 trial bottle and treatise free DR. R. H. KLINE, Ltd., 931 Arch St., Phila., Pa.

DULL ACHING PAINS

Palpitation of the Heart—All Cured by Hood's Sarsaparilla.

"I was troubled with a dull aching pain in my right kidney, and I also had palpitation of the heart. I began taking Hood's Sarsaparilla and since then I have never been troubled with either of these complaints. Hood's Sarsaparilla is also helping my wife very much." H. B. SCOTT, Marlboro, New York. Remember

Hood's Sarsaparilla

Is the best—in fact the One True Blood Purifier.

Hood's Pills cure indigestion. 25 cents.

A COOL BOTTLE

of Hires Rootbeer on a sweltering hot day is highly essential to comfort and health. It cools the blood, reduces your temperature, tones the stomach.

HIRES Rootbeer

should be in every home, in every office, in every workshop. A temperance drink, more healthful than ice water, more delightful and satisfying than any other beverage produced.

Made only by the Charles E. Hires Co., Philadelphia. A package makes 5 gallons. Sold everywhere.

Wanted—An Idea Who can think of some simple thing to patent? Protect your ideas; they may bring you wealth. Write JOHN WEDDERBURN & CO., Patent Attorneys, Washington, D. C., for their $1,800 prize offer and new list of one thousand inventions wanted.

GET RICH quickly; send for "200 Inventions Wanted." EDGAR TATE & Co., 345 B'way, N. Y.

Am. N. U. No. 29. 1897.

PISO'S CURE FOR CURES WHERE ALL ELSE FAILS. Best Cough Syrup. Tastes Good. Use in time. Sold by druggists.

NOTES AND COMMENTS.

A "South Sea Paradise" founded in the Fiji Islands by tired Californians has collapsed because the settlers found work to be necessary even there. The primal curse of Eden seems to be quite far-reaching even still.

Grasshoppers are overrunning sections of South Dakota. Crude petroleum, shipped by the railroads free, is used in destroying them. A bounty of fifty cents a bushel is offered for the pests, and a bushel can be gathered in twenty minutes.

That Boston bank clerk who stole $30,000 the other day and left for Canada explains that he took the money "because he wanted to buy a bicycle." That youngster evidently wanted all the latest bicycle improvements on his wheel.

It will be dangerous in future for citizenesses of Massachusetts to wear the plumage of insect-killing birds on their millinery. Governor Wolcott has signed the bill putting the bird-killer and the bird-wing wearer on the same basis and making them amenable to the same penalty.

The late James Aram, of Delevan, Wis., bequeathed $20,000 for a public library for the town, in memory of his daughter, and $20,000 for a home for superannuated and indigent Methodist ministers, in memory of his father and mother. He also gave $1,000 to each of the churches in the town, and $2,000 for the improvement of the local cemetery.

French nerve, unappreciated, has put an end to a Paris engagement, according to the English newspapers. A young woman was at the Bazar de la Charite with the young man she had accepted, when the fire broke out. He ran at the first alarm, leaving her alone, but she managed to get out and go home. There she found the young man, who had politely called to see if she was safe. He was shown to the door.

The Jubilee literature contains a story of Prince Alexander, the eleven-year-old son of Princess Beatrice, who wrote to his royal grandmother asking her for a sovereign. Instead of the sovereign, however, he received a letter from her dilating upon the evils of boyish extravagance and inclosing no coin. A little later the Queen received a letter from the boy, as follows: "Dearest Grandmamma—I hope you will not think I was disappointed because you could not send me any money. I sold your letter for £3 10s."

Lord Kelvin, in an address upon the earth as an abode fitted for life, has summed up the evidence into what must be accepted as the latest dictum of science regarding this obscure point. The old idea was of a solid earth nearly 20,000,000,000 years old, but modern science makes an immense reduction in this estimate. He was able to say with confidence that the earth solidified between 20,000,000 and 30,000,000 years ago. The latest estimate of the time required for the formation of all strata since the beginning of the Cambrian rock is 17,000,000 years. Lord Kelvin declares that the earth could not have been habitable more than 30,000,000 years.

The Engineering News gives an interesting resume of the grades climbed by the principal transcontinental railroads. The Santa Fe route shows the most hill climbing, aggregating a sheer rise of 35,003 feet in its entire length, or 6.44 miles. The sending of a train over this road means that it must be lifted bodily that distance. The aggregate up-hill grades on the Canadian Pacific are 23,057 feet; Northern Pacific, 17,137. Union Pacific, 16,439; and Great Northern, 15,305. The highest point reached by any railroad is on the Denver and Rio Grande route at Tennessee Pass, Col., where the summit is 10,433 feet above sea level. The Southern Pacific gets over the divide with the least exertion, the highest point being 5,082 feet at Paisano, Texas.

A remarkable engineering feat was recently performed in California, in providing a bulwark for a great dam being built to impound water for San Francisco. By a single blast a section of a mountain was torn off and hurled bodily into a gorge below. Two months were required in preparation for the blast. In tunnels cut into the mountain of rock great stores of black powder were placed, while deposits of giant powder were located under the mass to be moved. The black powder ignites slower than the giant powder, and the effect, when electricity was applied to both at once, was first to lift up the mass and then to push it over the edge into the gorge. A mass of rock measuring 400x60 feet, and weighing an estimated 150,000 tons, was thrown exactly as the engineers had planned.

To spare the rod and spoil the child is a subject for discussion before the School Board in Atlanta as it is in Milwaukee. In the Southern city the sentiment among the board members is that corporal punishment should be abolished in the high schools. When a boy is old enough to attend such a school, several of the members say, he is old enough to behave himself without fear of the strap, and old enough, too, to warrant being sent to the police station in a patrol wagon if he needs other discipline than moral suasion. As to the rod in the grammar schools, however, opinions differ, and the decision on this phase of the question awaits further investigation. A prominent member of the board says that teachers need to be trained how to do without the rod before its use is formally abolished.

The royal family of England costs the British government, in round numbers, $3,000,000 annually. Of this sum the Queen receives nearly $2,000,000 a year, besides the revenues from the duchy of Lancaster, which amount to a quarter of a million. The Lord Lieutenant of Ireland receives $100,000 a year for his services and expenses, and the Prince of Wales $200,000 a year. The President of France receives $240,000 a year for salary and expenses, an enormous salary, when it is remembered that the republic is sweating under a stupendous national debt of over $6,000,000,000—the largest debt ever incurred by any nation of the world. Italy can have ten thousand men slaughtered in Abyssinia and still pay her King $2,600,000 a year. The civil list of the Emperor of Germany is about $4,000,000 a year, besides large revenues from vast estates belonging to the royal family. The Czar of all the Russias owns in fee simple 1,000,000 square miles of cultivated land and enjoys an income of $12,000,000. The King of Spain, little Alfonso XIII., if he is of a saving disposition, will be one of the richest sovereigns in Europe when he comes of age. The State allows him $1,400,000 a year, with an additional $600,000 for family expenses. We are said to be the richest nation on earth, yet our President's salary is only $50,000 a year. It was $25,000 from 1789 to 1873.

A view of the most recent industrial uses and adaptations of electricity gives surprising results, and these adaptations are thus summed up by the Boston Journal of Commerce: Many of the commercial chemicals now in general use are made at much cheaper rates than formerly, because of the economy of electrical production. A large percentage of the metals can now be reduced from their ores by electrolytic methods. The production, refining, purifying, etc., of many products not essentially chemical—such, for instance, as sugar, molasses, beer, starch, beet root juice—is now accomplished electrolytically. Cotton is picked and bleached, leather is tanned, white lead is made, meat is preserved, ozone is generated, acetylene gas is produced, safes are broken, car wheels are tested, graphite is formed, and diamonds are manufactured by either the direct or indirect action of the current. Gold, silver, iron, zinc, lead, copper, tin, aluminum, nickel, bismuth, antimony are either mined, refined or separated from their ores, and in some cases actually produced by the magical properties of electricity. Power is transmitted, farms are worked, boats are propelled, oil wells are made to increase their flow, the stage is made more spectacular, water courses are disinfected and hitherto impenetrable substances are rendered transparent, all by means of recent electrical development. The list is not carried beyond the achievements of a year or two past, nor is it meant to include such apparatus as the telegraph, telephone or other widely spread factors of electrical development.

Firing Heavy Guns Immersed.

An interesting and very suggestive experiment has been made by British naval officers in the way of firing solid shots from heavy guns immersed in deep water.

A 110-pound gun was used which was anchored upon a platform at the bottom of Portsmouth harbor. After being loaded the gun was pointed toward a target set in the water seventy-five feet from its muzzle. The target was composed of oak beams and planks, twenty-one inches in thickness. Behind this was placed the hull of an old vessel, to which had been riveted sheets of boiler iron, making an armor three inches thick. A wire connected the firing mechanism of the gun with the shore station. The gun was fired at high tide. There was a slight disturbance of the water above the gun. Then the vessel beyond the target was seen to rock and to disappear beneath the waves. Subsequent investigation showed that the target had been knocked to pieces and the hull of the vessel completely pierced by the shot. The water apparently had little effect upon the projectile. It went as accurately as though fired through the air. In the test the gun was loaded and aimed by a diver. But with the modern mechanism now available, the same results could be attained from above the water. A new field for marine attack and defense is thus disclosed. Fitted with port holes below the water line, ships could strike the enemy in the points most vulnerable and wage war with double devastation in both elements. For harbor defense the submarine battery would prove of inestimable advantage.

An Arkansas man the other day married a woman he owed rather than go to jail for debt.

Had a Right To.

Office Boy—Jimmy, listen to the editor! He's swearing like a sailor.

Stenographer—He's got a right to; Mr. Longhair, the poet, was in here and left a lot of "blank" verse a minute ago.—Cincinnati Commercial Tribune.

If you owe a man, don't imagine that he will keep the fact to himself.

Are Your Eyes Right?

You are either left-eyed or right-eyed, unless you are the one person out of every fifteen who has eyes of equal strength. You also belong to the small minority of one out of every ten persons if your left eye is stronger than your right. As a rule, just as people are right-handed, they are right-eyed. This is probably due to the generally greater use of the organs of the right side of the body, as, for example, the runner uses his right arm and shoulder, uses his right eye, thereby strengthening it with exercise. This law is confirmed by the experience of aurists. If a person who has ears of equal hearing power has cause to use one ear more than the other for a long period the ear brought into requisition is found to be correspondingly stronger than the other.

One-third of the Line Has Been Completed and Trains Are Running.

Since the beginning of the regular service between Tscheljabinsk and the bridge over the Obi, Oct. 16, 1896, trains run only thrice a week, Sunday, Tuesday and Thursday. These trains accomplish the distance of 930 miles in fifty-one hours. The tickets cost: First class, $39; second class, $23.25, and third class, $15.75. Each of the three classes is provided with sleeping arrangements; yet as often happens in Russia, the travelers bring their own beds and samovars, or tea urns, with them, besides other articles. But one must not think that the cars on the Siberian railway are fitted up with all the comfort of European or American "trains de luxe." Even the ordinary station accommodation is only just being gradually completed; for example, the lack of refreshment rooms has been in many places and is still supplied by the peasants of the neighboring region, who come down to the stations with bread, cheese, butter, meat and baked fish. These small defects in the management will naturally soon vanish. For, although for the present it is but a single line of rails, yet the line is destined for considerable traffic in the future, as can be seen from the fact that as a start 2,000 locomotives, 3,000 employes and 35,000 freight cars were decided upon. This staff and rolling stock will allow, on completion of the whole line, of a train composed of one engine, one or two employes and eighteen freight cars for each mile.

As one-third part of this gigantic railway is now ready, it can be conceived that already $150,000,000 out of the estimated general cost of $345,000,000 have been spent. The line has, moreover, in this brief space, shown its influence on the colonization of Siberia, as the western portions of it have been brought, piece by piece, into working order. The colonization has greatly increased along the line since 1895, and the hope of the Russian Government is being rapidly fulfilled, that the cultivation of the swampy Taiga district on both sides of the line will proceed at a quicker rate than hitherto; the swarms of flies make this district terrible in summer. Up to the present there is no data as to the influence of the construction of the line upon trade; there can, however, be no doubt that this influence does exist to a considerable degree, as also an influence for good as regards the administrative system in Siberia. The Russian officials and soldiers, who were often hitherto month after month on the journey ere they reached their destination in Siberia, will, at all events, joyfully greet this connection by railway; its importance from the point of view of transporting troops is clearly seen from the fact that Russia at this moment has in Eastern Siberia alone an army of 60,000 men.—New York Tribune.

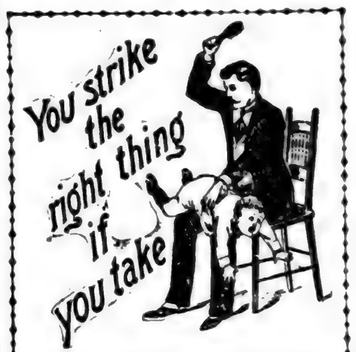
Senator Morgan proposes a new test for the immigrant—a knowledge and understanding of the ten commandments. If he will add a provision that the immigrant shall have kept all these from his youth up he will probably be able to put an effective check on the incoming tide for several centuries to come.

BUCKINGHAM'S DYE

For the Whiskers, Mustache, and Eyebrows.

In one preparation. Easy to apply at home. Colors brown or black. The Gentlemen's favorite, because satisfactory.

R. P. HALL & Co., Proprietors, Nashua, N. H. Sold by all Druggists.



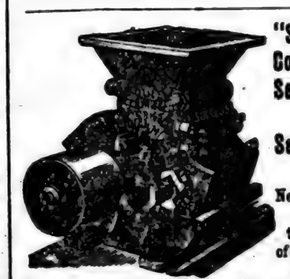
LYON & CO'S PICK LEAF EXTRA SMOKING TOBACCO

Made from the Purest, Ripest and Sweetest leaf grown in the Golden Belt of North Carolina. Cigarette Book goes with each 2-oz. pouch.

ALL FOR 10 CENTS.

A Pleasant, Cool and Delightful Smoke.

LYON & CO. TOBACCO WORKS, DURHAM, N. C.



"Success" Cotton..... Seed Huller and Separator.

Nearly doubles the Value of Seed to the Farmer.

All up-to-date Ginners use them because the Growers give their patronage to such gins. Huller is PRACTICAL, RELIABLE and GUARANTEED. For full information Address

SOULE STEAM FEED WORKS, Meridian, Miss

A GREAT CHANCE!

We want an agent in every town in the U. S. and Canada. No experience required. Ladies make most successful agents. We pay salary or liberal commission. You can work all the time or leisure hours, and can earn from EIGHT TO TWELVE DOLLARS PER DAY. We shall give.....

5 COTTAGE LOTS FREE

To our 5 most successful agents. These lots are worth $1,000 each now, will be worth $3,000 when times improve. They are located at PETIT MANAN, the queen of the Maine coast. If you desire to obtain it and will work there is one of them **FOR YOU**

Write at once for full particulars to the P. M. L. & I. COMPANY, - - Belfast, Me.

MEDICAL DEPARTMENT,

Tulane University of Louisiana.

Its advantages for practical instruction, both in ample laboratories and abundant hospital materials are unequalled. Free access is given to the great Charity Hospital with 700 beds and 15,000 patients annually. Special instruction is given daily at the bedside of the sick. The next session begins October 14, 1897. For catalogue and information address PROF. S. E. CHAILLE, M. D., Dean, P. O. Drawer 261, NEW ORLEANS, LA.

DRUNK ARDS can be saved without their knowledge by Anti-Jag the marvelous cure for the drink habit. Write Remova Chemical Co., 46 Broadway, N. Y. Full information (in plain wrapper) mailed free.

EVERY MAN HIS OWN DOCTOR

"Before and After Taking."

By J. Hamilton Ayers, A. M., M. D.

This is a most Valuable Book for the Household, teaching as it does the easily-distinguished Symptoms of different Diseases, the Causes, and Means of Preventing such Diseases, and the Simplest Remedies which will alleviate or cure.

598 PAGES, PROFUSELY ILLUSTRATED.

The Book is written in plain every-day English, and is free from the technical terms which render most Doctor Books so valueless to the generality of readers. This Book is intended to be of Service in the Family, and is so worded as to be readily understood by all. Only

60 CTS. POST-PAID.

(The low price only being made possible by the immense edition printed). Not only does this Book contain so much Information Relative to Diseases, but very properly gives a Complete Analysis of everything pertaining to Courtship, Marriage and the Production and Rearing of Healthy Families; together with Valuable Recipes and Prescriptions, Explanations of Botanical Practice, Correct use of Ordinary Herbs. New Edition, Revised and Enlarged with Complete Index. With this Book in the house there is no excuse for not knowing what to do in an emergency. Don't wait until you have illness in your family before you order, but send at once for this valuable volume. ONLY 60 CENTS POST-PAID. Send postal notes or postage stamps of any denomination not larger than 5 cents.

BOOK PUBLISHING HOUSE 134 Leonard Street, N. Y. City.

THE WAYS.

Do you traverse a way
That is likely to end
At something some day,
My friend?

Or, do you belong
To the great plodding throng
On the broad, level way
That leads to Nowhere—
That will end, some day,
In Nothing, out there.

There are paths leading out
From this broad, level way—
You have seen them, no doubt,
For you pass them each day—
That lead to Somewhere,
That glorious place,
So distant, so fair—
Like a mirage in space!

But these pathways, you say,
Are so stony and steep!
And the broad, level way
Is so easy to keep!
You have heard of Somewhere,
And you'd like to go there
If a way could be found
That was easy and wound
In a smooth, broad course that led on around
And up the height,
Where the city stands, a glorious sight,
Peopled by only immortals, and where
There is honor for each that, at last, gets there!

Ah! there is no way that is level and broad
Leading up to this glorious place, Somewhere,
And no man yet who has only trod
A way that is easy and smooth and broad
Has ever succeeded in getting there.
—S. E. Kiser, in Cleveland Leader

ADDIE'S APPLE PIE.

BY HELEN FORREST GRAVES.

"Now, Joseph, a pail of fresh water, please, from the well," said Addie Silvester. "And some oven wood, and a bunch of fennel, and some of those big roses from the bush by the stone wall. Not all the blossomed-out ones, you know, Joseph, but buds and half-blown flowers."

"Yes, miss," said Joseph.

"And stop by the hennery fence, Joseph, and see that the brood of little ducklings is all right and the calf hasn't jumped over the wall, and—good gracious, me, what are you staring at, Joseph?"

The hired boy, a great awkward lout of 16, turned very red.

"Please, miss, I can't help it," said Joseph. "But please, miss, I'll go as fast as ever I can; and if I can't find no roses, please, miss, I know a bush of lovely wild honeysuckle down by the swamp."

Away went Joseph, swinging awkwardly from side to side in his gait, while Miss Silvester, standing at her pastry table, reflected:

"How dreadfully awkward that boy is! One would actually suppose him to be all feet and hands. And I wish we could break him of that dreadful habit of staring with those gobble eyes of his."

Alas, how pathetically different were the meditations of honest Joe!

"Ain't she like an angel?" said Joseph, to himself, stumbling over the stone fence and frightening the golden-jacketed little ducklings hither and yon. "My! how them eyes of her'n do sparkle and them little white teeth shine every time she speaks! I wish I was a buccaneer, or the captain of a three-masted brig, and then I'd marry her, and we'd go and live on a desert island, where there wasn't nothin' but palms and bananer trees!"

While pretty Addie, slicing up the golden apples for pies, was glancing shyly at the sparkle of a certain ring upon the forefinger of her left hand—a plain, old-fashioned band of gold, with four claws grasping a small but brilliantly watered diamond—the engagement ring which Harry Fielding had given her two days before.

"And to think that it was Harry's mother's, 30 years ago!" said Addie to herself, turning the pretty, apple-stained finger round and round, to see the sunbeams splinter into colored rainbows against the crystal facets. "Oh, dear; I wonder how I shall look 30 years from now? But mamma is quite right—I oughtn't to wear it about my housework."

And slipping it off, she laid the yellow circlet on the table and proceeded to shower a dust of sweet-scented cinnamon over the apple-slices as they lay in their nest of crust.

And Joe returned, with a pail of water, an armful of wood, a favorable report concerning the ducklings and the red calf, and a bunch of delicious pink roses, that scented all the air.

"Now, Joe," said Miss Silvester, briskly, "you may carry these apple-parings to Bob, the pony, and then you may go and pick some peas for dinner."

"Yes, miss," said Joe.

And Addie fell into a deep reverie, as she covered in her pies with a blanket of snowy paste and decorated the same with the fantastic motions of the mysterious little instrument which housewives call a "jiggering iron"—a reverie as to whether she should be married in a white swiss muslin, with a wreath and veil, or in a brown cashmere traveling dress and a brown hat, with a crimson carnation in the side.

"I suppose the cashmere would really be the most sensible and useful," mused Addie, as she put the pies into the oven and glanced up at the clock. "But, oh, dear! the white swiss and the veil would be so lovely! And a girl never can expect to be a bride but once."

And she ran out to gather some red raspberries for Grandfather Silvester's 11 o'clock bowl of bread and milk.

When she came back Joe was shelling peas at the kitchen table.

"Please, miss, there wasn't nothin' to do at the barn just now," said Joe, "an' I thort I'd help you a spell."

"That's right, Joseph!" said Miss Silvester, with the gracious main of a princess.

For the beautiful Miranda disdained not the worship of a Caliban, and to Adelaide Silvester there was something rather amusing than otherwise in the idea that Joseph, the gobble-eyed farm lad, was her humble slave and adherent; for a woman naturally likes to queen it over the lowliest creature alive.

"Hello!" cried Mr. Harry Fielding, putting his handsome head into the kitchen; "how delicious your pies smell, Addie!"

"I made them myself," said Miss Silvester, with pardonable pride, as she looked down at the round, sunshiny trophies of her culinary skill—"without so much as a recipe book to refer to. And—"

But just at that moment she chanced to glance at the forefinger of her left hand, her mind attracted thither by an odd train of associations with the apple-pie making.

The diamond.

She looked eagerly down at the table where she had laid it. There was no ring there.

"Oh, Harry, it's gone!" she cried, nervously clasping her hands.

"What has gone?" said Harry Fielding, "What are you talking about, Addie?"

"My diamond ring," said poor Addie.

And then she sat down in one of the rush-bottomed kitchen chairs and began to cry.

"Not gone!" said Harry, cheerfully. "My darling, how should it be gone? It had neither wings to fly withal, nor legs to run. It's here somewhere, I don't doubt; it must be here."

But it was not. They searched high and low; they swept the kitchen, like the woman in Scripture, and still no sparkling stone rewarded their anxious scrutiny.

"I have it!" cried Harry, slapping his knees and bursting into a laugh. "You've baked it in one of the apple pies. It's the old story of 'The Maid and the Magpie' over again."

And, then and there, the covers were taken off the apple pies, and their fragrant contents prodded with a silver fork; and still no diamond appeared.

Mrs. Silvester looked hesitatingly at her daughter just then.

"What is it, mamma?" cried Addie.

"My dear," said the old lady, "I would be one of the last to believe evil of a fellow-creature, but—"

"But what, mamma?" urged Addie.

"According to your own statement," said Mrs. Silvester, reluctantly, "there was only one person in the kitchen all the time you were making those apple pies, and that person was—"

"Joseph!" cried out Addie, a flush of deep rose-red rising to her forehead.

"Joseph?" echoed Harry Fielding, springing to his feet.

"Your father took him from the workhouse," said Mrs. Silvester, "against my advice and consent. His uncle was transported for burglary to England; his father died here in a gypsy encampment."

"But, mamma," pleaded Addie, who had a sort of tacit liking for the uncouth creature, "we've always found him honest and truthful in every respect."

"Up to the present moment—yes," said Mrs. Silvester, cautiously. "But there must always be a first offence. And if it was not Joseph who took the ring, who was it?"

There was a moment's silence in the room, and then Addie said, in a low tone:

"I don't want to believe it, but I'm afraid it must have been Joseph."

Of course Joseph denied it; but Joseph was not one of those fortunate individuals whom nature has blessed with a prepossessing appearance or ready utterance, and his blusing, stammering denial was nowise in his favor. And Joseph was ignominiously searched, and the poor little garret-room was turned inside out, and Joseph himself was taken to the village station house, there to await the decree of Squire Sam Birdsall, who dealt out the law and order of the neighborhood. And, of all the shame and degradation of the whole business, one envenomed arrow stung poor Joseph sharpest.

"She believes me guilty!" said Joseph to himself, over and over again; "she thinks that I am the thief!"

"Has anyone remembered to feed Bob?" said Grandfather Silvester, the cheerful, chair-ridden old man, who was mind, ears and memory for the whole family. "Your father is away at market, my dear, and it used to be poor Joseph's business, you know."

"I'll run out and feed him this minute," said Addie.

For Bob was her cream-white pony, her own especial pet and darling, as far removed from the drudgery of the farm horses as Jupiter above a glow-worm.

"Oh, dear! oh, dear! I didn't know we should miss poor Joseph so!"

Bob whinnied pitifully as his mistress' light footfall sounded on the stable threshold. She went up to him and laid her cheek against his satin neck.

"Poor fellow!" she said, "are you hungry?"

And she looked remorsefully into his empty manger, where lay two or three apple-parings, discarded, for some excellent equine reason, by fastidious Bob, and—what was it that sparkled like a drop of dew in their midst?

Her diamond ring!

The ring itself, with its slender hoop of gold slightly marred by the prints of Bob's teeth (no wonder that the sagacious quadruped regarded it as an indigestible morsel and rejected it from the juicy morsels which he had elected to swallow)—the diamond, sparkling as bright as ever.

With a low cry she caught it up and flew back into the house, flushed and breathless with delight.

"Mamma! grandfather!" she cried, "it wasn't Joseph after all! Look look! it was thrown into Bob's manger with the apple parings. Call Harry, somebody! Tell him to go and bring Joseph back! I declare to goodness I could kiss the poor fellow, to think how he has been treated!"

She didn't kiss him, but her sweet, apologetic words were like dew on the fever of the poor lad's sore heart, when once more he found himself within the walls of the Silvester farmhouse.

"It wasn't the jail, miss," stuttered he, "nor it wasn't the hard names, nor it wasn't yet the being suspected by all the rest of 'em; but I didn't want you to think evil of me, miss!"

"And I never will again, Joseph!" said Addie, fervently.—Saturday Night.

THE SHIP'S BELL.

It Is Closely Identified With the Whole Career of the Vessel.

Lieutenant John M. Ellicott, U. S. N., writes an article for St. Nicholas on "What is Told by the Bell," in which he says:

Nothing in a ship becomes so closely identified with her throughout her whole career as the ship's bell. Officers and crew come and go; masts, decks, engines, and boilers become old, and are replaced by new ones; but from the day that she first glides into the water the same ship's bell remains always a part of her, marking her progress all over the world, and finally going down with her to a lonely grave at the bottom of the sea, or surviving her as a cherished souvenir of her existence and achievements. On a man-of-war the bell is usually inscribed with her name and the date of her launching; and as it is probable that it may some day become a memento of a glorious history, the bell is often the subject of special care in casting or selection. Sometimes the hundreds of workmen who have built the great ship contribute each a silver coin to be melted and molded into a bell which shall be the token of their love for the object of their creation and their interest in her future career. Often the people of the city or state after which a man-of-war is named may present to her a magnificent bell appropriately ornamented and inscribed with words of good will and good wishes. Such a bell is usually presented with ceremony after the ship goes into commission.

Ships' bells in general are made of bronze, like other bells. The addition of silver bells. The addition of silver in their composition gives them a peculiarly clear and musical tone. They are placed in such a position on the upper deck that they may be heard from one end of the ship to the other; and are usually near the mainmast or at the break of the forecastle. One peculiarity exists in a ship's bell which is necessary on account of her motion at sea. The tongue is hung so that it can swing in only one direction. If it were not so the bell would be continually ringing as the ship rolled and pitched. The direction in which the tongue can swing is another important point. If it were athwartship the bell would ring at every heavy roll of the ship; and if it were fore and aft the bell would ring at every deep pitch; so the direction in which the the tongue can swing is nearly half way around between these two.

Guarding Powder Magazines Against Lightning.

The buildings which are most carefully guarded against injury by lightning are probably some of the big powder magazines. Some of these are almost covered with a network of connecting rods and wires. These run down to the earth on all sides of the building, are joined below ground and lead away to a considerable distance, where the rod terminates in moist earth. For many years the Hotel de Villie in Brussels was looked upon as the most carefully protected building in the world, the subject being a hobby with the proprietor of the hotel. The roof of the great building looked like an ancient barbican with its dozens of minaret points jutting up. These rods were all connected and grounded in the most scientific manner, but it is a fact that the hotel was struck by lightning at least once in spite of its elaborate protection.

The people of Munith, Mich., are trying to pass an ordinance prohibiting the trains from going through the town so fast that passengers can't see the sights.

A GREAT MAIL SERVICE.

UNCLE SAM'S POSTAL BUSINESS IS THE LARGEST IN THE WORLD.

Curious Statistics Which Indicate the Needs of the Country's Postoffices—Some of the Big Items in the List of Annual Supplies—A Glutton for Rubber Bands.

The delegates to the international postal congress at Washington have all been amazed at the magnitude of our American postal service. They had heard a good deal about it and knew the statistics which indicated its enormous extent, but they had not been impressed by it at long range, as they have been since they have had an opportunity to see it with their own eyes. It is something to the credit of the people of the United States that this young nation has the greatest postoffice system in the world. As chance would have it, just as the foreign delegates met here our postoffice department issued its annual proposals for supplies for the ensuing year. Copies of this advertisement fell under the notice of the delegates, and they did a good deal of talking about the vast quantity of stuff it takes to run our postal system during a twelvemonth.

The first thing that attracted the attention of the delegates was a request for bids on 2830 reams of paper. This paper, all for the use of the postoffice department, averages in weight about 25 pounds to the ream, and the weight of the whole, therefore, is approximately 35 tons. Then there is the blotting paper. In his postal operations Uncle Sam must do a great deal of blotting, for the quantity asked for is about 25 tons. The paper and the blotting stuff are only a beginning. He wants 1800 dozen scratch blocks, each of 100 leaves, and he is very particular as to the manner in which they shall be made. Then he asks for 800,000 blank examination cards, each about 4 by 12 inches. Also 55,000 sheets of cardboard 22 by 28 inches, the total weight being about 30 tons.

One of the biggest items in his list is 250,000,000 "facing slips," each about 3 1-2 by 5 inches. These are used by the railway postal clerks, and by clerks in postoffices in tying up bunches of letters. There are many other things in the card line which Uncle Sam has to have in his business, but it would take too much space to enumerate them all. A surprising number of packing boxes, made of wood, are used in the postal service in the course of a year. No fewer than 1600 of these are called for, and their average size is 14 inches wide, 14 inches deep and 25 inches long. The department requires that these boxes shall be manufactured in Washington.

The postal service is a glutton for rubber bands. Four thousand four hundred and twenty-five gross of rubber bands of various sizes are asked for of the larger sizes. Of the smaller bands 9000 pounds are wanted. A small item of rubber goods is 400 pounds of bevel erasers, and combined pencil and ink erasers. An order of 8425 gross of steel pens indicates that the employes of the postal service do a vast amount of writing, especially when we remember that this specification is supplemented by the following: 500 gross of penholders, 275 dozen of penholders, 550 dozen of penholders, 12,200 dozen of black lead pencils, 1500 dozen of colored pencils, 20 dozen of automatic colored pencils, 200 boxes of lead for automatic colored pencils, 600 dozen of indelible automatic pencils, 6000 boxes of lead for the same, and 1600 dozen of colored pencils of another sort.

Of inks and mucilage Uncle Sam's postal boys use enormous quantities, as witness the following items: 1210 dozen of black inks, 120 dozen of carmine inks, 700 dozen quarts of mucilage, to be put up in 10 or 20 gallon vessels. The list of glass goods and steel articles is formidable enough to suit even the contractors. Inkstands are wanted to the number of 500 dozen, and an equal number of steel erasers are asked for. Carbon paper, hektograph paper, rubber stamps and stamp pads, facsimiles of signatures, press copy books and such things are listed by the carload.

Thirty-five thousand reams of wrapping paper, weighing 28 pounds to the ream, is one item; 1,400,000 pounds of twine is another, 5000 letter balances and 2000 letter scales are in the schedules, as well as 50 grocers' scales and 100 larger ones. The specifications for postmarking and rating stamps run up to the scores of thousands, and the amount of canceling ink needed for the simple purpose of spoiling the nice stamps which we put on our letters is 20,000 pounds. These figures have greatly impressed our foreign visitors.

Little Deformities.

If a child has projecting ears let him wear a ribbon or cap to train them back into proper position. An ill-shaped nose may be gently and carefully molded into form. A child's bones are really not much more than cartilage, and may be trained by judicious handling and regular pressure.

Do not grudge the time and trouble necessary in overcoming these little deficiencies, unless you wish to handicap your children for success in life. Personal beauty and symmetry are potent factors.—The W[illegible]

GEESE ON THE MARCH.

Their Marching Powers Well Known to the Trade for Centuries.

There are times when wild geese, some of the strongest fliers among the large birds, travel great distances on foot, sometimes to accompany their young, sometimes because they are moulting. Mr. Seebohm witnessed the passing of a goose column when exploring the fudra. They came on in column, the old birds leading, and, after crossing the Arctic moorland, descended to the river and took the water in the same order. Large, heavy birds like geese could not possibly march for long distances unless their method and order of march were carefully thought out. That the average intelligence of these birds is very high is generally acknowledged, but is nowhere so well shown as when they are traveling on foot. In the first place there is no hurry—everyone goes his own pace, but that pace is deliberate. They walk in column, but the ranks are often ten geese wide. No goose touches or jostles his neighbor, and all the heads are carried high, so as to get the maximum of air. At regular intervals on the march the column halt and feed, spreading out in lines for this purpose, but falling in at a proper signal from the leaders. The writer has often watched these proceedings when a large flock of geese has been crossing Port Meadow, the wild green flat above Oxford. But their marching powers have been well known in "the trade" for conturies and are still made use of abroad. At Antwerp, in January, a flock of 3000 geesd were seen to walk slong the quay, gently urged by some Flemish gooseherds. They were halted opposite to an Engish steamer bound for Harwich and then crossed three abreast on a plank with low canvas sides on to the steamer. They then walked along the deck, descended a steep, sloping plank and marched along the lower deck into an enclosure, where they remained during the crossing. At Harwich they were driven up the plank to the upper deck, off the ship and into pens, where, it is to be feared, most of them were killed for market. This is only a survival of the old system by which the Norfolk geese were driven up to London in thousands without losing condition. It paid better, before the days of railroads, to let the geese transport themselves.

The largest drove mentioned was one of $9000, which went from Suffolk, through Chelmsford and on to London. As "a cart," not carts, was provided to pick up the lame ones, the number who "fell out" must have been surprisingly small. It may be doubted whether 9000 creatures of any other species could have made the journey of a hundred miles with so little trouble. They took their journey easily, marching ten miles a day. The ordinary day's march of the German army is 13 miles, only three miles better than the geese. But these are the champion pedestrians of all birds. When Lord Oxford bet the Marquis of Queensbury that a drove of Suffolk geese would beat an equal number of turkeys in a walk to London, the geese won by 48 hours.—London Spectator.

The Time For Taking Medicine.

Acids, as a rule, should be given between meals. Acids given before meals check the excessive secretion of the acids of the gastric juice.

Iodine or the iodides should be given on an empty stomach. If given during digestion the acids and starch alter and weaken their action.

Irritating and poisonous drugs, such as salts of arsenic, copper, zinc and iron, should be given directly after meals.

Oxide and nitrate of silver should be given after the process of digestion is ended; if given during or close after meals, the chemicals destroy or impair their action. Potassium permanganate, also, should not be given until the process of digestion is ended, as organic matter decomposes it and renders it inert.

The active principal of the gastric juice is impaired and rendered inert by tannin and pure alcohol, hence they should never be given until after the close of digestion.

Malt extracts, cod-liver oil, the phosphate, etc., should be given with or directly after food.

Remember that drugs of any sort should never be given without the advice of a physician; but after a special tonic has been prescribed, these rules should be born in mind as to the best time for administering it.—Home Queen.

Sword Worth a Million.

Perhaps the most precious sword in existence is that of the Gaekwar of Barodo. Its hilt and belt are encrusted with diamonds, rubies and emeralds, and it is valued at $1,100,000. The Shah of Persia possesses a sword valued at $50,000. There are some costly swords in India, and both the Czar and the Sultan possess jeweled sabers of great price. The most valuable sword in England is one that was presented to Lord Wolseley. The hilt is set with brilliants, and it is valued at $10,000.

CHILTO[N]

VOL. I. NO. 17.

IT IS NOW A LAW

The Tariff Bill Finally Passed Both Houses of Congress.

SIGNED BY THE PRESIDENT.

The Senate Vote Stood 40 to 30—This Ends the Labor for Which the Fifty-fifth Congress Assembled in Extraordinary Session.

The senate bill passed its last legislative stage at 3 p. m. Saturday when the senate by the decisive vote of 40 to 30 adopted the conference report on the bill. This closed the great labor for which the Fifty-fifth congress assembled in extraordinary session and after stubborn resistance, at times threatened a deadlock, the senate concurred with the house in a resolution for the final adjournment of the session at 9 o'clock. The president's message for a currency commission was received by the house, but the house bill creating the commission was not acted upon. Thus the whole day was prolific of a series of momentous matters, one of which alone would have been of extraordinary interest. An analysis of the vote shows that the affirmative vote was cast by thirty-seven republicans, one democrat, McEnery one silver republican, Jones, of Nevada; and one populist, Stewart.

The negative vote was cast by twenty-eight democrats and two populists, Harris and Turner. Mr. Teller, silver republican, and two populists, Allen and Butler, were present and did not vote. One populist, Kyle, and one silver republican, Pettigrew, were absent without pairs, which were equivalent to withholding their votes.

At 7 p. m. the senate took a recess till 8.45, when it reassembled for a brief session. Only sixteen senators were present. The president's message on currency was received and on motion of Mr. Cullom, of Illinois, was referred to the finance committee.

The house bill for a monetary commission was also referred to the finance committee.

This finished the work and then the vice-president announced:

"The senate stands adjourned without day.

HOUSE.

The last session of the house was marked by many interesting things. In addition to the speaker affixing his signature to the Dingley tariff bill, a bill providing for the creating of a currency commission was crowded through in the closing hours.

The secretary of the senate reported that the senate had adopted the conference report and one minute and thirty-one seconds after the house reconvened the engrossed bill was signed and on its way to the president.

When the president's message came in recommending the creation of a currency commission it was answered by the republican leaders with great promptitude. By means of a special order the Stone bill introduced some days ago with the approval of the administration was brought to a vote after an hour's debate. It was passed by a vote of 128 to 99.

As the final act of the session the speaker announced the appointment of the committees.

Mr. Dingley, the floor leader of the majority, then presented from the ways and means committee a resolution for final adjournment at 2 o'clock. The resolution was then adopted without division and the speaker laid before the house the special message of the President, recommending the appointment of a currency commission.

The house at 8 o'clock took half an hour's recess.

When the house reconvened the speaker announced the committees. At 8:55, when the names had been read, Mr. Grosvenor, from the committee appointed to wait on the president, announced that they had performed their mission. The president sent a congratulatory reply, and then at 9 o'clock the speaker declared the house adjourned without day.

GENERAL A. W. GREELY

Believes That Prof. Andree Will Never Return.

In reply to a telegraphic request Gen. Greeley, the Arctic explorer, has sent the Associated Press from Linden, Va., the following statement regarding the Andree expedition:

"It is possible that Prof. Andree may have reached the North Pole or its vicinity. The telegraphic reports, as far as I have seen, stated that he started with a south wind of twenty-two miles an hour. The chance of such a wind blowing 600 miles straight to the North Pole, are, however, very small, as it would be an extraordinary meteorological phenomena such as has never instanced any storm. Doubts of the success of M. Andree's projected expedition and his probable return were expressed at the sixth international geographical convention. M. Andree admitted the extreme hazardness of the project which is the one outlined.

I pointed out that even should he reach the pole he could hardly expect to find his south wind continuing across the pole for 1,000 miles as a north wind. I urged that his chances of attaining the North American coast were consequently small as the observations at Lady Franklin Bay, Grinnell Land, and Point Barrow, Alaska, showed that the winds almost constantly came from the south, while strong north winds were almost unknown. Andree replied: "Then I shall expect to land somewhere on the Siberian coast." He expressed again his determination to go and his confidence of returning safely.

Prof. Ekholm, who accompanied Andree in his unsuccessful attempt last summer, declined to go this year on account of one of the dangers I urged upon Andree—the permability of the balloon, which allows gas to escape constantly, but which Andree claims to have overcome. While I believe that Andre will never return, yet experience teaches us that miraculous things occur daily.

(Signed.) A. W. Greely.

THE LOGAN MONUMENT

Said to be the Largest Equestrian Statue in America.

The statue of Gen. Logan which was dedicated last Thursday at Lake Park, Chicago, Ill., was designed by St. Gaudens, and is the largest equestrian statue in America. The figure of Gen. Logan as it stands on its granite pedestal is dressed in the uniform of a major-general. He sits erect and bare-headed, with his left hand grasping the bridle-rein, while with his right hand he bears aloft the flag.

From the base to the top of the horse's withers is 11 feet 3 inches, and to the top of Logan's head is 15 feet 11 inches. The entire weight is 14,200 pounds. The statue stands 24 feet above Lake Michigan. Through the center of the mound a foundation of brick has been built, within which is a crypt for the reception of Gen. Logan's remains.

The approach leading up to the monument is by a series of steps and terraces 96 feet long. The statue faces Eldredge court, in the center of Lake Front park, and in full view of Gen. Logan's old home in Park row. The entire expense of erecting and unveiling was $80,000, of which the state appropriated $50,000.

FOR THE PROMISED LAND.

Miners and Everybody Else Talk Nothing But Yukon and Will Go There.

A special to the Victoria, B. C., Times from Nanaimo says: Many coal miners have left here for Victoria on their way to Yukon. Some thirty of the best miners in the pits of the Vancouver Coal company have thrown down their picks to prepare to leave for the promised land. Upon every corner, up street and down street, common conversation is Yukon. Many are trying to raise property which cost them $1,500 and being unsuccessful even to one-third the original cost. Among those who will go are Thomas Keith, ex-member of parliament, Albert Wilson and about fifty others who will bid adieu to Nanaimo within the next three weeks. Every effort is being made in Victoria and provincial cities to have Canadian customs officers sent up to collect duties on American goods. It is expected that officers will go on the next steamer.

CAPITOL ITEMS.

Senator Sherman in Perfect Accord With the President.

LARGE DEMAND ANTICIPATED

Carnegie and Bethleham Companies Decline to Bid Within the $300 Limit. They Claim it is not Possible to Produce Armor at That Figure.

Beats the Record.

The largest number of appointments of fourth-class postmasters ever made on a single day was scored, last Friday with an aggregate of 168. The best previous record was 157 made June 31.

The Seal Question.

Secretary Sherman has denied the statment that he had been induced to sign the letter of instructions to Ambassador Hay relative to the seal controversy, which has so excited the British press only under severe pressure and against his own judgment. He says there was not a word of truth in it and that as a matter of fact he had been in perfect accord with the president in every step of the correspondence relating to the seal question.

Declined to Bid.

Secretary of the Navy Long has received replies from the Carnegie and Bethlehem Companies to his invitation to submit bids for supplying armor for the three battleships. Illinois, Wisconsin and Alabama, in accordance with the limitation placed by Congress upon the price to be paid.

Both of the companies decline firmly to bid within the $300 limit on the ground that it is not possible for them to produce armor of the quality they have been supplying to the Government at that figure.

Big Demand Anticipated.

Assistant Secretary Vanderlip has authorized the director of the bureau of engraving and printing to print and deliver to the office of the secretary United States notes, treasury notes and silver certificates to the amount of $104.000,000. A large proportion of those notes will be in small denominations, ones, twos, fives and tens and the supply is expected to be sufficient for the needs of business for about three months, meeting the unusal large demand for small bills required in the movement of crops. The department anticipates in view of the abundant crops and the foreign demand an unusually large and early call for small bills.

Land Office for Alaska.

In the house the other day Mr. Lacy (rep., Ia.) secured unanimous consent for the considerartion of a bill to amend the act creating a civil government in Alaska. It was identical with the bill passed by the house at the last session, creating a surveyor-general and a register and receiver of the general land office.

It, however, contains an additional feature empowering the president to create an additional land district. Mr. Lacy explained that Yukon valley gold discoveies rendered an additional land office imperative. In answer to a question he said the gold fields lay in both the United States and British North America. The Klondyke region was in Canada. The bill passed.

Japs Will Oppose Annexation.

Count Okuna, foreign minister of Japan, says, regarding the annexation of Hawaii to the United States;

"The foreigners are not surprised at the proposed annexation. We simply protested against it. The importance of the islands will be immensely increased by the construction of the Nicaraguan or Panama canal, and it is absolutely necessary therefore to leave the country independent. Leaving aside the attitude of other powers, and the question is, what will Japan do if under any circumstances the annexation is carried into practice in spite of the protest of Japan? Japan must oppose it to the utmost. Annexation must not be recognized."

GEESE ON THE MARCH.

Their Marching Powers Well Known to the Trade for Centuries.

There are times when wild geese, some of the strongest fliers among the large birds, travel great distances on foot, sometimes to accompany their young, sometimes because they are moulting. Mr. Seebohm witnessed the passing of a goose column when exploring the fudra. They came on in column, the old birds leading, and, after crossing the Arctic moorland, descended to the river and took the water in the same order. Large, heavy birds like geese could not possibly march for long distances unless their method and order of march were carefully thought out. That the average intelligence of these birds is very high is generally acknowledged, but is nowhere so well shown as when they are traveling on foot. In the first place there is no hurry—everyone goes his own pace, but that pace is deliberate. They walk in column, but the ranks are often ten geese wide. No goose touches or jostles his neighbor, and all the heads are carried high, so as to get the maximum of air. At regular intervals on the march the column halt and feed, spreading out in lines for this purpose, but falling in at a proper signal from the leaders. The writer has often watched these proceedings when a large flock of geese has been crossing Port Meadow, the wild green flat above Oxford. But their marching powers have been well known in "the trade" for conturies and are still made use of abroad. At Antwerp, in January, a flock of 3000 geese were seen to walk along the quay, gently urged by some Flemish gooseherds. They were halted opposite to an Engish steamer bound for Harwich and then crossed three abreast on a plank with low canvas sides on to the steamer. They then walked along the deck, descended a steep, sloping plank and marched along the lower deck into an enclosure, where they remained during the crossing. At Harwich they were driven up the plank to the upper deck, off the ship and into pens, where, it is to be feared, most of them were killed for market. This is only a survival of the old system by which the Norfolk geese were driven up to London in thousands without losing condition. It paid better, before the days of railroads, to let the geese transport themselves.

The largest drove mentioned was one of $9000, which went from Suffolk, through Chelmsford and on to London. As "a cart," not carts, was provided to pick up the lame ones, the number who "fell out" must have been surprisingly small. It may be doubted whether 9000 creatures of any other species could have made the journey of a hundred miles with so little trouble. They took their journey easily, marching ten miles a day. The ordinary day's march of the German army is 13 miles, only three miles better than the geese. But these are the champion pedestrians of all birds. When Lord Oxford bet the Marquis of Queensbury that a drove of Suffolk geese would beat an equal number of turkeys in a walk to London, the geese won by 48 hours.—London Spectator.

The Time For Taking Medicine.

Acids, as a rule, should be given between meals. Acids given before meals check the excessive secretion of the acids of the gastric juice.

Iodine or the iodides should be given on an empty stomach. If given during digestion the acids and starch alter and weaken their action.

Irritating and poisonous drugs, such as salts of arsenic, copper, zinc and iron, should be given directly after meals.

Oxide and nitrate of silver should be given after the process of digestion is ended; if given during or close after meals, the chemicals destroy or impair their action. Potassium permanganate, also, should not be given until the process of digestion is ended, as organic matter decomposes it and renders it inert.

The active principal of the gastric juice is impaired and rendered inert by tannin and pure alcohol, hence they should never be given until after the close of digestion.

Malt extracts, cod-liver oil, the phosphate, etc., should be given with or directly after food.

Remember that drugs of any sort should never be given without the advice of a physician; but after a special tonic has been prescribed, these rules should be born in mind as to the best time for administering it. — Home Queen.

Sword Worth a Million.

Perhaps the most precious sword in existence is that of the Gaekwar of Barodo: Its hilt and belt are encrusted with diamonds, rubies and emeralds, and it is valued at $1,100,000. The Shah of Persia possesses a sword valued at $50,000. There are some costly swords in India, and both the Czar and the Sultan possess jeweled sabers of great price. The most valuable sword in England is one that was presented to Lord Wolseley. The hilt is set with brilliants, and it is valued at $10,000.

The library of the University of Kokyo, Japan, contains over 320,000 volumes

THE STORY OF ULLA.

Told at the Edge of the Northern Sea, and Written for This Paper.

BY EDWIN LESTER ARNOLD.

CHAPTER I.

This is the story of Ulla the viking, Ulla the priest! This is the story of Ulla the proud and Ulla the humble. This is the story each sentence of which falls on the heart of the writer heavy as the hollow moan of breakers on some desolate midnight shore. And the heart of Ulla is that shore, and the pulse of the storm that is over—the storm of the life and the loving—comes distant and sad as he writes with a melancholy cadence through the hush of the evening of living.

I am that viking, I am that priest, and here in my lonely home by the edge

"I SIT BY THE DIM SHINE OF MY LAMP."

of the northern sea I sit by the dim shine of my lamp, while the night wind sighs without, and across these lean, thin hands, these palsied, knotted fingers that tremble like the white aspen leaves, lies a fair braid of yellow hair. Long, long it seems since that braid was cut from the head that grew it. Long, long months of pain and days of regretting have passed since that strand was cut from its wearer; the salt sea has dimmed it, time has touched its luster, and the dark stain of blood is upon it, yet as I, the monk Ulla, raise that fair thing again and again to my lips and press it where naught but the sign of the new faith should be pressed—press it trembling and silently to those cold lips—something of the old love shoots through my shrunken veins—something of the strong passion that once nerved them tingles into those withered fingers that smooth that gleaming toy so tenderly, and a white mist rises to my dull eyes, and my head droops forward, and the little cell seems widening out as wide as life itself; and sad as the sound of the wind among pine trees, desolate as the beat of the tireless pulse of the sea upon the rim of the night comes to my lonely heart the echo of long ago.

It was in the time of my master, Halfdan the Black, and I was a Norway jarl and lived by the white lip of the sea in Baldersund. I was young then, I was scarcely twenty, and had herds and men and farms all the way up the wild coast as far up as fair Hitteren, and a long ship lay in the creep by my homestead, and boar hounds lay on the rushes by my inglenook, and my bows and spears lay on the tressels, and a hundred jolly fellows drank from my flowing horns and carved my meats each day, and were proud to call me lord and leader. Three times as many stocked my yellow harvests and filled my barns. And I was strong and tall and big of limb, and although I was so young I had already been twice abroad and had harried across the wide sea in distant Fareyjar and down south to Ljodhus. I had sipped the glorious wine of battle, and watched the red flame of burning thorp and tower leap up to heaven from my footsteps. Princes had courted me and scalds had sung; everything I had, everything that a bold heart could hope for or a strong hand reach—everything but one; the chair on my left hand still stood empty at the feast, no bright eyes welcomed Ulla returning victorious from a foray, no tall Norway maid tempered with her presence the rude revelry in his father's hall, for Ulla was unwed.

Yet it was not for lack of fitting choice, for our maids were straight as young spruces, supple as the yellow sedges by the tarns and fair as the spring flowers of the fields when the May snow rolls back from them, and many such might I have had for the asking. Thoralla there was, for instance, whose locks were as yellow as the ripe hill barley; and Unn, whose sky-blue eyes shone wondrously kindly on her handsome neighbor when they met in shady forest path; and Thyri the slim, whose mother thought the lands of Ulla and their own would well match together, and Thora the smiler and many another. But I was wild and wayward, and as difficult to net as the free blue hawks that sail along the cliff face in springtime.

Matters were like this when my master, King Halfdan, more easily persuaded, had determined to marry the comely Ragnhild, daughter of Harold Goldbeard, and, everything having been settled by the ambassadors, one day in early summer from all the isles and fjords and every river town and mountain flat came trooping the Norway lords and chiefs to honor the ceremonial and see the show. By Frigga's self that was a day, when all those cavaliers came riding down to the plain by the southern city, and so far as the eye could see the meadows were agleam with spear and quirass and winged helms, and every way was blocked with mighty men in skins and golden armor, strong sons of Odin with wild blue eyes, keen features, and yellow hair astream upon their shoulders and mighty muscles showing beneath their clinking armlets and bands of beaten metal. Indeed, that was a day, and I could fill here, as I sit with nothing but the blank rock wall before me, a hundred pages with the names and deeds of those who came, and every name should sound to you like that of a giant and princely brother, and every splendid deed I linked to every name should bring the blush of pride to your cheek and the pulse of pleasure to your kindred hearts—but the lamp burns low and I am no scald, therefore let those warlike shadows pass unchronicled again into the voids of memory from whence they came.

In the mid of the plain the king's men had built a hall of rough-hewn pine logs, so long and wide that 5,000 chiefs could sit to meat within it at once. And every vassal of the king had sent a polished buckler to deck the bride house, and these were ranged in rows along the roofs and sides until all these warlike trappings gleamed together with one broad shine that men could see from Akinfell to the white pools by Flekkerfjord. And every Norway maid had bound a fillet of green spruce and golden flower, and these were ranged between the shields until a cloud of soft color wrapped the palace far and near, and the sweet new pine smell hung warm and heavy overhead.

Nor was this all. Every jarl and sea lord, every captain and rover who owned a long ship or snekja, a skeid or skuta, had brought them round to the fjord and hauled them up over rollers, and there they stood, those great navies of the vikings that had paled the cheeks of maids and matrons in twenty lands, their golden names—"Deer of the Surf," "Raven of the Wind," "Ægir's Steed," "Hawk on the Gull's Track," "Snake of the Sea," carved in runic on each steep rising prow, in two long rows a mile or two in length, with parti-colored sails all set, and red raiding flag streaming on the wind, and gilt dragon heads all turned inward, and jolly crews in bright vestments in their idle ranks of oars, and garlands of flowers about those sides which the white ribbons of the sea foam were wont alone to deck.

All about the great mid hall were scores of lesser houses, so that where green grass grew a week ago was now a gay wooden city, and a thousand troops of horse stood munching Halfdan's hay, and a thousand stalwart clansmen were quaffing Halfdan's ale, and a thousand tables bent with Halfdan's provender, and a thousand trumpets sounded Halfdan's war-note, and a thousand scalds were singing Halfdan's praises that day King Halfdan married.

The great prince had chosen me to be among his right-hand men, and thus happened that which was the sweet and the bitter, the light and the darkness of my life. King Goldbeard came ashore from his ships early in the morning, and my handsome black-haired master took the sweet Ragnhild by the hand, and at the head of a long procession of princes, chiefs and ladies, all on foot, marched through the mighty concourse of the shouting people and up the long lane of dragon ships into the great hall itself. There the feudatories ranged themselves in gallant rows at the many dressel tables, while the kings and we with them went on to the further end, where stood some oaken benches. These made three sides of a square. On one sat Harold with his peers; on the other, facing him, was Halfdan—and I on his right—and four strong jarls from the corners of his kingdom to flank us. The last bench across the other two was filled by ladies, and amid them—all in white bride linen, with a splendid torque of jewels binding the loose folds across her bosom and a diadem of rough gold in her golden hair—sat the bride.

I scarcely know what followed. I saw the bride-price paid and the bench gifts made on bended knee. I saw the fair and frightened Ragnhild clinging weeping for a minute to her father's neck, and then I saw King Halfdan take her

"I SAW KING HALFDAN TAKE HER HAND."

hand and acknowledge her before all Norway as his wife: the trumpets sounded, and the shout of the people outside came into the hall like the roar of a torrent sounding through the pine woods. I saw and heard all this but dimly, for Ulla Erlingson himself, the indifferent, the invincible, was on that moment vanquished.

Among the fair Dane's maidens on the cross bench sat an English girl, and such a queen of gentle loveliness never eyes rested on before. She was scarce seventeen years old, but tall and shapely and slim, with a wondrous smooth figure, and her comeliness of limb and out line was set off by a fair, clinging robe of the mystic druid green, of just such hue as you see hanging, pale and tender, over the strong black fields of the northern sea when the west west wind blows at sunset. Her eyes were blue as fairy flax in summer, and shy, and clear, with a veiled light running somewhere deep down within them; her feet were sandaled with doe skin and white ermine, her middle was belted with a broad zone of pearls and amber beads, none of them smaller than a linnet's egg, and her hair, the crown and consummation of her loveliness, was bound up with a single fillet of red English gold.

A strand of that hair now, fifty years after, lies before me in the pale flicker of my feeble lamp. The luster has gone from it, and the dull stain of blood is on it, and it is pale with the kisses of these priestly lips, and bleached by salt sea water, and I hide my eyes a space from the silent reproach of that sweet toy, for even now I cannot look upon it without a throe of heavy grief and sorrow.

But nothing I recked of this then, and before the hungry, laughing chieftains had settled down to the marriage feast—before Ragnhild and Gunna, my sweet maid—and I as flagon bearer—had once made the circle of the hundred tables and first filled with pine-bark beer each princely feaster's flagon, I loved each thing she touched, ay, and the very air she breathed.

CHAPTER II.

Three brief days we spent in happy nearness, and I found she was the daughter of an English prince—one of those lordlings whose lands we pillaged and who had sent the maiden over under the care of a surly churl, her uncle, with a woman-gift to Ragnhild in order to enlist that great lady's mediation. The first day I spent haunting the maiden's footsteps, a prey to such fits of hot hopefulness and cold despair as I thought surely no other man had suffered hitherto. The second day we had sports and contests, and plucking up heart of grace I threw Offar, the Dane, in a wrestling bout, and hurled my spear on the first try sheer through the great iron shield old Langaness of Iceland had hung for us to cast at. Ay! and under the eyes of Queen Ragnhild and all her court I spread the great sail of my long ship and urged the rowers and burst through the jostling ranks of my compeers, and sailed round the fjord and back ahead of any, and won a prize and laid it on fair Gunna's knees.

And the third day, between the rising of the sun and the setting of it, I had met the maiden among the pines by the lonely shore, and had poured my heart

"I THREW OFFAR THE DANE."

to her with such eloquence as surely Frigga's self gave me, and she had blushed and sighed, and told me how wide apart were our kindred and how hostile our countries, and that it could never be, and then had blushed again and dropped a tear and slid her hand into my own, and thus Ulla was happy—happy with an incredible happiness, happy beyond expectation and knowledge.

Sweet was the breath of the pines that afternoon, pleasant the distant murmur of the sea upon the hollow rocks; soft the carpet of felted mosses and fair the nodding flowers that fringed our path!

On the next morning I went to the tent where she lodged by the sullen old churl her uncle, and it was empty! The pennon was gone from in front; the red-haired sentinels were gone, the benches were empty and deserted, the doors were opened, and, sick at heart and fearful, I turned to one who stood near and asked where was the barbarian envoy and where the fair white girl who had come with him. Heavy as lead fell the answer on my ears: "The stranger had quarreled last night at the feast—had struck and been struck by a hill chieftain, and in a moment of drunken fury had ordered out his ships, had taken the white maid from her couch and, scarcely giving her time to slip on cloak and sandals, had gone down to the strand, and, cursing everything Norwegian, launched into the black, midnight sea, and sailed away through the darkness to the land of the strangers."

Bitter was my grief and disappointment! For half a day I ran up and down the shore distracted, rage and chagrin alternately mastering my soul. Then I bethought me of my longship and had her dragged to the shore, and, swift as a white sea-maw before a squall, I fled out to sea, and crossing over the rough water, beat up and down the English coast for a week hoping to see them, and when that hope was vain back I came disconsolate to the viking's shore and sailed for many days about the islands, asking all strange ships from rocky Jar to merchant Nidaros whether a ship of the foreigners with a white maid and red-haired men on board had put in there, and got laughed at for my pains, and so I came back empty-handed and empty-hearted at last to my own homestead.

Very weary were the days and months that followed. The sunshine had gone out of the world, and I shunned my jolly comrades; the light laughter of the Norway maids was bitter to me. I hated my hawks and my wolf-dogs; I no longer fed my sleek horse; my weapons rusted on their hooks; my lendirmen, unreproved, pillaged my stocks and barns, and day and night I hung, disconsolate, over the remembrance of my loss.

CHAPTER III.

Ten years had passed; I had forayed north and south and asked with every lessening hope for news of her I sought from captives and merchants, but one and all shook their heads and could tell me nothing. In many a bloody fray on the English shore and sack of thorp or castle I had borne her image in my mind hoping to find her likeness some-

"I HAD MET THE MAIDEN AMONG THE PINES."

where, and thus, I say, ten years had passed, and presently still another spring came round and we had eaten all our winter provisions and were weary of last year's concubines, and rusty with basking by winter's fires and yearnful for the breath of the free ocean, or the yet dearer breath of adventure, and thus one day I went down to the strand where my good ship lay hauled up and tented over against the storm and snow, to see the work that Skaun the carpenter and Vedrey of the brushes had done upon her. And as I walked about that gallant hulk my blood took a new color and beat a quicker measure than it had done for long, while the winter sloth dropped from me and the hunger of the rover for quest and danger was born anew in my heart. A better skeid never was steered by a sea king's son, I thought. Her sides were blue—blue as last winter's ice in the shadows of June—right up from the water edge to the high gunwale, while inside the Trondhjem forest oak was scoured as white as a maiden's linen. The tall mast in the center was slim and straight as an arrow, and on either side were rowlock holes for sixty oars. A lovely ship, indeed, and cunning Vedrey had varnished her until her clinker sides shone like the back of a new caught salmon, and had carved and gilded every oar hole with a golden scroll of twisting serpents, and here and there and everywhere had been at work so deftly that it was a day's wonder to explore the workings of the loving zeal wherewith he had adorned the vessel from glittering stem to stern. And Skaun had seen to every peg and sinew that laced her shapely sides; he had been aft and forward; above, below; had scraped the oars and set new seats for rowers, and caulked afresh each seam with red cow-hair and resin—oh, a lovely ship, indeed, and in my pride surely I thought such a one never stood on mortal slips before. Once more I would venture a cast with fortune, and in a burst of pleasure and such life as had lain asleep too long within my heart I vowed then and there to start on a foray before three days were over. And, hot in the revulsion of my feelings, I set Skaun and Vedrey running here and there as they had never run before, and collected some of the lazy-boned villeins who had basked in my porch and snored by my pine wood fire all through the snow and frost, and made them work as they had not worked for many a day.

Under our busy hands the beautiful winter hulk put on her war gear and blossomed like a summer tree. We fetched out her sixty great oars, "Feet of the Sea-wolf," of ash (four men sat at each) and strapped them into their painted rowlock holes. Then we slung in the landing boats and set the great rudder aft on the starboard; we put the black leather tent on board, and under it the hudfat sleeping-bags to shield me and my jolly pillagers from the English rain. We shipped the landing planks—many were the white feet of captive girls we hoped would tread them—and a hundred stout rollers in case our longship needed to be beached. Then we put in the arms chest and filled it to the brim with glistening swords and axes, praying all the time to Odin that their shine might be dimmed ere we returned; we put the brass kettles on board, and the provisions, and barrels of water with little lids. Next we set up the tall mast that shone in its winter coat of bear's grease and was so red and straight, and hoisted to the spar the great square sail, "Cloak of the Wind." It was the great jarl Kand of Viskerdal, my foster-brother, who gave me that sheet, and it was colored blue and white and made of woolen stuff as soft as silk. Lastly of all the glistening dragon head was put upon the prow, and the warriors' shields, black and yellow, each overlapping each, were set along the bulwarks, and there, flashing in the sun with a hundred colors, beautiful and complete from stem to stern, my sea bride sat shining on the ways!

So well had we worked that the dawn of the second day from my vow we were ready, and half the valley came to see us off. All went well with the launching and in a few minutes after the props were knocked away we slid out into the fjord and floated true and straight, and at the same instant my five score fighting men set up the hymn to Odin, the sail was spread, and the long oars began to dip, swift and strong, into the merry water that ran rippling by us. Loudly, loudly I prayed from my place by the high tiller to the three fatal sisters who live beneath the ash Yggdrasil that they would send me this time to the arms of my love, and loudly, loudly to this moment I bewail me that my prayer was granted.

[TO BE CONTINUED.]

Worms That Raise Tons of Sand.

Mr. Darwin a few years before his death made the nonscientific world familiar with the work of worms in passing earth through their bodies, and with the wonderful results effected by them in a comparatively short space of time. More recently C. Davison has followed up Mr. Darwin's researches in this field of science. Last year Mr. Davison examined the sands between Holy Island and the coast of Northumberland, a large flat stretch of beach familiar to most persons who travel by the east coast route to Scotland. The observer found that the number of castings of sand thrown up by the lobworms gave an average of 50,000,000 to the square mile. A portion of the castings was weighed and the total weight thrown up annually was thus shown to be, in some places, about 901 tons per acre; at other points it was a good deal less than this, but in still other parts it amounted to no less than 3,145 tons per acre. If all the sand thus passed through the bodies of these animals in the course of twelve months were spread out it would give an average thickness of not less than thirteen inches. How many and various are the changes produced in the sand by the wonderful activity of these industrious worms it is impossible to say. But it is easy to see how the presence of such creatures in large numbers operate with other forces to produce a kind of order on the surface of the earth, and to replace crudeness by beauty. The thing that strikes one most, however, is the magnitude of the results which can be produced in a short time when a large number of separate individuals work in co-operation by the same methods toward the same end.—London Hospital.

GERMAN railways now aggregate 24,600 miles and employ 12,620 locomotives, 26,008 passenger cars, 556,851 freight cars and 618,000 officials and other employes. In 1890 there were 3,088 accidents of all kinds.

The Helpless Lord Chancellor.

The responsible office of "chairman" or president of a legislative body is one that generally carries with it both powers and privileges. There are, however, exceptions to the rule. In the British House of Lords, says the Sunday Magazine, it is not the lord chancellor, but the whole House that is addressed as "My lords."

The Speaker is the sole judge of all questions of order in the House of Commons; in the House of Lords such matters, when there is a conflict of opinion, are decided by the whole House, and not by the lord chancellor.

If several members of the House of Commons rise simultaneously to take part in a debate, the Speaker decides who shall speak first; but if two or more peers rise together in the House of Lords, the lord chancellor cannot decide who shall first be heard. It is the voice of the House that determines.

Happily, etiquette is so strong in the gilded chamber that it rarely happens when the House by cries expresses its desire to hear one of the contending peers that the others do not give way. But some years ago there was a notable scene over the question whether a peer who had risen from the front Tory bench should be heard in preference to a peer who had risen from the front Liberal bench.

Neither noble lord would give way, and to bring the curious situation to an end, Earl Granville moved that the Liberal peer be heard. The House divided on the question, and decided by a big majority that the Tory peer should be heard first.

It is difficult for the average man to understand why the lord chancellor should not be able to exercise authority which is vested in the chairman of every public meeting; but there is a subtle constitutional point involved in this apparently ridiculous procedure.

All peers are equal as legislators in the House of Lords. No one of them can be vested with authority over the others. Therefore, when a point of order is involved, it is the whole House, and not the lord chancellor, that must decide the issue.

Probable Fortune for President's Brother.

Abner McKinley, the President's brother, has just secured control of an invention which he believes is worth millions of dollars, and his friends trust that his hopes may not be ill-founded. It is a process for adulterating silk with a fiber made from wood pulp. A fabric half-silk and half-fiber is difficult to distinguish from the genuine article, and is said to be much more durable for dress goods and linings than pure silk.—New York letter to the Chicago Record.

THE FARM AND GARDEN.

ITEMS OF INTEREST ON AGRICULTURAL TOPICS.

Grain for Poultry in Summer. Ponds for Watering Cows. Mulch Under Bearing Trees. Etc., Etc.

A HINT TO FARMERS.

A farmer should never be without note book and pencil. He doesn't know what minute he may need it. We ought to use the pencil more anyway, and do more figuring. Sometimes when work piles up ahead of me and I get worried over it, I write off a list for a month of what must be done, beginning with that which demands immediate attention; then drop the worry and go to work and pick one job after another from the list. Sometimes it surprises me to find the list diminish so fast.—Stephen W. Cox.

GRAIN FOR POULTRY IN SUMMER.

One reason why the egg supply falls off soon after warm weather begins is because the hens are exhausted from the labor of producing one egg a day for several weeks, and they cannot continue to do it on their diet of insects and grass. The hens that are laying will not be fattened if given a little wheat each day, especially if it is harrowed in loose soil so that the fowls have to scratch for it. The wheat will also improve the quality of the eggs, which, as all know, are most palatable in winter, when grain is a much larger part of their feed than it is any other time of year. Grain may fatten fowls in winter, when they get little exercise, but they run off fat as fast as they make it in summer.

PARING HOOFS OF SHEEP.

When kept in warm stables, with their feet resting in a strawy manure kept damp with their urine, sheep's hoofs will often grow too long. It is the condition under which foot or hoof rot usually occurs. Sheep need dry land to graze on, and all the better if it is stony or rocky, giving opportunity for the sheep to knock off pieces of their hoofs and keep them of proper length. When pastured on low ground sheep's hoofs should be occasionally pared, and a little blue vitriol put on the cut to prevent disease should any germs of the rot be present. It is a good time to examine the sheep's hoofs before they are turned out to pasture.

TEMPORARY FENCES BEST.

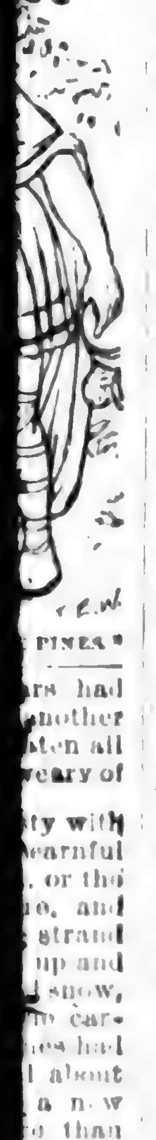
Every year the amount of interior fences is lessening, and it is not, as is generally thought, because fencing material is growing scarcer. In fact, the greater cheapness of iron makes the woven wire fences really cheaper, considering their permanence, than many of the old time fences which cost so much labor to put up. But the woven wire fence has a still greater advantage in the fact that it can be easily taken down and set up again. With a few hundred rods of this fence no other fencing material would be needed on any farm. Under a permanent fence, especially an old stone wall, such weeds as Canada thistle and quack grass will find a secure home, from which no cultivating can dislodge them.

PONDS FOR WATERING COWS.

So much is said about the need of pure water for cows that most people have come to the conclusion that pond water is always objectionable. It may be, near large cities, where various kinds of refuse get into it, and so also may the spring water of such localities be polluted with typhoid and other germs. But away from large cities or villages the pond water as found on many farms is as pure as that which comes from springs. Cows will drink it, even if the water be muddled, rather than the water freshly drawn from spring or well. The reason is because in summer the water is warmer. If allowed, cows will wade into such ponds, letting the water cover their udders. This is very refreshing to them on a hot day, but is best done where there is a running stream, so as by exposure to the air by its motion to keep the water fresh.

MULCH UNDER BEARING TREES.

There is a great amount of water in the soil, and this if carefully saved will be assurance of a good fruit crop. Almost all kinds of fruit trees suffer late in the summer for lack of water. The best way to keep moisture in the soil is to thoroughly mulch it with straw, cut grass, or anything that will present an open, dry surface. If nothing else can be procured cultivate a little loose soil under the trees as far as the roots extend. Many people do not think of loose soil as a mulch, but it is one of the best. It is for this reason that an orchard in bearing ought always to be cultivated rather than kept in grass. In cultivated soil every little shower sinks down where it will help the roots. But if the surface is left hard and uncultivated, even the heavy rain, if there is a steep descent, may run off on the surface and do little good. There is an especial need of moisture while the fruit



ing and in a few minutes after the props were knocked away we slid out into the fjord and floated true and straight, and at the same instant my five score fighting men set up the hymn to Odin, the sail was spread, and the long oars began to dip, swift and strong, into the merry water that ran rippling by us. Loudly, loudly I prayed from my place by the high tiller to the three fatal sisters who live beneath the ash Yggdrasil that they would send me this time to the arms of my love, and loudly, loudly to this moment I bewail me that my prayer was granted.

Happily, etiquette is so strong in the gilded chamber that it rarely happens when the House by cries expresses its desire to hear one of the contending peers that the others do not give way. But some years ago there was a notable scene over the question whether a peer who had risen from the front Tory bench should be heard in preference to a peer who had risen from the front Liberal bench.

Neither noble lord would give way, and to bring the curious situation to an end, Earl Granville moved that the Liberal peer be heard. The House divided on the question, and decided by a big majority that the Tory peer should be heard first.

It is difficult for the average man to understand why the lord chancellor should not be able to exercise authority which is vested in the chairman of every public meeting; but there is a subtle constitutional point involved in this apparently ridiculous procedure.

All peers are equal as legislators in the House of Lords. No one of them can be vested with authority over the others. Therefore, when a point of order is involved, it is the whole House, and not the lord chancellor, that must decide the issue.

Probable Fortune for President's Brother.

Abner McKinley, the President's brother, has just secured control of an invention which he believes is worth millions of dollars, and his friends trust that his hopes may not be ill-founded. It is a process for adulterating silk with a fiber made from wood pulp. A fabric half-silk and half-fiber is difficult to distinguish from the genuine article, and is said to be even more durable for dress goods and linings than pure silk.—New York letter to the Chicago Record.

THE FARM AND GARDEN.

ITEMS OF INTEREST ON AGRICULTURAL TOPICS.

Grain for Poultry in Summer. Ponds for Watering Cows. Mulch Under Bearing Trees, Etc., Etc.

A HINT TO FARMERS.

A farmer should never be without note book and pencil. He doesn't know what minute he may need it. We ought to use the pencil more anyway, and do more figuring. Sometimes when work piles up ahead of me and I get worried over it, I write off a list for a month of what must be done, beginning with that which demands immediate attention; then drop the worry and go to work and pick one job after another from the list. Sometimes it surprises me to find the list diminish so fast.—Stephen W. Cox.

GRAIN FOR POULTRY IN SUMMER.

One reason why the egg supply falls off soon after warm weather begins is because the hens are exhausted from the labor of producing one egg a day for several weeks, and they cannot continue to do it on their diet of insects and grass. The hens that are laying will not be fattened if given a little wheat each day, especially if it is harrowed in loose soil so that the fowls have to scratch for it. The wheat will also improve the quality of the eggs, which, as all know, are most palatable in winter, when grain is a much larger part of their feed than it is any other time of year. Grain may fatten fowls in winter, when they get little exercise, but they run off fat as fast as they make it in summer.

PARING HOOFS OF SHEEP.

When kept in warm stables, with their feet resting in a strawy manure kept damp with their urine, sheep's hoofs will often grow too long. It is the condition under which foot or hoof rot usually occurs. Sheep need dry land to graze on, and all the better if it is stony or rocky, giving opportunity for the sheep to knock off pieces of their hoofs and keep them of proper length. When pastured on low ground sheep's hoofs should be occasionally pared, and a little blue vitriol put on the cut to prevent disease should any germs of the rot be present. It is a good time to examine the sheep's hoofs before they are turned out to pasture.

TEMPORARY FENCES BEST.

Every year the amount of interior fences is lessening, and it is not, as is generally thought, because fencing material is growing scarcer. In fact, the greater cheapness of iron makes the woven wire fences really cheaper, considering their permanence, than many of the old time fences which cost so much labor to put up. But the woven wire fence has a still greater advantage in the fact that it can be easily taken down and set up again. With a few hundred rods of this fence no other fencing material would be needed on any farm. Under a permanent fence, especially an old stone wall, such weeds as Canada thistle and quack grass will find a secure home, from which no cultivating can dislodge them.

PONDS FOR WATERING COWS.

So much is said about the need of pure water for cows that most people have come to the conclusion that pond water is always objectionable. It may be, near large cities, where various kinds of refuse get into it, and so also may the spring water of such localities be polluted with typhoid and other germs. But away from large cities or villages the pond water as found on many farms is as pure as that which comes from springs. Cows will drink it, even if the water be muddled, rather than the water freshly drawn from spring or well. The reason is because in summer the water is warmer. If allowed, cows will wade into such ponds, letting the water cover their udders. This is very refreshing to them on a hot day, but is best done where there is a running stream, so as by exposure to the air by its motion to keep the water fresh.

MULCH UNDER BEARING TREES.

There is a great amount of water in the soil, and this if carefully saved will be assurance of a good fruit crop. Almost all kinds of fruit trees suffer late in the summer for lack of water. The best way to keep moisture in the soil is to thoroughly mulch it with straw, cut grass, or anything that will present an open, dry surface. If nothing else can be procured cultivate a little loose soil under the trees as far as the roots extend. Many people do not think of loose soil as a mulch, but it is one of the best. It is for this reason that an orchard in bearing ought always to be cultivated rather than kept in grass. In cultivated soil every little shower sinks down where it will help the roots. But if the surface is left hard and uncultivated, even the heavy rain, if there is a steep descent, may run off on the surface and do little good. There is an especial need of moisture while the fruit and its seeds are being formed, for this requires potash, which cannot be used by roots until it is dissolved by water in the soil.

RAISING QUEENS.

In rearing queens we should select the best colonies or colony from which to breed them, and remove the queen from the colony selected. This colony, of course, must be a fairly strong one, and one that contains bees of all ages down to brood in all stages, and a good supply of brood yet to hatch. The queen removed may be cared for by taking one or two frames of brood and honey from the same, or any other colony, and placed in a new hive by themselves, and may be built up eventually into a full colony, and if additional frames are added, can be built up in a short time.

The hive left queenless will begin to construct queen cells, and will produce perhaps a half dozen or a dozen cells, which at the end of eight days will be completed and sealed over. Three or four days later, or at the age of about twelve days, the cells are ready to cut out and use. Some use them at any time after they are sealed over, but I prefer to have them nearer maturity, as a much greater per cent. of them can be saved. As the young queens hatch out in sixteen days, and often a day or so before, it is risky to wait too long, for when the first queen comes out she will immediately destroy all the other cells in the hive, and hence this danger point must be closely looked after.

Now for every queen cell we wish to save we will start nuclei or small colonies, that is, take about two frames of brood and honey with adhering bees from any colony or colonies, but to a certainty see that you do not take the queen. Start as many of these nuclei as you have cells to stock, and be careful to have them well stocked with bees, enough to cleverly cover the combs. For this purpose, frames of brood just beginning to hatch are the best, as the old bees will return to their former homes. After these nuclei are all arranged, cut out the queen cells and engraft one cell in a comb of each nuclei, being careful to cut out the cells by taking a little of the comb with them so that the cell proper is not damaged, and insert it as near the brood as possible.

These cells will hatch in sixteen days, and the young queens will become fertile and begin laying inside of ten days usually. These virgin queens often become lost during this period as they fly out to meet the male bee, and in returning enter wrong hives. After the queens begin laying they are ready to use as untested queens, as it is not known of their purity until their bees begin to hatch, which is twenty-one days. These nuclei may be built up into full colonies, and this is one way of increasing the number of colonies.—A. H. Duff, Kansas.

BREEDS RUNNING TOGETHER.

When the hatching season ends the breeds can run together in one flock. It would be an advantage to have no males with them, but it will not injure the stock should the males and hens be of different breeds. Some breeders contend that when a hen is kept with a male of different breed her progeny will never again be up to standard requirements in points, but we have never known any injurious results from such a course if the breeds are separated two months before the eggs are to be used. We have known of the separation of the breeds to occur only ten days before using the eggs, and in the experiments made we found the influence of the male to extend to only five days. We advise more time, however, and suggest two months, in order to be sure that no mistake will occur. It is expensive to keep the breeds separated in summer. More fences are required and frequently the separation must be accomplished by confining the hens. We have always allowed all the hens to run together after the hatching season is over, and have done so for thirty years, with no injurious effects resulting therefrom so far as the purity of the breeds was concerned.—Poultry Keeper.

PROPOGATING ROSES.

While it is true that nurserymen propagate roses by the thousand from cuttings, they have unusual facilities for doing this in their propagating houses, where heated water or steam runs under the benches covered with soil and sand in which the cuttings are placed. You cannot expect to do this in the open ground, the same as you can easily do with cuttings of the grapevine, current and gooseberry. Rose wood is very hard, and as a cutting roots very slowly, if the bud is exposed to greater warmth than the end of the cutting in the soil, it will burst into leaf before the roots have started, and will then perish. The tea rose is hardest of all to root, and we know some nurserymen who find more success with this variety by growing the plant from layers. This is a sure way, though it may be near fall before the layer has fully rooted, and in that case we should leave it connected with the main vine till the second year, so as to make a strong plant. If, when the plant is layered in spring, a small cut is made on the under side opposite the buds, roots will put out more quickly. Where the stalk is bent it should also be slit so as to relieve the effort of the layer to resume its erect position. The connection with the main bush will send sap down to the branch under ground, while the cut will check the flow backward to the vine. This will make a bunch just outside the cut, out of which a great mass of roots will push, making a strong vine.—American Cultivator.

FARM AND GARDEN NOTES.

Have you dusted those chicks yet?

Fix the troughs so the pigs cannot foul them, as they will surely do if they can get into them.

Once a month clean all chicken coops and roosts and apply insect powder, or better, liquid lice paint.

If you have been neglectful in this direction, then dust or grease the chicks once a week for a month.

Shade is necessary both for the fowls and chicks from now on. If the stock can not get under natural shade, such as trees, then build some sort of protection from the sun.

Erect a trellis of poles and cover it with cornstalks or anything convenient. It should be three or more feet from the ground and situated conveniently to the roost or coops.

The hog kept in a clover field seldom makes a nuisance of himself by turning the field upside down. It is the lack of some necessary feed ingredient and the prospect of finding it below that starts the rooter.

Grapevines make an excellent sunshade if trained to a flat trellis. These can be planted anywhere, in the chicken-yard or out of it, and answer the double purpose of shade and furnishing delicious fruit.

A prominent swine-raiser says he believes that if hogs have plenty of grass in summer and about half the grain they will eat, three pounds of pork can be made from less grain than one pound can in cold weather with hogs confined in a close pen.

When a pig stops growing he becomes stunted, and a stunted pig is no good. Close confinement on dry food won't do. If obliged to keep him off the clover patch, you should get some succulent, green stuff—young clover, purslane, lettuce, etc., to him.

The lambs must be kept thriving all summer long. This requires good food and water and plenty of both, with good care. If possible have them in a convenient lot, go among them often and feed a little regularly. Feed according to the pasture. You will thus keep them accustomed to you and the troughs, and they will be the better for it in more ways than one.

Fruit of all kinds should be planted in the poultry-yards. They all thrive amazingly so planted. The most of of our poultry-yards are in an old apple orchard. The trees have improved very much since we put the yards there. Last year says the "Epitomist," we build more yards in the lower end of the orchard where the trees seemed to be dying, and this summer we can see an improvement in those trees. By another year we expect to see them much more improved.

A fat hog is soon "done up" by worry and excitement on a hot day, and many are killed every year by carelessness in driving and hauling. If obliged to handle heavy hogs in hot weather, try to get it over with early in the day. Use plenty of water, but don't douse cold water onto a hot hog; sprinkle carefully at first, and keep it up frequently; have the patience of Job.

Grapevines can be trained in the fences, and blackberries will yield heavily if planted in the yards. The hens will do all the tending and fertilizing. Of course the hens will have to be turned out when the berries begin to get to some size, yet they will only take those berries near the ground, especially if the breed kept is of the heavy kind. Leghorns would probably jump for the fruit.

Sheep must be watched closely during the summer months, for blow flies are ever alert for abrasions or filth or moisture—sores where they may deposit their young. The first indication of these should be investigated at once and the maggots removed or destroyed with turpentine; then apply a mixture of pine tar and turpentine to prevent a repetition of the offense and assist in healing the irritation.

The Longest Railroad Bridge.

The longest railroad bridge in the world is that recently completed at Czernovoda, Roumania. It crosses the Danube and thus shortens the railroad journey from London to Constantinople about sixteen hours. The length of this structure is 13,325 feet, or a good two miles and a half. There is one span, in the middle of the river, 620 feet long, and four more each having a length of 445 feet. The other spans are still shorter. The chief rivals of this structure are the Tay bridge, in Scotland and the Mississippi bridge, at Cairo. The length of the former is 10,725 feet and that of the latter is 10,760 feet.

FOR THE YOUNG FOLKS.

THE REASON WHY.

I know a little maiden who is always in a hurry,
 She races through her breakfast to be in time for school;
She scribbles at her desk in a hasty sort of flurry,
 And comes home in a breathless whirl that fills the vestibule.

She hurries through her studying, she hurries through her sewing,
 Like an engine at high pressure, as if leisure were a crime;
She's always in a scramble, no matter where she's going,
 And yet—would you believe it?—she never is in time.

It seems a contradiction, until you know the reason,
 But I'm sure you think it simple, as I do, when I state
That she never has been known to begin a thing in season,
 And she's always in a hurry, because she starts too late.

EVETS AND LIZARDS.

Evets or efts, as they are more properly called, are harmless little creatures, though they have the repulsive lizard-like look, and the habit of hiding in dark, mysterious swamp water, which are exciting to the imaginations of ignorant people. The female lays her eggs on the leaf of some water plant, which she wraps about them in a curious way, leaving them to be hatched by the summer heat. The young are like tadpoles—what you call polliwogs—at first; but when fully developed, they breathe the air like frogs or salamanders. They live on worms and insects. Their skin is smooth and delicate. In swimming, they balance themselves with their legs, and scull with their tails. If one loses a part of its tail, it will grow out again. There are several species of efts, and all come under the general name of newts or tritons.

The lizards belong to an entirely different family. In tropical America there is a class of lizards, some of them very large; but we have none hereabouts. The true lizards abound in the Old World, especially in tropical countries. They run on walls and trees, sun themselves on banks and limbs, and dart in and out of the green foliage, amidst which their bright colors shine very prettily. Sometimes thousands of them will be seen about some old ruin.

WONDERFUL THINGS IN A BACK YARD.

Some of the boys and girls no doubt believe that in order to see really wonderful things they must travel abroad and spend a great deal of money in railroad and steamship fares. But the wonderful is almost everywhere if we only have the eyes to see it. A New York author named Charles M. Skinner has written a whole book about the wonderful things that happen in his back yard. He calls it "Nature in a City Yard." The yard was eighteen feet long by fifty feet wide, and you would simply be astonished to know what wonders so small a piece of ground produced. Besides dogs and tuneful cats and tomato cans, Mr. Skinner found many other things. He says:

"The zoology of the district likewise comprises English sparrows, slimy slugs and earthworms. Mosquitoes call whenever the wind brings them in from the fens of Long Island and the meadows of New Jersey; and we are liable to have flies. There are beetles, gnats, fireflies, centipedes and a rarely visible mouse. In flower time we enjoy the company of bees, both honey and bumble, vagrom wasps and hornets and butterflies and moths in great numbers. Then, let's see: We have a cricket or two, and a periodical delegation of grasshoppers. We have stocked the place with three toads and a turtle. The ability of these citizens to hide themselves in a space so small is wonderful. As to minor denizens and visitors, their name is legion, and they are a corrupt, unconscionable, pernickety lot. They are the aphides, the common plant lice that prey by myriads on the poppies and chrysanthemums, the wood lice or sow bugs, the rose bugs, the McGonigle boy, the caterpillars that strip the zinnias, the blue beetles on the asters, the mealy bugs that spread over the cacti, the scale that dot the palms, the hard-shelled, many-legged wire worms that burrow through and kill the roots of bachelor buttons, and our experimental louseworts; coiling like ammonites when shaken out, and we stir up potato bugs and seventeen-year locusts when we gather our hay crop with a lawn mower. You might not believe that we had nearly sixty varieties of plants in bloom at once in warm weather, and that the orchids hanging on the house wall above the kitchen windows, and in a shady corner, in pots, flourished in spite of the forebodings of florists."

And in telling of the surprising and interesting life which all of these things live Mr. Skinner takes up an entire book. So you see that a man or boy with eyes to see wonders doesn't have far to go.

A WIZARD'S PETS.

Perhaps in no way was the late great and only Herrmann more truly the wizard than in his absolute power over every kind of animal. He was never known to approach one that did not instantly recognize and love him as a friend; and so devoted was he to "pets," that he never traveled without a retinue of dogs, birds, monkeys, etc. Mrs. Herrmann was not a whit behind the great magician in her fondness for and power over animals, and if there was room in their private car for General, Shadow and Lola (Mr. Herrmann's Danish hound, monkey and macaw) it was only upon condition that they remained upon good terms with Fidget, a black and tan; Chappie, a mocking bird, and Bettie, a paroquet—the especial pets of Mrs. Herrmann.

It is not to be wondered at, therefore, that the magnificent Herrmann manor at Whitestone, L. I., with its broad acres has long been the home, not only of some of the finest bred horses and dogs in America, but of deer, goats, ganders, ducks, doves, monkeys, magpies, parrots—in fact, every manner of living things. When Mr. Herrmann was at home it was always his custom to have his morning coffee and roll in bed and this was a grand hour for the dogs, as one and all were allowed to go to his room and assist at the function; and it was thus, surrounded by a dozen or more huge hounds and St. Bernards, each eagerly clamoring for a friendly word, that this almost supernaturally delicate man best enjoyed his breakfast.

Some of these great St. Bernards, by the way, enjoyed a very unique sort of protection during their puppyhood, though they have doubtless forgotten all about it by this time. Thirteen of them were born at one litter—a quite unusual thing—and formed, of course, a most picturesque and interesting group. It chanced that Mr. Herrmann's favorite pet at this time was a brilliant macaw that he had brought from Central America. These birds are sometimes a shimmering cadet blue with golden wings, but this one was a bright scarlet with black beak that only seemed the blacker from its striking setting of snow white feathers. This gorgeous bird measured 1½ yards from beak to tip of tail, and in addition to its great beauty was a very clever talker. One day Mr. Herrmann put this beautiful macaw into the monkey cage, which he placed on top of the kennel containing the thirteen young St. Bernards. Later in the day the family were aghast at discovering that Miss Lola had used her sharp bill to good purpose, for she had bitten a great hole in the cage, thereby obtaining her freedom. Search was made for her everywhere, but all in vain.

Sad at heart, Mr. and Mrs. Herrmann strolled out to take a look at the puppies by way of consolation, when, to their great surprise, there in their midst stood Miss Lola, having the most beautiful time in the world. She had evidently got upon the most intimate terms with her four-legged neighbors; one was licking her beak, another her wing; still others contented themselves with her back and beautiful tail feathers, each and all doing her homage in their own clumsy puppy fashion and Miss Lola, a truly feminine, creature, was enjoying all this devotion in every feather of her being. Presently the mother appeared and the hungry and ungrateful little puppies one by one deserted their brilliant guest, who was by no means pleased at the turn affairs had taken. Now, Lola could be very vicious if she chose, and when she marched in a dignified manner over to Mrs. St. Bernard, planted herself firmly in front of her and began to wink at her in a very wicked way, both Mr. and Mrs. Herrmann were on the alert to see that she didn't pick out her rival's eyes. However, after winking and deliberating—deliberating and winking, she looked squarely into the eyes of the mother dog, and in a coarse, gruff voice ejaculated, "Hullo!"

From this time on she constituted herself the mistress of the dog kennel, grudgingly allowing the mother to come in when occasion required, but never ceased to be fiercely jealous of her. Sometimes Lola would fly into a tree and refuse all entreaties to come down until some one would stand under the tree with a puppy in his arms, when she would fly down at once. Unfortunately, this beautiful pet developed such a habit of biting or nibbling at every thing within sight, especially wood, that Mr. Herrmann could not take her on his last trip, fearing that in time she might eat up the car. He therefore placed her in Central park and, curiously enough, she dropped dead from her perch on the very day that her beloved master so suddenly expired.

Nearly every one is familiar with Herrmann's "Noah's ark" trick, where he shows the audience an empty box, and for further verification of its emptiness has buckets of water poured into it. Then he begins to take out animals by the wholesale. First comes a squealing pig, then a pet gander, and so on. Now, for some reason or other, the gander suddenly developed a strange jealousy of the pig, and every night would seize its poor little tail in its sharp beak, causing it to run about the stage squealing furiously, to the great amusement of the audience. Mrs. Herrmann, however, had much too soft a heart to let this go on, and one day cleverly fitted a piece of kid glove over piggie's tail. That evening the gander, discovering this device, and not willing to let the little beast go scot free, caught him by the ear, and the audience was as much amused as ever. The next day Mrs. Herrmann made a red flannel cap, tying under the chin and perfectly fitting the ears of the little victim. When Mr. Herrmann drew him out of the ark that night so attired he was almost more paralyzed than the gander, who, however, never molested piggie again. All the trick animals were as tame as possible, and seemed to greatly enjoy their public appearances. A trick duck in particular was so devoted to one of the maids that it would persist in following her all over the theater.

Story of a Repentant Dog.

This little dog tried to make amends for his sins. But, unfortunately, he did not do it in the best way, although he did the best he could. A story comes from New Haven, Conn., about a black spaniel that abstracted a feather duster from his owner's house and while playing with it tore out all the feathers. The dog, after being shown the featherless handle, was given a severe whipping with it. He then disappeared and about an hour afterward walked bravely into the house with a brand-new duster in his mouth. He walked up to his mistress and meekly deposited the new brush at her feet. By the mark on it she saw that the dog had stolen it from a neighboring fancy goods store.

CHILTON COUNTY CALL.

M. E. TAYLOR, Editor and Prop.

Published every Friday at Thorsby, Alabama.

Subscription price, $1.00 per year in advance.

Entered at the postoffice at Thorsby, Ala., as second-class matter.

NOTICE TO THE PUBLIC.

Any erroneous reflection upon the character, standing or reputation of any person, firm or corporation, which may appear in the columns of The Call, will be gladly corrected upon its being brought to the attention of the publisher.

"'FESS UP!"

The Advertiser has several times challenged the Anniston Hot Blast to produce a plank in any platform of the National Democratic party, except the platform adopted at Chicago last year, which contained a declaration in favor of the free, unlimited and independent coinage of silver at 16 to 1 by the United States. Thus far the Hot Blast has dodged this challenge.—Montgomery Advertiser,

If the Advertiser will put its thinking cap on, it will speedily recall the time when the Democratic party committed itself—in Presidential convention assembled—to an unlimited issue of greenbacks, of fiat paper money.

It can't crawl under, climb over nor tunnel through this little episode in the history of its party, when "Gentleman George" Pendleton, of Ohio, was on top—"Gentleman George," who was afterwards Minister to Berlin, by the grace of Grover.

And, if the CALL is not mistaken, Sir Walter Screws was a henchman of "Gentleman George" in that far-away time.

Plead the baby act; 'fess up, Monsier Advertiser, and admit it was a case of "youthful indiscretion" on your part, at that period of your career; or own that you are now a senile septuagenarian, whose only ambition in life is to hang on to a post-office.

DON'T.

We understand that a good many young Mississippians have fixed their glittering eyes on the gold fields of Alaska. The St. Louis Globe-Democrat says in this connection:

"The story of opening the California placer mines is one of many hardships and tremendous labor, though in a geographical sense they were quite accessible and favorably located as to climate. By far the larger number of California miners were disappointed in the eventual results of their hard work as argonauts."

We appeal to the young men of our State not to rush off after the Alaska ignus fatuus while there is gold in their native hills—in Clebourne County for instance. Venturesome spirits like they undoubtedly possess, can ill-afford to waste themselves in the desert air of what may be properly called the Artic zone. One chance in a million they may make a fortune; the other 999,999 are that they will freeze and starve. Again the CALL says:

Don't.

TENNESSEE and Georgia are putting on a large lot of frills and furbelows, because each of their Governors has a lady Colonel on his staff. The states in question think they have broken the military record, but, bless their innocent souls, Dr. Mary Walker, of Washington City, was made a real major, way back in the '60s, and would have been promoted to a Jigadier Brindleship, if it hadn't been for the protest of some horrid he-creature.

The Kansas State Agricultural college has one of the six forest plantations on which trees are grown experimentally under the general supervision of the department of agriculture at Washington. The other five stations are located respectively in Minnesota, South Dakota, Nebraska, Colorado and Utah.

It is said that unscrupulous pot-hunters in Maryland, in their war on ducks, employ a gun about 12 feet in length, with a bore like a cannon, and using from two to three pounds of shot at each discharge. These guns are arranged on swivels in the bow of a punt, and when used against the birds at night, slaughter them by the hundred. The game wardens, however, are doing effective work in stopping the practice.

It was Hawthorne who alluded once to the finished finesse of the practiced politicians as a craft of men "skilled to adjust those preliminary measures which steal from the people, without its knowledge, the power of choosing its own rulers." It, however, suggests the New York Observer, the people would not so generally and deliberately go to sleep while the politicians plot the latter's craft might be greatly circumscribed, if not emtended altogether.

THE FALL FROM GRACE.

Fell she from her high estate;
Fell as if the hand of fate

Had in malice struck her down!
Thrown aside her deeply crown.

Left her in the street alone,
Heart to heart with paving stone.

She so young and sweet and fair
Creature of a purer air.

Light of home; the radiant gleam,
Of a father's dearest dream.

Sunshine was but shadow while
Friends could linger in her smile.

Fell she from her proud estate
Fell as by the hand of fate;

Cast upon a hard turnpike
By a misnamed safety bike.

—Boston Globe.

HUMOROUS.

Cholly—My head is going round. Dolly—Well, I hope it never gets around to me.

"I heard that Pose, a photographer, was 'held up' twice in the same evening." "Yes, he was retouched."

"There seems to be an awfully bad air in here." "Oh, it is nothing. Just wait till you hear Miss Squeals try to sing."

She—How are you getting on with your bicycle, Captain Vert? He (a beginner)—Oh! splendidly; getting on about every two minutes.

Bubbles—My wife and I met by accident—thrown together by chance, as it were. Wheelwoman (eagerly)—Did you break the bicycles?

Florence—From the way Arthur behaved when he called last night, Belle, I feel sure he is in love! Belle—Dear me! Is that so? Who can it be?

Evelyn—Charley looks worried this evening. I wonder if Miss Winthrop is going to refuse him? Bob—He's wondering, too. That's what worries him.

Algernon—I have just sent $10 worth of flowers to Miss Walsingham. Freddy—Why, I didn't know that any new florist had opened up a shop in town.

First Little Girl—And isn't your cat afraid of mice? Second Little Girl—Oh, no; not a single bit. First Little Girl—That's queer. And she's a lady cat, too, isn't she?

Mrs. Brown—I am the mother of seven boys. Do you wonder that I am a bread maker? Mrs. Jones—I am the mother of seven girls. Do you wonder that I am a match maker?

Flossie — Eddy, what's extravagance? Eddy—Oh, it's always wanting to get something you want to get, instead of just getting something you don't, that somebody else wants you to get.

"The rooms are rather small," said the prospective summer boarder. "The advantage of that," said the hotel-keeper complacently, "is that not so much fresh air is required to keep them cool."

"Look up, dearest," he murmured, and his voice was as tender as spring lamb. "No, Edgah," she murmured, "I will not look up. I've had that kiss-with-every-airship gag worked on me too many times."

Fogg—Harry, run out and get me a magazine. Henry—Yes, sir. Which one? Fogg—Oh, it doesn't matter. The same pictures of bicycles, kokaks and typewriters are in all of them. Any one will do.

Miss Oldgirl—I have just been elected to membership of the United States Daughters of 1812. Why don't you become a member? Bessie Pert—Because of my age. I won't be eligible until fifty years yet.

First Sweet Girl About to Graduate—My commencement gown is ready, but I don't know what I shall write my essay on. Second Sweet Girl About to Graduate—Then I'm ahead of you. I selected my stationery today.

Piano Sounded by Electricity.

A piano on an entirely new principle is announced from Germany. The strings are stretched across the sounding board as in the ordinary piano, but the entire hammer mechanism is absent. Instead, the depressing of the key puts in action a magnet which automatically attracts and releases the wire, thus producing vibrations without the metallic stock which accompanies the sound in the common type. The resulting effect upon the tones is said to be very remarkable. The high notes resemble those of an Aeolian harp. The middle and lower notes are like a 'cello or an organ. It responds readily to every variation in power and expression. A note can be sounded for several minutes without varing in quality. So radically different from all existing instruments are the effects that a writer in the Illustrated American says a new style of music is needed to bring out its capabilities.

Sold.

"There is a girl in Allegheny who can put her tongue out and touch her ear," said a Northsider to a Pittsburger.

"How does she do it?"

"This way," replied the Northsider, who put out his tongue and at the same time touched his ear with his forefinger.—Vicksburg Chronicle Telegraph.

SCISSORINGS.

The Alexander City Outlook declares: "That little spat between the Sheffield Reaper and the Thorsby Call is getting too snappy. Call time on the frisky things, Mr. Reporter (Allen, of the Waterloo Tribune,) or they will hit below the belt."

We have done the best we could to prevent serious trouble, but it seems that it can't be averted. Our neighbors are determined to damage each other's countenance. Well, we resign our job as referee.—Waterloo Tribune.

There is no need to hit below the belt in this case. After receiving a few light slaps the Reaper has thrown up its hands.

"Thomas Jefferson still lives!" exclaims an exchange. Well, if that is true, let him come forth and throttle the many Democratic liars who claim to represent true Jeffersonian Democracy.—Alexander City Outlook.

Have mercy, Outlook, have mercy! If the Sage of Monticello heeded your petition, there would be a mortal lot of badly surprised if not strangled Democrats.

Speaking of Dewitt Talmage, the Pratt City News says: Weighted with the feebleness of age he soon will lay his armor down, the emerald gates will burst and his raptured vision shall behold the King in His beauty as his feet tread the elysian fields of the land of the blest.'

Holy Smoke!

What kind of whiskey does the News man drink, anyway.

Rain is the best fertilizer after all for corn Since the recent downpour you can hear the corn popping in the valley on the hill sides and if the people of this section don't have hog and hominy for next year it will be for the reason they are too lazy to kill the hogs and make the hominy.—Alabama Home, (Anniston.)

Randolph county takes first premium on illict distilleries for the past year and Cleburne county next. The revenue officers raided 64 stills in Randolph, 36 in Cleburne, 21 in Coosa and only seven in Shelby. Autauga gets the booby prize; the best it could do for the officers was to furnish one

Notwithstanding his "short way of saying things," and his radical views in regard to politics, when there should be none, Brer Anderson, of the Eutaw Mirror undoubtedly publishes one of the most interesting weeklies on our extensive X-list.

That "Flag Station Youngling," the Thorsby "infant," has already succeeded in spiking the artillery of the Sheffield Reaper, and rendering it silent; and it didn't take any particular exertion on the part of our intellect to do it, either.

The editor of the Thorsby Call is a cynical critic.—Heflin New Era.

P'raps;' but you can't say our bread isn't always buttered on the right side.

The Chattanooga Times is yowling like a yard full of tom-cats against yellow journalism, forgetful of the fact that it is a yellow (metal) journal itself.

About 30 of our boys are in camp at Tuscaloosa this week.—Bessemer Journal.

Belled Halifax! How many children have you, anyway.

The Hawkins Lumber Co., in Birmingham, is one of the most reliable firms in Alabama. They have everything the builder desires. Well seasoned lumber from the forests of Alabama and Georgia, sash, doors, blinds, casings, finishing lumber, stair work, cabinet work, office fixtures, church pews, pulpits, etc. Out of town purchasers will receive courteous treatment and get special low prices.

Now if Morgan were to become speechless, after the manner of Pettigrew! But we have no right to hope for such a boon,—Chattanooga Times.

Yet the Times man calls himself a democrat! Sheol is so full of just such democrats that their legs are sticking through its windows.

LANGVILLE & SON,

General Blacksmiths

and

Wagon Makers.

Prices reasonable and first-class workmanship.

HOUSE BUILDING

Is the order of the day in Thorsby. We are now prepared to keep up with the procession. Our new planing mill, which has recently been put in, and is now run in connection with our saw mill, enables us to furnish all kinds of lumber for building purposes. Our prices are more reasonable than those of others, and, being prepared to turn out an order on short notice, we can save the builder a large amount of inconvenience and expense. By buying at home you have no freight to pay and you are helping along home industries. We also are prepared to ship lumber by the car load or in small quantities.

WEEKLY REVIEW

Of Trade as Reported by Bradstreets.

JULY THE BUSIEST MONTH.

The Widespread Confidence That There Will be a Marked Revival in General Trade in the Fall Continues to Grow—Reports Are Very Encouraging.

Bradstreet's weekly review of trade says: The widespread confidence that there will be a marked revival in general trade in the fall continues to grow and with it material evidence that it is well founded. Chicago jobbers in clothing, dry goods and shoes, and manufacturers elsewhere of pianos, organs, wagons and farm implements report that fall business has begun, which is much earlier than usual. The distribution of general merchandise from St. Louis is less active though trade there is favorable. Like accounts received from Pittsburg, notwithstanding dullness in iron and steel; Savannah, in spite of this being the busy season on plantations; Omaha, Milwaukee, Duluth, Minneapolis and St. Paul, where merchants are feeling the influence of a prospectively large crop of wheat, and from Galveston and other points in Texas on the favorable crop outlook and confidence in all increased movement of merchandise next fall. Demand for supplies for shipment to the Klondyke gold region has made July the busiest instead of the dullest month of the commercial year at Seattle and has an influence on sales of staples at Tacoma, Portland and San Francisco.

The world's wheat crop outlook continues to favor the United States much as it did eighteen years ago. The outlook is that Russia, alone of all other other wheat exporters, will be able to compete with the United States. The advance of more than 20 cents a bushel, compared with a year ago, is in the face of a domestic wheat crop probably 1,000,000,000 bushels larger than last year. And the prospects for a continued higher level for quotations owing to increased demand from importing countries explain why the American farmer is to secure his proportion of the advance of the coming era of prosperity. That he is alive to the situation is indicated by a tendency to hold back wheat already harvested, notwithstanding higher quotations. Unfavorable features include the continuance of the strike of the bituminous coal miners in the western and southern states which now begins to threaten the continued activity of industries dependent upon that variety of fuel, the present stagnation of the Bessemer pin iron and steel billet markets with prices as low as ever known, the shutting down of New England cotton mill machinery to reduce output and get rid of stock on hand and the unsatisfactory condition of the woolen goods market on account of the relatively low prices of the products compared with the prices for raw material.

Exports of wheat (flour included as wheat) from Montreal and both coasts of the United States this week, amount to 1,978,828 bushels, an increase of about 456,000 bushels compared with last week, for which shipments from the ports of New York and Baltimore are largely responsible. The corresponding total in the like week last year was 3,037,000 bushels: in the week two years ago, 1,265,000; three years ago, 3,888,000 bushels, and in the corresponding period in 1893, it was 4,363,000 bushels.

Exports of Indian corn amount to 2,298,379 bushels this week, contrasted with 2,723,000 bushels last week, 1,980,000 bushels in the week a year ago, 770,000 bushels two years ago, 256,000 bushels three years ago and as compared with 1,587,000 bushels in the like week of 1893.

There are 220 business failures reported throughout the United States this week as compared with 247 last week, 280 in the week a year ago, 239 in the week two years ago, 237 three years ago and 489 in the corresponding period in 1893.

There were twenty-one business failures reported from the Dominion of Canada this week, against 38 last week.

FLOODS IN MINNESOTA.

Water Rose So Fast People Were Rescued in Boats.

A special from Ada, Minn., says: The worst floods in the history of this section are now on here. Long continued rains amounting to 5 inches coming at a time when the ground was thoroughly soaked have flooded half of Norman county. The water rose unprecedentedly. Fields where the grain was waving 4 feet high are now under water covering the heads of the wheat. The water rose to fast that the people were rescued in boats. The damage is especially severe on farmers who had trouble last year from floods.

MAN'S GREED FOR GOLD.

Mines That Pay Handsomely Are Deserted for the Klondike Region.

Among the arrivals at San Francisco from Alaska on the steamer Berthe was Dr. C. F. Dickenson, of Kodiak Island, which lies as the head of Cook's inlet. He says the gold excitement all over the territory of Alaska is something unprecedented, and that the people are flocking to the Klondike region in a way that threatens to depopulate many of the trading posts and coast towns.

"When I left Kodiak two weeks ago," said Mr. Dickenson, "the people were leaving all that section of the country and flocking in the direction of Klondike. In a way the situation is appalling, for many of the industries are left practically without the means of operations. Mines that are paying handsomely at Cook's inlet have been deserted. In my opinion there are just as good placer diggings to be found at Cook's inlet as in the Klondike region. There is not a foot of ground in all that country that does not contain gold in more or less appreciable quantities. The great trouble has been that people have not had either the courage or opportunity, I do not know which, to thoroughly prospect the country. I think that in another month the country about Cook's inlet will be practically deserted. There is room there for thousands of men and there is certainly no better place in the world for a poor man."

MINISTERS ARE RETICENT.

The Gold Discoveries May Cause International Disputes as to Boundary.

A telegram from Ottawa, Ont., says: The attention of the monetary commission has been called to claims that the new gold fields are in American territory. The ministers are reticent. It is regared that the act providing for the appointment of a boundary commission was in the light of a treaty and any action in opposition to that convention would be taken as relinquishment of the treaties. The government has no fears as to the decision as regards the mainland, but admit that some of the islands on the coast may be subject for arbitration. This depends whether the boundary follows the indentations of the coast or whether the six mile coast line is to be considered from a line stretched from headland to headland of the coast line.

As regards future proceedings this statement is made that for twenty-two years Canada has been anxious to have the boundary line clearly and finally settled and any feasible and amicable proposition to effect this will be seriously considered.

CAPTAIN GENERAL WEYLER

Shows Neither Mercy Nor Quarter—Inquisitorial Torture Daily Occurences.

The correspondent of the London Daily Chronicle in Sagua La Grande, province of Santa Clara, Cuba, writes to his paper a terrible account of the condition of affairs in the island.

Both the government troops and the insurgents, he says, are suffering horribly from famine and the ravages of smallpox and yellow fever, while butcheries of prisoners after inquisitorial tortures are of daily occurrence, if the victims be suspected of withholding information.

Captain General Weyler, the correspondent says, has shown neither mercy nor quarter, and has turned the campaign in Cuba into a near approach to that of duke of Alva in Holland in the sixteenth century.

A TERRIFIC EXPLOSION.

Lightning Strikes a Magazine Containing Twenty Tons of Powder.

At Wilkesbarre, Pa., during the prevalence of a heavy rain and thunder storm last Friday afternoon the powder magazine at the Empire mine, operated by the Lehigh and Wilkesbarre Coal Company, was struck by lightning.

A terrific explosion was so great that it shook the foundation of nearly every dwelling in Wilkesbarre. There were about twenty tons of powder stored in the building. No one was in the place at the time but John Higgins, who was driving by just as the explosion occurred was instantly killed by flying debris.

Charged With Killing Deputies.

At Trinidad, Col., six men and two women are under arrest for the murder of Deputies William Green and William Kelly, who were in search of cattle thieves, in 1895. Officers are in pursuit of two more men who are implicated.

Exports of Gold.

Lazard Freres, New York, shipped $800,000 in gold to Europe Saturday. It was not taken from the sub-treasury.

Kidder, Peabody & Co. of Boston, shipped [illegible] in gold to Europe on Tuesday.

HOME HITS AND HAPPENINGS.

NEWS BOILED DOWN AND ADMINISTERED IN BROKEN DOSES.

In this week's issue of the CALL we begin the publication of a continued story, entitled "The Story of Ulla." This is the first of a series of continued stories which will hereafter be published in the CALL, with plenty of other interesting reading, such as farm notes, scientific matter, short stories, general news of the world, home and county local, editorial, comments and everything else that goes to make an up-to-date county paper.

The publisher of the CALL will offer as a prize to the farmer who brings to this office, the largest watermelon one dollar in cash and one year's subscription to the CALL; for the second largest melon, one year's subscription; for the third, six months' subscription and for the fourth, three months' subscription. This offer is open to everybody and will last during the season.

There have been five acres of peas planted in the experimental garden this week. The average yield of peas planted at this time of year will be about 100 bushels to the acre, and will sell for about $1.75 per bushel. Show us the farmer who can't make money from such a crop as that?

Mr. Kincheon Wells, an old and respected citizen of this county, died at his home in Clanton Tuesday, and was taken to Verbena and buried Friday. Mr. Wells was at one time a member of the legislature from this county and also chairman of the Democratic committee.

W. H. Skaggs, staff correspondent of the Chicago Inter Ocean, was in our town, Thursday, interviewing several of our citizens for the purpose of giving Thorsby a complimentary wright-up on that paper.

On account of the smallpox Pensacola and Montgomery people notified the railroad officials at Birmingham that the excursion, advertised for August 1st, would not be allowed to enter their cities.

The new building, built by the owner of the CALL, for the exclusive use of the publication of that paper, will in another week be ready for occupancy.

Thorsby people are all busy cultivating and tressling grapes, hoeing sweet potatoes, building houses and clearing their lands.

Sweet potatoes are now growing very fast, and the prospects are that there will be a good crop this year.

Nels Johnson, who was badly cut up at the mill last week, is now improving very rapidly.

A meeting of the Farmers Alliance will be held in Clanton Saturday, the 31st inst.

There were fourteen illicit distilleries raided in Chilton county during the past year.

Prof. C. C. Slaton, of Jemison, has accepted a school at Calera.

The Call office is now prepared to do any and all kinds of printing. We have one of the best job printing plants in the State. All our material and presses are new and up to date. High grade work at low grade prices.

GROCERIES

We can give you a good bargain in anything you may need in the line of groceries. If you are not satisfied with your grocer give us a trial.
We have a fine line of

GENERAL MERCHANDISE.

ROLISON & ROLISON,
Postoffice Building

SOMETHING NEW

For the public in general to rest their eyes on. Our fine new stock of General Merchandise is very pleasing to the eye. New Goods, such as were never brought into Chilton county before. We have everything the housewife desires to do good cooking with. We have not only good, fresh groceries, but a fine line of Dry Goods, Hardware, Farm Implements and everything that can be expected in a first-class

SUPPLY STORE.

We are Money Savers for the people, "Low Prices and Good Goods" is our motto. All kinds of farm produce bought.

F. MOBECK'S
CASH SUPPLY STORE
A. M. JOHNSON, Manager,

Gen'l Steamship and
Foreign Exchange Agency.

THORSBY.

A NEW AND NOTABLE COLONY.

THORSBY AS SEEN THROUGH THE SPECTACLES OF OUTSIDERS.

WHAT A LEADING MAGAZINE OF SOUTHERN PROGRESS SAYS CONCERNING OUR COLONY

In Speaking of the more prominent and progressive points in this section. The Illustrated South, of Birmingham, Ala., has the following to say of Thorsby:

A number of Northern colonies have been founded in the South within the last double decade, and we know of none that has failed to realize the brightest dreams of its promoters.

Thorsby is one of the newest and most notable of these colonies, and merits special mention because it is more advanced for its age than any of its competitors. In fact, it is a fin de siecle revelation in the matter of community building, and we know of no place in the wide and wonderful sweep of our Southland that possesses a more promising future.

It is situated in the highlands of central Alabama, on the picturesque and prolific Chilton plateau, and has direct communication with the seaports of the South and the markets of the North through the medium of the Louisville & Nashville Railway, one of the great grand trunk lines of our continent.

Speaking of Thorsby a recent writer remarks: "In June, 1895, Messrs. Thorson and Peterson came to this country on a prospecting expedition, and finally decided to settle their colony on the present site (in Chilton County, Ala). It was several months before any work was begun, but within the last eighteen months a beautiful village and settlement has sprung up like magic. The Concordia Land and Improvemnt Association was organized, with Mr. Thorson as President, and Mr. Peterson as Secretary. They bought up about 2,500 or 3,000 acres of this land, laid off a town into lots and the surrounding country into ten acre blocks and at once began improvements, naming the new settlement Thorsby. Every obstacle vanished before the hand of energy, pluck and industry, and now there are at Thorsby a fine hotel, three stores, a postoffice, a newspaper, a saw-mill, a shingle and lath mill, blacksmith-shop, two churches and a two-story school-house, about [illegible] dwellings and as many families, and more coming all the time. A green-house and experimental garden is a new feature for this year, at which I saw tomato-plants a foot high. This colony seems to be making grape culture a specialty, and now have about 80 acres in grapes, and I understand, are putting out this Spring 18,000 cuttings. Young orchards are being set with all kinds of fruit, the houses are substantial and well-built, mostly two story. The urgent need now is a canning-factory, and negotiations are pending looking toward the establishment of one in the near future."

The Concordia Land and Improvement Association, spoken of in the foregoing excerpt is incorporated under the laws of Alabama, possesses a capital of $150,000, and has land for sale in all directions from Thorsby—some of it adjoining the town limits and some of it further out to a distance of nine miles.

From a booklet lately published by the Association we learn that "this land is of different varieties, but it is all very productive. Some parts are level, while other parts are more rolling. That which is not under cultivation is covered with timber of many different varieties, such as the long leaf yellow pine, all kinds of oak, hickory, chestnut, persimmon, poplar, beach, all kinds of gum trees and black walnut.

"Therefore fuel costs nothing but the labor of cutting it, and lumber is very cheap. Good, fine, hard pine lumber is bought here for only $5 to $7 per 1000 feet. This growth of timber sufficiently shows the good quality and strength of the soil. The Association has some improved farms for sale at very reasonable prices. It has the land surveyed in tracts of from ten to eighty acres each, so that the purchaser may have his choice also in this respect, but it is to be remembered that twenty acres of this fertile farm and fruit land is a good-sized farm, because the crops are so abundant. Each tract of land has a road laid out at least on one side."

The proximity of Thorsby to the Gulf, and the fact that it is 790 feet above tide-water, combine to make its climate ideally equable. It is never too hot, never too cold, and one season melts into another with none of the abruptness that is so unpleasantly common in the higher latitudes. This fact, together with the absolute absence of malaria, and the purity of the freestone water, combine to make this locality one of the healthiest that can anywhere be found.

The soil of Thorsby and Chilton county cannot be surpassed for fertility. They are of the rich, dark, grayish, red and brown loam lands, with a proper mixture of sand on a clay subsoil, and are adapted for general farming, stock-raising and fruit-growing.

Where the North can only raise one crop of corn, potatoes and other hardy products in a year, this part of the South can raise two, and can raise, at the same time, cotton, sugar-cane and all the other semi-tropic staples, to say nothing of fruit!

Let the new-comer select a spot like Thorsby for his home, let him set to work with a stout heart and a steady hand, and he will find that Fortune will change her frowns to smiles and reward him according to his deserts, no matter what they may hap to be.

LIFE'S MYSTERY.

We live, and love, and die;
And if we question why
The weal, the woe,
And to what end, a sigh
Bears Nature's sole reply:
We live, and love, and die
Ere we may know.
—Mary E. Stickney in Lippincott,

JACKIE'S BURGLAR.

The garret was squalid to a degree. It was dark, dirty and wretched, and the thin streaks of light which filtered in through the tiny, dust-choked skylight only seemed to heighten the darkness and increase the misery of the place. It was a small, square room, with no furniture, except a couple of broken chairs, a grimy table, and a broken packing case, and it seemed a place scarcely fit for habitation. Yet on the floor were three coarse straw mattresses, and on one of them, with his weary face turned up to the dismal skylight above, lay a boy. He was only a small boy, but his face was like an old man's, and his limbs were shrunken and dwarfed and thin. He lay looking up into the face of a man who bent over him.

"I shall be all right by and by, dad," he said, in a weak voice. "I shall be all right as soon as the sun creeps up a bit and I can get out. Don't worry, dad. P'r'aps I shall be able to do something soon. P'r'aps I could make some boxes or something if I could sit up a bit.

Two big tears coursed down the man's cheek and fell on the boy's hand. He turned away hurriedly and began walking to and fro across the garret.

"I must get the doctor to you somehow," he said, more to himself than the boy on the bed; "If I fetch him by force he must come. It's no good putting it off any longer."

"No, no," said the boy, with the thoughtfulness of an old man; "wait a bit. I may be all right to-morrow."

The man plunged his hand into his pocket and sighed. With twopence between them and starvation, what was the use of fetching a doctor who would order eggs and milk for this boy? What was the use of anything except to sit and stare at the skylight and starve?

John Endleton was a man who had once been in a good position. Only a year ago he had believed himself to be out of the reach of want; but misfortune had overtaken him, his bank had lost money in a hundred different ways, ill-luck had followed him, and he had fallen from bad to worse, until he at last found himself, with his 10-year-old son, in an East End slum, penniless, heart sick, hopeless, with sickness overtaking them, with no prospect of anything better than a hand-to-mouth existence, and with a criminal—a jail bird—a common convict for a companion.

John Endleton was a proud man. It was his pride, perhaps, that had led him to refuse good berths that he would have been thankful for now, and he hated the man who shared their garret. If he could have afforded it—if he could only have made sure of the necessary pence—he would have rented the entire room in order to keep his boy from contact with the man; but he had reached such a hopeless state of his existence that he was thankful if he found himself able to provide for one decent meal a day, and he was obliged to tolerate him, although his very presence seemed poison. He hated his coarse ways, his bad face, his evil breath, and the thought that he was within almost a yard of his son made him shudder.

Jem Brooker was the leader of a gang. There was no better known criminal in the whole of London than he, and he was proud of his reputation, proud of his wickedness, and proud even of the time he had "done" in Portland Prison. He was foul mouthed, bad tempered and had been convicted of numberless crimes; but fer some strange reason little Jackie Endleton interested him.

In the early morning, when he staggered up to the garret half drunk, the sight of the thin, white face on the dirty mattress sobered him. The touch of the boy's hand dragged back his memory through a thousand dirty byways to the fresh country, where, when he was a small lad, he had played with his sister in green fields under blue skies. Something in the boy's eyes recalled his mother, something, too, in the droop of the little lips reminded him of hers as he had seen them last, when she had been dying with shame for her son. And the big, gaunt man, whose heart was black with crime, who had resisted the overtures of missionaries and sneered at prison chaplains, found himself suddenly overcome by a 10-year-old boy who was dying of starvation in a miserable garret. He scoffed and swore at himself as he did it, but it became a regular thing for him to bring oranges and sometimes grapes on his return to the garret at night.

And John Endleton hated it. He resented it fiercely, and shrank back when Jem Brooker approached the bed and looked down at Jackie's face.

As the winter passed into the spring Jackie seemed to grow weaker instead of stronger, and at last, with a solitary shilling in his pocket John Endleton set off in desperation for a doctor. If anything happened to the boy he would have nothing to live for, and the thought seemed to choke him. But he knocked at the doctor's door without success. The doctor was busy—too busy to attend to him until night, and when night came he had forgotten all about it, and Jackie lay in a half fever, moaning and tossing restlessly from side to side, while Endleton sat over him with rage at his heart.

When, toward morning, Jem mounted the creaking stairs in his usual half-drunken fashion and staggered into the garret, he found Endleton sitting by the side of the mattress with his face in his hands. A pale moon sent a shaft of light on the sleeping boy's face, and it looked white and drawn and cold, as if already the shadow of death lay upon it.

Jem stopped in drunken surprise. A stupid grin crossed his face. He stared and waved his hand wildly in the air. He tried to speak, but his voice was hoarse with brandy, and the figures of the boy and his father danced before his eyes by the dozen.

He muttered some words—indistinguishable and meaningless; and, collapsing suddenly, he tumbled down on his mattress and huddled himself together in a drunken sleep.

When he awoke a gray dawn was peeping slowly in through the small square of glass in the roof, and everything in the dingy garret appeared unreal and lifeless. The boy on the bed seemed scarcely to breathe.

Jem raised himself on his elbow and looked round, and some remembrance of the last night's scene began to pass through his mind. He looked, and it seemed to him John Endleton had never moved. The moonlight had gone from the boy's face, and the dawn had come instead; but John Endleton was still sitting there, huddled up on the floor with his face buried in his hands.

Jem lifted himself slowly from his mattress, and stretched himself with a big yawn. Then he looked again at the two in the corner, and after a minute got up and went toward them.

"Ain't the little 'un well?" he asked, clumsily. "Wot's up with 'un?"

John Endleton stirred impatiently. The sound of the ex-convict's voice seemed to rouse all his hatred and disgust. He looked round with repulsion upon his face, and Jem, seeing it, shrugged his shoulders and sneered.

"Oh, well, if ye're so mighty independent and 'aughty, why don't yer tak' lodgin's in th' 'Grand'? A-course if yer don't want no 'elp I don't" care. Only I thought, he added brutally, "as th' chap's a-dyin' like, as yer might want somethin' for 'im."

John Endleton started and looked down at the boy, with his wan face, his thin hands and faltering breath. For a moment it seemed to his excited imagination that the boy had ceased to breathe, and he leant forward hurriedly and with trembling fingers pulled back the sheet.

"He's all right. He's not dying," he exclaimed, eagerly. But, at the same time, it was borne in upon him that unless he had nourishing things to eat, and those quickly, there would be no hope of ever pulling him round again, and the thought stabbed his heart with sudden bitterness.

He turned to the burglar. It was possible that Jem could help him. Jem might know where to get help or work, or even charity; but Endleton's pride still stood up in arms, and with a determination to have nothing to do with him, he turned away.

Jem, with a fierce sneer on his lips and a burning hatred in his heart against Endleton, turned away, too. Not a finger would he lift—not an inch would he stir—not if the boy was dying fifty times over!

As he turned, he caught sight of Jackie's pallid face lying on the dirty pillow.

"Oh, lor! wot a little bloke it is," he thought; and then he went out, mumbling down the stairs, swearing to himself—a man apparently without the faintest hope of a better life, without knowledge of anything except things evil, and yet with one clean spot in his black heart.

Detective Hartly, prowling through the East End in search of such thieves and transgressors as he might with dignity escort to the lock-up, was turning a corner, when he suddenly became aware that on the opposite side of the street a familiar and not exactly pleasing figure was ambling along at a rapid rate with something peculiar in the bulgy appearance of his coat.

"There's that Crooked Jem again," said the detective to himself. He cast a suspicious eye at Jem's pockets, pulled at his eyebrow—which was a way he had—and then beckoned to a policeman to follow him.

When he was within an inch or two of the said pockets he suddenly clapped the unsuspecting Jem on the shoulder—so suddenly that Jem's jaw fell, and he made an abrupt, half undecided movement as if to flee from the wrath of the law.

"Now, then," said Hartly, severely, "none of that. On with the handcuffs. And Snaith, you come here and take his arm."

Jem looked from one to the other in something like dismay.

"I ain't done nothing," he expostulated.

"Well, we'll see," said the detective; "and you'll remember, if anything is found on you, there are three years off that last job that you've got to finish."

Jem's face grew dark. His hands fidgeted strangely under his handcuffs, and if it hadn't been that he was a hardened, hopeless criminal, one might almost have fancied that his under lip trembled.

"Well, I'm blowed if I ever tries ter cheat th' gallows agen," was his vague and ungrammatical remark, and then they marched on to the police station.

There, inside the bare room, with its wooden benches and square desks, with the dingy green ledgers and musty papers, Detective Hartly proceeded to turn out the unhappy Jem's pockets. As he did so his eyes first opened in astonishment, then screwed up in bewilderment, and, finally, he looked as if he had suddenly been confronted with the riddle of the Sphinx.

Out of the depths of Jem's capacious pockets he turned on to the table a chicken, a tin of soup, some eggs, a packet of sweets, a sticky piece of candied peel, and last, but not least, a bottle of port.

"What's the meaning of this?" said the detective, sharply, feeling vaguely that some trick was being played upon him. "What is it? A picnic, a card party, or what? Apparently you're in a new line."

"Oh, yes," said Jem sullenly, "I've stole 'em all."

And after that he made no remark. He sat staring at the stone floor, with his coarse hands clasped together by the handcuffs, and with a strange, almost baffled, expression on his face.

"I'll tell yer wot," he said, raising his head suddenly, "if yer'll cum wi' me I'll show yer the bloke that put me up ter this job. It's str'ight—no kiddin', an I swear as if yer does I'll cum back quiet—I swear I will. Yer can bring Snaith with yer an' some more coppers if yer like—I don't care."

The detective looked at Jem in silence for a moment. Something about the case struck him as peculiar. It was not like Jem Brooker to steal eatables when better things were to be got with the same risk, and he felt a desire to know what it meant.

So with a fine disregard of the rules and regulations of her Majesty's prison he bundled Jem and Snaith into a cab, and with another policeman on the box, they were driven to a small and filthy court a short distance away.

There they all three mounted the dreary stairs to the dingy garret where John Endleton sat with shaking shoulders watching his dying son.

At the sound of footsteps he raised his head and looked round. With sudden astonishment he saw that Jem was handcuffed. He saw the policeman and the detective, and then Hartly stepped into the middle of the room.

He looked round expectantly.

"Well," he said, "what now?" He had expected to find perhaps half a dozen roughs. He had hoped that Jem might have given him some valuable information—some clew that he had been unable to pick up himself; and now all that was to be seen was a man and a sick boy.

"What do you mean by this?" he demanded, turning to Jem, and the thief pointed with his manacled hand to the bed.

"There's the little cove as started me on this," he said; and Hartly snorted impatiently.

"Look here, Jem Brooker," he said, "you won't make things any better for yourself with trickery. Now, what's the reason for this fool's errand?"

Jem stood up.

"That's th' meanin' of it," he repeated, still pointing to the bed. "It's the little bloke there as set me on it—'im as is dying for things to eat. There 'e is. S'elp me, that's wot I done it for."

Hartly turned round sharply and looked at the boy. Then he stepped across the room and peered down at the wan face that was blue with cold and pitiful with hunger, and all at once he became aware that there was a strange silence in the room, and when he looked again he saw the father staring breathlessly into the boy's face.

He saw it only dimly before him, and then it faded away to a picture of his own son. Some vague astonishment at Brooker's behavior passed through his mind—he had never expected to find a heart under the man's rough exterior—and then he strode suddenly across the room to the top of the stairs.

"I say, Harris—Harris," he shouted. "Go back to the station at once and get those things that are on the table there. Hurry up, now. Bring the port and the soup, and you'll find a cup and saucer in the cupboard. Be quick. You'd better take the cab; and, oh, I say, bring a corkscrew!"

Then he went back and calmly unlocked the handcuffs on Jem's wrists.

To-day Detective Hartly is not quite such a hard man as he was. He has a great belief in the human nature, and even the tender-heartedness, of the greatest of criminals, and sometimes he will cite the instance of a man whose heart, cankered with evil and hedged in by vice, was reached only by the small fingers of a child.—Tit-Bits.

The African Piano.

Among the musical instruments used on the Congo we notice the long and short drum, says the Journal of American Folk Lore. Some drums are used to beat the time of the dance. Some other drums are used as telephones for the transmission of messages to neighboring villages. The stringed instruments represent the African harp. The ivory horns are used for the convocation of popular assemblies. The double bell is used to call the attention of the people to some proclamation of the chief. The Africans everywhere are very musical, but their music does not always suit European taste.

The African dance is not always indulged in for amusement alone. Dancing enters into some of the most solemn ceremonies—as, for instance, the inauguration of a new king. Then the chief-elect of the tribe dances very gravely before the assembled elders and the people.

The madimba has been called the African piano. It is made of calabashes of graded sizes, whscha are surmounted by boards of graded sizes also, all being attached to a semi-circular frame. Each board represents a note or half note and emits its appointed sound when struck by one of the two rubber balls at the end of the two sticks which are cleverly handled by the musician. While almost every native can beat the drum or play some of the minor musical instruments, the playing of the madimba is an art which only a few specialsits learn. They must be paid for playing at festivities or ceremonies and their art supports them either partly or entirely.

An Electric Fishing Reel.

A local genius at Columbus Ind., is said to have invented an electric fishing reel which-is highly successful from one point or view and very destructive from another. As described in a dispatch to The Journal, there is inclosed in the fishing line a small wire which is attached to a battery near the fisherman or executioner and connecting at the other end with the hook. When the machine is in action the momeut the fish toutches the hook it receives a shock that kills it. It is said that eighty pounds of fish were killed with the machine in an experimental trial of a few hours.

The inventor seems to be ingeniously diabolical. As a means merely of killing fish, it may have all the merrit claimed for it, but it is enough to make old Izaak Walton turn in his grave, if there is enough of him left to turn, or rise to indignantly protest. A machine that destroys every element of sport and gives the person who manipulates it every possible advan- over the fish has nothing to recomend it except its capicity for killing fish. In this respect it is quite as unsportsmanlike as dynamite, and only less barbarous in that it only kills one fish at a time instead of scores. It is somewhat remarkable that this infernal machine should have made its appearance at the home of the State Fish Commissioner. Mr. Sweeney has been doing good work in the way of putting a stop to the unlawful catching and killing of fish, and if the law be made to cover this new machine he will doubtless apply it.—Indianapolis Journal.

UNIVERSITY OF ALABAMA.

New Courses of Study—New Blood in the Faculty—Reduced Expenses.

The new courses of study adopted by the faculty and approved by the board of trustees, places the University of Alabama abreast of the leading up-to-date colleges and universities of the land.

The A. B. course is practically fixed or constant through the Junior year. In the Senior year it is largely elective

In the B. S. course the right of election begins much earlier, and is much more extensive. In each case the student must make up eighteen hours a week in recitations. Later it is expected that graduate work will be arranged, leading to the higher degrees of M. A. and C. E.

There are several new men in the faculty. They are:

Dr. James K. Powers, President.
Dr. George S. Wilkins, Engineering.
Dr. W. B. Saffold, Greek.
Dr. John Y. Graham, Biology, and Judge W. S. Thorington, Dean of the Law Department.

All in all, it is doubtful if the University of Alabama ever had a stronger faculty in all its history.—Tuscaloosa Evening Times.

A year's expenses for cadets have been reduced from $172.50 to $130.

Missouri Revives the Whipping Post.

The whipping post has been re-established in the Missouri Penitentiary. As a matter of fact, says the St. Louis Republic, the whipping post was never entirely abolished at the institution, though for a while it was never maintained with the severity which experience has demonstrated absolutely essential to the proper management of convicts.

State Normal College Board.

The recent meeting of the Troy State Normal College Board was characterized by intense interest in the College's growth, and perfect harmony of sentiment and action prevailed. Provisions for the College's ordinary needs and constant growth were made, and steps were taken to meet extraordinary demands, now imperative, likewise, to provide fully for the College as indicated by the prospects as seen from the many scores of letters from young people wanting to prepare for teaching.

Dr. E. R. Eldridge was unanimously re-elected President, and entering now the tenth year of his work, is the ranking College President in Alabama as to length of tenure, except Dr. Broome, of Auburn A. & M. College, who has served about twice the time of Dr. Eldridge.

As "Teacher Training" is the special purpose of this College, the board seeks to emphasize more and more the

DEPARTMENT OF PEDAGOGY,

and have organized this work as follows:

I. THEORETICAL PEDAGOGY,

in which are taught the history, art, science and philosophy of education, and school organization and management: Edwin R. Eldridge, LL. D., Professor; Edgar M. Wright, B. L., Assistant Professor.

II. PRACTICAL PEDAGOGY;

the application of all under I, in the—A—Peabody Summer School of Pedagogy, June 1, four weeks, annually: E. R. Eldridge, LL. D., Conductor Didactics; E. M. Wright, B. L., Psychology; James H. Glanville, Ph. D., Psychic Phenomena; Miss Catharine Gardner, Calisthenics; Miss Sue Pierson, B. S., Physical and Vocal Culture; B—The Model School Department: E. R. Eldridge, President of College, ex-officio Superintendent; E. M. Wright, Director High School; Miss Mabel Eldridge, B. Ped., Assistant; Miss Catharine Gardner, Director of Intermediate, Primary and Kindergarten; Miss Pearl Gellerstedt, M. Ph., and Miss Laura Hamil, M. Ph., Co-Principals, Intermediate, 1896–7; Miss Willie Belle Segars, M. Ph., Principal of Primary, 1896–7; Miss Wyche Green, M. Ph., Principal Kindergarten, 1896–7; Pedagogic Seniors, as per demand are assistants in model schools; C—Scholastic, Fellowship, Practice, Teachings: The Professor of Pedagogy of College, ex-officio Director; the Scholastic Professors' Assistants; Post Graduates as Tutors; W. A. McCreless, M. Ped., Latin; Wilkerson Whitehurst, M. Ph., Algebra; Julia Bowles, B. S., English; senior students as per necessity, or opportunity.

THE SCHOLASTICS DEPARTMENTS.

E. R. Eldridge, LL. D., Psychology, Logic and Ethics; E. M. Shackelford, A. M., English and Civics; C. R. McCall, A. M., Ancient and Modern Languages; M. D. Pace, C. E., Pure and Applied Mathematics; C. L. McCartha, A. M., Material Sciences; Miss Mary Murphree, Instrumental Music; Miss Sue Pierson, B. S., Physical and Vocal Culture; Miss Elizabeth McMillan, Drawing and Painting; Miss Daisey Brenner, Phonography; —— ——, Penmanship and Book-Keeping.

It was the sentiment of the Board that the expenses of the attendance should be the lowest possible, and in this line the Senatorial and Representative scholarships were commended as the best medium to equalize the advantages of the College to all sections of the State alike. Nominations of candidates for Teacher Training by Senators or Representatives, in their respective districts, approved by their respective County Superintendents as worthy, appointed by the State Superintendent of Education, are entitled to scholarships as per the regulations governing, made known on the application to the President.

The State Superintendent, (like the Governor of the State) is ex-officio a member of the Troy State Normal College Board, and while attending a meeting of the Board requested that all students capable of passing the examination for a State certificate, good in every county of Alabama, be certified at any term ending, on passing said examination, that he might issue to all such, from his office at Montgomery, such State certificate, and this certification was ordered by the Board, at any term ending, commencement, or otherwise, the effect of which is to grant to Normal students the immediate advantages in the way of State certification to teach, a great recommendation to any teacher. School officers desiring such "Trained Teachers" can be put in communication with such by addressing the President of the College. Many such calls are filled annually.

Hard on Wales.

When the Prince of Wales visited Canada thirty-seven years ago, the lumbermen and raftsmen of the Ottawa valley presented to him an address which concluded with the words "Long may you remain the Prince of Wales." The leading raftsman, Alan Mason, afterward explained to the prince that this doubtful compliment was no slip of the pen, as might be supposed. "We are perfectly satisfied with the queen," he said, "and want her to remain on the throne as long as she can." The other day Mr. Mason wrote to the prince, reminding him of the incident, and has received the following reply: "His royal highness perfectly remembers the incident to which you refer. His royal highness greatly appreciates and thanks you for your kind and loyal sentiments, and will not fail to make them known to the Queen."—Pittsburg Dispatch.

Judicious advertising pays.

There is a young woman in Dayton, Ohio, who was in love with Scott Jackson, the murderer of Pearl Bryan. There was a young man in the same town who was in love with the young woman. The young man no longer is. He called on the young woman the other night and presented his ultimatum. The young woman scorned him. Her loyal heart was in the grave of Jackson. She could not think of loving a common fellow who had never killed anybody. The jilted one determined to make himself eligible, so he went into a neighboring stone quarry and blew himself to pieces with a dynamite cartridge. It is not related whether the young woman has now consented to love him. Whether she has or not, the experience of using dynamite to make a breach in a marble heart cannot be generally recommended.

Cure Corns With Physic.

Might as well try that as to attempt the cure of Tetter, Eczema, Ringworm and other cutaneous affections with blood medicine. Tetterine is the only absolutely safe and certain remedy. With it cure is sure. It's an ointment. 50 cents at druggists or by mail for 50c. in stamps from J. T. Shuptrine, Savannah, Ga.

We respectfully direct attention to the advertisement of the Union Female College, Eufaula, Ala., which appears in this column. This institution, under the skillful management of Prof. T. J. Simmons, offers unequaled advantages in many departments. It will pay you to send for a Catalogue.

W. H. Griffin, Jackson, Michigan, writes: "Suffered with Catarrh for fifteen years. Hall's Catarrh Cure cured me." Sold by Druggists, 75c.

I have found Piso's Cure for Consumption an unfailing medicine.—F. R. Lotz, 1305 Scott St., Covington, Ky., Oct. 1, 1895.

Mrs. Winslow's Soothing Syrup for children teething, softens the gums, reducing inflammation, allays pain, cures wind colic. 25c. a bottle.

Fits permanently cured. No fits or nervousness after first day's use of Dr. Kline's Great Nerve Restorer. $2 trial bottle and treatise free Dr. R. H. Kline, Ltd., 931 Arch St., Phila., Pa.

TROUBLESOME PIMPLES

Blood Perfectly Purified by Hood's.

"I have been troubled with small red pimples breaking out on my face. They caused me a great deal of pain. I have taken several bottles of Hood's Sarsaparilla and it has given me relief. I have not been troubled with the pimples since I began taking it." Lucy Fischer, 230 West 144th Street, New York City. Remember

Charming location; delightful climate; wonderful health record. This is a chartered college of the highest grade. Literary faculty unsurpassed in the south. Art, Elocution, Physical Culture, etc., under the finest instructors. UNEQUALED ADVANTAGES are offered in our CONSERVATORY OF MUSIC School select. Fare excellent. Terms very reasonable. Next session opens September 2nd. Please write for catalogue.

T. J. SIMMONS, A. M., Pres't.

Am. N. U. No. 30. 1897.

PISO'S CURE FOR CONSUMPTION
CURES WHERE ALL ELSE FAILS. Best Cough Syrup. Tastes Good. Use in time. Sold by druggists. 25 CTS.

"Some Things Are Better Left Unsaid."

He—How are you? Keeping strong? She—No; only just managing to keep out of my grave.

He—Oh, I'm sorry to hear that, Judy.

The Left Ear the Best.

It has been ascertained by experiments that a number of persons who use the telephone habitually hear better with the left ear than with the right. The common practice of the telephone companies is to place the receiver so that it will be applied to the left ear. In order to educate the right ear to the same point of efficiency it is recommended that the receiver be held in the right hand half of the time.

Let the Little Ones Sleep.

"God giveth His beloved sleep," and little children should have plenty of it. It is the tendency of the times to disregard this necessity; hence the increase of nervous diseases among our young men and women. Sleep means growth with young people, and unless there is much sleep there will be no healthy growth.

Nature teaches a little child to lie down and sleep whenever it is weary, and after a bath or after its mid-day meal, and it is only through artificial influences that a little child leaves off the habit of taking a daily nap, and it is generally due to the mother's neglect that it is finally dispensed with. Yet the world often sympathizes with the mother rather than the child when toward night baby grows cross and fretful, while the mother often grows impatient, forgetting the long, tiresome day which the little one has endured. What wonder that these little ones grow up into nervous young men and women, with no constitutions to speak of!

Many grown people are pressed for time to accomplish all that they desire, and in their march for gold or daily bread, find little time to rest, yet there is no reason why they should begrudge their children an extra hour's sleep in the morning because they have an inherited idea that it is more healthful for them to rise early, and they fear that if they are allowed to sleep until they naturally awaken, habits of laziness will be formed which will mar their after lives.

The appalling catastrophe in Paris is in some respects without a parallel in the history of human disaster. A bazar of charity instituted by ladies of the highest rank was destroyed by fire and at least 200 women of the cream of Parisian society were incinerated in the funeral pile. Princesses, duchesses and other titled ladies, with many others of high aristocratic blood, were the victims of death by fire. Of course the poor and needy or those of average social rank feel as acutely as those of the highest blood the tortures of death in a holocaust. The sacrifice of the lives of 200 persons of any rank is a manifold tragedy, carrying desolation to homes as dear to their occupants as are the palaces and mansions of wealth and rank. But it never before happened that all the victims of such a cremation were of the highest rank. Fair Sisters of Charity died in the flames. The circumstances inspire the event with peculiar pathos. The rank, wealth and loveliness of Paris had instituted the bazar to procure money for the support and relief of the poor. The wares exposed for sale were the choicest finery, ornaments of dress, the flimsy articles of taste and fancy which are the supreme art products of Parisian skill and expertness. From recollections of the French department at the World's Fair an idea may be formed of the beauty and value of these exhibits. When fire touched the inflammable materials the wealth of beauty and values was swept away as by a breath. The world will sympathize with the grief of Paris and France in their tragic bereavement. It is not a loss that gifts of money can replace. The event is one of the most awful catastrophes that the annals of misfortune will record.

Pill Clothes.

The good pill has a good coat. The pill coat serves two purposes; it protects the pill, enabling it to retain all its remedial value, and it disguises the taste for the palate. Some pill coats are too heavy; they will not dissolve in the stomach, and the pills they cover pass through the system as harmless as a bread pellet. Other coats are too light, and permit the speedy deterioration of the pill. After 30 years exposure, Ayer's Sugar Coated Pills have been found as effective as if just fresh from the laboratory. It's a good pill with a good coat. Ask your druggist for

STORY OF A $1,000 BILL.

A Great Bank Robbery by Which a Car Conductor Profited.

The recent attempt of young King to get away with $30,000 from the Boylston Bank has drawn forth some incidents connected with that institution's previous experiences. The following one given us by a New Haven man is connected with the robbery of about 1869, when some $400,000 was lifted from the bank's vaults by an elaborately worked plan. The method by which they worked, hiring a barber shop next the bank and running it for several nights, while drilling through the division wall, is familiar to the press; but a little incident which is not generally known is this:

On the night of the robbery the late Conductor "Hez" McKinney of this city took charge of his "owl" train at Springfield. Among his passengers he noticed particularly three or four well-dressed men, though they did not evidence any connection between them and were not seated together. One of these men had no ticket, and saying he was going to New Haven, produced a bill in a casual way to pay the fare. McKinney was pleased at the size of the bill—a crisp $1,000 bank note and said he would have to hand him the change after the next stop, Hartford. At Hartford he got the money, and as the train started, went through the car to the seat that his man had occupied to square accounts. He identified the passenger carefully, and started to hand out the money. The occupant of the seat, however, appeared not to recognize him, gave a blank stare of amazement at the mass of money, and professed to have no knowledge of it, having just got on at Hartford. Though McKinney insisted on the identity and urged the man to take the money, he stoutly refused. When collection of tickets was made this passenger produced some small change and paid fare to Meriden, where he got off the train. The other men left the train at different stations.

At the end of the trip McKinny reported the occurrence at headquarters and while refusing to hand over the money, suggested that it be put in a bank and advertised, which he himself did. No claim was ever made for it.

After a long wait the railroad company undertook to claim the money, but McKinny couldn't see it in that light. He paid over the fare from Springfield to New Haven and retained the the rest, being supported in his action by legal opinion. When he had allowed a considerable further time for any possible claim, McKinny used the money in nicely furnishing his home. No clue could ever be found as to the source of the money, but of course the conjecture was that the bill was probably a part of the bank's funds; that the passenger handed it out by mistake and, discovering it when too late, decided to let it all go rather than leave a trail.—New Haven Leader.

Hygienic Value of Fruits.

Dr. Dupoury, a French physician celebrated for his scientific investigations in dietary matters, in an article printed in a Paris journal, considers the hygienic value of fruits. He divides fruits into five classes, each of which possesses a special hygienic value—the acid, the sweet, the astringent, the oily and the mealy. To the first, including cherries, strawberries, raspberries, gooseberries, peaches, apples, lemons and oranges he accords great merit. Cherries, however, he prohibits entirely to those affected with neuralgia in the stomach. Strawberries and raspberries he recommends warmly to those of bilious, plethoric and gouty temperament, and denies them to those in whom diabetes is present or suspected. Of the sweet fruits he considers that plums are of special hygienic value, and even a preventive in gout, and particularly rheumatism. To the grape he accords the very first place. He is an ardent advocate of what in Europe is called the grape cure. In this cure grapes for several days form the exclusive aliment. The patient commences with the consumption of from one to two pounds daily, with a gradual increase to eight or ten pounds. After a few days of this diet a marked improvement in the general health is noticeable. The appetite improves, the digestion becomes easy and rapid, and increased capacity to withstand the fatigue of outdoor exercise is noticeable. The grape cure is particularly recommended to the anæmic, dyspeptic and consumptive, in diseases of the liver and in gout.—California Fruit Grower.

Arizona Onyx.

The Eastern Company, headed by Congressman Charles N. Fowler of New Jersey, that lately purchased the the famous O'Neil onyx mines, eighty miles north of Phoenix Arizona, has had a large force of men at work rushing operations in anticipation of added demand through the operations of the new tariff law, which place a prohibitory duty on Mexican onyx. Within the week discovery has been made at depth never before attained of a broad stratum of onyx of exceptional beauty and of the highest value. The owners are conferring with the Santa Fe railway for a branch road from Prescott.—St. Louis Globe Democrat.

ELIZABETH COLLEGE. FOR WOMEN.

CHARLOTTE, N. C.

EQUAL TO THE BEST
Colleges for men with every feature of a high grade College for women added.
A FACULTY OF 15 SPECIALISTS
From schools of international reputation, as Yale, Johns Hopkins, Amherst, University of Virginia, Berlin, New England Conservatory, Paris, &c.
THREE COURSES
Leading to degrees.
GROUP SYSTEM
With electives.
MUSIC CONSERVATORY
With course leading to diploma. Pipe Organ, Piano, Violin, Guitar, Banjo, Mandolin, Vocal.
ART CONSERVATORY
Full course to diploma—all varieties.
FULL COMMERCIAL
Course—Teacher from Eastman.
A REFINED HOME
With every modern convenience.
CLIMATE
Similar to that of ASHEVILLE.
COLLEGE BUILDING,
172 ft. frontage, 148 ft. deep, 4 stories high, built of pressed brick, fire proof, with every modern appliance.

THE KISS I'LL GET TONIGHT

All day the clouds have hovered low,
And poured their floods upon the earth;
Yet on my face fair love-beams glow,
And in my heart sings tuneful mirth;
For what bleak cloud or chilling rain
Could kill my joy or give me pain,
When on my lips, in fancy bright,
I feel the kiss I'll get tonight?

Through valleys wide, o'er rivers deep,
Past stately towns and humble homes,
My journey onward do I keep,
Until from out the twilight comes
The grandest vision earth contains:
My sweetheart waits—looks though the panes,
As angels peer from realms of light—
To give the kiss I'll get tonight.

So may it be in years unborn,
When life's clouds gather, cares descend;
That peace will my worn brow adorn,
And love strength to my weakness lend;
For, though each day brings bitter woes,
My soul will sing until its close,
"Sweetheart, your love puts cares to flight—
God bless the kiss I'll get tonight."
—Paul Lossing McKendrick, in Everywhere.

HER FATHER'S VOICE.

BY GRACE MCGOWAN COOKE.

Marjorie, at the piano practicing her exercises, finished with evident relief the day's task and, apparently as a sort of vocal frolic, ran down the scale as low as her deep, powerful young voice would go, and sounded a half-dozen notes that might have shamed a basso.

Great-aunt Marjorie, sitting by the window, laughed; and her neice and namesake whirled about upon the stool to face her.

"What are you laughing at, Aunt Marjorie—me and my 'trumpet tones?'"

"It made me think of your grandmother," answered the pretty old lady. "She had just such a voice, and she was almost as much ashamed of it as somebody I know is proud of hers."

"Aunt Margie," accused Marjorie, "I see a story in your eye. Don't deny it! I'm a good girl; I've been through all my exercises five times; I deserve that story," and bringing a hassock she disposed herself at her aunt's knee, in a comfortable listening attitude.

"Well," began Aunt Margie, "things about Barbara are usually interesting, and the way she was teased about her basso voice, as we used to call it, is amusing enough to remember. There is one incident connected with it which is quite a little tale and will bear repeating.

"Barbara used to sing what we called 'counter' in the choir—you call it 'alto' now, I think—and her singing voice was much admired. But I remember," laughing softly, "that old Billy Gillespie, who taught our singing school, attempted to get up a quartet of female voices and asked her to take the bass. She never went back to the class afterwards, and she would hardly speak to old Billy when she met him.

"It was not much wonder. We had tormented her till she could not be reasonable about it. She had begun it herself, frightening any of the other girls whom she caught out after dusk, by hiding and calling their names in a big, bass voice she could assume.

"Your Great-uncle Zeph was the cruelest tease of all, and he told her that she was so fond of the boys that she tried to talk and sing like them. It was finally such a sore subject that when we wanted her, for a joke, to imitate father's singing—which she could do perfectly—we could not get her to utter a note.

"When your Great-uncle Jonas was ordained a minister upon his 21st birthday at Harrisburg, we were all very much excited over it. Father and mother, of course, intended to be present, but we young folks could not expect to go. Travel was difficult in the Pennsylvania mountains in those days, and they would have to make most of the trip on horseback.

"I remember the day they started. It was early spring, and the roads were badly broken up by a March thaw.

"They had sent for Aunt Betsy Sellins and Uncle Silas to come and stay with us. The Sellinses used always to stay with us when father and mother were called away. They were not related to us, but they had been tenants of father's, and we always called them aunt and uncle.

"Two of the boys had gone to mill, and Zeph and the baby brother, then eight years old, were out hunting.

"Mother didn't like to go, leaving just Barbara and me in the house, but, as none of the others had got back by noon, she and father were obliged to ride away or miss being in Harrisburg Sunday morning.

"Barbara and I cleared up and washed the dishes, feeling rather small and quiet in the big, empty house.

"Along about three o'clock in the afternoon a Mr. Greenough, who lived seven miles beyond us up the road, came past and brought the word that Uncle Silas and Aunt Betsy would be over—the next day!

"Barbara and I looked pretty blank when we heard that. 'Why, we expected them this morning,' I said.

"'Well, then, they got the word wrong,' answered Mr. Greenough, 'for they understood that they were asked to come tomorrow. Does it make any great difference?'

"'Oh, no,' replied Barbara, with a warning glance at me. 'We have our house pretty full as it is. We just expected them to help us through the work.'

"After he had gone she said: 'No need to tell anybody that we and the boys are alone here even for one night. I'd feel as safe as usual if I was sure no one knew it.' And I nodded.

"For some time past there had been a good deal of excitement in our neighborhood over the work of an armed band of desperadoes, who attacked isolated houses, robbed them and even, in some cases, killed the occupants and fired the buildings.

"The mountainous regions of the state were the strongholds of such bands long after the more accessible portion had been brought under sway of law and order.

"In our neighborhood, however, we had an added terror. So much knowledge of the location of valuables, the temporarily unprotected state of houses and the habits of the families had been shown in these attacks that it was suspected that some person or persons living in our midst belonged to the gangs and gave information.

"Our house would not have been considered ordinarily liable to attack. It was a big, square, old colonial mansion, such as you would just now think very handsome. It stood upon the high road, and was a regular stopping place for travelers or drovers with cattle coming over the mountains to Harrisburg.

"The afternoon was well along, and we had begun preparations for supper, when we had another visitor. This time it was a man whom none of us liked, a ne'er-do-well fellow, who had peddled tin and bought up eggs and butter and chickens through the country for some months past. 'I stopped to tell ye,' he called, reining up his horse in front of the house, 'that Sulky crick is on a rise, an' if the boys ain't back from Hollister's mill they won't be able to git hum tonight.'

"Barbara and I had both run out at his call. The man's light, shifty eyes searched the whole place and avoided the two forlorn figures on the porch.

"That's all right. I'll tell father. Thank you for stopping to let us know, so we won't be anxious," said Barbara bravely; but I was dissolving in tears behind her shoulder.

"'Sh'd have thought your ma an' pa'd hev wanted to be in Harrisburg a Sabba' day to see Jonas ordained,' hazarded the man.

"'They did want to,' answered Barbara. 'Come, Maggie,' and with her arm around me, she drew me into the house, but not before I had observed what I thought was a gleam of amusement or triumph in the man's watery eyes.

"'O, Barbara,' I sobbed, "even Zeph and little Cale can't get home. They can't cross Sulky. We'll be all alone. Let's lock up the house and hide in the woods!'

"'Now, Maggie,' coaxed Barbara, as we sat disconsolately on the kitchen settle. 'I've thought it all over. It's likely we're scared for nothing. Probably nobody knows we're here alone, nor wants to harm us. We can't get word to anyone, and we can't stay in the woods on a cold night like this. Anyhow, we're safer where we are. Let's eat some supper and pop some corn and be as cheerful as we can.'

"But there was very little supper eaten and no corn popped that night. I started and cried out at every sound from without the house, and Barbara grew very pale and anxious. Finally, about ten o'clock, we crept upstairs and to bed.

"Frightened as we were, I think we both slept, for the next thing I knew was Barbara touching me and saying: 'Don't scream, Maggie; listen.' Outside, in the dark, there was the sound of horses being ridden cautiously up to the gate. Then upon the steps and porch there came the tread of men and lowered voices.

"The people, whoever they were, evidently thought they were in little danger, even if they were not heard, but they appeared to be not absolutely certain and observing some caution.

"'They're robbers,' whispered Barbara; 'they think father and the boys are gone, but they're not sure.'

"'Let's hide,' I breathed through my chattering teeth.

"'No, no,' counselled Barbie. 'I've got a plan. They're getting in; listen, Maggie, theyr'e forcing the side hall window. Do just as I tell, you, Maggie.'

"I was almost wild with fear, but I managed to understand what it was Barbara wanted of me and promised to do my best.

"One man had evidently come in through the window we had heard them force. He was apparently sent in to reconnoiter, while the others waited outside. We could hear his stealthy step slowly ascending the stair. Suddenly, as he reached the top and paused, so still that we could hear his suppressed breathing, Barbara brought her bare feet down on the floor with a sound like some one jumping out of bed. Then she yawned—a noisy yawn, like a sleepy man, and lit a candle. Our matches were not the explosive kind you have now, but we could tell by the slight movement in the hall and the stir on the front porch that our light had been seen from the window and through the keyhole.

"'Oh, no,' Barbara! She was sitting on the bed's edge, dressed in her scant, white bedgown, a night to move anyone but terrified me to laughter, as she noisily drew on father's heavy boots.

"We could still hear the little indefinite stir and breathing of the man outside our door. Barbara cleared her throat portentously, stamped her feet a little, got up and walked across the floor. Then—she told me afterwards that she expected on every note her voice would fall—she hummed a little and broke mellowly into 'How Firm a Foundation Ye Saints of the Lord.' Father was leader of the choir and a noted singer. All the countryside knew his voice, and I could have sworn that was his voice had I not seen the lips that were uttering it.

"Suddenly she broke off singing and whistled a bar. Then she rapped gravely, with shaking head, upon the wall.

"'Marjorie! Marjorie! Get up!' she said. 'Here's all these men wanting their breakfast, child, and to get an early start. Mother isn't here, mind.'

"'Why, father,' I answered, in as near my natural voice as I could command, 'It's not yet 12 o'clock. Your watch must be wrong.'

"At the first sound of the big bass notes I had heard the scout turn and start down the steps with more speed than caution.

"He was evidently surprised into his hasty retreat, for half-way down he paused to listen, and when he heard father, as he supposed, speak to a party of drovers who were in the house and would want an early start, he fairly ran. The drovers always went well armed and prepared for outlaws, and this band plainly had no wish to meet them.

"We heard the fellow fall headlong over a rocking chair in the hall, and I burst into a hysterical giggle, but Barbara opened the door and called seriously in the deep voice which had, perhaps, saved both our lives:

"'Zephaniah! What are you doing?'

"A rocking chair is an awful thing to wrestle with in the dark. One of the men below (thinking from the sounds, no doubt, that there was a fight) came into the hall, got involved in the evolutions of man and chair, and it was not till Barbara, flushed with victory, opened the door again, made one or two steps and called:

"'Zephaniah! Shall I come down and attend to your case?' that comparative quiet was restored, and we heard the two scuttle through the window and hurry out to their companions, who, catching the panic from them, ran to their horses and galloped away.

"Barbara sat down on her bed and laughed till she was weak, and she said she was never more surprised in her life than when she found that I had quietly fainted.

"After I came to she went down as bold as a lion and fastened the window the robbers had left open.

"The story was not left, either, to depend on Barbara's word and mine, for in the morning, when the boys and Aunt Betsy and Uncle Silas came, there were the muddy footprints everywhere, the broken hasp of the window and the rocking chair—our chivalrous defender of the night before—with one rocker and one arm broken to speak for us."—Atlanta Constitution.

Human Vices in a Dog.

The most dissipated dog in town is owned by Harry McCafferty. In addition to being addicted to the beer habit, the animal is an inveterate cigarette smoker and is passionately fond of chewing tobacco. It first contracted the habit by eating the discarded stumps of cigars and cigarettes. It is a curious sight to witness the dog perched upon a chair with a cigarette in its mouth and a pair of spectacles on its nose. The dog will chew any kind of tobacco and seems to prefer it to food, but, as this habit may prove dangerous, its master is substituting candy which has been in the same box with the tobacco, and the smell rarely deceives the eccentric pet.—Philadelphia Record.

A Court of Honor for Duellists.

An attempt is making in Germany to establish a permanent court of honor before which all the challenges among German students are to be heard. A draft of rules to govern this court has been drawn up by the high school of engineering in Berlin and leading universities have indorsed the scheme. The movement has the sympathy of many well-known "fighting men" throughout Germany who believe that a reform of this sort is very badly needed. It is admitted by many duelists that fully 90 per cent. of the challenges among the students at the present time are due to disputes arising when the men are under the influence of liquor.

Revolution.

"I tell you," said the man who is always excited, "the world is on the verge of another revolution."

"That's true," replied his friend who keeps cool.

"And there's no telling when it will end."

"Oh, yes, there is. It will end in twenty-four hours, and start right over again the same as usual."—Washington Star.

DEADLY PEST OF FLIES.

TERRIBLE RAVAGES OF THE BUFFALO GNAT IN THE SOUTHWEST.

Men and Cattle Stung to Death—Belongs to a Family Widespread Over America and Europe—There Are Sixty Varieties—How Animals Act When Attacked.

From the South and the Southwest come reports of a plague of flies worse than that which helped to obtain the liberation of the Israelites from bondage in ancient Egypt. In Yucatan the sun has been obscured by millions of these pests. In Jeffersonville a farmer named Price, while at work on his farm, was stung to death by a swarm that lit on his face and hands. In Western Oklahoma and parts of Texas adjoining several hundred head of horses, mules and cattle have been killed.

In all cases the fly is of the species known as the buffalo gnat. The gnats are described as resembling small flies. They appear in the spring along the river regions and are carried into the country by high north winds.

They have long been known to science as members of the Similium family. This family comprises but a single genus differentiated into about sixty known species. The particular species to which the buffalo gnat belongs has not yet been baptized by any given name in natural science. Perhaps that is why the king of darkness reigns triumphant within them. To increase this possibility the gnats are popularly known as black flies. They exist in Europe as well as in America. They are small and short. They have no ocelli, the thorax is without any transverse suture, the legs are short, the tibiae are without spurs, and the hind tibiae and first joint of the hind tarsi are dilated.

The larvæ live under water and have interesting pecularities. They are soft skinned and are thinner near the middle. Their head is cyclindrical. They have two pair of eye spots. On the first thoracic segment is a foot protuberance with bristly hooklets. The end of the abdomen has several appendages for attachment. They live in subaquatic plants or on stones, where they form for themselves elongated cocoons, open above. In this upper end the pupæ ensconce themselves. From the anterior part of the body, which is naked and free, extend eight or sixteen very long, slender, thread-like breathing tubes. The perfect insect escapes under water and crawls to the surface.

The European species have been taken in hand by scientists and dignified by the name Similium columbaszenso. They appear in spring, especially along the region of the Danube, where many hundreds of cattle fall victim to their bites. Whenever they bite they cause burning itching. Soon a painful, hard swelling makes its appearance. It may remain for a week or longer. Many such bites close together produce severe inflammatory fever, and in more susceptible victims cramps. They especially frequent such parts of the body as are not covered by hair, and also the passages of the nostril and the ear.

The buffalo gnat proper are found in greater or less quantities every year in Louisiana, Texas and some of the other Southern states. But, luckily, it is not often that they occur in such incredible quantities as now.

Animals, when attacked by large numbers, grow frantic and seek to evade their tormentors by rolling in the dust, rushing about and whirling round and round. At times they are literally covered with the animated pests. The ears and nostrils are the chief points of attack. The former are filled clear to the tympanum with layer upon layer. An inflammatory fever, with a high pulse, soon sets in. The afflicted cattle soon die of cramps and convulsions. In the dead animals the skin of the entire body will be found covered with numerous minute ulcers.

The buffalo gnat has two great aversions—smoke and darkness. Hence, the best way of driving it off is to place the infected animal in a barn, close all the windows and doors save a single passage of escape, and ignite a slow fire of manure, peat or other material which will give out more smoke than light.—New York Herald.

All the Nine Are Brothers.

Portsmouth, Ohio, probably contains the most unique baseball club of the country. It consists solely of the nine Dodds brothers, whose ages range from seventeen to thirty-six years. The youngest is Frank Dodds, who is the regular pitcher, and he has shown remarkable ability for the position. The club ranks second only to the regular professional club, and in a recent game with it was beaten only by the score of 3 to 2. All of the young men are carpenters and play ball only for pleasure. They have christened their club the Polar Bears.—Cleveland Plain Dealer.

Opportunity Comes.

Mrs. Peck—If I had my life to go over again I wouldn't marry the best man alive.

Mr. H. Peck (his chance at last)—You bet you wouldn't. I wouldn't ask you to.—Philadelphia North American.

THE BRIDE DINES OFF THE GROOM.

Queer Facts and Peculiarities About Spiders Not Generally Known.

Margaret Wentworth Leighton has been spending considerable time studying spiders, and the results of her studies are embodied in the article she contributes to the Popular Science Monthly. According to her the spider is deserving of more attention than it receives, especially as it is more skillful than man. This is shown in the fact that the spider's thread is used in the telescope because man has been unable to manufacture one so delicate.

As a rule the female spider is much larger and stronger than the male. The husband's place as the weaker vessel is clearly shown by the fact that after the honeymoon, which is always brief, the bride dines off the groom and his career ends. In the case of spiders, the husband literally supports his family.

Spiders differ materially in character, habits, tastes and size. Some prefer to live in houses or cellars, and never seek the sunlight, others live under water all their lives, while others burrow in the earth like moles. Many spiders never leave their webs, but wait for their prey, while others go boldly forth and attack what they may find that will serve for food. The most adventurous spiders construct a sort of balloon from their webs and then sail away through the air, trusting to fate to land them in a desirable spot.

There are many instances of spiders that loved music. One lived for a long time in the room where the boy Beethoven practiced, and it was noticed that when he played his beloved violin the spider knocked off work and did not resume again until the music ceased.

The spinning apparatus by which the spider constructs its web is one of the most delicate instruments ever created. The spinarets, or spinners, are little organs at the rear end of the body. Each has a number of very minute holes in it and through these holes the silk flows in liquid form, hardening as soon as it meets the air. The strands from several holes unite and form what is called the spider's thread.

The common garden spider, which makes a net of typical shape and sometimes of large size, exercises the utmost care in its construction, and uses two sorts of silk. One is smooth and the other is covered with a sticky substance. In moving about on the web the spider is careful to walk on the smooth silk, where there is no danger of becoming entangled in the snare intended for unwary flies.

About one hundred and fifty years ago a Frenchman, M. Le Bon, made some stockings, purses and gloves of the webs of spiders, and some years ago the Empress of Brazil presented a dress to Queen Victoria, the material of which was woven by the spiders of South America.

Spiders moult several times during their lives, and on each occasion come forth in a garb of a new color. They are greatly affected by the weather, and on the approach of a storm take refuge in a safe spot. They have been known to hide in this way before there were any indications of the approaching storm discernible to man.

Spiders receive a great deal of consideration in India, where so many dumb animals are treated with consideration and even reverence. Children there keep spiders for pets, and it is nothing unusual to see a little tot leading an enormous spider by a string tied around its body. Such pet spiders are fed on worms and insects and they readily accommodate themselves to captivity and take food from the hand.

Answered Conscience's Promptings.

"So strong is the influence wielded by conscience, and so frequently does it cause the wrong-doer to atone for his sin, that for the past eighty-five years the Conscience fund has been officially recognized as one of the regular sources of revenue for the United States Government," writes Clifford Howard in the Ladies' Home Journal. "During this time the consciences of the American people have added to Uncle Sam's resources at the rate of about three hundred dollars a month, or a total sum up to the present year of something over $300,000—the amounts of the individual contributions varying from a few cents to several thousand dollars. The smallest contribution ever made to the Conscience fund was received in May, 1896, and consisted of a two-cent stamp, which was inclosed in the following letter of explanation: 'I once sent a letter in with a photograph (unsealed), which I have since learned was not lawful. I inclose stamp to make it right.' By a curious coincidence the largest sum every contributed reached the treasury department about the same time that the stamp was received. This was a bill of exchange for $14,225.15, which had been sent to the secretary of state by the consul-general at London, to whom the money had been given by a clergyman on behalf of a person unknown, no name being given."

Burglars looted a Broadway, New York, tailoring establishment the other day, and got away with 1,000 pairs of trousers.

McKinley's Uncle Gets an Office.

B. F. McKinley, uncle of President McKinley, has been appointed assistant postmaster of San Francisco by Postmaster Montague.

Andree a Lost Man.

Gen. A. W. Greeley, the Arctic explorer, in an interview in the New York World, says he thinks Prof. Andree, the balloon voyager, will never be heard from.

Fatal Bursting of a Blood Vessel.

In a wrestling match at Marrinville, Ark., Thursday, between Gus Nelms, a professional, and Farris Farmer, an amateur, the latter burst a blood vessel, and died.

Mines Flooded.

News has been received here, says a Madrid cable of Thursday, of the flooding of he mines in the Balearic islands by the sea. Nine of the men employed in the inundated works were drowned.

Lack of Fuel.

The Peoria, Illinois, Straw Board Mills were forced to close Thursday morning for lack of coal. This throws 150 men out of work and raises the total of those in idleness there because of the strike to 1500.

Deputy Collector Goes Wrong.

R. W. Anderson, deputy collector of customs at Chateaugay, N. Y., has been removed from office on account of an alleged shortage in his accounts of $500. Mr. Anderson is reported to have left the city.

German Press Roars Gently.

The attitude of the German press in the matter of the denunciation of the Anglo-German treaty is pacific, the newspapers generally following the keynote sounded by the semi-official press.

Found Dead on His Wife's Grave.

At Degraff, O., Thursday night Frank Wright was found lying dead on his wife's grave with a bullet in his brain. Wright was formerly a resident of Springfield, O., but lately lived in New York.

Fed His Baby to the Hogs.

Lee Davidson was arrested at Ozark, Ark., Friday, accused of infanticide. It is said that he threw his wife and baby into a hog-pen, and the babe was devoured by the swine.

England and Germany Will Come to Terms

The Berlin Boersen Courier says: "The general opinion in official and commercial circles is that an agreement will be reached between England and Germany on the tariffs. A tariff war is altogether out of the question. There are too many interests at stake on both sides."

A Murderer Breaks Jail.

J. H. Ingraham, indicted for the murder of John I. Hoss, escaped from jail at Conway, Ark., Friday afternoon. Hoss, who was killed about a month ago, was a well-known traveling salesman and a brother of Rev. E. E. Hoss, of Nashville, Tenn., editor of the Christian Advocate.

A Gold Strike in Minnesota.

A rich strike has been made at the Randolph mine, near Mine Center, Minn. Ore that will assay from $500 to $1,000 to the ton has been uncovered. A blast that was made there a few days ago threw up several good sized nuggets, one of them weighing 22 ounces of pure gold. The discovery is the richest yet made in the Seine river country.

Two United States Cavalrymen Drowned.

Trooper Bertrand and Jacobson, of B troop, Second United States Cavalry, were drowned last Friday night in a reservoir at Monument, Col. When returning from camp at Colorado Springs to Fort Logan Jacobson fell from his horse into the water through which he was urging his animal to swim. As Jacobson could not swim Bertrand went to his rescue and was dragged down by the drowning.

As Jacobson could not swim Bertrand went to his rescue and was dragged down by the drowning.

Making It Hard on Foreigners.

The chamber of deputies at Brussels has passed a bill compelling all foreigners who have had a year's residence to enroll themselves in the civic guard. The measure is the result of the very great increase of late in the foreign colonies at Antwerp and in Brussels. It is expected that the senate will kill the bill, but M. Schollaert, the minister of the interior and public instruction, threatens to resign his portfolio unless the measure is passed into law.

An Ancient Loan.

The Brussels correspondent of the London Pall Mall Gazette has made an interesting find. At Antwerp he has unearthed a document which describes the first loan contracted by the United States. It is now in possession of a prominent Belgian family. It is dated Antwerp, December, 1791, confirmed at Philadelphia, Pa., May 5, 1782, and is signed by George Washington and Thomas Jefferson, and certified by Alexander Hamilton.

Murder at Texarkana.

The famous Sixteen to One Saloon, in Texarkana, Ark., was the scene of another sensational murder, Saturday afternoon, both parties to the tragedy being prominent men. Wiley Balthrop, a merchant of Buchanan, was shot and instantly killed by J. W. Foster. Threats had been made by both men. Balthrop was getting into his buggy when Foster drew a 45-calibre revolver from his shirt bosom and shot him through the heart. Both men have large families. Balthrop was very popular and has many friends who are very bitter against Foster. The murderer is under arrest.

Party Broken Up by a Mad Dog.

A children's party at the home of L. J. Wright, a prominent citizen of Whitesburg, Ala., was interrupted Thursday night in a horrible manner. While the entertainment was at its height young David McGaha and several other children stepped out into the road. Without warning a mad dog, foaming at the mouth, bounded into the crowd of children and bore McGaha to the ground, biting him fearfully about the head and arms. The patient was brought to Huntsville Friday and a mad stone was applied to the wounds. The stone rapidly adhered to the boy's wounds.

ALASKA'S GOLD FIELDS.

A BOUNDARY LINE BETWEEN ALASKA AND PRITISA LAND

Senate Must Pass the Pending Treaty Before Anything Can be Done---A Talk With General Duffield---Where Most Gold is to be Found.

Nothing can be done more than already has been done towards marking the boundary line between Alaska and British possessions along the 141st meridian until the senate passes upon the boundary treaty now before it. There is, however, no doubt of the location of the line along this meridian and most people in the locality know where it is. The demarkation work was superintended by Gen. Duffield, superintendent of the coast and geodetic survey, on behalf of the United States. General Duffield has spent considerable time in Alaska. He expresses the opinion that a railroad easily can be constructed from Taku Inlet to the Klondyke gold fields, and believes that the enterprise will be worth undertaking, because of the richness of the mines.

"The gold," said General Duffield, in discussing the question, "has been ground out of the quartz by the pressure of the glaciers, which lie and move along the courses of the streams, exerting a tremendous pressure. This force is present to a more appreciable extent in Alaska than elsewhere, and I believe that as a consequence more placer gold will be found in that region than in any other port of the world."

General Duffield thinks the gold hunters on the American side of the line have made the mistake of prospecting the largest streams instead of the small ones.

"When gold is precipitated," he said, "it sinks. It does not float far down stream. It is therefore to be looked for along the small creeks and about the head waters of the larger tributaries of the Yukon."

"There is," he added, "no reason why as rich finds may not be made on the American side of the line as in the Klondyke district."

Six Killed in a Mountain Slide.

As a result of a mountain Slide on the southern slope of the Koppen at Berlin, one of the Riesen-Gebirge peaks, six persons were killed.

COLLEGE ON NEW LINES.

PROF. ANDREWS HAS ACCEPTED THE PRESIDENCY.

Wealthy Journalist to Establish a University in Which There Will Be No Tuition Fees--The Advisory Board Will Be From the Whole Country.

A special dispatch from Providence, R. I., dated last Friday, says: President E. Benjamin Andrews, whose resignation as the head of Brown University caused a profound sensation last week, has accepted the presidency of a new university. The institution will be a popular college, at first something after the Chautauqua movement, and later a large educational institution is to be developed. The position as president was tendered to President Andrews within the past five weeks by the founder of the new college, John Brisbane Walker, a journalist of note and a millionaire. Mr. Walker is a prominent figure in certain theories of education, and believes in the advancement of his ideas. In the last presidential campaign he was on the silver side of the contest. In many of their ideas and opinions upon leading political and financial questions President Andrews and Mr. Walker are said to agree. President Andrews will retire from Brown in September and at once take up the duties as the president of the new university.

President Andrews, in a long interview Friday, said he had been negotiating with Mr. Walker for some time; that he found him a very able man, and one who would be sure to go ahead with his proposed great educational project. President Andrews said that in the fall he would devote his time to his new duties.

"The new college," said President Andrews, "will be a big affair, with the view to the widespread dissemination of education. It will be a popular institution, designed upon new ideas, and the plan will be to meet the problems that come constantly before the people, and which are to be solved under the prevailing conditions of the time in which such questions arise."

Under President Andrews there will be an advisory board of ten men, chosen from the brightest and rarest minds in the whole country. The greater purpose of the new university will be to reach the masses who have not the means to secure entrance to the now existing universities of the country. The prospects of the new university has just been issued, and in it there is this announcement:

"All instruction blanks, examination papers, official circulars, etc., will be furnished free. There will be no charge of any kind made to the student, expenses being borne for the present by the college. No conditions except the pledge of a given number of hours' study will attach to the entrance of students upon the rolls of the university."

The university work will be formally opened on September 1.

UNIVERSITY OF CALIFORNIA.

Will Be One of the Famous Schools of the World.

The University of California is to become one of the most famous universities of the world. At any rate it is to have, if designs are carried out, the finest pile of buildings on the globe, and these are to be put into effect at once.

Inside of a year ground will be broken for the first of a magnificent group of buildings. There are to be 28 or 30 of them, homogeneous in design. Regent Reinstein says it will take many years to build them and there is already money enough to last for ten years.

All the buildings are to be built of stone and built to last for ages. How many millions they will cost Regent Boinstein refuses to say, but he has enough pledged to make his magnificent plan a certainty.

Drug Men Indicted.

Last Saturday the grand jury of Nashville, Tenn., returned into court indictments against W. W. Berry, J. A. Demoville, S. S. Wharton, D. D. Phillips, E. M. Neal and T. J. Webb, leading wholesale drug men, charging them with violating the anti-trust and combine law, in that it is alleged they entered into an agreement to control the price of certain drugs and made contracts with manufacturers accord-

Burglars looted a Broadway, New York, tailoring establishment the other day, and got away with 1089 pairs of trousers.

THE STORY OF ULLA

Told at the Edge of the Northern Sea, and Written for This Paper.

BY EDWIN LESTER ARNOLD.

CHAPTER IV.

We crept out by the green island of Thymnoes, where the white sheep were feeding to the water's edge, and past Goddo on our right, and the long, black shore of Bommels on the left, and so by many a green oeland and dark rock out into the spray and fresh salt wind we joyfully lurching the old Sea Wolf. The frothy pillow of the foam glittering under her prow, and behind the green wall of the Norway pines, and the gray rocks, and the sweet sea surge that tumbled forever at their feet and threw its white arms up as though, lover-like, it would enlace its silver fingers with the green hair of the nodding brache overhead. Down went our gallant shore down peak, and pine, and point, and as the great black bosom of our mother sea opened to us, her firstling sons proudly we turned our faces westward and each eye grew bright at thought of the plunder to come, and each heart beat high as we smelt the incense of fight in the strong breath of the sea. Oh! but I was proud as, my hand on the pulsing tiller that throbbed under the racing surges not less loudly than my heart, I stood by the high stern and led the wild, free song to Odin wherewith my gallant company mocked the waves—proud! Oh, the salt spray rises again in these old eyes of mine but to remember the fierce wine of life that usurped my blood and flew here and there in my young veins that day this cold mind of mine burns again but to recall the ecstasy of the unfettered passions that then beset me; but to think for an ungodly minute on those splendid vistas of unbridled lust and cruelty and rapine which dazed my soul.

Well! it is over, and I do wrong ever to remember. No more the salt wind takes the war song of Ulla, like a herald of death, to the land of the stranger; no more for him is the joyful rattle of the ranged shields clattering on his vessel's side as she stoops to the steep blue valleys of the midland sea; no more the old viking's plough shall turn that frothy furrow he did once delight in; no more the lovely smoke of burning thorps shall rise from Ulla's torch to Odin's footstool; no more his stern heart shall melt to pleasure as his vessel staggers homeward through the yeast and spume, and every swirl of the cold dark water spinning enviously against her laboring side tell of rich plunder hid within. It is over for me but it was a noble frenzy while it lasted. All that noon of our setting out we plunged before a favoring wind across the salt water, and by the second evening the wave began to wear another color as the sea shealed up to the British shore. At the same time the breeze gave out with the sun and we took to our sweeps, and all night long under the starlight the Sea Wolf crept silently and secretly into the land. In the gray of the morning that followed a haze grew up and under the curtain of the white sea mist that lay soft and heavy as wool on the gently rocking sea we heard the sound of the waves beating on the dim North Umbrian shore. We approached as close as we dared, and then waited for the sun, rolling an idle hour or two on the smooth, long heave of the swell, and, in the dead silence listening to the chatter of the wild fowl and the laugh of the kittiwake on the unseen cliffs; or the chafe and creak of an oar now and then in the rowlock and the hiss of the water swirling gently against our sides. So still lay the Sea Wolf in the shadow of the morning mist that the shy grebes and speckled divers came paddling all about her and stared with eyes bead black with wonder to see the silver mist turn on a sudden into a painted hulk with ranked oars, and great damp sail aflap against the ruddy mast, and golden dragon head sniffing the chill morning air aloft, and grim warriors leaning on battle-ax and spear crowding her deck. And strange fish swam lapping round, and the swift gannet's white pinions stirred Hafdan's listless flag as she swept unheeding by through the milky haze. No man among us spoke until on a sudden the curling wavelets in the east sparkled with liquid fire, the hanging shroud of whiteness flushed with a yellow radiance, the strange, bright light shone through the green-crested waves, and as the free sweet breath of the morning drifted down upon us, and each man drank of it deep and silently, the curtain of the night was lifted, and the yellow feet of the sun came striding over the black plains of the restless northern sea.

Silent and deep we laughed with pleasure, and my grim, stout fellow shook the mist-beads from their tawny lips, then—muttering a prayer to Odin—again the white water fretted under the stern of our ship and the long, slow dip of the oars fell with a pleasant sound on the calm of the morning. Round under the rugged knees of green cliffs crept the Wolf, so secret and swift that the speckled loons stood agape in rows to watch the golden dragon head go dipping by their lonely eyries, and the blue pigeon on her cavern shelf astride of her white egg stood wonderstruck and forgot to fly—thus she went across the mouth of lovely bays and under grassy headlands and big bights fringed with endless lonely meadows and past fair estuaries where rank fields of westral crops were all awaste between neglected woodland and southward constantly for many a day hour, but nothing could we see to sack or burn. Noon came and went, and the warm sweat glazed the sinewy forearms of my gallant rowers until at last I saw them begin to turn their bronze faces over their hithe shoulders and angrily scan the ruined shore and swear deep between their strong white teeth; swear at the Danes who had swept this fair country so clean, swear at Biorn Grimsar, and Hakonson the avaricious, and Inge the bloody, and Guthern of Hagbard, who had pillaged here last autumn and wiped out maid and matron, croft and castle, and left nothing for any honest viking who came after them. Ayl I was sad, we thought, to see so sweet a country so void of life, and we pulled on southward for many miles, looking now on the sunny shore made by nature to be rich and happy, and yet had nothing on it to burn or plunder, and then

"THE JAVELIN FLEW AND TOO TRUE."

as he spoke the javelin flew, and, too true, struck its mark and pierced deep into the old crone's withered bosom, and with a scream of surprise and deathless hatred she spun round upon her heels and grinned and staggered and then plunged headlong into the sea at her feet, and as we passed her crimson blood was spreading in a great red pool upon the dark heave of the smooth flowing surf.

I know not whether it were true, as some among my comrades thought, that that thin old blood spilt so would bring us luck, but presently it is true enough we had another sign, for a raven came flying off from the land and circled round us and fell into our wake behind, and as the black wings of Odin's friend and messenger went flapping overhead a new spirit was born in my fierce crew. They stretched their hands to heaven and shouted with one voice a verse from out the raven war song, then down they went and with new courage stretched them to their oars until the red viking flag streamed bravely out astern and the shields rattled joyfully and the water lay in a white streak along the low-dipping gunwale of the old Sea Wolf. Cape and bay and headland slipped by. We had come into a better peopled country, when on a sudden a Dane who kept our fore-watch slapped his hand upon his thigh and cried: "A burgh! a burgh! and not yet plundered!" And there, following the point of his eager finger, we saw, three miles away, a strong hall upon a rocky promontory, with trees and meads about it green and fair, and sheep upon the hills and clustering huts below, all sweet and peaceful, and a little harbor—everything, indeed, that could glad a viking heart; and, truly grateful, we thanked the bird that had brought us fortune, and paused in a little creek to wait for nightfall.

All the afternoon the longship lay out of sight in the little cavern bay with cliffs, green-tasseled with hanging grasses, nearly meeting overhead, and below the smooth swell of the water heaving the long tangles of sea grass and weeds, and idly reflecting the stern laces and golden mail of that grim crew on board lolling about upon the deck or hanging over the loaded bulwark to watch the shining fishes at play deep down below. Who would have thought that pretty shadow listlessly rolling there or the heave of the wave was bent on such an errand? It was so still as we lay screened in the cover that you could hear the larks singing to themselves high up in the blue over the cliff grass, and the bubble and play of the water in the crevices of the rocks all round us; it was so still that presently this monotony grew wearisome to my fierce and vested spirit. I chafed and turned and impatiently watched the sun which seemed as though it would never set, until at last a happy idea entered into my head—I would go and spy this burgh we were to plunder, see how big and strong it was, how many men held it and how much profit we were like to come by in the venture. With this fancy in my mind I roused my handsome sleepy fellows, who, at my voice stretched their great limbs where they had lain sleeping on the rowers' benches or turned their eyes from gazing on the shining sea to look on one another and say "Ulla is mad! young Ulla Erlingson is wholly mad!" But I pointed out how the madness would vantage us, how greatly it would help us to know the lie and nature of the hold, how I could disguise myself so that my mother should not know me, and learn and see all I could and be back again with them safe and sound, for by dangling on a gibbet above the highest roof gave them something new to fight for"—as Sarp of Beyr said—before the twilight fell.

CHAPTER V.

Like the brave fellows that they were, the bold fancy pleased them, and forthwith I was disguised as a ragged out cast, with a slouch hat and sorry coat and dirty-gartered legs, with worn wolf skin sandals; my yellow hair was knotted up and hidden in my cap, my face was daubed gray and lean with ash and mud, and with a little paint good Vedey put a sore or two upon my naked arms such as might come by want and long travel, and with a touch of red and green made to look most hideously new a long-healed wound or two I had upon my bosom. I seemed when it was done so miserable and lean and put so pitiful a whine into my voice and leant so heavy on my long ash staff that all my jolly vikings fell a-laughing, and laughed so loud they hushed the droning of the blue pigeon brooding on her eggs and started the shaggy, green-eyed sea crows from their rocky pinnacles a mile away, and then they rowed me to a landing, and with jest and sage advice sent me on my dangerous errand.

It was a sweet place, that English burgh. Even now, long years after, I, old and wrinkled, still dream in the winter nights of the warm incense of that afternoon, and how the grateful sun drew fragrance from out the earth, and how sweet the yellow meadow flowers did smell about it, and how the apples blossomed on the hanger; and then across my evening vision even now there comes the black reek of its burning thatch and the hot steam of the blood in the hall by the banquet tables—ay, I conjure again all these years after in restless slumber the shine of its many roofs a-basking in the April sun, the blue-eyed children rolling in frolic sport about the grassy court—the twittering love songs of the new-come swallows on the roof ridge—and then athwart my sleep the black column of avenging smoke leaps to the star-lit midnight sky, the cruel tongues of leaping crimson flame spring up, and the fierce, rasping cry of stricken men, the piercing shriek of women, and the low wail of butchered little ones affright my old and unstrung ears!

Ay, it seemed a sweet place that unpouched, ancient English citadel as I hobbled out from the hazels and humble and decrepit as became me, craved its hospitality. All inland — stretching away into the dim blue distance—lay fertile fields and woods, shining greener than any other woods can shine, with brooks and streams between them flashing in the light, and splendid herds enough to feast an army for a year, kneedeep in the many colored grasses, and then all this richness swept round by the shore of a little crescent bay to here where on a gently rising promontory the prince's castle stood. It stood upon the very topmost flat of the hill, and was approached from below by a rough track fashioned of beams laid side by side, which circled up through the gorse and fern to its outer fence. Getting out upon that track I walked up the hill secretly noting as I went each stock and stone of cover, and soon came to the first sweep of outer stockade. This was a great circle of pointed timbers sloping outward over a ditch from the crest of a tall earthen rampart—strong fence, indeed, and one that twenty men might hold against a hundred. I entered through the open gate of this and right in front rose another rampart and another palisade that made me sigh to look on—I had to walk half-way round the grassy flat between these two before I found a gate to pass the second time. But this latter entrance gained it made me master of the place. Those two tall fences, strong in oaken timbers, mossy gates and iron rivets, shut in the whole hilltop, of which the other boundary was the sheer cliffs that dropped steep down into the sea below, and all this space was full of sheds and buildings, and huts and houses, and granaries of corn and stacks of fodder for the beasts, and corn for soldiers, and here a thrashing floor, and there a well with rope and bucket, yonder a row of ovens and a drinking trough and much else. Then came a grassy green and next, along the verge, a little aloof from all, the prince's house. A fine house it stood upon the crag, with terraces and courts, doors and windows, strong stone outer walls and timbered arches, a goodly place, indeed, with the sun shining on it, a good wind-cool wirling about, red fish-tail tiles upon the roofs, brass studs upon the doors and a colonnade round it with wide projecting eaves supported by unsmoothed pillars of oak, to which solid oak logs made steps all round. Partly behind this was the strong place of the fort, a tall, rough tower of solid masonry rising sheer into the air on the very verge of the cliff from the more peaceful dwelling places around, and grim and w

lowless frowning down 200 feet into the white surge that broke and thundered far below.

As I entered this burgh a few children were playing about upon the grass and some women were grinding corn in a hand mill at one place, while at another a young and fair serving maid was spinning flax upon the steps of the chief's house. A dog or two lay basking in the sun, and as they saw me and fell a-barking the damsel stopped her spinning, the corn mill came to a stop under the hands of the old crones, and the little ones fled to cover like a flock of startled partridges. But I looked harmless enough, a ragged fellow there by the gate, gaunt and humble, and presently seeing they were reassured I advanced slowly and begged of the younger woman in the meanest whine my wit could master a drink of milk and an oaten cake to stay my hunger. That fair foreigner got up and took me into the hall—and a splendid hall it was—and put me at the servant's tressel, then calling some others, set milk and bread before me. So I ate and drank and all the time kept counting the golden plates and ewers on the master's distant table and scanning his weapons or costly furs hung round the hall, and thinking how much my ship could carry home. Ay, and as each fair damsel filled my horn and platter, asking me in gentle civility the while of my home and wayfaring, little did she know that I was wondering how much she would fetch at the slave stakes in Throndjem market place, or whether she would scream greatly that night or no. Indeed, those comely, red-haired English maidens were so civil that had they not been barbarians and thus to us what the hinds of the valley are to the hill wolves and the speckled salmon to the gray ospreys I might almost have rued the red night's work that was at hand. But as things were, I should have blushed as soon to think myself compassionate as coward, and thus I laughed and chatted with them, and while I finished my bowl learned of those incautious women tongues that all the men were away inland; that the women and children from all round came in and the palisades were closed at nightfall, and saving some half-dozen herders there were to be no men in the burgh that night. I learnt that their master had a fair daughter, though I saw her not, as she was then spinning with her maidens in the turret; that the master was wondrous rich, but old and feeble, and thus, having learned all I hoped for, with a last quick look round the place, I rose to go. As I turned one gentle

"'FAREWELL,' SHE SAID."

maid put a silver penny that she had taken from a little store in the corner of her thread box into my hand. "Farewell," she said, "old man, and may the good God guide you; it ever grieves my heart to see one poor and hungry," and that penny was put out at good interest, for that very night, when the burgh was burning, I saved her from the brief rooing of Vidkun the rough, and, leading her to the foss, showed her the coin and, pointing to the dark shade of the thickets, let her go free and unharmed. Thus I rejoined my comrades and told them all I had seen.

[TO BE CONTINUED.]

How Kilgore Secured Attention.

Representative Kilgore was the hero, on a recent Friday evening during the night session, of a mute but expressive scene. Mr. Kilgore had a little bill in which his interest was fully aroused, and in its behalf he asked the gentleman in the chair—who, it happened, was not Mr. Crisp—for how long a time he might occupy the attention of the House. The Speaker pro tem. gave Mr. Kilgore unusually good measure, telling him to go ahead, as an hour was at his disposal. The Speaker turned his attention elsewhere, and the House hummed away in its usual conversational fortissimo. Then followed a sudden silence, so out of the usual House style that the temporary chairman was astonished into elevating his eyes, only to find the members looking at Mr. Kilgore in silent amusement. There stood Mr. Kilgore sawing the air with his arms and performing all the gestures in the most complete oratorical textbook. His lips opened and shut as if yards of Congressional Record copy were issuing from between them. Mr. Kilgore was extremely animated, but not a sound was heard.

"What is the matter, Mr. Kilgore?" demanded the Speaker. "I told the gentleman from Texas he could have an hour to address the House on this measure."

"I know it, Mr. Speaker," smiled Kilgore, "but I thought the House would prefer a pantomine speech and it wouldn't disturb their conversation." The Speaker, according to Kate Field's Washington, had to impair his dignity with a smile, but evidently Kilgore knew best what the House appreciated, for when the vote was taken there was not a single dissent.

Judicious advertising pays.

Deadly Poison Discovered in a Common Roadside Flower.

Dr. R. E. Hommell, of this city, who is professor of materia medica and physiology of the New Jersey State College of Pharmacy, spends considerable of his time studying the structure and therapeutic properties of the medical plants of our country, and his investigations have been rewarded by a discovery most important to science, namely, the identification of a poisonous principle in a wild flower commonly known as blue weed.

The plant grows abundantly during the months of July and August in different parts of Hudson County, in fact, all over the country, principally southward. It is usually found along roadsides and other open places, among wild flowers, such as the mullein, thistle, poke, buttercup, red clover, wild mustard and many others.

The plant belongs to the borage family and is a biennial. It is tough and bristly, has an erect stem, two feet high, leaves linear, lanceolate flowers, purple changing to blue, rather showy, growing in short lateral clusters.

It has always been regarded as a perfectly harmless vegetation; in fact, all of the other members of the family are innocent. They are muscilaginous, slightly bitter plants. The exception, however, is the blue weed.

The fact was observed during the months of February and March by Dr. Hommell and Professor A. Drescher, a chemist of Newark. The analysis and experiments covered nearly six weeks, and the scientists succeeded in isolating a new alkaloid, destined to play an important role in medicine.

The substance found is identical with "Curania," the alkaloid of Curare or "Woorara," the South American arrow poison, obtained from the young branches of Strychnos castelnae and Cocculus toxiferns. It may also be obtained from different other plants in South America.

The physiological action of curare is powerful. When injected into the blood hypodermically, it produces paralysis of the muscular system in general, especially the muscles of respiration and locomotion, followed by convulsions which are produced by asphyxia due to respiratory paralysis.

Locally applied to the skin, it acts as an irritant, causing inflammation and pain. It is also apt to irritate the mucous membranes of the nose and mouth and other situations in the physical economy.

The poisoning principle in blue weed has similar physiological actions to the Indian arrow poison. A small amount of the blue weed alkaloid injected into the circulation of rabbits and guinea pigs caused death in less than ten minutes.

The physiological tests were conducted by Dr. Zeis, veterinary surgeon, of Newark; Professor Drescher and Dr. Hommell repeatedly, and they assert positively, that there is absolutely no further doubt as to the very poisonous character of a wild flower heretofore regarded as harmless.—Jersey City Journal.

WHEELING IN RUSSIA.

Cyclists are Restricted in the Dominions of the Czar.

Wheeling as a pastime in Russia has not been conducted with the same degree of liberality and common sense that has marked its course in this and other countries. For instance, women were not allowed to ride in the streets of St. Petersburg up to February of the present year. Permits are issued to all persons who desire to ride under conditions which every American will smile at, namely:

The applicant must first pass an examination on the wheel before one of the cycling associations of St. Petersburg. When the applicant has received a certificate he files it together with an application to the city officials. Although the permit is given gratis, the cost of revenue stamps and of the little book containing rules and regulations regarding bicycle riding in the city amounts to $1.13, which must be paid by the applicant before the permit is obtained. Such permit is good for one year, which begins always with May 1st. Upon payment of the required amount a registered number of the bicycle is issued with the permit. These numbers are in plain white figures on a red plate, and must be fastened to the wheel on both the front and back, so as to be clearly visible to the police and the public in case any mishap should occur, or in case the regulations prescribed for bicycle riders are disregarded. One plate with the number on both sides is fastened to the frame in front, below the handle-bars, sticking out so the number can be seen from either side; and the other plate is fastened to the rear of the frame, below the saddle, in such a way as to be in full view when the person is sitting on the saddle.

When several wheelmen are riding together, they must ride one after the other at a distance of not less than fourteen feet between each bicycle.

By a special order of the City Governor, the person who receives a permit to ride a bicycle must give a photo of himself, which is attached to the permit.

"Heart Bracelets. The Latest Fad. A Rainy Day Idea. Charlotte Walter's Terrible Cry, Etc., Etc.

HEART BRACELETS.

A slender gold bracelet, designed to please young women of sentimental tendencies, is arrayed with two hearts in fine brilliants affectionately linked together.

A RAINY DAY IDEA.

One of the women writers on a Cleveland paper is urging women to wear their daintiest skirts on rainy days, pleading as a reason for the strange request that women should do their best to avoid bedraggled appearance on the days of all others when skirts are in especial evidence. As to whether this Cleveland sister expects to win the world over to her view is not stated. Dark skirts and well-fitting waterproof boots are especially desirable for rainy day jaunts, and are surely more sensible and neat than white, lace-trimmed lingerie that will not stay white long.—New York Tribune.

CHARLOTTE WOLTER'S TERRIBLE CRY.

When Charlotte Wolter, the great German actress, who died recently in Vienna, began her stage career, her voice was disagreeable, harsh, hesitating, and girlish. From that same throat proceeded a few years later a voice that has never before or since been heard on the German stage; metallic and full, charming, so intensely affecting. Now the listener's ear revelled in the sweetness of her tones, now it was carried away by their irresistible force. The "Wolter-schrei!" (Wolter-cry) is a new German word, coined expressly to designate the expression of the utmost horror; a terrible cry, piercing to the very marrow in one's bones, which she uttered in Goethe's "Goetz von Berlichingen."

THE LATEST FAD.

The latest fad with the New Orleans girls is the cravat craze. Almost every girl who owes any forfeit to her gentleman friends is making amends by working him the daintiest cravat perhaps he ever has worn. One of these dainty conceits, seen by the writer yesterday in the boudoir of a lovely girl on St. Charles avenue, was of white silk, flicked here and there with a delicate tracery of blue silk floss, that was perfectly bewitching, and altogether too lovely for any masculine to wear. "But I promised to pay up an old score," said the pretty debtor, as her deft fingers flew to and fro in the soft meshes of silk, "and this is the most delicate and graceful way of doing it."—New Orleans Picayune.

COULD STAND THE STRAIN NO LONGER.

A woman who was traveling alone not long ago wandered one evening into a hotel parlor. A pretty young girl at once rushed toward her and breathlessly asked what time it was. Somewhat astonished, the woman glanced at the big mantel clock and repeated the hour. "Oh, thank you," said the stranger, but without any signs of going away. "I suppose you think it queer my asking that," she burst out a moment later, "but to tell the truth I didn't want to know the time at all; I just had to speak to somebody. You see, I'm on my wedding trip, and for a whole week I haven't spoke to a soul but my husband. Why, I've hardly heard the sound of any one's voice but his. It was really a question of my speaking to some one or going wild."—Kansas City Star.

A WOMAN OF NERVE.

The life of George Spotts, a resident of Rochester, Ind., was saved by his wife after the doctors had given him up because the woman was not afraid to do what the physicians, with all their learning, were. Six months ago Spotts' foot became gangrened, and when told of the disease, he asked the doctor to amputate the member. After consultation with others, the doctor refused to so, giving as his reason that Spotts was in such an enfeebled condition that he could not endure the shock, although telling him at the same time that there was little hope for his life without such an operation. After he left Mrs. Spotts sharpened a common butcher knife, and cutting the flesh around the ankle, unjointed the foot and removed it, and then sewed up the flesh. The patient bore the operation well, and is rapidly improving, while the doctors who held the consultation are saying nothing.—Detroit Free Press.

VANITY AND CRIME.

There are, it is said, certain savages—just barely human beings—called Dyaks. They have become famous to the world as "head-hunters." These Dyaks creep through miles of forest paths and kill as many as they can of another lot of people, and then cut off

VANITY AND CRIME.

There are, it is said, certain savages—just barely human beings—called Dyaks. They have become famous to the world as "head-hunters." These Dyaks creep through miles of forest paths and kill as many as they can of another lot of people, and then cut off the heads of the slain and dry them and hang them up, arranged on lines more or less artistically festooned about the place in which they live. This exhibition of dried and dead human heads seems to make these swart and murderous savages vain and glad. These people are, as we understand, or think we understand, but undeveloped, cruel, bloody-minded human creatures. They prefer the dried human heads to delicate ferns showing wonderful outlines, or to brilliant leaves and fragrant flowers. They have their own ideas concerning decoration, writes Stanley Waterloo, in the Woman's Home Companion. Upon a dozen or two of the islands in the Southern Pacific, where the waves lap the sloping sands lazily and life should be calm and peaceful, there are, or were until lately, certain people who occasionally killed certain other people for reasons sufficiently good, no doubt, to them, and who, thus coming into possession of a group of dead creatures with fingers, conceived the idea that the fingers of these dead, when dried, would make most artistic, not to say suggestive, necklaces. So they strung these dried fingers upon something strong and pliant, and wore them with much pride. When I see the bright feathers of birds, slain that hats may be garnished for the thoughtless females of a higher grade of beings, I am reminded somehow of the Dyaks and of the wearers of the necklace made of fingers.

SQUAW AS A LUMBER JACK.

One of the best log drivers and all-around lumber jacks in Northern Wisconsin is a Chippewa Indian woman named Maggie Moon, better known in the woods and on the river as "Spike Shoe Mag." She may now be seen every day running logs on the Nemadji River at Superior, and she has been seen at that same occupation every summer during the last five years, while in the winter season she has been employed as an ordinary lumber jack—to swing the axe, to skid logs, or to drive a tote team.

Maggie is the wife of John Moon, a stalwart Chippewa Indian, whose occupation is also that of a lumber jack and log driver. Mr. Moon took a contract once to harvest some timber for the owner thereof, but he took the job at too low a price and was obliged to put his wife to work chopping and hauling in order to save a man's wages.

Mrs. Moon seemed to take to the work as though she had been used to it all her life, and she made such a handy lumber jack that her husband could never see his way clear to dispense with her services. Three years ago John Moon went to work on the log drive and took his wife with him just to see if she could do the work, in case she had to. Mrs. Moon rigged herself out with a pair of bloomers, donned a slouch hat and a pair of spiked shoes, and sailed forth with her lord and master to learn the log-driving business.

After experiencing all manner of hardships and disappointments, she finally mastered the business, and can now balance herself upon a floating log with the dexterity of an acrobat. The couple live during the driving season in an old log cabin on the bank of the Nemadji River, and in winter they make their abode in a small canvas tent, usually pitched a short distance from the mess camp.—New York Times.

WEIGHTY BRIDES.

Throughout the empire of Morocco and in Tunis there are villages where the elder members of the adult population follow professionally the pursuit of fattening young ladies for the matrimonial market of Barbary. The Moors, like the Turks and most other Orientals, give a decided preference to "moon-faced" wives over lean ones, and are more solicitous as to the number of pounds which their brides weigh than about the stock of accomplishments they possess.

A girl is put under the process of fattening when she is about twelve years of age. Her hands are tied behind her and she is seated on a carpet during so many hours every day, while her "papa" stands over her with a matraque, or big stick, and her mother at times pops into her mouth a ball of couscoussou, or stiff maize porridge, kneaded up with grease and just large enough to be swallowed without the patient choking.

If the unfortunate girl declines to be stuffed she is compelled, so that ere long the poor girl resigns herself to the torture and gulps down the boluses lest she should be beaten.

In Brazil corpulence is also considered the essential point of female beauty, and the greatest compliment that can be paid to a Brazilian lady is to tell her that she grows fatter and fairer every day.—San Francisco Chronicle.

FASHION NOTES.

Trimmed skirts increase in favor as the season advances.

Parasols are profusely trimmed with lace, chiffon, silk muslin and all sorts of thin fabrics.

Gold embroidery is extremely fashionable, and passementerie, made up of metal threads, is a favorite garniture.

Lavender blue and the deeper iris purple blue are two very fashionable colors just at the moment both in dress and millinery.

A cream serge suit is equally satisfactory to nine out of ten women, blonde or brunette, who select it for dressy demi-dress uses.

Mousseline brilliante is a new gauzy textile much used for draping evening toilettes. It has a very silky surface, and is remarkably dainty and beautiful.

A dress of tan-colored cloth has a bolero of white satin embroidered in gold. There are shoulder caps of the same embroidery and high flaring collar.

Iridescent mohairs are still favored for stylish traveling costumes, and if the jacket and skirt style is chosen it is a pretty way to have the silk shirt waist en suite match one of the colors in the mohair.

A new hat is so arranged that it rests almost on the back of the head. The front of the brim is rolled back and the space over the top of the head is filled in with fine flowers. The trimming is of ribbon loops and blossoms.

Most of the new tucked evening gowns of gauzy material have rows of handsome Venetian lace insertion on bodice and skirt. Other toilets are made with Gainsborough fichus of tulle or mousseline de soie crossed over the corsage, passed under the arms and tied at the back.

Separate collars of rich fabric are worn with dressy costumes. One of these is square at the back after the fashion of a child's sailor collar. The square sides extend over the shoulders, narrow in slightly over the bust, then spread in a wide tab which almost conceals the front of the waist.

Accordion pleated skirts of black silk grenadine, canvas tulle, black Swiss muslin dotted in silk, fancy French and Russian nets, and similar diaphanous textiles are made up over gored foundations of Turkish red or golden yellow satin. Portions of the bodice and sleeves are likewise pleated and finished with elegant decorations in cut jet.

Gros de Tours is one of the most popular silks this summer and has a soft finished cordage surface, slightly heavier in quality than taffeta, but less glossy. It is used in the pale tints for evening toilets, and in browns, grays and greens for church, visiting, etc. Some of the grounds are striped with satin in bronze or black, then figured with small leaves or flowers or quaint old-fashioned figures. These patterns make charming fancy waists.

The Names of Dishes.

The sandwich is called for the Earl of Sandwich.

Mulligatawny is from an East Indian word meaning pepper water.

Waffle is from wafel, a word of Teutonic origin, meaning honeycomb.

Hominy is from auhuminea, the North American Indian word for parched corn.

Gooseberry fool is a corruption of gooseberry foule, milled or pressed gooseberries.

Forcemeat is a corruption of farcemeat, from the French farce, stuffing, i. e., meat for stuffing.

Blanc-mange means literally white food, hence chocolate blanc-mange is something of a misnomer.

Succotash is a name borrowed from the Narragansett Indians and called by them m'sick-quatash.

Charlotte is a corruption of the old English word charlyt, which means a dish of custard, and charlotte russe is Russian charlotte.

Gumbo is simply okra soup, gumbo being the name by which okra is often known in the South. Chicken gumbo is soup of okra and chicken.

Macaroni is taken from a Greek derivation, which means "the blessed dead," in allusion to the ancient custom of eating it at feasts for the dead.

Sally Lunn was a pastry cook who, at the close of the eighteenth century, used to cry the teabread which bears her name about the streets of Bath, England.

Paris Dog Market.

The dog market, which is held every Sunday on the Boulevard de l'Hospital, is one of the most interesting sights in Paris, and one, too, which tourists rarely see. Often a dog-fancier can pick up a great bargain, for, after a certain interval has elapsed, every dog found wandering about the streets without a master finds its way to the Dog Market. Then, again, a lively trade is done in dogs which have been stolen, and for which no adequate reward has been offered or given. A price is rarely put on a dog; the whole matter is one of endless bargaining and discussion, and those who wish to pick up a bargain take care to go somewhat late in the day. The regular dog merchants avoid the weekly market, excepting the quality of purchasers. On the other hand, it not unfrequently happens that some servant in livery is seen trying to dispose of a couple of well-bred pups on which a reserve price has been put by master or mistress.

THE FARM AND GARDEN.

ITEMS OF INTEREST ON AGRICULTURAL TOPICS.

Provide for the Cows. Whitewashing the Hen House. A Cheap and Permanent Fence. Rose Insects, Etc., Etc.

PROVIDE FOR THE COWS.

Sow some sorghum or corn or oats for green feed for the cows when the grass fails, and they will increase their flow of milk instead of falling off, as they will be sure to do if they have only the pasture for feed at that time.

WHITEWASHING THE HEN HOUSE.

It is hardly worth while to paint the hen house, which is usually a cheap structure, made warm and comfortable, but not stylish. But at the time of spring cleaning, it should never fail to get a good whitewashing, both inside and outside, except the roof. It will destroy all the smaller lice and all the eggs that would hatch if this or oil were not applied to them. The whitewash is an excellent thing in winter, also, and makes the hen house lighter.

A CHEAP AND PERMANENT FENCE.

I think I have a good way of making fence where there is stone. I take a large stone, put it on a line where I want my fence. Twenty on thirty feet from that I put another on the line and so on. Then I drill into each hole three or four inches deep, and set in a piece of old gas or water pipe, that will not cost much. I drill holes through the pipe and fasten the fence wire to the posts with small annealed wire. I built one in that way twenty years ago, and it is there now. My posts cost me two cents each. The bottom wire will lie on the stones, so that a three-foot post will make a four-foot fence.—Albion Locke in New York Tribune.

PEACH TREES FROM SEED.

It is claimed that peach trees raised from seed are healthier than budded trees, but this, of course, will depend on the character of the cultivator for carefulness. Where the propagator of the peach is careful not to take buds or grafts from diseased trees, the budded trees will, with proper care in this respect, be just as healthy as the seedling. Any seedlings which are raised in tainted ground show signs of disease as readily as trees grafted from diseased stock. The great difficulty with any orchard of seedling trees is that they do not come into bearing at the same time, and they vary in quality; so that those who depend on seedling orchards are never sure of the character of the fruit that is to follow.—Meehan's Monthly.

ROSES IN THE GARDEN.

Roses, to succeed the best, should be planted out in the open, never under the shade of trees or in any place where the roots of trees can reach them to monopolize any of their food. Roses are gross livers, and require a large amount of good food. Accordingly, they do better placed where nothing will have a chance to encroach upon their rights.

When one has a chance to prepare a bed for them just as it should be, the better way is to remove the upper soil and dig out the subsoil to the depth of two feet. Take a pick and mellow up what is possible of the bottom of the pit; then fill in with a mixture of good soil and old, thoroughly rotted manure. These beds may be made of any desired size or shape, and should always be provided with a good drainage, as roses will never endure having to stand in water. They like water, a goodly quantity, when it can be administered according to their fancy. Baths of soapsuds are beneficial, as well as being a fine preventive against insect life.—Home Magazine

ROSE INSECTS.

As for insects, that is a difficulty that all rose growers are obliged to contend with, but so, also, with nearly all other plants. The aphis can be destroyed with a solution of whale-oil soap in water—one pound to eight gallons of water; and this should be applied with a garden syringe, so as to throw it on with force. By so doing the liquid will reach all parts of the foliage, drenching the insects and driving many of them to the ground, where they will perish. By following up the use of the soapy water the aphides can be kept down.

The "slugs or maggots" that bore into the buds are more difficult to manage. It will be found that they have webs on the leaves, drawing the leaf together or folding it, and conceal themselves inside. The plants should be carefully looked over and every folded leaf squeezed between thumb and forefinger. A little watchfulness, some patience, and considerable perseverance, will enable one to keep this insect in check in the manner now mentioned. With kerosene emulsion and whale-oil soap, and tobacco water, and when necessary, the two last named mixed together, one ought to be able to conquer the insect enemies of the rose.—Vicks Magazine

KEEPING POULTRY.

The trouble with people who are supplying fresh eggs is that they become careless, and if they find a nest full of eggs that look clean, they will turn them in whether they know their age or not. This is no way to keep a trade for fresh eggs. Neither will dirty eggs help keep a fresh egg trade. In fact, dirty eggs sell for less than clean ones on the general market.

The best way to enter the poultry business is to begin with a small flock, and gradually enlarge, the object being to learn and also to breed for the kind of fowls desired. No one can succeed who goes on the market and buys his hens, of all sizes, breeds and characteristics, for he will know nothing of them and may lose all from disease or inferiority of the stock. By breeding his stock he gets those best suited to the objects desired.

Early failure to hatch eggs very seldom comes from lack of vigor in the germ; for in this the early eggs are superior. They more often come from allowing eggs to be chilled before the setting begins. Every one knows that chilling after a few days' setting soon destroys the life in the egg. It may do so where eggs that have never been set on are kept in contact with metal, which rapidly abstracts heat when the eggs are kept for greater safety near the freezing temperature. Dishes for holding should be of wood which abstracts heat slowly.

Feed young chickens first light bread crumbled and moistened with shortening enough to make it crumble well, and after a while some oatmeal; then rice or grits. Such feed, if given in full doses often enough, will make chicks grow rapidly. They do not need egg custard or any other dainties. Plain, nutritious food is best for th digestion.

GRASS FOR LAWNS.

No subject has been more fully investigated and demonstrated by practical experience than the qualities of various classes of lawn grass by the Department of Agriculture. In front of the seed house there is nearly an acre of ground in which are grown about 500 varieties of grasses and forage plants. There are little beds in some instances only a few feet square and in others still smaller, showing at least a couple of hundred kinds of lawn grass. Any one can see this exhibit by a visit to the grounds of the Department of Agriculture. Every known lawn grass is shown there, the seed or turf having been brought from every quarter of the globe. This experiment has demonstrated that the "creeping bent," of all long grasses, is the finest. It is finer than the Kentucky blue grass and grows two or three times as thick. It spreads rapidly and in full growth resembles a thick mat. It is generally known by people who make lawns about their houses and especially in this city is hardly ever seen. Only lately it is being called to the attention of seed men throughout the country, and it is believed that in the near future the creeping bent will be seen wherever householders aim to procure an ideal lawn about their homes.

It is a curious fact that this city is regarded by horticulturists as having very poor lawns, although so much ground has been set aside for parking purposes. At the Department of Agriculture this fact is accounted for because of the great number of weeds and coarse grasses that have been sown on the lawns here.—Washington Star.

FARM AND GARDEN NOTES.

There's no time of year when intelligent head-work helps along more than now.

Keep the harvest-field water jug cool by wrapping it in a piece of carpet or burlap kept moist.

More and better food and water—less whip and yell would be a mighty good "hoss trade" on some farms.

Roller and plank drag should be put in good working order now; they will soon be needed on the wheat ground.

Those who sell farm machinery often set it up carelessly; nuts should be screwed up and keys driven home before starting.

Narrow leafed plantain is one of the most persistent weed pests with which we have had any experience. A constant warfare must be maintained until it is thoroughly subdued.

The care of begonias is comparatively simple, they being well adapted to ordinary window culture. The varieties are very numerous, and, aside from the tuberous kinds, they are included in two divisions—one of which embraces those specially prized for their blooming qualities, and the other those having remarkably handsome foliage.

Often farmers who grow corn after corn say their corn does not do well in spots, that "something seems to be working on it." If they will pull up a few stalks and examine the roots they will probably find the corn root worm or the corn root louse (the latter cared for by ants) at work. These may be starved out in a single year by changing the crop.

CHILTON COUNTY CALL.

M. E. TAYLOR, Editor and Prop.

Published every Friday at Thorsby, Alabama.

Subscription price, $1.00 per year in advance.

Entered at the postoffice at Thorsby, Ala., as second-class matter.

German agricultural papers say the imports of American apples into Germany last year were twenty times as large as in any previous season.

Sociologists have been paying an unusual amount of attention of late to the questions of prison reform, reduction of the criminal classes and the like.

All northern Boone County, says a Columbia (Mo.) paper, is dotted with cyclone cellars. The round grass grown tops look like Indian mounds or like the entrances to coyote holes on the prairies.

A correspondent who evidently is worrying about a gift wants to know what we consider best for a wedding We can't recall anything more appropriate than a girl from this locality for such a function.

According to the statistics compiled for 1996, the total length of the railway system of the whole world is 427,215 miles, distributed over the various continents as follows: North America, 202,983; Europe, 152,417; Asia, 26,078; South America, 23,799; Australasia, 13,795; Africa, 8,143.

Archbishop Corrigan, of New York, presides over the greatest Catholic see in Christendom, comprising the city and county of New York, the counties of Westchester, Putnam, Dutchess, Ulster, Sullivan, Orange, Rockland and Richmond, and also the Bahama Islands. The Catholic population of this archdiocese was estimated a few years ago at 800,000.

Some great scientists have had the indelicacy to go prying into the question of the age of the earth. A few weeks ago we told what one conclusion was in this regard. Lord Kelvin, the great Scotch astronomer and mathematician, in an address in London, said he was able to declare with confidence that the earth solidified between 20,000,000 and 30,000,000 years ago. The latest estimate of the time required for the formation of all strata since the beginning of the Cambrian rocks is 17,000,000 years. Lord Kelvin asserted that the earth could not have been habitable more than 30,000,000 years at the most.

The reasons advanced by the English for continuing to occupy Egypt are resented in a curious fashion by the papers of Cairo. The British assert that the great prevalence of crime and violence renders necessary the interposition of a foreign power to keep the peace. In order to answer this the Cairo papers publish each morning reports, taken from the London papers, of crime in England, and print long editorials full of statistics showing that an Egyptian army ought to take possession of Great Britain and maintain the order which the reports they quote seem to indicate the British are unable to preserve themselves.

After a careful study of most of the self-propelled carriages, from the earliest times to the present day, Sir David Solomons concludes that steam is much the most suitable, and advantageous motive power. In England electric energy for carriages cannot be calculated at less than eight cents per horse power hour, and accumulations must be frequently recharged, with considerable loss in useless travel unless charging stations are to be found throughout the locality. The cost of benzine gas would be about a fourth as great for the same power, steam, from petroleum fuel at twelve cents per gallon, costing about the same as the gas. The Trenton (N. J.) American claims that the best existing motor the world has yet seen for its power, method of fuelling, suspension springs, and travelling long distances before recharging is one which is likely to remain with us for many a long year to come, whatever may be the future development of motor traffic. It is known and loved by all under the name of the horse.

CONDITION OF TRADE.

DISPATCHES REPORT IMPROVEMENTS IN EVERY NORTHERN CITY.

The Passage of the Tariff Bill Caused a Marked Increase in Foreign Demand and Advance in Price of Wheat--Crop Prospects Encouraging.

R. G. Dun & Co's. weekly review of trade says: Dispatches from almost every Northern city of importance report without exception, improvement in business, and from Detroit to Seattle and Portland splendid crop prospects are reported. The task of adjusting the business and industries of the country to conditions created by a new law has progressed with gratifying rapidity and ease. Even the increasing strength of the striking coal miners probably forwards the adoption of the uniformity plan, which promises to remove most of the causes of such struggles. Some confusion is caused by events seemingly contradictory; by closing the large cotton mills when many other works are starting and by a decline in some prices when others are advancing, but the balance is unmistakably on the right side.

The most important event since the passage of the tariff, which was generally anticipated a week ago, has been the marked increase in foreign demand and advance in price of wheat, the latter has risen 4½c during the week, with western receipts for the first time, exceeding last year's and western railroads besieged for cars, and with Atlantic exports of 1,718,738 bushels, flour included, for the week, and 6,351,178 bushels in four weeks, against 6,917,865 last year. With heavy contracts for shipment, exceeding 1,200,000 bushels on a single day. Liverpool reports of a shipment from America to Northern Bohemia and with French markets excited, speculative sales here have little influence.

The fact that corn exports exceed last year's, although the price has advanced to 32.87 cents, is further proof that foreign demands are substantial. With crop news still favorable producers may probably realize something like $80,000,000 more than last year on wheat, which means a great difference in purchases by agricultural States. Corn also advanced 1.25 cents and cotton a sixteenth, though reports as to yield is good.

The industrial sky is partly overclouded by coal and iron difficulties and by the closing of some large cotton mills. Having run for months far ahead of consuming demand on cotton bought at comparatively high prices, the mills see ahead a large crop and cheap cotton, and it is but the rational way to halt production, clear off the accumulated stocks at the season when vacations are common and begin the year on its own basis.

The woolen manufacture answers wholesomely and moderately to the new tariff conditions and while opening of light weights below about $1 in cost, has a very encouraging demand the advance in price asked is not large. With very heavy stocks of free wool on hand, manufactures are able and in the presence of large stocks of foreign goods are obliged to engage for the next season without advancing prices in proportion to the rise in wool and large contracts of that nature have already been advanced. Selling of wool at Boston, where the speculation has been most active, is suggestive, amounting to 8,843,000 pounds for the week and at three chief markets to 11,984,500. Sales for four weeks have been 46,109,200 pounds, 22,538,500 being domestic, against 74,221,350 in all last year.

Delay in the iron industry is partly because wages have not been settled at all works, though they have at many, and partly because steadily rising demands do not yet raise prices. In some products prices are a shade lower, notwithstanding a larger demand, owing to competition between works, but Bessemer is a shade higher. In structural work, plates, sheets and bars for the enormous operations of agricultural implement works the demand increases and for rolling stock owing to the abundance of crops.

Failures for the week have been 236 in the United States, against 281 last year, and 28 in Canada, against 40 last year.

Buffalo Refining Company Assigns.

The Buffalo N. Y., Refining Company, of which U. B. Matthew is president, has made a general assignment for the benefit of its creditors. While the company is a comparatively small corporation, being capitalized at only $15,000, still it has been famous out of proportion to business magnitude, because it has been one of the few independent refiners of the country, and under various names for more than twenty years as has maintained an existence in active antagonism to the Standard Oil Company.

Woman Seriously Wounded.

In a shooting scrape between Jeff Alexander and unknown parties five miles east of Waverly, Texas, Thursday night, one woman was seriously, if not fatally, shot.

FOUR PERSONS KILLED.

Dastardly Work of Train Wreckers Near Cincinnati, Ohio.

The Chicago express on the Cleveland, Cincinnati, Chicago & St. Louis Railway, due in Cincinnati at 7 a.m., was wrecked at Thornton, Ind., about 2:30 a.m., Saturday. Four were killed outright and several slightly injured. There was a deliberate plot to wreck the train, as a coupling pin had been driven into the switch and hold it open and throw the fast train from Chicago to Cincinnati off the track as it passed Thornton. The engine and tender, the mail, express and baggage cars were thrown from the track and wrecked. Engineer Winslow reversed his lever and seems to have jumped, for he was found twenty feet from the train, with the top of his head crushed in. Fireman Crickmore was found pressed up against the boiler by the tender. The flesh was almost roasted from his body. Three tramps were riding on the front of the first postal car. One of these was scalded by the steam and the other was badly jammed between two cars. The third was not badly hurt. One postal car was thrown crossways of the upturned engine tender and the other was dashed against it.

The opinion is entertained at the headquarters of the Big Four road that the train wreckers had hoped to destroy a coal train about due. General Manager Schaeff has offered a reward of $500 for the arrest and conviction of the wreckers.

RADFORD CONVICTED.

And it is Probable He Will be Put to Death.

A dispatch to the New York Herald from Panama says: "Telegraphic advices from Medellin say that Charles Radford, of Alabama, has been tried on an appeal and found guilty there of murder in the first degree for killing Charles H. Simmonds, a prominent merchant of Cali. Radford will in all probability be sentenced to death.

Radford came to Colombia from the United States about two years ago and settled in Cali. He had a difficulty with Mr. Simmons over a land claim and one day walked into his office while Mr. Simmons had his back turned and shot him dead. Excitement in Cali ran so high at the time that the authorities feared Radford would be lynched if allowed to remain there, so he was taken to Medellin, where he remained in prison until his trial.

DINGLEY TARIFF BILL.

German Organ Indicates the Policy of the Government.

The Hamburgischer Correspondent, a semi-official organ, discusses the Dingley tariff, indicating the attitude of the German government in regard to the tariff. The paper says: "Although Germany has entered a protest against a differential duty on raw sugar it cannot be overlooked that it constitutes a very doubtful question of international law whether or not a violation of the favored nation treatment is entailed by increasing the duty on articles enjoying a bounty from exporting countries. In all other cases where the Dingley tariff imposes increased duties, there is no violation of the favored nation treatment, as the increases apply not only to German, but to all other imports."

DIED OF STARVATION.

Fate of Two Members of the Calvert Exploring Party.

The mystery that for nearly a year has clouded the fate of Chas. Wells and G. L. Jones, the two missing members of the Calvert exploring expedition in West Australia, is now cleared up by advices received from Sydney, Aus. L. A. Wells, leader of the searching party, recently found the dead bodies of the two men near Joanna Springs in the heart of a desert. The two men missed the trail in November, 1896, and failed to meet the main body of the expedition. They died of thirst and starvation.

Foreign Mails Systematically Robbed.

Chief Postoffice Inspector Ashe, with assistants in New York City and elsewhere, has been working for days on a series of remarkable robberies of mail matter carried aboard the great ocean steamships at New York. The authorities admit that the mails have been robbed, but refuse to give particulars. They will not say how much property has been lost, but is known that the thefts aggregate thousands of dollars. The first of the thefts occurred several months ago, and has never been satisfactorily explained. Additional complaints were received and the inspectors became convinced that the foreign mails were being systematically robbed on a large scale, as eighty packages of matter have been missed from a single steamship. The mail stolen in that case was mostly in registered pouches, which had been sealed in the general office in New York City and opened by the clerks aboard the vessel. Another theft was that of a package of currency sent from Germany to a city in New York State. These robberies are said to be among the most daring ever attempted in the service.

HOME HITS AND HAPPENINGS.

NEWS BOILED DOWN AND ADMINISTERED IN BROKEN DOSES.

J. F. Peterson returned Thursday from a four weeks trip to the Northwest. He is now more than ever satisfied with his new home in Alabama, and claims that he would not trade his vineyard tract in Thorsby for 160 acres of good farm land in the Northwest.

Last Monday morning Thomas H. Caton swore out a warrant before Justice Bice for Luke McCarry for assault with intent to murder. The case was brought up in Justice Bice's court Wednesday and McCarry was acquitted.

A watermelon party was held at the home of Herman Langville last Monday evening. Another one will be held at the home of C. P. Turnquisto on Saturday evening.

Mr. Engstone and John Camberg, of Boone, Ia., and J. D. Hawkins, of Rock Island, Ill., are visitors in Thorsby this week, arriving here Thursday night.

The five acres of peas, planted in the experimental garden last week, are growing very fast and have already been cultivated.

The family of C. A. Peterson, his wife and three children, arrived here from La Cross, Wis., Wednesday evening.

A street gang is at work this week opening up new streets to the vineyards in the Eastern addition.

The Thorsby Literary Circle will render a musical programme Friday night at the school house.

The Thorsby Lumber Co. shipped two car-loads of lumber from their mill this week.

A car-load of lath was shipped this week from the lath mill to Montgomery.

Oscar Swansen has lumber on the ground for a new residence.

Iver Husby is finishing a new residence on his vineyard.

The Sheffield Reaper says: "The Thorsby infant is treating us to its absence and silent contempt."

The Reaper is on our regular list and if the Call was missed a week it was not because we did not mail it. If the Reaper man will look up his regular list he will undoubtedly find that the Call is not on it. There has never been but two copies of the Reaper come to our exchange table.

The Hawkins Lumber Co., in Birmingham, is one of the most reliable firms in Alabama. They have everything the builder desires. Well seasoned lumber from the forests of Alabama and Georgia, sash, doors, blinds, casings, finishing lumber, stair work, cabinet work, office fixtures, church pews, pulpits, etc. Out of town purchasers will receive courteous treatment and get special low prices.

National Prison Congress Invitations.

Governor Culberson, of Texas, has sent a letter to the governors of the several States calling attention to the national prison congress to be held in Austin on the 16th of October to the 20th, inclusive. He suggests the great importance of the congress and the wide-reaching effects its deliberations may have upon the prison population of the several States, and urges the governors of other States to appoint delegates to attend it.

Homing Pigeons Shipped to New Orleans.

The Mishawaka Homing Pigeon Club, of Mishawaka, Ind., has expressed a crate of carriers to New Orleans, La., for a 1,000 mile race for big stakes, and also with a view to lower the world's record, made by Johanna, a Massachusetts club bird, two years ago over a distance of 1,000 miles. This last is the only successful trip ever made by a carrier pigeon for such a distance.

Miners Demand Better Wages.

At a mass meeting which lasted all day at Centreville, Ia., the miners of the low field coal districts of southern Iowa, 700 to 800 in number, passed resolutions demanding the 1892 23 prices, and if acceded to they will continue work, and unless they are they would be called out for a general suspension. It is believed the operators will grant their demand.

Revival in the Diamond Trade.

A great revival in the diamond trade is predicted in New York. It is said that within the past few days from $1,000,000 to $2,000,000 worth of diamonds have been ordered in the European markets.

The Reaper is on our regular list and if the Call was missed a week it was not because we did not mail it. If the Reaper man will look up his regular list he will undoubtedly find that the Call is not on it. There has never been but two copies of the Reaper come to our exchange table.

The Hawkins Lumber Co., in Birmingham, is one of the most reliable firms in Alabama. They have everything the builder desires. Well seasoned lumber from the forests of Alabama and Georgia, sash, doors, blinds, casings, finishing lumber, stair work, cabinet work, office fixtures, church pews, pulpits, etc. Out of town purchasers will receive courteous treatment and get special low prices.

National Prison Congress Invitations.

Governor Culberson, of Texas, has sent a letter to the governors of the several States calling attention to the national prison congress to be held in Austin on the 16th of October to the 20th, inclusive. He suggests the great importance of the congress and the wide-reaching effects its deliberations may have upon the prison population of the several States, and urges the governors of other States to appoint delegates to attend it.

Homing Pigeons Shipped to New Orleans.

The Mishawaka Homing Pigeon Club, of Mishawaka, Ind., has expressed a crate of carriers to New Orleans, La., for a 1,000 mile race for big stakes, and also with a view to lower the world's record, made by Johanna, a Massachusetts club bird, two years ago over a distance of 1,000 miles. This last is the only successful trip ever made by a carrier pigeon for such a distance.

Miners Demand Better Wages.

At a mass meeting which lasted all day at Centreville, Ia., the miners of the low field coal districts of southern Iowa, 700 to 800 in number, passed resolutions demanding the 1892-93 prices, and if acceded to they will continue work, and unless they are they would be called out for a general suspension. It is believed the operators will grant their demand.

Revival in the Diamond Trade.

A great revival in the diamond trade is predicted in New York. It is said that within the past few days from $1,000,000 to $2,000,000 worth of diamonds have been ordered in the European markets.

THE ADVICE OF AGE.

Contented be with what you need,
Nor sigh for what you cannot get,
More independent then you'll be,
Than he who wears a coronet.

Supply yourself with treasures, which
Are not consumed by moth and rust,
But which will pass as current coin,
When bank accounts have turned to dust.

So trim your sails to adverse winds,
That they can't drive your bark astray,
And through the dark tempestuous night
With patience wait the coming day.

Waste not your time in vain regrets;
Your errors made, to profit turn,
That, from your thoughtless follies, you
May lessons bright of wisdom learn!

No credit great to him is due
Who never in the dust has lain;
But is to him who, when he fails,
Is brave enough to rise again.

The rougher be the traveler's road;
The sharper be the wintry blast;
The warmer seems the shelter'd inn,
When the wild day of storm is passed.
—Rufus C. Hopkins.

HUMOROUS.

The public has decided that the living picture business is a dead failure.

"See how white the umpire is getting!" "Yes, the bleachers are after him."

"I almost always travel on my face.' 'Do the wheels in your head make it easy?"

Waiter—Gent at third table wants a hot roll. Cook—Hot roll? He must think we have money to burn.

Gobang—Faint heart never won fair lady, you know. Grymes—Oh, I don't know. Some widows are fair ladies.

"Do I know my stories are coming out when I begin them?" repeated the great author. "Oh, bless you, no! I dictate to a typewriter, you know."

"My good man, you do something to bring light and purity into the homes of your fellow men? Do you distribute tracts?" "No; I clean windows and beat carpets."

Sapsmith — Do you know, Miss Sally, I spend a great deal of my time in self-contemplation? Sally Gay —Isn't that more like throwing it away than spending it, Mr. Sapsmith?

A rich man in New York, long troubled with the problem of what to name his new yacht, has at last concluded to name it "Floating Debt," in commemoration of what such luxuries cost.

"Bridget has had breakfast late every day this week. Can't you do something to get her up on time?" "Well, there's the alarm clock." "That doesn't always go off. Lend her the baby."

"I had the inflammatory rheumatism so bad once," said the elderly boarder, "that they had to call a consultation of four physicians." "Sort of joint commission, eh?" asked the Cheerful Idiot.

Jimmy—Is an empire an' an umpire de same t'ing, Tommy? Tommy—Putty much de same, Jimmy. An empire is a place what's run by an emperor, an' he tries to boss t'ings as much like an umpire as he can.

Nellie (aged six)—Mamma, you said it was not right to tell tales about John. Mother—Yes, that is what I told you, dear. Nellie—Well, then, I won't say nuffin, but I fink John ought to tell you how he scratched me pretty soon.

"Oh, mamma," murmured Flossie in a frightened tone, as her dear little sister leaned forward and grasped her father's cigar, which she attempted to put in her mouth, "wouldn't it be dreadful if Flossie turned out to be a new woman?"

"Jimpson is cute. He's renovating his house now, and it isn't costing him much of anything. He's made his wife believe that she's an artist. So he just buys the paint, and his wife puts it on herself." "She looks as though she did."

"When a woman," said the cornfed philosopher, "says that she really believes she is getting fat, and her husband retorts that it is because she eats too much and doesn't do enough work, it is safe to presume that the honeymoon has ceased to be."

"I guess Jim can get away for that fishing party all right." "What makes you think so?" "I was up to his house last night. His wife used to be an amateur elocutionist before they were married, and he asked her to recite! She'll never refuse him now."

He Was Willing.

She—I have been shut up in boarding school so long that I feel very awkward and timid in company. I do not know what to do with my hands.

He—I'll hold them for you.—Boston Traveler.

Different.

"I suppose your daughter is just like mine—rather ride a wheel than eat."

"Not exactly; but she would rather ride a wheel than cook."—Chicago Record.

Dancing masters agree that the bicycle has dealt a cruel blow to their art.

Hanged for a Triple Murder.

Maximo Martinez was hanged at Floresville, Texas, in the Wilson county jail Friday afternoon for a triple murder committed on June 5th last. He killed Jesus Carillo and wife, an aged couple, and Juanita Acosta, eighteen, whom he first assaulted. Martinez died without a struggle and apparently with no fear. He said he wanted the girl to elope with him, but that she objected because he was married, although he was separated from his wife.

Prospecting Company Organized.

The United States Alaskan Gold Company, with a capital of $1,000,000, was incorporated Friday by the filing of articles in the office of the secretary of State. The company is formed for the purpose of mining gold in the Klondike fields.

LANGVILLE & SON,

General Blacksmiths
and
Wagon Makers.

Prices reasonable and first-class workmanship.

HOUSE BUILDING

Is the order of the day in Thorsby. We are now prepared to keep up with the procession. Our new planing mill, which has recently been put in, and is now run in connection with our saw mill, enables us to furnish all kinds of lumber for building purposes. Our prices are more reasonable than those of others, and, being prepared to turn out an order on short notice, we can save the builder a large amount of inconvenience and expenses. By buying at home you have no freight to pay and you are helping aglong home industries. We also are prepared to ship lumber by the car load or in small quantities.

THORSBY LUMBER CO.

THORSBY, ALA.

GROCERIES

We can give you a good bargain in anything you may need in the line of groceries. If you are not satisfied with your grocer give us a trial. We have a fine line of

GENERAL MERCHANDISE.

ROLISON & ROLISON,
Postoffice Building

What do you want?
What Can we do for you?

MONEY WE CANNOT GIVE YOU YOU BUT MONEY WE CAN SAVE YOU.

We do not ask you to take our word for it.
All we ask is to give us a trial.

We Sell our goods so fast they are always fresh.

WE SELL FOR CASH and that is how we can save you money.

A NEW AND NOTABLE COLONY.

THORSBY AS SEEN THROUGH THE SPECTACLES OF OUTSIDERS.

WHAT A LEADING MAGAZINE OF SOUTHERN PROGRESS SAYS CONCERNING OUR COLONY

In Speaking of the more prominent and progressive points in this section, The Illustrated South, of Birmingham, Ala., has the following to say of Thorsby:

A number of Northern colonies have been founded in the South within the last double decade, and we know of none that has failed to realize the brightest dreams of its promoters.

Thorsby is one of the newest and most notable of these colonies, and merits special mention because it is more advanced for its age than any of its competitors. In fact, it is a finde stecle revelation in the matter of community building, and we know of no place in the wide and wonderful sweep of our Southland that possesses a more promising future.

It is situated in the highlands of central Alabama, on the picturesque and prolific Chilton plateau, and has direct communication with the seaports of the South and the markets of the North through the medium of the Louisville & Nashville Railway, one of the great grand trunk lines of our continent.

Speaking of Thorsby a recent writer remarks: "In June, 1895, Messrs. Thorson and Peterson came to this country on a prospecting expedition, and finally decided to settle their colony on the present site (in Chilton County, Ala). It was several months before any work was begun, but within the last eighteen months a beautiful village and settlement has sprung up like magic. The Concordia Land and Improvemnt Association was organized, with Mr. Thorson as President, and Mr. Peterson as Secretary. They bought up about 2,500 or 3,000 acres of this land, laid off a town into lots and the surrounding country into ten acre blocks and at once began improvements, naming the new settlement Thorsby. Every obstacle vanished before the hand of [illegible] industry, and now there are [illegible] a fine hotel, three stores, a [illegible], a newspaper, a saw-mill, a shingle and lath mill, blacksmith-shop, two churches and a [illegible] school-house, about [illegible] dwellings and as many [illegible], and more coming all the time. A green-house and experimental garden is a new feature for this year, at which I saw tomato-plants a foot high. This colony seems to be making grape culture a specialty, and now have about 80 acres in grapes, and I understand, are putting out this Spring 18,000 cuttings. Young orchards are being set with all kinds of fruit, the houses are substantial and well-built, mostly two story. The urgent need now is a canning-factory, and negotiations are pending looking toward the establishment of one in the near future."

The Concordia Land and Improvement Association, spoken of in the foregoing excerpt is incorporated under the laws of Alabama, possesses a capital of $250,000, and has land for sale in all directions from Thorsby—some of it adjoining the town limits and some of it further out to a distance of nine miles.

From a booklet lately published by the Association we learn that "this land is of different varieties, but it is all very productive. Some parts are level, while other parts are more rolling. That which is not under cultivation is covered with timber of many different varieties, such as the long leaf yellow pine, all kinds of oak, hickory, chestnut, persimmon, poplar, beech, all kinds of gum trees and black walnut.

"Therefore fuel costs nothing but the labor of cutting it, and lumber is very cheap. Good, fine, hard pine lumber is bought here for only $5 to $7 per 1000 feet. This growth of timber sufficiently shows the good quality and strength of the soil. The Association has some improved farms for sale at very reasonable prices. It has the land surveyed in tracts of from ten to eighty acres each, so that the purchaser may have his choice also in this respect, but it is to be remembered that twenty acres of this fertile farm and fruit land is a good-sized farm, because the crops are so abundant. Each tract of land has a road laid out at least on one side."

The proximity of Thorsby to the Gulf, and the fact that it is 700 feet above tide-water, combine to make its climate ideally equable. It is never too hot, never too cold, and one season melts into another with none of the abruptness that is so unpleasantly common in the higher latitudes. This fact, together with the absolute absence of malaria, and the purity of the freestone water, combine to make this locality one of the healthiest that can anywhere be found.

The soil of Thorsby and Chilton county cannot be surpassed for fertility. They are of the rich, dark, grayish, red and brown loam loads, with a proper mixture of sand on a clay subsoil, and are adapted for general farming, stock-raising and fruit-growing.

Where the plouth can only raise one crop of corn, potatoes and other hardy products in a year, this part of the South can raise two, and can raise, at the same time, cotton, sugar-cane and all the other semi-tropic staples, to say nothing of fruit!

Let the new-comer select a spot like Thorsby for his home, let him set to work with a stout heart and a steady hand, and he will find that Nature will change her frowns to smiles, and reward him according to his deserts, no matter what they may hap to be.

"If."

If trouble were a feather
  A breath might blow away,
And only sunny weather
  Came to us, day by day,
We'd laugh away the wrinkles
  That tell of life's decay,
If trouble were a feather
  A breath might blow away.

If maids would set the fashion
  Never to answer "nay,"
When love, the tender passion,
  Spoke in its pleading way;
Then through life's leafy byways
  In lovers' mood we'd stray,
If maids would set the fashion
  Never to answer "nay."

If fame were worth the striving
  And all were in the race,
And each of us were driving
  A horse well backed for place;
Then round life's race course speeding
  We'd set a merry pace,
If fame were worth the striving,
  And all were in the race.

—James King Duffy, in The Puritan.

THE TWO LOVERS.

"You have no right to talk to me like that," said Mabel Courthope, indignantly. "Just because we have known each other so long is not the least reason in the world why you should presume to dictate to me as to my friendship. It's mean of you."

"I'm sorry, Mabel," replied Jim Todd, humbly, "but I was only thinking of you, and I don't like Reginald Bulwer, and——"

She cut him short with a scornful little laugh.

"I am sorry I cannot be guided by your likes and your dislikes, but if papa does not object to my knowing Mr. Bulwer, I don't see why you should take me to task."

"No," replied Jim wearily, "I don't know why I should; only not so very long ago you never used to snub me when I ventured an opinion upon any subject, even upon your acquaintances. It seems things have altered."

Mabel Courthope made no reply to the remark, and after glancing once into her face, Jim bade her good night, and refusing the half-hearted invitotion to him to "come in for half an hour, as papa would be so glad to see you," made his way to his solitary lodging.

Things had changed considerably, he reflected, in the past six months—how much he had scarcely realized until this very evening. And it was all owing to an individual of whose existence he had been entirely unaware until some time after Christmas.

He had been happy in the love that had grown up within him from the day when he had first met Mabel Courthope. He could have sworn that it had been reciprocated until Reginald Bulwer appeared on the scene. Then things changed. Unfortunately, he admitted there was only too much reason for the change. Bulwer was everything he was not. Bulwer was rich, handsome and an aristocrat. Jim was poor, plain and a plebeian, and when he reckoned up the advantages which lay in his rival, Jim Todd groaned in spirit, but it was not until the week before Henley that they were finally shattered.

He had called in the hope of persuading Mabel to go with him to Henley on the final day of the regatta, and had been met with the information that she had already accepted an invitation to spend a week there with a party of Bulwer's friends on a house boat. It was the bitterness of the disappointed hope which made him voice the dislike which he felt instinctively for Bulwer, and led to the quarrel—the first quarrel he had ever allowed himself to be drawn into with Mabel Courthope. It only added to his dejection to perceive in the last backward glance he cast toward the girl that she already seemed to have forgotten him. Another had occupied the post he had vacated; and Mabel, as she leaned over the fence, was too intent to give him another look.

Yet Mabel Courthope was not altogether at ease with herself. She liked Jim immensely, and, until the advent of Reginald Bulwer, had fancied herself in love with him. But when Bulwer appeared, Jim was eclipsed completely. It flattered the girl's vanity to receive the attentions of the dark, handsome man. None of her girl friends could boast such a suitor, and half the pleasure she found in his society was due to the envious glances of her feminine acquaintances. Besides, at the most, Jim would be able to offer her a suburban home, while Reginald's life would have undreamed-of possibilities. She was so sick of the suburbs, she told herself, and the bolder, freer life of Mayfair seemed to be opening its doors to her. She accepted implicitly all Bulwer had told her of the society which seemed so far away from Brixton, and his position the land of promise. She wondered d became tremulous with delight at flatteries, when he told her that mag its queens there was none to come, with her when he hinted at velopmen at he soon might venture accept her right position and loved t. Yet when she turned horse. a while from the dan- dream something very like regret was apt to crop up in her mind. Jim was not brilliant, but he was very tender. He had no great circle of aristocratic friends, but he had rather die than give her a moment's pain. Like most girls of 20 with a pair of lovers, she was a veritable bundle of indecision. She had no sooner accepted an invitation to spend the week at Henley under the chaperonage of a lady friend of Bulwer's than she began to regret that jolly day which she knew she would have had in Jim's company. However, she had decided, and when she set out for Henley, on a cloudless July morning, her regrets were not sufficient to pucker her fair brow in the very slightest degree.

There was no doubt but she made a very attractive picture, and Reginald Bulwer could not help being proud of his companion. Many a keen inspection was made of the pair, and more than once an audible comment reached the girl's ears.

"Bulwer again. I wonder who that little girl is?" she distinctly heard one man say, as they embarked at the landing stage. But the remark conveyed nothing to her mind, for she was far too busily engaged in noting the life and bustle around her to spare a thought for anything else.

Mabel had been on the river often enough, but Henley was new to her, and when the full brilliance of the scene became clear to her dazzled eyes she could only gasp out her pleasure,

"Oh, it is lovely! I did not think anything could be so bright in this gray England of ours," she exclaimed.

"All England is not Brixton," exclaimed Bulwer, lightly. "I hope that we shall see many scenes as bright as this together," and as he spoke a light flashed into his eyes as he bent them upon her, and Mabel's heart trembled with pleasure. She thought that at last he was going to ask her to share his lot in future, and remained discreetly silent. But Bulwer made no further remark, and, settling to work with the sculls, paddled the boat down the stream.

Presently he broke the silence again. "You will find the people we are staying with very different from the Brixtonians, Mabel," he said. "It will be quite a new experience of life for you." He seemed somewhat at a loss to explain his meaning in reply to the girl's question as to where the difference lay.

"Is Mrs. Walls a very clever woman?" asked Mabel, referring to the hostess she was about to meet.

"No; oh, no." replied Bulwer. "Clever, of course, but nothing exceptional, you know. She is just like the rest of them, and you must prepare to be shocked a little. You see, in Brixton people take such narrow views of life. Men and women of the world are accustomed to take a much broader outlook upon things."

"What things?" demanded the girl.

"Things generally, you know," replied Bulwer, vaguely.

Mabel began to wonder a little. She wondered still more during the next two or three days she spent on board the houseboat Irene, and something very much like distrust began to take possession of her. In two days her experience of the manners and customs of the society to which Bulwer had introduced her led her to some very curious conclusions. She decided that the ladies consumed more champagne than was good for their health, and she found that a brandy and soda was invariably considered the thing to drink in the early morning. She learned that it was correct to address the most casual male acquaintance as "dear boy" and to refer to a lord otherwise than by his Christian name was to confess oneself outside the pale of civilization. She learned, too, that the only subjects upon which a society lady could converse with any degree of fluency was upon matters theatrical or sporting, and when deeply interested in either of these questions her language had an adjectival facility which was somewhat alarming to a mere Brixtonian.

Still Reginald was very attentive, and laughed away Mabel's scruples. She had very little time to think, either. Each day was full of incident, and in one continual whirl of light and life, seemed to end before it had well begun. Before breakfast was finished it was time to take the punt and make their way to a point of vantage on the course. Scarcely an hour seemed to pass and it was time to return to lunch. Then the punt again, tea at another houseboat, and finally a drift down the river and a reposeful half-hour in the backwater before Hambledon Lock before dinner. After dinner, gossip and music, without and within, filled the evening, until eyes refused to remain open longer. That was the order of things until the last day of the regatta.

Meanwhile Jim Todd had been going disconsolately about his business in town. At first he had determined to remain away from Henley altogether; but, as each day passed, he repented of his intention, and at last, on the morning of the last day, he donned his flannels and followed the rest of the pleasure-seekers. At least he would be able to get a glimpse of the girl who had thrown him over. He did not bear her any ill-will; there was not a particle of malice in the whole of his body. If she seemed unhappy, well, he would bear it as best he might, and take up loyally the position of friend, if he were allowed to do so. In spite, however, of the fine day and the life and movement Jim Todd felt the reverse of happy. The general gayety only increased his gloom. He was outside it all, and, to crown everything, he did not catch a glimpse of Mabel. So at length wearying of the babble of laughter and music, he got out his sculls and left the course behind, determined to find some secluded spot where he might rest and brood over his lost happiness.

The quiet spot was more difficult to find than he had anticipated. Every sheltered corner had its boat and its pair of lovers. It was very tantalizing to Jim, in hit particular mood. He went on, however, pulling doggedly until he reached at last a little backwater which promised retirement, and there he pushed his boat in under the shade of a tree and made it fast to one of its branches. He was not undisturbed for long, however, for within half an hour a second boat pushed in within a few yards of him, and, though the leafy screen prevented him from seeing who the occupants were, snatches of their conversation reached his ears. He was about to move, when suddenly he heard a woman's voice mention the name of Mabel Courthope coupled with that of Reginald Bulwer.

Jim lay still and listened, and as he lay his blood began to boil in anger. But not for long did he lie quiescent. Putting the scraps together convinced him that his suspicions were more than correct. He pushed his boat out into the river and once more settled himself to the sculls. A shout made him look over his shoulder. He had been working off his anger by strenuous exertion and driving his light outrigger fast against the current. He was going straight back to Henley and the Irene to confront Bulwer and to take Mabel home. In one glance he saw a punt narrowly escape being run down by a big launch only to be caught in the swirl of the water and ignominiously capsized.

Half a dozen vigorous strokes took Jim to the spot. Brief though the time had been, he recognized the occupants. One of them, the man, intent only upon his own preservation, was striking out for the bank, the girl was not to be seen. Jim hesitated not a moment, but, balancing himself carefully in his light craft, dived into the river. It seemed an age, but was a very few seconds in reality, before he caught sight of the object of his search, and then the matter was easy. Another boat had arrived on the scene, and the launch, too, had slowed down; so that within a minute both Jim and the object of his rescue had been safely hauled out of the water, and were making for Henley as fast at the launch could take them, heedless of the dripping figure on the bank.

Mabel Courthope did not return to the Irene; neither did Reginald Bulwer ever venture to call at her home again. Nor did the girl desire to see him. Mr. and Mrs. Tood are quite happy in their little home at Brixton. —Chicago Times-Herald.

This Bear Had Nerve.

A. J. Brockway, of Osceola, N. Y., has been missing sheep from his pasture for a month. A week ago he discovered bear tracks in his sheep pasture, and he decided that the bear was the thief. He set a big spring trap, which he chained to a log, and baited it with fresh meat.

The next morning the log and the trap were gone and the condition of the ground around made it plain that the bear had had a tussel with the trap before he had started to carry it away. There was a trail straight across the field in the direction of the swamp, showing the way the bear and his load had gone. The trail led more than a mile through the woods.

Brockway got his gun and followed it up. It led into the swamp, and he almost stumbled over the bear before he saw it. The animal was sitting down licking a paw which was fast in the trap. It was just as much astonished as was Brockway at being discovered, and started to run away. It was almost exhausted, and before it had gone half a dozen steps Brockway recovered his nerve and shot it between the shoulders. It weighed about 250 pounds.—New York Press.

Winning a Law Partnership.

John L. McLaurin, the new Senator from South Carolina, won a law partnership by his first case before a jury. Though all the leading lawyers of the county—the law and the evidence were against him—he defended and obtained the acquittal of thirty-two negroes who were parties to a country feud. Judge Townsend, now Assistant Attorney-General of South Carolina, who opposed him in the trial, was so impressed by the young man's [illegible] that he offered to take him as a partner and the offer was accepted.—San Francisco Chronicle.

Germany has caught the summer school epidemic, the University of Marburg announcing one for French and German this summer. Professor Wilhelm Victor, the phonologist, will lecture on German pronunciation.

NOTES AND COMMENTS.

It is now roughly estimated that in the college and university graduations for this year about one-half of the entire output are women. Fifty years ago only about a half of one per cent. of college gradustes were women.

Queen Victoria has thirty great-grandchildren, all of whom are living, and nineteen of the number are boys. Matronly honors are gathering also on the Queen's oldest daughter, the Empress Frederick, who has seventeen grandchildren.

Kansas boasts that it had a hailstorm the other day in which the hailstones were as large as ostriches' eggs, and it is said that one enterprising farmer filled his cellar with the stones, covered them with sawdust, and will sell them to families that need ice.

The proudest man in the State of Washington at the latest mail advices was Mr. J. R. Know, of Latah, Spokane county, to whom four children has been born. One of them is a boy and him the happy father has named Rogers, after the Governor of the State.

A recent statement, based on good authority, affirms that between twenty-five and thirty million birds are annually imported into England alone for decorative purposes, and that the supply for Europe requires not less than one hundred and fifty million. Adding fifty million for America it makes a total of some two hundred million birds sacrificed annually on the altar of fashion.

The recent Danubian floods have apparently been as destructive as those of the Mississippi, and left as many people homeless. Twenty thousand inhabitants of Galatz, in Moldavia, have been drowned out by the deluge, the severest recorded in that region within the century. With its tale of earthquake and flood and various forms of calamity and ruin around the world, the current year has taken a prominent place, but has several months left in which to redeem its reputation. It is quite time it set about it.

Up to the year 1804 the Bible had only been translated into thirty languages. Most of these, besides the English, were dead languages. But now, by the latest statistics, the number of versions of the Scriptures in existence in 1895 is 381, so that the Bible within about ninety years has been translated into some 350 languages. These translations comprise those of all the great non-Christian nations, so that nine-tenths of the world now have the Scriptures in their own tongue.

Thanks to the encouragement which Emperor William has accorded to the practice of duelling, it is now being adopted by the medical profession in Germany. A couple of physicians summoned in consultation became involved at the bedside of the patient in so vehement a dispute with regard to the character of the malady and of its treatment that they concluded to fight the matter out. The conflict took place on the outskirts of Bonn, on the Rhine, one of the combatants, Dr. Fischer, receiving a bullet in the chest, which killed him instantly. This may be said to constitute an altogether new departure in what is known to laymen as "medical etiquette."

The French parricide, who slew his father and mother and was asked upon condemnation what he had to say why sentence should not be pronounced upon him, entreated the Court to have mercy upon a poor orphan. This tale is green with the moss of ages and may not be true, but something like it is true of a woman named Marie Celvet, recently sentenced by a Paris tribunal to twenty years' imprisonment at hard labor for the murder of her sister. While in court she constantly wore a long crepe veil. "Why do you wear this veil?" asked one of the officials, to which she replied that she was in mourning for her sister. Showing an affectionate sensibility, the earlier exhibition of which, however, would have been more becoming to her even than the garment.

W. Bokaseff, of Russia, is thus quoted in The Washington Post: "I have come to America to study your methods of farming and dairy business, and especially to look into the cultivation of the sunflower plant in this country. I am a sunflower farmer at my home in Russia. One of my family was the first person in Russia to obtain oil from the seed of the sunflower. It is one of the leading agricultural industries in the Czar's dominions now, and the people can clear more money from it than any other crop. If the soil and climatic conditions are right in the United States, and I can find a suitable location, I may enter on the cultivation of the sunflower on a large scale, and also put up mills for the extraction of the oil."

Over 20,000,000 packages of vegetable, flower and field seed have been distributed by the Department of Agriculture during the past spring. This distribution has given to each member of Congress 40,000 packages of seed at a total cost of $130,000. Over a million of these packages were flower seed and nearly 400,000 field seed, the balance being a [illegible] vegetables. In the entire distribution nearly every variety of vegetable known to the agriculturists was distributed. There were 32 varieties of beans, 10 varieties of beets, 23 varieties of cabbage, 11 varieties of carrots, 19 varieties of sweet corn, 18 kinds of cucumbers, 30 kinds of lettuce, 19 varieties of muskmelons, 17 kinds of watermelons, and 15 varieties of onions. The entire amount of seeds distributed was sufficient to plant an area of 355 square miles, or about six times the size of the District of Columbia. This is the largest distribution of seed ever attempted by the Department of Agriculture, and it is said that seedsmen all over the country are complaining that they do not make sales to farmers and others because they are getting all the seed they want free from the Department of Agriculture.

Says the New York Times: "An incident in the career of the late Isham G. Harris that has been ignored in most of his obituaries is so illustrative of the Senator's character that it deserves recalling and remembrance. When the Confederacy fell there was in his possession as Governor of Tennessee $100,000 in gold belonging to the State school fund. As an ardent Southern sympathizer, Governor Harris was desirous of preventing this money from falling into the hands of "Parson" Brownlow and the other officials of the new State government. He took it with him, therefore, when he avoided capture by flight to Mexico, and after remaining in that country for eighteen months carried the treasure to England. Many another Confederate officer, State, municipal and military, did much the same thing with public funds, but not quite all of them, if rumore can be trusted, imitated the subsequent course of Governor Harris. After he had been in England a year, affairs had so settled down in the United States that he could safely return. So back he came, and with him he brought the $100,000, still in gold, and turned every cent of it into the Tennessee Treasury. Of course, this was only simple honesty, but it must be remembered that Harris had lost every penny of his own large fortune, and that he might have used the argument which others in his position are said to have found valid, that Confederate money had no lawful owner after the Confederacy ceased to exist."

The United States Government is already preparing to take observations of the total eclipse of the sun, which is to take place on May 28, 1900, says the Atlanta Constitution. Observation stations will be established along the path of the total eclipse and experienced astronomers in the service of the government will be sent down to take the observations and make the astronomical calculations which it is expected will be so valuable to science and to astronomy. It may seem rather early to begin to take observations now for an event that will not occur within the next three years, but the government will begin to take the observations May 15, and continue until the same date in the month of June. These observations will be for the purpose of determining the best points at which to establish the permanent stations, where the final observations will be taken during the eclipse of 1900. The path of the total eclipse will extend in a direct line from New Orleans to Norfolk, Va., and will pass through Georgia in the locality of Macon. Blank report sheets have been sent to all the weather bureaus in the vicinity of the path of the eclipse with the instruction to the weather man to secure the services of capable and intelligent men to take the observations and register the results in the sheets made for the purpose. The exact condition of the sky, of the sun and of the whole heavens will be marked down in the sheets every morning of the month when the observations are being taken, and all of the sheets when filled out will be sent to Washington and carefully graded. The permanent observation stations will be established at the points where the first observations taken receive the highest percentage.

Horses That Count.

Horses can count. It is customary when hauling hard coal here to put six tubfuls in the cart; when the last tub has been dumped, those horses that for years have been in the business, without word from the driver, start off. While discharging the soft coal from the Dreadnaught, the other day, seven tubs were hauled to the load, and at the beginning of the work the horses in nearly every instance started when the sixth tub was emptied, but after being stopped a few times they seemed to realize they were to haul one more.—Boston Herald.

Strange Coffin.

A strange coffin, said to be intended for a British Admiral of the Fleet, is on exhibition at Liverpool. It is in the shape of a double-ended lifeboat, seven feet long, and painted with white portholes like an old-fashioned battleship. It is fitted with life lines, oars and a rudder, and is made seaworthy in every respect.

Too much blind driving on a hot day has killed men and horses.

Washing a Fine Art.

Ever since spinning was a type of womanly industry, from age to age it has been expected that beautiful apparel should clothe women. To keep dainty belongings in good order it is necessary to have them properly laundered. This is especially true in the laundering of pretty summer gowns, which is now quite a fine art. To do the work properly, fill a tub two-thirds full of warm water, dissolve the fourth of a cake of Ivory Soap (which will not fade the most delicate colors), add it to the water; wash the articles through it, rinse first in clear and then in blue water; wring, dip in thin starch, shake out and hang on the line in the shade. When dry, sprinkle and iron. Gowns thus laundered will retain their freshness the entire season.

ELIZA R. PARKER.

The Sea Gull.

The sea gull is the scavenger of the ocean. It scours the surface of the sea near the shore and frequents harbors to seize on floating garbage, dead fish and other putrefying matter; and these birds have saved many a village and seaport town, round about which they hover, from plague and pestilence. Such being the services of the sea gull it is a short-sighted policy that causes them to be ruthlessly killed by thousands, partly in idle sport, but principally that their wings may be used for millinery purposes. Their eggs are also collected in enormous quantities for museums and for the shops of naturalists.

Language Lesson.

"Mamma, if I had a hat before I had this one it's right to say that's the hat I had had, isn't it?"

"Certainly, Johnny."

"And if that hat once had a hole in it and I had it mended I could say it had had a hole in it, couldn't I?"

"Yes, there would be nothing incorrect in that."

"Then it'd be good English to say that the hat I had had had had a hole in it, wouldn't it?"

"Johnny, you make my head ache."—Chicago Tribune.

"It was so dark in the parlor when young Dr. Plummer came in that I did not notice he had shaved off his mustache." "Didn't you? I felt the difference while you were getting a light."—Cleveland Plain-Dealer.

Jones—Sillibub has a medicine which he declares is a sure cure for heart disease. Smith—Did it cure him? Jones—Yes, it gave him such a frightful attack of indigestion that he forgot all about his heart.—Harper's Bazar.

"J. Addison!" "Yes, your excellency?" "I hope that the agriculturists will appreciate the beginning of our efforts in their behalf." "In what way, sir?" "Well, in sending Hay to England."—Pittsburg Chronicle-Telegraph.

Dr. Ende—There's nothing serious the matter with Patsy, Mrs. Mulcahey. I think a little soap and water will do him as much good as anything. Mrs. Mulcahey—Yis, docther, an' will Oi give it t' him befoor or afther his males? —Judge.

Mrs. Henpeck—Young Mrs. Bagley, who was married on last Thursday, tells me her husband left almost immediately for the West on a business trip. Henpeck (viciously—Yes; he writes me that he finds married life a very happy existence.—Philadelphia North American.

Bicycle Prices Fall.

After several years of exorbitantly large profits the manufacturers of bicycles have been compelled to very largely reduce their prices. The public actually refused to longer pay $100 for a machine which can be built for one-quarter that amount.

A few makers saw this some time ago and put on the market cheaper machines at very greatly reduced prices which so cut into the business of the higher priced manufacturers that in pure self-defense they were compelled to bid good-bye to their old high prices.

Why should not the same thing occur with type-writing machines? They no doubt cost considerably less to produce than bicycles, and yet some of them are selling at the ridiculously high price of $100. It is fair to infer that a machine which sells at $50 costs close to $15 to manufacture.

If a few large department stores in New York, Boston, Philadelphia, Chicago, etc., would arrange for large quantities to be manufactured for them by some one outside of a Trust the prices would come down to reasonable figures as have those of bicycles.

The University of Alabama.

(A supplement to the catalogue.)

The President and faculty of the University have issued an academic supplement to the catalogue setting forth new and up-to-date courses of study. These allow many options to students, while maintaining a high standard by requiring certain essentials of an education of all applicants for a degree.

Students who have already entered upon one of the old courses may continue without prejudice. But they can choose as others as far as the schedule will allow. It is the purpose of the faculty to cause no man to lose his class by reason of the change, however desirable.

This evidence of life will be gratifying to all the friends of the University.

tables. In the entire distribution nearly every variety of vegetable known to the agriculturists was distributed. There were 32 varieties of beans, 10 varieties of beets, 23 varieties of cabbage, 11 varieties of carrots, 19 varieties of sweet corn, 18 kinds of cucumbers, 30 kinds of lettuce, 19 varieties of muskmelons, 17 kinds of watermelons, and 15 varieties of onions. The entire amount of seeds distributed was sufficient to plant an area of 355 square miles, or about six times the size of the District of Columbia. This is the largest distribution of seed ever attempted by the Department of Agriculture, and it is said that seedsmen all over the country are complaining that they do not make sales to farmers and others because they are getting all the seed they want free from the Department of Agriculture.

Says the New York Times: "An incident in the career of the late Isham G. Harris that has been ignored in most of his obituaries is so illustrative of the Senator's character that it deserves recalling and remembrance. When the Confederacy fell there was in his possession as Governor of Tennessee $100,000 in gold belonging to the State school fund. STREET OF YELLOW SPIDERS.

Curious Discovery in a Florida Thicket—A Mantle of Mimicry.

Once in attempting to force my way through the thick bay cedar underbrush of one of the smaller and outer keys of the Florida reef, I suddenly broke into an opening which had the appearance of a narrow street or trail. The brush was six or eight feet in height and remarkably thick, and the heat was intolerable. The branches and leaves which were interlaced formed a perfect network, and gave shelter to innumerable crabs, which had taken possession of old birds' nest, while under foot the eggs and newly hatched terns almost covered the ground.

Once in the opening or street, it was found to be about seven feet across, winding away out of sight; but my way was blocked by several curious obstacles—a succession of webs stretched vertically across the pathway at intervals of five or six feet. They were of extraordinay strength, and were thrown out and poised in a marvellous manner. In the centre of each of these silken barriers clung a huge yellow spider, so ugly and conspicuous that I stopped before the first doubting the evidence of my eyes; and as I looked, the first yellow spider of the series disappeared. There was no doubt about it; at first so striking and gaudy, it slowly faded away, and through the web I could see other yellow spiders beyond, suggesting that it was no illusion.

While I stood wondering in the hot sun, the spider solved the mystery by appearing again, first dimly, then like many spiders quivering in the strong light, finally resolving itself into one huge yellow fellow that moved like a pendulum to and fro and then stopped. I touched it gently with a switch I held, whereupon it deliberately began to swing its huge body, imparting to the entire web a vibratory motion which increased in rapidity until the body of the spider began to grow fainter, and in a few moments became invisible. It was all very simple when understood; the spider when alarmed began to swing, gradually increasing his motion until it disappeared or could not be followed by the eye. Thinking the case might be exceptional, I again touched the spider, and again it literally swung itself out of sight.

Crawling beneath the web, I confronted the next spider, which also was yellow or saffron in color, with black velvet-like markings, hanging in the sun like a great topaz, its web dotted with the remains of many feasts, empty skeletons of insects, bits of pearly fish-scales, perhaps dropped by some passing bird, a delicate feather, and a motley array of flies and other insect-folk. At first the spider paid me scant attention; then I saw a slight convulsive movement of its legs as it imparted the first long swing to its hammock-like web that put this wonderful life-saving device, for this it was, in motion. It was the spider's defence and protection from enemies. Certain birds undoubtedly preyed upon the spiders, and this faculty of mysteriously disappearing had on more than one occasion served it well. I could easily imagine the astonishment of the bird when darting down to seize the plump and showy spider to find that it had slipped away.

There was much in this street of yellow spiders to distract the mind from the intense heat that poured down from the almost vertical sun. In the middle of the path, beyond a turn, grew a clump of cactus, with here and there a ripe fruit rich in the purple of full maturity—a brilliant contrast to the green leaves. As I stood watching the hermit-crabs dropping from the bushes and scurrying away over the sand, I thought I saw a ripe fruit of the cactus move; then, to my amazement it passed directly out of sight; and after the fashion of the spiders, but he slipped around one of the big leaves. I almost expected to see the others follow it, but nothing of the kind occurred. I walked along and placed myself in a position to see behind the broad, flat, pear-shaped leaf. There was the purple object now moving cautiously around with the evident intention of keeping itself out of sight, and then I saw it was a crab, a crab with a purple back the exact tint of the fruit, while its general shape, when the legs were tucked up beneath the body, made the crab a mimic of the cactus fruit, a protective resemblance so perfect that the crab was safe from sharp-eyed enemies and I should have passed it by had it remained quiet; but the phenomenon of moving fruit attraced my attention and led to its discovery.

For some distance I followed this street of spiders, creeping beneath the webs when I could, and everywhere these tricks of nature to protect the defenceless were apparent. The eggs of the gulls simulated the sand in color; the little mantis, which clung to the big cedar, was the exact tint of the leaves and defied detection until accidentally brushed off. Over all life in the secluded spot nature had thrown her protective mantle of mimicry.—New York Post.

Oddities of English Villages.

Undoubtedly the most extraordinary township in England is that of Skiddaw, in Cumberland. It contains but one house, the occupier of which is unable to exercise the Briton's privilege of voting because there is no overseer to prepare a voter's list and no church or other place of worship or assembly on which to publish one.

The most remote village in England is that of Farley-com-Pitton. This truly rural spot is thirty miles and a half from the nearest railway station. As a contrast to this may be mentioned the hamlet of Ystrad, about ten miles from Cardiff. This tiny settlement has two inportant main roads, two railways and two large rivers.

A very unique feature is exclusively claimed by Trimley, a small village in Suffolk. In the one churchyard of parish two churches are to be seen. Service is conducted three times a week in each of these churches at the same hour.

The deepest well in England is found at Hamilton in Hampshire. It stretches 350 feet below the surface of the earth. About half way down this well shaft is a subway, three miles in length, which leads to the seacoast.

On the top of the parish church tower in Bicknoller, Somersetshire, is a yew tree, now five feet high, and still growing in a hard fashion. It is generally believed that the tree owes its origin to a seed dropped by a bird.

Perhaps the most splendidly decorated church in the kingdom is that of Whitley Court, Worcestershire. It is entirely constructed of white marble, the pews are chastely carved and the pulpit is of genuine Carara marble, richly paneled with precious stones.

On the village green at Meriden, in Warwickshire, there is a large stone cross, which is supposed to mark the central point of England.—Pearson's Weekly.

A Dog's Broken Heart.

W. L. Murfree, brother of the well-known novelist, Charles Egbert Craddock, recently related a remarkable instance of a dog's affection for his kind.

In was during the war, when the Murfree family lived near Murfreesboro, Tenn. The children owned two dogs, a great St. Bernard named Hugo, and a tiny white poodle, Fleece. The two were inseparable companions and wherever Hugo's dignified self appeared there gamboled beside him the absurd bundle of curls and wool. It was Landseer's picture of Dignity and Impudence in life. Hugo looked with anxious solicitude after Fleece if the little fellow ran away, which he frequently did, and never gave it up until he brought Fleece home again in safe conduct.

Battles were raging all around them and one night the firing was so near and incessant that no one slept.

The next morning Hugo and Fleece were missing, and while the children searched for them Hugo wearily walked through the gate, carrying poor little Fleece's dead body.

He walked to his mistress and laid his burden gently down at her feet, then with a look of unutterable grief laid himself down beside it, nor could they coax nor drive him away. Little Fleece's white coat was blood stained. A stray bullet had ended his happy little life and the children wept over the sorrows of war, realizing as never before what it meant.

They had a most elaborate funeral and buried Fleece with military honors, with his body wrapped in a flag, and they marched to the grave to the beat of a toy drum, with Hugo, who followed close, as the chief mourner. When the little mound, flower covered and draped with a flag, was finished, Hugo laid himself down across the tiny grave and refused to be comforted. He would neither eat nor drink, and the next morning they found the great fellow stiff and cold in death, still faithfully guarding the mound that covered his dear little friend. His great, loving heart was broken with grief.

Small Army That Reduced India.

There was a mutiny of the Sepoys in India in 1857, which for a time threatened to spread to the other tribes and end in the overthrow of British rule in that country. It was an occasion calling for prompt and energetic action and the employment of a large army of soldiers. To suppress it and make sure of retaining control in an effective manner 35,000 soldiers were used. With these the Sepoys were beaten and order restored. It was the turning point in East Indian affairs. If the Sepoys had triumphed England would have been driven out of India and its influence destroyed. The bloody work of the mutineers at Cawnpore and Delhi left no doubt as to the nature of the rebellion, but it took only 15,000 men to win the campaign and establish the permanency of British control in a manner which has never since been seriously questioned by a resort to arms.

Professor Thomas Shaw, in his experience with sorghum as forage for sheep at the Minnesota Station, has met with no losses from pasturing second and third growth sorghum; yet he does not say that it will not injure sheep or other animals, and the fact that numerous losses have been reported due to this cause—whatever the real cause may have been—should lead to the exercise of caution in turning stock on to second-growth sorghum.

There Was One More.

The delivery clerk with the pink cheeks was fondling his blonde young moustache when a young woman stepped in front of him.

"Plaze," she said with a soft smile, "is there anny letthers here for paple by the name of Murphy?"

The young man with the pink cheeks stopped playing with his moustache and looked through a pile of papers.

"No," he said, brusquely, as he shoved them back into their pigeon holes again. "There's nothing here for the Murphys."

"Is there anything here for James Murphy?" persisted the maiden.

"No."

"Is there anything for William Murphy?" she pleaded.

"Nothing."

"Is there anything for Michael Murphy?" almost tearfully.

"Nix."

"Is there any——"

The young man with the pink cheeks deemed it high time to exhibit his powers of persiflage. And he did so.

"Madam," he said, raising his voice, "there is nothing here for Peter Murphy, or Paul Murphy, or Larry Murphy; Oscar Murphy's correspondents have forgotten him; Lewis, Samuel, Terence, Patrick, Thomas, Clarence Robert and Joseph Murphy are neglected by their distant relatives. Sadder still, there is not a single letter for Mary Murphy, nor so much as a postal card for Agnes, Bridget, Clarinda, Augusta, Ida, Ellen, Susan, Mamie or Gladys Murphy."

The young man with the pink cheeks paused and looked behind him for the applause of his fellows. But the maiden stood her ground, and softly said:

"Plaze, sor, I didn't hear ye mintion the name of Mortimer Murphy. Might there be anything for him, sor?"

Fireproof Paper.

Fireproof paper for writing and printing purposes is now manufactured in Berlin by a new patented process. Ninety-five parts of asbestos fiber of the best quality are washed in a solution of permanganate of calcium, then treated with sulphuric acid as a bleaching agent. Five parts of wood pulp, as used in paper factories, are added, and the whole is placed in the agitating box with an addition of lime water and borate of soda. After being thoroughly mixed, the material is pumped into the regulating box and allowed to flow out of the gate on an endless wire cloth, where it enters the usual paper-making machinery. It is easy to apply water marks to this paper, which ordinarily has a smooth surface, which can be satin finished for writing purposes. Paper thus produced is said to resist even the direct influence of flame and remains uninjured, though subjected to a white heat.

Food and Odor.

Food that has little odor and food that readily absorbs odors should be placed at the bottom of the refrigerator. All foods with a strong odor should be kept on the top shelves.

Her Great Regret.

"Why are you sad, Mabel, darling?"

"I was thinking, dearest, that this was the last evening that we could be together until to-morrow."—Triffes.

Soap Producing Trees.

In the West India islands and in South America grows a tree whose fruit makes an excellent lather and is used to wash clothes. The bark of a tree which grows in Peru and of another which grows in the Malay islands yields a fine soap.

An Eastern poet says: "And I will not cease till Greece hath won." Perhaps this is what induced England to withdraw from the blockade.

What is Tetterine?

It is a fragrant, unctuous ointment of great cooling and healing power. It is good for Tetter, Ringworm, Eczema and all roughness of the skin. It stops pain and itching at once and if properly used will positively cure even the worst of chronic cases. 50 cents at a drug store or by mail for 50 cents in stamps. J. T. Shuptrine, Savannah, Ga.

Mrs. Winslow's Soothing Syrup for children teething, softens the gums, reducing inflammation, allays pain, cures wind colic. 25c. a bottle.

We think Piso's Cure for Consumption is the only medicine for Coughs.—JENNIE PINCKARD, Springfield, Ills., Oct. 1, 1894.

Rev. H. P. Carson, Scotland, Dak., says: "Two bottles of Hall's Catarrh Cure completely cured my little girl." Sold by Druggists, 75c.

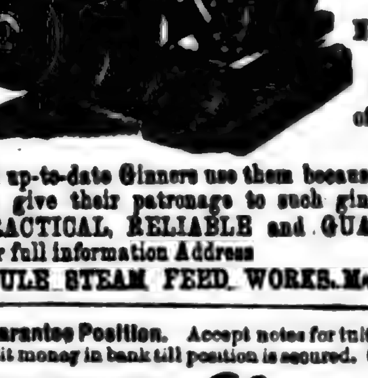
Fits permanently cured. No fits or nervousness after first day's use of Dr. Kline's Great Nerve Restorer. $2 trial bottle and treatise free DR. R. H. KLINE, Ltd., 931 Arch St., Phila., Pa.

If afflicted with sore eyes use Dr. Isaac Thompson's Eye-water. Druggists sell at 25c. per bottle.

HALL'S
Vegetable Sicilian
HAIR RENEWER
Beautifies and restores Gray Hair to its original color and vitality; prevents baldness; cures itching and dandruff. A fine hair dressing.
R. P. Hall & Co., Props., Nashua, N. H.
Sold by all Druggists.

THE SUSPENDER FAD.
RASTUS—"Here you, Liza, wot yer dun done wid my best Sunday suspenders, hey?"
LIZA—"Why, pop, I dun see in der papers dat it's de stile fo' young ladies to wear suspenders now, and I dun borrowed yo's fo' de ball dis evening, and I want to take along your Pick Leaf Smoking Tobacco."

LYON & CO'S PICK LEAF EXTRA SMOKING TOBACCO
Made from the Purest, Ripest and Sweetest leaf grown in the Golden Belt of North Carolina. Cigarette Book goes with each 2-oz. pouch.
ALL FOR 10 CENTS.
A Pleasant, Cool and Delightful Smoke.
LYON & CO. TOBACCO WORKS, DURHAM, N. C.

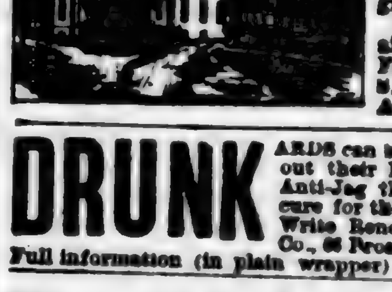


"Success" Cotton Seed Huller and Separator.
Nearly doubles the Value of Seed to the Farmer.
All up-to-date Ginners use them because the Growers give their patronage to such gins. Huller is PRACTICAL, RELIABLE and GUARANTEED.
For full information Address
SOULE STEAM FEED WORKS, Meridian, Miss

Guarantee Position. Accept notes for tuition, or can deposit money in bank till position is secured. Carfare paid.
DRAUGHON'S PRACTICAL Business College
NASHVILLE, TENN., and TEXARKANA, TEXAS.
Indorsed by Bankers, Merchants, and others. Bookkeeping, Penmanship, Shorthand, Typewriting, Telegraphy, etc. Four weeks in Bookkeeping with us equals 12 elsewhere. No vacation. Enter any time. Board $10. To order our books for home study is next best thing to entering our schools. Write us at Nashville. (Mention this paper.)

UNION FEMALE COLLEGE
Eufaula, Alabama.
Charming location; delightful climate; wonderful health record. This is a chartered college of the highest grade. Literary faculty unsurpassed in the south. Art, Elocution, Physical Culture, etc., under the finest instructors. UNEQUALED ADVANTAGES are offered in our CONSERVATORY OF MUSIC. School select. Fare excellent. Terms very reasonable. Next session opens September 23rd. Please write for catalogue.
T. J. SIMMONS, A. M., Pres't.

CLAREMONT COLLEGE, HICKORY, N. C.



Girls and young women. Location a noted health resort. Ten schools in one. $400 PIANO given to the best music graduate. Mountain air and water. For catal'g ad. S. P. Hatton, A. M., Pres.

DRUNKARDS can be saved without their knowledge by Anti-Jag the marvelous cure for the drunk habit. Write Renova Chemical Co., 66 Broadway, N. Y. Full information (in plain wrapper) mailed free.

THE OLD HOME.

'The old home, the old home,
O would I were once more
A boy among the happy scenes
That brightened life of yore,
To roam among the tangled bloom
With torn straw hat and all,
And watch the rifts of summer suns
Upon the landscape fall!

To catch the scent of roses fair,
And hear the wild birds' song
With passion fill the balmy air
The leafy nooks among;
To hear the bullfrog's merry croak
On logs by ripples wet,
His coat of green a dazzling sheen—
I seem to see him yet!

The old home, the old home,
I loved each blade of grass
That sang through tiny bells of dew
In joy to let me pass;
The good old trees that welcomed me
And branches downward hung,
Where oft in childish revelry
I swayed and dreamed and sung!

Once more to lie upon the fringe
Which hid the brooklet's smiles,
And watch the bubbles curl and break,
The fishes' merry wiles.
To hear the murmur all around,
The life and zeal of glee
That robed with magic every sound
The swift winds brought to me!

The old home, the old home,
Once more at ease to lie,
And in a wonder, rapt and still,
To watch the nights go by,
Her gentle hands so full of stars
They seemed to tremble out,
The while the moon's impassioned bars
Upon the stream made rout!

To hear once more the siren song
The hours sang as they fled,
To see once more the future stand
With laurel-covered head,
To lie once more in peopled sleep
Of dreams so bright and fair
They never could their promise keep,
But died in beauty there!

—Hamilton Jay, in Florida Times-Union.

The Conquering Hero.

BY ELIZABETH C. WINTER.

It was such a pretty scene! The trees had the abundance of verdant leafage that belongs to happy June; the grass seemed more than usually rich and green and the wild flowers more abundant than ever before—there was a rural bridge over a deep, rushing stream that fed a mill-dam some distance beyond; and roses clambered over the broken rails of the bridge and twined their wild tendrils about an old tree near by, against which was a rustic seat. On the rustic seat was another rose—a very sweet and fresh and lovely rose in white muslin, with a Marie Antoinette fichu across her breast and knotted at the waist, and a wide Leghorn hat on her head that shaded her eyes so cleverly that no beholder could guess that tears were rising there from time to time and dropping on the white mull kerchief. And this had happened so often that the rose might very well be said to be washed in dew.

Her name was Kate, and she was very angry with herself because the tears would fall despite all the indignant things she was saying to herself in the effort to stop their flow, till at last she started to her feet in a dreadful pet and began to walk up and down, crushing the wild flowers under her feet. But that could not continue, for she was a very sweet little woman and could not hurt even a flower without regretting it; and presently she bent her graceful figure and pulled the wild anemones and the few late violets, and, having reached the rustic seat, she added a rose or two and sat down.

"It's a perfectly lovely morning!" she murmured, and pinned the flowers among the folds of the mull kerchief. "I wonder where she has taken the child, because——"

She stopped and looked anxiously about till she saw, in the distance, the maid and the little boy rambling among the trees and apparently absorbed in gathering wild flowers and chasing butterflies; and the music of the child's laughter was borne to her on the soft, perfumed summer breeze. It was a heavenly sound—a sound to gladden any mother's heart; but Kate Selden sighed and drew from her belt a closely crumbled piece of paper, which she had thrust there in fierce impatience; and as she looked at it the tears, which had not retreated very far, again rose to her eyes.

"Oh, I'm just a dreadful fool!" she thought; "a silly, silly little simpleton! And I'm glad he is late, for I wouldn't have him know, for anything in this world, that I cared enough to cry——" And, smoothing out the crumbled paper, she began to read the written words once more, though she already knew them by heart:

"If you will see me on Wednesday we can talk the matter over. I have spoken with my lawyer, and he has consulted with yours, and a separation can be arranged without any public scandal—at least, I hope so. I would call at the house, but I know your mother hates me worse than ever now, and it would only cause a scene. So, if you will come to the old rustic seat close by the bridge—you know where we used to meet in the old, happy days—ah, Kate, if you would only let me tell you everything, you would find that I am not so very much to blame—but I won't speak of that. Because, of course, I know you wish to leave me, and I will make no defense. Yes, you shall keep the boy, though I believe the law would give him to me if I chose to fight for my right. But I don't care to call it my right—no, in that I yield to you entirely. I believe a child belongs to his mother first and before all others. Therefore I give him to you without asking what the law might say about it. But I do ask that you will let me see him as often as I may wish, for I love him, dear—yes, though you may not believe it, Kate, I love him next to his mother, who is still the dearest on earth to me. There, I didn't mean to say that; but it is written, and let it stay so. I will not offend you again; but be there on Wednesday, any time before noon. I won't be later than eleven, and we can arrange all the business details—the lawyers will do the rest."

And by this time the tears were brimming over, but she wiped them softly away; and, instead of crushing the paper as before, she folded it very smoothly and slipped it inside her corsage, where she could feel it rise and fall beneath the hurried beating of her heart.

"I'm glad he's late," she repeated; "I'm very glad he's late." And then she looked at her watch and found it was not quite half-past ten. "Oh, he isn't late, after all—I must have been very early—I will go and find Annette and the child." And as she rose there was the crackling of a twig under a hasty footstep, and Kate Selden stood face to face with her husband. He was very pale, and his lips looked pallid and drawn with the effort to keep from trembling. She had flushed deeply when their eyes met, but now the color ebbed away from her girlish face, and she said, confusedly:

"I am so glad!—I mean, not to keep you waiting. You see I am here first."

"You are very good," he said; "but you are always good. You got my letter?"

"Oh, yes, or I wouldn't have known you were coming here." She moved backward a step and was very glad to drop into the old rustic seat. "It is very generous of you, Sidney, to agree to everything, and particularly about baby."

"It is all I can do, now—to try and please you," he answered, weakly; and the perspiration was like dew on his brow. He took off his hat and stammered something about its being "awfully hot."

"Yes; perhaps you have walked fast—it is very warm, and you look tired. Won't you sit down?" She moved a little further away to make room for him, and he dropped into the place beside her.

"We used to say there was just room enough for two," he said, with a smile, and she turned her head away—perhaps to pluck a rose, for she snapped one off short and then threw it away.

"Am I to see baby today?" he asked, after a few moments of awkward silence. "I haven't seen him, you know, since——"

"Oh, yes," she answered, hurriedly, and, looking about, "there they are, he and Annette, yonder in the woods; they are coming this way. Oh, Sidney," she cried, suddenly turning toward him, "how could you? I can never, never forgive you!"

"I could never dare to ask you!"

They were almost the very words of Pauline and Claude. She remembered in a moment that it had been the first play Sidney had taken her to see after they were married; and how often they had laughed at that pair of lovers, each dying to forgive and be forgiven, and neither daring to say the right word. She used to think she could never be so foolish as that, and now—it was getting very awkward, for this was a far more serious matter, and she knew that she could never forgive. What woman could?

And then she heard the laughter and shouts of little Sidney, who had just caught sight of his father, and was now running wildly to welcome him. It was a fortunate interruption to a scene that was nearing a painful climax, and she was very glad to take a step or two toward the laughing boy, who was already flying across the bridge, followed by his nurse; then there was a crash, a shriek; the side of the bridge was gaping outward; the maid stood wringing her hands; and the golden curls, that had floated for a moment above the rushing water, were gone.

It was so sudden, so inexplicable, that the frantic mother could not realize at first what had happened. When she did, the air resounded with her agonized cries, and it was the nurse girl who was the first to see that Selden had already reached his child, just in time.

"Courage, ma'am, courage!" the girl whispered, while she supported her mistress. "See—he is safe! His father has him—look, look! the darling has his arms about the master's neck, an' he's hugging an' kissing of him just as if nothing had happened at all!"

The girl assisted her mistress back to the little rustic seat, and when the father and child had reached the young mother, little Sidney was already laughing with delight; and as he put one dripping arm about her neck, he drew her close till her face touched her husband's face.

"Kate," whispered Selden, "Kate, may I beg forgiveness now?"

"Oh, Sidney! I have been so proud and heartless! I was jealous and vain—and—and—so selfish and unfair I wouldn't listen to you, and all the time I knew you never cared for that woman! Can you forgive me, too?"

"Just give me a chance, that's all," and then two pairs of arms met and clasped each other close about the conquering hero, who seemed to find himself quite suddenly an object of only secondary importance.

It then occurred to Annette that Master Sidney would have a dreadful cold unless his dripping garments were changed immediately; so she carried him off in pursuit of dry clothing.—Frank Leslie's Popular Monthly

LONDON'S GREAT GROWTH.

Four Times the Size It Was at Victoria's Coronation.

Whatever future chroniclers may have to say of Queen Victoria's reign and the brilliant celebration of her "Diamond Jubilee," one point that can not be overlooked is the enormous growth of London during Her Majesty's lifetime. The metropolis has quadrupled in population, having increased from a little over a million to four millions and a quarter. It seems difficult to imagine that there ever was a time when London was a small place, yet when the Queen was born it was very little larger than Glasgow is now, and only double the size of Birmingham. It is usual to compare the glories of Victoria's reign to those of Elizabeth, but between the London of today and that of "Good Queen Bess" there is really no comparison. London was still girt around by the walls built by the Romans and was largely inclosed within them. The mansions of the great lay outside the city walls, chiefly on the way from the Strand to Westminster. There were few stone houses, and none tiled or slated, being mostly built of wood and thatched with straw. Beyond the royal palace at Westminster was open country, and marsh lands formed the sole feature of the landscape across the river. On the other side of the city was open country, with "Merrie Islington," a village in the distance. Sanitary science was unknown. The paving of the streets was in its infancy; except with regard to a few of the principal thoroughfares, each inhabitant paved as much as he liked before his own door with the materials that his pride or poverty might suggest.

The streets were obstructed with stalls, sheds, signposts and projections of every kind; curbstones were unknown, and only in a few thoroughfares were the footpaths divided from the carriage way with posts and chains. This was the London of Elizabeth, just 300 years ago—a very different city from that of today—a London gradually becoming foul and pestilential, ultimately to be cleared and purified by the great plague, which carried off a fifth of the inhabitants in 1665, and the great fire of the following year, which involved 400 streets, 13,200 houses, 88 churches, St. Paul's Cathedral and four city gates. Before the fire it is estimated to have contained from 10,000 to 12,000 streets, alleys and lanes, 156,000 houses and about 700,000 inhabitants. So that in seventeen centuries London had grown to a population of under 730,000. By the beginning of Queen Victoria's life it had increased to 1,000,000, and now, at the end of the sixtieth year of her reign it is sevenfold what it was under "Good Queen Bess." Rather than to Elizabeth London owes its growth to Charles II, for, after the restoration, those who returned with him did not care to return to their old city houses, but built themselves mansions further West, leaving the city to the merchants, by whom it has ever since been monopolized. To James I we owe Pall Mall, and Kensington was originated by the creation of a palace there when Whitehall was burned down.—London Standard.

When Umbrellas Were First Used.

Umbrellas are of great antiquity; among the Greeks they were a mark of elevated rank, and one is seen on a Hamilton vase in the hands of a princess. We find the umbrella figured upon the ruins of Persepolis, and the Romans carried it at the theatre to keep off the sun. Yet Coryate, the traveler, in 1611, notices the umbrellas of Italy as rarities. These and other umbrellas are only described for keeping off the sun, which may be explained by the comparative scarcity of rain in the above countries. The frequency of rain in other lands led to their being used for a very different purpose. Jonas Hanway is described to have been the first to walk the streets of London with an umbrella over his head, which he had probably used in his travels in the East. And in 1778 one John Macdonald, a footman, was ridiculed for carrying in the streets an umbrella, which he had brought from Spain; however, as he tells us, he persisted for three months in carrying his umbrella, till people took no further notice of the novelty. —Harper's Round Table.

The feeding expenses of the London zoological gardens average $500 a week.

AN UNCOMMON MISSION.

NOVEL CONTRACT FOR AN AMERICAN IN SOUTH AMERICA.

Professor Bruner, An Expert, Goes to Argentine to Destroy a Bug Plague—Following Experiments, Will Inoculate Locusts With Swift, Death-Dealing Disease

Professor Lawrence Bruner, entomologist of the University of Nebraska, arrived in South America on a novel mission. He is to organize the army of science against the locusts and grasshoppers which have become a destructive plague in Argentine for which the government has just appropriated $1,000,000. He is promised a large bonus if he succeeds in destroying the pests which are destroying the vegetation of that country and threatening the rural districts with famine and the commercial section with disaster.

Conversing upon the subject of his experiments and the details incident to destroy these bugs when they threaten to become dangerous, Professor Bruner said:—

"In order to carry out the plan of exterminating this specie of insect life in Nebraska the authorities found it necessary to have a large number of live, healthy locusts, chinch bugs, grasshoppers or other specimens that were required to be destroyed. The university therefore required farmers whose fields were threatened by the pests to send to the university a small number of these insects if they desired aid. In return the university sent to them a supply of "sick" bugs that could be used in communicating the disease to the bugs in the field. Full directions for using these inoculated bugs accompanied each package. We begin at first to secure a supply of dead insects that had been killed by the fungus known as sporotrichum globuliforum. The starters were received from Nebraska farmers and placed in our cages with healthy grasshoppers. As a rule no difficulty was experienced in securing the spread of this disease from the infected bugs to the healthy insects in the laboratory. The disease is a dry rot, which causes the bodies of the locusts and similar specie to decay. Its spread is very rapid and the result very fatal. It resembles in some respects leprosy in the human family. The infected bugs were then sent back to the farmers with instructions to liberate them in the field. In a day or two every locust in the field in which they were placed was dead.

"In some Nebraska fields the insects thus treated have been reported dead in great bunches. These bunches are always found in moist places and in shaded nooks. In Butler county last year, near Augusta, the farm of Frank Shannon was threatened with destruction and the adjacent farmers were much alarmed. The university was appealed to and a number of fungus-covered grasshoppers were sent to that section. The insects covered the ground in great numbers and in two weeks the field was so full of dead grasshoppers that the wind piled the insects several feet high. They gradually dried up and became powder.

"The damage to Nebraska agriculture from grasshoppers and locusts during the past quarter of a century can scarcely be estimated. On several occasions the pests have destroyed every vestige of vegetation in many counties of the western part of the state. Since they never attain their full growth until June and July, they arrive just at the time when they are most dangerous to farm property.

"Many farmers during the last great plague tried ploughing trenches around their fields and thus attempt to keep out the approaching army, but the trenches were soon filled to overflowing and the swarm would then cross on the struggling bodies of those in the trenches. The very ground appeared to be moving as the quivering mass continued the onward course like an enormous billow. Railroad trains were actually stopped still by the mass of slimy insects as they attempted to pass over the rails and were crushed beneath the wheels."

This is the condition of things in the Argentine Republic, where Professor Bruner is to begin his work as soon as he arrives, yet he is confident that he can reduce the damage to a minimum and destroy the insects absolutely and so throughly that they will not be dangerous for years to come in the same locality.

WITH THE SUPERSTITIOUS CLUB.

When, Where and How to Get Married the Topic of Discussion.

When the president of the Superstitious club called that body to order at its last meeting there were four kinds of caramels, and as many different varieties of chocolate creams on the table. It was evident to the most casual observer that the season of fasting was over. It was also evident from a certain air of alertness among the members that a topic of special interest was about to be discussed.

"Miss President," said the secretary, "on our dial of subjects the hand is turned 'to the wedding day.' Is that in order?"

"Very—I mean quite so. I observe six or eight of the members present are wearing their winter suits. It suggests the theory that those are our May brides."

There was a flutter as if somebody had been hit. Then Maude Johnson said:

"Miss President, we are April brides. We believe that May is an unlucky month for marriage, and have fortified ourselves with proofs. Is it in order to present them now?"

"Perfectly so," said the president, sweetly, "we will listen to the arguments."

"The Romans," continued Miss Johnson, "were very superstitious about marrying in May; they avoided all celebration days, and as many of these occurred in that month they pronounced it unfavorable to marriages. The 14th especially is to be avoided. That day of the week upon which it happens to fall is esteemed unlucky through all the rest of the year."

"Girls," said the president, passing the caramels, "I wish to call your attention to a superstition that is not of Roman of foreign origin, but is purely American, and therefore to be considered. I allude to the fatality which always attends a bride who makes her own wedding cake!"

"Wow!" said Mable Sweet. "I helped stir mine."

"Throw it away then, or stay—send it to our next luncheon. On no account use it for your wedding. Why, girls, I have a dozen names on record of unhappy marriages, and in each instance the bride made her own wedding cake. If you are very anxious to have a finger in the pie—I mean a hand in the cake—stir it from you never toward you. But I should never hoodoo my whole career by making the cake."

"My superstition runs to days," said Marion Strong. "We have chosen the first three days of the week—Monday, Tuesday and Wednesday, for club wedding days."

"I rise to a point of order," said Helen Stewart, "Sunday is the first day in the week."

The club does not sanction Sunday marriages except for the second occasion or for solemn elderly nuptials."

"The better the day the better the deed," suggested one of the members.

"We compromise on Tuesday for health, but I wanted it on Monday for wealth," Lily Johnson said, blushing a becoming carmine.

"I shall never marry," said the president, laying her sleek head back and closing her eyes, "but if I do," coming to life again, "I shall choose Wednesday, best day of all."

"What are we to do about receiving sharp objects such as knives and forks for wedding presents, they are sure to cut friendship."

"I should draw the line at steel," said the president. "I am sure that solid silver knives are lucky gifts because you can't cut anything, not even a potato—with a silver knife. The same with manicure sets. I know a Southern girl who weeded out the steel implements and sent them back. You will have dozens of manicure sets, and you can send them out for presents again. There are others."

Miss Flutterbudget, the girl who made a sensation last winter by asking leave of the club to wear thirteen engagement rings, rose to say that she was one of the April brides, and what should she do in case of receiving a gift of pearls.

"Wear them," said the president sharply, "a girl with your wonderful luck can accept anything. True, pearls mean tears, but I doubt if you will shed any. You are one of our 'freaks.'"

"Thanks, awfully," little Flutterbudget murmured sarcastically, and was sharply rapped to order.

"The names of six new girls are up for approval," announced the secretary, and after the usual formalities they were entered as members. They take the place of the six retiring to be married.

After singing "Parting is Such Pain," the club adjourned to attend a free cocoa demonstration.—Chicago Times-Herald.

Cocoa.

The use of cocoa dates from the mythical times of Quetzalcoatl king of the Toltecs, to whom it was administered by a magician named Titlacahua in order that he might transport himself wherever he wished. Columbus brought cocoa to Spain in 1494, and Cortez found that Montezuma, the famous cacique of Mexico, was served with chocolate, or chocolati, in golden cups, with tortoise shell spoons. At first the English and Dutch sea-rovers thought so little of cocoa that when they captured a Spanish ship laden with it they hurled the cargo overboard in their anger and disappointment. Cocoa was introduced into London in the middle of the seventeenth century, and that city now uses about 8800 pounds of it daily. Not over half of this, however, is estimated to be consumed as cocoa or chocolate, the rest going into the manufacture of confectionery, etc. In the United States 22,400,000 pounds of raw cocoa are used every year.

Meant It.

"Several times during the delivery of his commencement day oration he paused and took a drink of water. He was very dry."

"You mean he was very thirsty."

"Yes, he was very thirsty, too."—Chicago Tribune.

CHILT

VOL. I. NO. 19.

LATE TELEGRAPH ITEMS.

FLORIDA'S ORANGE CROP IS ESTIMATED AT 150,000 BOXES.

Wheat Blockade at Kansas City—Bombay's Terrible Death Rate—Forest Fires in Arkansas—A Lottery Dealer Arrested. Murdered His Wife.

A Silver Shipment.

The steamship Lucania, which left for Europe Saturday took 500,000 ounces of silver and 30,000 Mexican dollars.

Mills in the Hands of a Receiver.

The Keystone Mills, located near Camden, Ark., was placed in the hands of a receiver Friday at the instance of creditors.

Help for the Miners.

The 1,900 employes of the Joliet Rolling Mill at Joliet, Ills., decided Friday to give one day's wages to the striking miners. Considerable over $2,000 will be netted.

A Printing Plant Burned.

Fire Friday night, in the Rees Printing Co's. printing establishment, at Omaha, Neb., did $75,000 damage to stock and plant and $15,000 damage to the building. Everything fully insured.

A Lottery Dealer Arrested.

Geo. Predor, supposed to be an agent of the Honduras National Lottery Company, was arrested at Washington Friday, charged with violating the anti-lottery law. This is the first arrest made under that ordinance in Washington for four years.

He Broke a Record.

Jacob Winright rode a quarter mile and a half mile, backward, on a bicycle at Belleville, Ill., Friday, in 38½ and 1.51 3-5 seconds, respectively. This breaks the record, held by Harold Anderson, of Cleveland, of 59 2-5 for the quarter mile.

A New British Naval Station.

A dispatch to the London Times from Capetown says the imperial government intends to build a harbor and graving dock at Simontown, at a cost of £2,500,000. Simontown is a town of Cape Colony, on Simon's bay, about 25 miles south of Capetown. It is the port to which ships resort for repairs.

Carrying Wheat to Newcastle.

The bureau of American republics, Washington, has received information that merchants of Rio Janeiro have chartered two vessels now at San Francisco to carry cargoes of California wheat to Rio. This is the first time in history such a thing has occurred, and is attributable to the short crops in the Argentine Republic and Uruguay.

Bombay's Terrible Death Rate.

Considerable alarm has been caused by the official statistics of the public health just published. They show that there were 1,071 deaths at Bombay during the past week, of which number 220 were deaths from cholera and 18 from the plague. This total death rate is equal to 65.61 per thousand, or double the normal rate.

Wheat Blockade at Kansas City.

The unusually heavy receipts of wheat from the west threatens a possible blockade at Kansas City. Friday night there were 1,800 cars loaded with wheat, on sidetracks in that city. About half of the cars are billed through to Galveston, and the gulf roads are said to be unable to move the product as fast as it comes in from the west. Grain is coming in, too, far beyond the capacity of the Kansas City elevators and the indications are that the accumulation there will be greater.

Americans Victors at Tennis.

The American tennis cracks established their supremacy over the visiting English team in the courts of the St. George Cricket Club, at Hoboken, N. J., Friday, before a thousand spectators. The result of Wednesday's play had left the two teams tied, each with three games won and three lost. The final result of the match, finished Friday afternoon, left the English team with a score for the week of four matches won and five lost, while the Americans finished with five won and four lost.

A Maniac's Horrible Suicide.

At Texarkana, Ark., Mrs. Caroline Ochs, wife of a railroad conductor, Friday morning, saturated her hair and clothing with kerosene oil, ignited them and ran into the yard, where she burned to death in a few minutes. Mrs. Ochs weighed nearly 300 pounds and pre-

suggests the theory that those are ou. May brides."

CHILTON COUNTY CALL.

SOUTHWARD THE STAR OF EMPIRE TAKES ITS WAY.

VOL. I. NO. 19. THORSBY, ALA., FRIDAY, AUGUST 13, 1897. $1.00 PER YEAR.

LATE TELEGRAPH ITEMS.

FLORIDA'S ORANGE CROP IS ESTIMATED AT 150,000 BOXES.

Wheat Blockade at Kansas City—Bombay's Terrible Death Rate—Forest Fires in Arkansas—A Lottery Dealer Arrested. Murdered His Wife.

A Silver Shipment.

The steamship Lucania, which left for Europe Saturday took 500,000 ounces of silver and 30,000 Mexican dollars.

Mills in the Hands of a Receiver.

The Keystone Mills, located near Camden, Ark., was placed in the hands of a receiver Friday at the instance of creditors.

Help for the Miners.

The 1,900 employes of the Joliet Rolling Mill at Joliet, Ills., decided Friday to give one day's wages to the striking miners. Considerable over $2,000 will be netted.

A Printing Plant Burned.

Fire Friday night, in the Rees Printing Co's. printing establishment, at Omaha, Neb., did $75,000 damage to stock and plant and $15,000 damage to the building. Everything fully insured.

A Lottery Dealer Arrested.

Geo. Predor, supposed to be an agent of the Honduras National Lottery Company, was arrested at Washington Friday, charged with violating the anti-lottery law. This is the first arrest made under that ordinance in Washington for four years.

He Broke a Record.

Jacob Winright rode a quarter mile and a half mile, backward, on a bicycle at Belleville, Ill., Friday, in 38¾ and 1.51 3-5 seconds, respectively. This breaks the record, held by Harold Anderson, of Cleveland, of 59 2-5 for the quarter mile.

A New British Naval Station.

A dispatch to the London Times from Capetown says the imperial government intends to build a harbor and graving dock at Simontown, at a cost of £2,500,000. Simontown is a town of Cape Colony, on Simon's bay, about 25 miles south of Capetown. It is the port to which ships resort for repairs.

Carrying Wheat to Newcastle.

The bureau of American republics, Washington, has received information that merchants of Rio Janeiro have chartered two vessels now at San Francisco to carry cargoes of California wheat to Rio. This is the first time in history such a thing has occurred, and is attributable to the short crops in the Argentine Republic and Uruguay.

Bombay's Terrible Death Rate.

Considerable alarm has been caused by the official statistics of the public health just published. They show that there were 1,071 deaths at Bombay during the past week, of which number 220 were deaths from cholera and 18 from the plague. This total death rate is equal to 65.61 per thousand, or double the normal rate.

Wheat Blockade at Kansas City.

The unusually heavy receipts of wheat from the west threatens a possible blockade at Kansas City. Friday night there were 1,800 cars loaded with wheat, on sidetracks in that city. About half of the cars are billed through to Galveston, and the gulf roads are said to be unable to move the product as fast as it comes in from the west. Grain is coming in, too, far beyond the capacity of the Kansas City elevators and the indications are that the accumulation there will be greater.

Americans Victors at Tennis.

The American tennis cracks established their supremacy over the visiting English team in the courts of the St. George Cricket Club, at Hoboken, N. J., Friday, before a thousand spectators. The result of Wednesday's play had left the two teams tied, each with three games won and three lost. The final result of the match, finished Friday afternoon, left the English team with a score for the week of fou matches won and five lost, while the Americans finished with five won and four lost.

A Maniac's Horrible Suicide.

At Texarkana, Ark., Mrs. Caroline Ochs, wife of a railroad conductor, Friday morning, saturated her hair and clothing with kerosene oil, ignited them and ran into the yard, where she burned to death in a few minutes. Mrs. Ochs weighed nearly 300 pounds and prevented her family from extinguishing the flames which enveloped her. She was recently discharged from an insane asylum as cured.

Arkansas Forest Fires.

Forest fires are raging in the Maumelee mountains, in Perry county, Ark., and much damage has been done in destroying the range, grapes and timber. A large number of non-residents went into the mountains a few days ago, on a hunting and fishing trip, and it is alleged the fire was started by some miscreant for the purpose of running the strangers out.

Opposition to the New Tariff.

In the Hungarian parliament, Wednesday, the minister of commerce, Baron de Raul, replying to an interpellation on the subject of the Dingley tariff, said the government considered that Hungary, in promoting her export interests, should not act alone, but to insure success, the government thought all States should agree in a common course of action.

Murdered Her Husband.

Friday afternoon, in the office of Magistrate W. W. Martin, at Drecherd, Tenn., Mrs. Charles Olmstead, while applying for a warrant against her husband, was threatened by him with death if she persisted in trying to have him arrested. Suddenly Mrs. Olmstead drew a pistol and shot him in the stomach, inflicting a mortal wound. They are comparative strangers in the town, having recently gone there from Michigan.

An Insurance War Averted.

Twenty-eight non-union insurance companies, Friday, signed an agreement to restrict their agents to commissions of 15 per cent. and by this action averted what might have proved a disastrous rate war. The meeting at the auditorium in Chicago, called promptly at 11 o'clock Thursday, was attended by representatives of about 15 per cent. of the non-union companies, doing a general agency business. After a short discussion a preamble and resolutions were adopted, by an almost unanimous vote, expressing the agreement given above.

Canada Will Send Troops to the Klondike.

At Friday's cabinet council at Ottawa, Ont., it was decided to send reinforcements of Northwest mounted police into the Yukon country. This course was determined upon in consequence of official reports from Dyea, that owing to the crush of pilgrims bound for the Klondike, it will require double the present detachment of one hundred men to preserves law and order. The government is daily receiving protests from its political supporters in the West against the new mining regulations for the Yukon. It is probable that another hundred men of the Northwest mountain police will be ordered to the Klondike district at once.

A Fighting Parson.

Rev. J. Walstein, who has been holding revival services at Concord Christian church, near Washington, Ind., received word he would be egged if he preached again. He went prepared and when he opened services, laid a pistol on each side of his Bible, announcing he would defend himself if necessary. It was not long before a disturbance was raised at one of the windows. In an instant the minister commenced firing toward the window. He scattered the toughs, but one bullet passed through the abdomen of the 3-year-old daughter of John Staniford, who was sleeping on one of the seats. The little girl is dead. In the excitement Walstein made his escape.

Orange Crop Will Reach 150,000 Boxes.

Officers of the Florida Fruit Exchange, at Jacksonville, who keep themselves posted on the condition of the orange crop throughout the State, now estimate that the crop this fall will amount to between 150,000 and 200,000 boxes. The bulk of the oranges will come from the counties of Manatee and Lee. Volusia county will come next, with from 15,000 to 20,000 boxes. The crop would probably have reached 250,000 boxes had it not been for the drought in the spring and early summer. This caused quantities of small oranges to drop from the trees, especially in the middle of the orange growing section of the State. In 1898 the probabilities are, freezes and droughts barred, the crop will reach as high as 600,000 boxes. All of the orange growers are sanguine of success. They have now tided over the worst period, that following the disaster of the freeze, and have restored their groves to something like their old-time beauty.

DUN'S WEEKLY REVIEW.

FAILURES THIS MONTH THE SMALLEST SINCE 1892.

Liquidation of a Powerful Combination in Wheat Brings a Reaction, But a Gain of 1 1-8c Occurs Afterwards—Manufacturers Are Buying But Little Wool.

R. G. Dun & Co's weekly review of trade says:

Four years ago, August 5, 1893, the first number of Dun's review was issued with failures in that month amounting to $1,450,000,000, while in the month just closed failures have only been $7,177,727, the smallest in any month since 1892. The statement of failures by classes of business for July and for 46 months shows that in manufacturing failures have been smaller than any other month of the entire period, in trading smaller than in any other month except one, and in many branches of each department smaller than in most months of which records exist. The pessimists, who have pronounced reports of gain fictitious and misrepresentations, have grown weary of their dismal views and begin to see the dawn of better days.

Last month was the first for four years of which the volume of business reported by clearing houses was larger than in the same month of 1892, and telegraphic dispatches from all parts of the country given this week show a gratifying improvement. This is partly due to a large yield for which there is good prices, though the crop is probably not as large nor the prices thus far as high as in 1892, but for cotton the price is higher and the yield probably larger than in that year. Other farm products are realizing greater prices and the possible decrease in the yield of corn may help to take the enormous supply brought over from last year. Liquidation of a powerful combination in wheat brought a reaction, but a gain of 1⅛c occurred the following day.

There has been a notable increase in the number of hands employed in the iron manufacture, because the satisfactory adjustment of the wage disputes with the amalgamated association has caused the opening of numerous establishments which have been wanting, while the miners' strike seems each day more likely to end in a permanent settlement, beneficial to both parties. Meanwhile the demand for most of the finished products is steadily increasing, the feature this week being large pipe contracts for Russian oil fields, Sumatra and Germany. While consumption does not yet equal the capacity of the works in operation and prices of iron and steel products average slightly lower, the situation is altogether more hopeful. In minor metals the consumption of tin equals the receipts, so that prices do not change and the visible supply is practically the same as a month ago, while exports of copper have been heavy and prevent a decline of lake below 11c, and realizing in lead has caused only a slight decline to 3.80.

The sales of wool, as comparative returns by months show, bear little relation to the actual consumption in manufacture, but heavy liquidation since the new tariff bill was enacted gives the impression that some dealers are no longer confident of a speedy advance. Nevertheless, prices have risen during the past few weeks nearly 1c per pound. Manufactures are buying but little, though they are rapidly increasing their output and are able to obtain an advance of about 1 per cent. in prices of goods, with rapidly increasing orders. The temporary curtailment of output by cotton mills continues, but does not yet bring improved prices for products, although the demand is generally gaining.

Failures for the week have been 213 in the United States, against 240 last year, and 29 in Canada, against 32 last year.

Crushed to Death While at Work.

Daniel Gregg, foreman of the timber force at Ishkooda Ala., ore mines, and Steve Sadler, colored, one of his helpers, met a sudden and fearful death in those mines Friday afternoon. Mr. Gregg and his gang were engaged in propping up a loose ceiling, and had erected a number of props. Suddenly the whole structure gave way and down with it came several tons of slate. Gregg and Sadler were caught under the falling mass and completely covered up. When their bodies were recovered they were both dead. Several others made narrow escapes.

THE STORY OF ULLA.

Told at the Edge of the Northern Sea, and Written for This Paper.

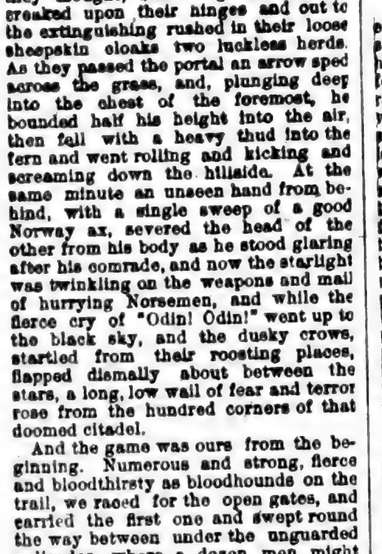
BY EDWIN LESTER ARNOLD.

CHAPTER VI.

It was just at dusk that evening: the western sky was streaked with crimson and black; the white mist was lying in thin wreaths along the purple river meadows; the landrails were croaking in the fern and the night jars churning on the oak; the little stars were twinkling in the smooth heaven, and the pale crescent of the moon was adip upon the sea when a thin curl of smoke rose from the thatch of a hut in the fishing village below the burgh. A minute after a bright tongue of flame shot up and a cry of alarm rose from inside the stockades. "Surely some careless housewife had let an ember fall among the thatch," they thought, and the great oak gates creaked upon their hinges and out to the extinguishing rushed in their loose sheepskin cloaks two luckless herds. As they passed the portal an arrow sped across the grass, and, plunging deep into the chest of the foremost, he bounded half his height into the air, then fell with a heavy thud into the fern and went rolling and kicking and screaming down the hillside. At the same minute an unseen hand from behind, with a single sweep of a good Norway ax, severed the head of the other from his body as he stood glaring after his comrade, and now the starlight was twinkling on the weapons and mail of hurrying Norsemen, and while the fierce cry of "Odin! Odin!" went up to the black sky, and the dusky crows, startled from their roosting places, flapped dismally about between the stars, a long, low wail of fear and terror rose from the hundred corners of that doomed citadel.

And the game was ours from the beginning. Numerous and strong, fierce and bloodthirsty as bloodhounds on the trail, we raced for the open gates, and carried the first one and swept round the way between under the unguarded palisades, where a dozen men might have held us at bay, and so to the inner portal, where we stabbed a brave old crone who tried to shut it in our face, and there the place had fallen—the wolves were in the fold.

And wild work we made of it! As we gained the entrance the English chieftain rushed out of the mid-door of his hall in his nightwear (for he had already gone to bed), a naked sword in his hand and by his side a fair young boy with curly yellow hair. By Thor, I would not have been the wild fowl on the neighboring marsh when that comely lad was hungry. He shot so close and straight, although the light was poor for shooting, that had there been a dozen such it would have gone badly indeed with us. At the first shaft he pierced Kolbiorn through the wrist, and the second wounded stalwart Sveinke in the thigh; then he shot one in the throat and another in the stomach, and kept us all at bay until his last arrow was spent, and then died far down on the haft of bloody Dagson's bear spear like the fierce young cub he was. As for the other — although he was stout enough of heart, yet his limbs were



"BY HIS SIDE A FAIR YOUNG BOY."

lean and old, and my merry fellows made short work with him, and he lay in the moonlight as they left him, pale and bloody across his threshold, all the evening.

Then we shut the gates to keep the screaming women in and lit a stack or two to give us light and so fell on. But why should I try to tell you all we did that evening? Why should I try to picture the wild, fierce hell of lust and cruelty and rapine that raged within those grassy shambles under the mild white starlight? And if I had a hundred pens I could not tell each incident as it befell, and if I did you might not care to listen. If I had a hundred pens I could scarce recount how, one by one, we first dragged the men from their hiding places, and how some of them fought desperately, while some submitted sullenly, but whichever way it was we killed them. Or how the women screamed and struggled in the arms of the sea rovers and cried for mercy and tore the yellow beards of their new, grimly laughing masters, and were sent down to hades, the old and lean ones and how the others—the pale, fair girls with fear-bright eyes and long, loose hair and bare feet, all in their torn, dishevelled night gear—were bound hand and foot and lashed to the pillars in the dining-hall, or how the little ones moaned and wailed, and hid behind the heaps of dead and strove to wake with timid petulance those who would never wake again, or, often, with their cherished playthings locked tightly within their arms, crept into wondrous corners hid from us—ask me no matter of it, for I could surfeit you with horrors until compassion dimmed your eyes and stayed your reading!

For an hour the place was full of the guttural shouts of men and the shrieks of women, the scream of the maiden and cry of the mother losing her little one, the wail of the captive and the moan of the dying down in the shadows; and men ran here and there struggling with white-shrouded forms, or dragging by heel or hair strange shapes into dusky corners, and the fires blazed and the sparks fell—and then, presently, because there were no more to kill, the noise died down until presently silence reigned, broken only by the laughing and shouting of my men, and then we gathered in the hall, refit the lamps, brushed off the remnants of the earlier evening supper and laid out for ourselves all the best we could put our hands on. And fierce, wild revelry my fellows made of it. The hot blood of rapine and pillage had got into their veins and they heated it higher with the strong, abundant drink from that British chieftain's hiding places, until they were more like a tawny, handsome band of furies than mortal men—gods! I think I never brought such a crew of devils to that shore before. They made the rafters ring with their wild pagan hymns; they danced and shouted and ate and drank, while the pale captive girls stood huddling in the shadows or waited trembling on them, and the wine and ale went streaming down the floor among the blood and litter, and the torches flared, and the dogs howled outside. Oh, it was strange, wild revelry and went on for half the night-time.

It must have been near the dawn and most of the maidens lay swooning upon the floor between weariness and terror, and half the rovers were drunk as swine, when they fetched in the dead chieftain, setting him, pale and bloody, in his chair, and putting a cup into his hands while the ribaldest fellow there made a song and sung it to him. Then next a cry arose—who started it I know not, but may God forgive him—for the English franklin's daughter! We had not seen her—she was not among the captives—and now a hundred buxom fellows were on foot hunting with torch and lamp high and low in every crack and corner of the burgh to find her. Unhappy damsel, they hunted futilely everywhere until they came to the small round tower on the cliff verge; there the strong oak door was barred and shut from within, and a wild yell of drunken pleasure told their quarry was at bay.

What was it that made me just then so sick of all that revelry and sat like a black foreboding on my soul? I know not, but I turned, and, weary of the glare and tumult, slowly left the burgh and walked down to the beach, where lay my ship, just as the men were making a tall mound of sticks and heath and timbers about the door of the doomed tower that held the silent princess.

Climbing on board I gave orders to those who had stood by the Wolf to make all ready for the sea, then threw myself down listless, strangely sad, and shilly as one in ague, by my place at the tiller to await the coming of the pillagers. And presently, one by one, the sons of the creek came reeling down the path, singing as they stumbled down the darkness and carrying bundles and bags, and furs, and cups, and weapons in sheafs, and dragging faltering slaves, and surly, snarling dogs in leashes, and so at last when they were all on board but one, that one came running down the path, and before he had got half way to us the burgh was all illuminated with a rosy light, and looking up we saw that the laughing villain had fired it in twenty places, and not only the dwellings but also the great mound of fuel his friends had built against the tower door.

CHAPTER VII.

Up came our anchor and out we lurched upon the waves once more. We set sail and drifted slowly down under the cliff where stood the castle, and as we came the fire raged furiously until when we were below that beetling brow we were sailing on a heaving molten sea of blood, and all our spars and cordage were shining copper red, and all the upturned faces of the vikings were flushed and hectic in the shine—and then—oh, how can I write it?—just as we came the nearest a white woman's form stepped frantic out on top of the tower and clasped her hands across her eyes, and hid her face and wept. And I—oh the fiercest, strangest gust of agony and joy sprang up within my heart—I gasped and glared, and, all forgetting the strangeness of it in the horror of the moment, dropped the tiller, and leaping to the clanking bulwarks stared another moment, and then, out of my deepest heart, out of the hot inspiration of my very soul, burst a fierce, wild cry of "Gunna!"

And in an instant that white form was on her feet and staring terror-dazed at us, and then she saw me by the shrouds as I stood limned in gold, with all my ship against the black setting of the night, and gazed down steadfastly upon me for a minute, then clapped her hands upon her bosom and stretched them wildly to me, and above the hissing of the flame and the thud of the white surf upon the rocks I heard her cry, "Ulla! Ulla!"

And now the strength of twenty jarls was in my heart. I tossed off as though they were baby fingers the strong grip of two stout fellows who thought to stay me and in a minute was in the surf and striking out bravely for the land. The great frothy pillows of the sea boiled for a space under my chin, and now I was deep down in a humming black sea valley and anon mast high upon a curling crest of spume, and then, all in the black shadow of the cliff, the black waters seemed to dissolve into a hell of ghostly chaos and white thunder, and my feet touched the pebbly bottom. I landed somehow, but how only the pale Norns can tell, and scrambled up a sheep track the boldest of my men had said in daylight was impossible; came to the palisades and clambered over them, and rolled into the fort on top of two mangled bodies, and up again, and now, in the golden shine of the fire, rushed to the great hall.

There in his chair of state was the dead chief just as my robbers had left him, with mouth wide open and fixed eyes staring grimly down his hall and golden wine cup clinched within his fingers and bloody night gear wrapped about him, while on his face the streaks of pain and anger twitching with a hideous mockery of life as the smoke curled and the flames went soaring overhead in rosy eddies. To right and left was wild disorder, tables overturned and benches cast about, broken flagons and squandered victuals, bent swords and cleft targets, and costly stuffs pulled into shreds and dead men a-sprawl upon their faces, and blood and dirt and litter, and over all the fire was humming its fierce song as it mounted from point to point in the roof and shed great burning

"WAS IN THE SURF AND STRIKING OUT BRAVELY."

flakes and embers on us below. But nothing I cared for blood and litter, but with a foot of wind and a heart hotter than the flames above rushed through the banquet place and brushing rudely by the scowling king got out to the inner court and so reached the portal of the tower.

Over a red path of cinders I flew, and with my bare hand cast the flame-ro en doorway into red ruins, and up the twining oaken steps I raced—scarce noticing that they fell to ashes as I passed—and in another moment, in a moment of wildly mingled feelings, I was out upon the burning parapet, and there upon her knees, leaning against the outer walls, and seeming asleep was the white maid whose fair face had haunted my forest path and shone upon me through the drift and reck of ten years' storm and battle.

Down I went upon one knee and, deep, strong love and gentle compunction welling up in my heart, took the maiden's head upon my shoulder and her hand in mine, and in a minute she gave a great, shivering gasp of pain and fear and opened her eyes and looked up. By sweet Skulla herself, it was nearly worth the interval of pain to see the glad light of pleasure that was lit within them as they met mine, to feel the warm clasp of her hand and to know unspoken that our hearts were one and our troth unbroken. It was a happy moment, but all too brief, for I knelt and framed the hot words of love and courage and drew her sweet, yielding form to my bosom, and rained my long garnered kisses on her dear, pale face. I felt the oaken platform whereon we stood heave and tremble, and, with a gasp, I looked about and saw the cruel flame had gnawed through every joist upon that turret, and the whole platform was crackling and blistered and hanging by a thread, while down below, hungry for its fall, was the great roaring, seething funeral of the inner tower. "Gunna!" I cried, "my own? there is but one way. Look! look! The stairs are gone, the platform rocks, and down below the courtyard is cruel hard. Gunna, my life! come—quick!—there—so—and hide your face deep down to my wolf-skin folds!" And as she fled to me and leapt into my arms I hid her face in my cloak and stepped off on to the narrow rim of cracked and ragged parapet just as the platform fell into ruins and went thundering down into the yellow and crimson caldron underneath.

For one grim minute I poised myself upon that narrow, giddy shell of blackened wall with the howling flame roaring behind and the dark vortex of the sea thundering in dim dreadfulness two hundred feet below upon the other, then—wrapping my sweet burden still closer to my bosom and muttering between my

"NOW FOR GREEN BALDERSUND—OR OLD VALHALLA!"

Valhalla!"—leapt bravely out into the night!

This is all! This is the story of Ulla the viking, Ulla the priest. The lamp wavers to its ending—the ink is dry.

When the clansmen picked us up the maid was dead, and so was the light and the loving of Ulla. For three days we staggered back across the melancholy ridge and furrow of the black North Sea, and then we buried her here under a grassy mound by the white lip of the ocean in Baldersund. And grief, dull and abiding, sat in my heart, and none could assuage it. At last, after many years, there came one barefooted, a cross and a staff in his hands, from over seas and whispered comfort. He poured the unction of the new faith into my heart and the baptismal water on my head and bid me forget and arise anew. And I took the cowl of him, learning to read and write, and built me a hut by the green mound I loved and strove by penance and privation to do as I was bid.

But can I forget? Can the sharp thong and the mean fare purge the hot, free, loving spirit in my blood? At times it shakes off the shackles of sweet insipidness, and then I—I, old Ulla Erlingson—while the pale ghost-fire plays upon the dark summit of my mound and the black sea booms dismal in the black night distance, go out upon that dear, shrouding turf and cast myself upon my face, and tear my white hair, and mock the wild wind and waves with my still wilder grief.

We have noticed that when anyone in a crowd has a bit of scandal to relate, it is not until the speaker is through talking, and all have had their curiosity appeased, that someone says something about gossiping being so improper.

EMPLOYMENT, which Galen calls "Nature's physician," is so essential to human happiness that indolence is justly considered the mother of misery.

TRUMPET CALLS.

Ram's Horn Sounds a Warning Note to the Unredeemed.

THE wish to shine makes men fools.

The devil's head is longer than his tail.

Don't try to impart ideas by your feelings.

The man who can tell all he knows of religion knows very little.

The profit on whisky is conspicuously advertised in the clothing of the saloon-keeper's wife.

You cannot fool God with a pinch of cloves.

A little sin has as much death in it as a big one.

The gurgling of the faucet is the devil's delight.

Make a call too short, rather than be yawned out.

The was is not over because we have lost a battle.

Whoever knows God well wants to know him better.

Some would rather face a cannon than their own evils.

Prayer is always easy, when we kneel on praying ground.

The man who knows how to live well will not have to learn how to die well.

Our prayers for guidance will not be heard, unless we are willing to be led.

The devil has to fight hard for all he gets in every home where Christ is king.

In the robin redbreast speaks the same Christ who came to "seek and save."

Nature is God's; botany and geology are man's; so religion is divine, theology human.

The man weighs little on the Lord's side who is not throwing an ounce of weight against the saloon.

The prohibition that gives society the children who never saw a drunkard can't be such a big failure.

On One Condition.

There is probably no man in the country who has a wider reputation as a bridge builder than W. H. Brown, chief engineer of the Pennsylvania Railroad. No bridge project, no matter how great its magnitude, is entered upon with more readiness, both as to the preparation of the plans and their successful execution, than by him.

His promptness to undertake great bridge projects, however, is no greater than his readiness to answer absurd engineering questions which are often put to him. This was evidenced by his reply to a clergyman to whom he was introduced some years ago in Pittsburg by the late H. H. Houston, a director of the Pennsylvania Railroad. Mr. Houston introduced him as the greatest bridge builder of the country, whereupon the preacher, turning to Mr. Brown, asked him if he could build a bridge to eternity. "Yes, if you furnish the abutments," was the prompt reply.—Philadelphia Record.

TURNED THE OTHER CHEEK.

I kissed her lightly on the cheek,
Her face blazed up as I could see.
I thought in scathing terms she'd speak—
She turned the other cheek to me!

SO FAR AND YET SO NEAR.

"Can you tell me how far it is to Muggleton?"

"Well, the way you're going it's about 85,000 miles."

NOT HER OWN.

Mrs. Nutte—Don't you think there is a noticeable improvement in my appearance?

Nutte—Ye-es; but I fear it's patented.

ONE CASE WHERE IT DOES.

Optimus—I don't think that the world is always willing to believe the worst about a man!

Pessimus—Get a black eye and see.

A GENTLE HINT.

Mr. Kashbocks—My money is a lot of trouble to me.

Miss Wayting—They say every man ought to have some woman to share his troubles.

SWITCHING HIM OFF.

Mrs. Youngish—Oh, Bob, what shall I do? Baby is crying because I won't let him pull all the fur off my new muff.

Mr. Youngish—Well, that's all right. Give him the cat!

THE TEMPTATION TOO GREAT.

Ellen—Why don't you put a couple of oysters on those black eyes o' yourn?

Tom—I did, I tried it twiced, but somehow I can't never get them no furder up than my mout'.

NOT A SENSITIVE PLANT.

"What is a hardy rose bush?"

"It is one that doesn't mind your wife pulling it up by the roots every few days to see if it has begun to grow yet."

A RECIPE.

Dick—One is so apt to lose sight of one's friends.

Harry—That's not necessary. Mine stick to me with touching fidelity.

Dick—How do you manage it?

Harry—Oh, I borrow money of them.

A MODERN SCHEHEREZADE.

"Meeker," observed a friend of the family, "is a very superior woman. She can converse intelligently, I believe, on a thousand different topics."

"Yes," sighed Mr. Meeker, "and she does."

A DECIDED HINT.

Mother—What in the world ever possessed you to give Mr. Bingo a shaving set?

Daughter—He never seems to realize how tender my face is.

HIS TOOLS.

Nonie—They found nothing on that dead cashier in Canada but a cake of soap.

Laura—That's probably what he cleaned up the bank with.

KNEW THEIR DUTY.

"How did the passengers behave after it was discovered that the vessel was on fire?"

"Admirably! They got the panic-stricken crew into the boats and then subdued the flames."

ARTFUL AUDACITY.

"So Boracks is going to marry that aged Munn girl, is he?"

"Yes, and the funny part of it is that he told her he wanted to marry her on account of her fortune."

"Eh?"

"He told her she was too young and foolish to have the care of so much money."

SOME EXCUSE.

Blinks—"The paper says the Czar is a very illiterate man."

Winks—"Not up in the classics, eh?"

Blinks—"Worse. They say his letters are full of errors in orthography."

Winks—"But, my dear sir, just think. He has to spell in Russian."

A WARNING.

"It seems to me," said the living skeleton, as he reached for the plate of beef steak, "that your business is falling off."

"So is yours," hissed the manager, as he quickly removed the dish from the table, "and you'd better be doing it."

HAD HEARD IT BEFORE.

He arrived home at 3 A. M. and told his wife that he had been sitting up with a sick friend.

"Do you expect me to believe that?" she inquired.

"Do you think I would tell a barefaced lie?" he asked, with an injured air.

"Certainly not," said she. "That one is so old it has whiskers."

No Respecter of Persons.

When Admiral de Horsey, at Port Royal, was one night returning to his flag-ship alone, his way to the boat led across the barrack square. A black sentry of one of the West India regiments halted him at the gate with, "Who goes dar?" Great was the admiral's annoyance to find he had neglected to get the password. "That's all right," he said carelessly, hoping to overcome the man's scruples by indifference, "you know who I am." "Dunno know nobody, sar," replied the sentry pomposly; "you can't go in dar." "Why, I'm Admiral de Horsey!" "Well, you can't go in," was the reply. "I don't care if you's Admiral De Donkey, I don't. — Household Words.

THE FARM AND GARDEN.

ITEMS OF INTEREST ON AGRICULTURAL TOPICS.

Cut the Land in Condition.—Care of Grain Drills.—White Specks in Butter.—Propagating Currants and Gooseberries.

GET THE LAND IN CONDITION.

Professor Bailey says that the first step in the enrichment of unproductive land is to improve its physical condition by means of careful and thorough tillage, by the addition of humus, and perhaps by underdrainage. It must first be put in such condition that plants can grow in it. After that the addition of chemical fertilizers may pay by giving additional or redundant growth.—Farm News.

CARE OF GRAIN DRILLS.

The gain drill is much too expensive an implement to be left to rust by neglect in caring for it. The fertilizer drills are especially liable to this injury, because they have held some acids which cannot help rusting whatever iron they come in contact with. While in use the friction prevents rust formation, but if phosphate is left in the drill over night some injury must result. Worse still happens if the drill is left out of doors to be wet and rusted by rains. We have known careful farmers who kept grain drills in good condition twelve to fifteen years. But they kept them under cover and on an earth, not board floor, and always greased the parts most exposed to rust before putting away.

WHITE SPECKS IN BUTTER.

Sometimes when the milk is set in shallow pans, white specks in butter from the cream drying on top, forming small portions that are too hard to churn into butter. These particles do not take color like the rest of the butter, and the specks are thus caused. This may be remedied by carefully straining the cream when put into the churn. Another cause is this: When some milk is skimmed off with the cream, as is usually done in the case of deep cold-setting, this milk settles to the bottom, gets overripe, and forms a curd, which will not break up in churning nor run off with the buttermilk. This can be remedied by not letting the cream stand so long before churning, or by frequent and thorough stirring of it during the process of ripening. These particles can also be taken out by straining the cream.—The Silver Knight.

PROPAGATING CURRANTS AND GOOSEBERRIES.

Take cuttings of currants in September after the new wood has ripened, as may be seen by having turned brown. Make them about six inches in length, from the new wood, removing the leaves. Plant them so only one bud is left above the surface and they will take root in the fall and be ready to make growth promptly in the spring. Some leaves or litter should be laid around them when cold weather comes on, to prevent them from heaving when the frost comes out of the ground.

Cuttings of the gooseberry are more difficult to root, but treated in the same way a portion of those made from our American varieties will root. But the better way to raise gooseberries is by layering. This can be done as early as the latter part of July. Draw the soil up about the bush and lay the branches partly down upon it and head fine soil up over them, spatting it down well with the back of the spade to make it lie close to the wood. The leaves should be removed from the portions of stems which are covered. Leave the plants earthed up in this way all winter, and in the spring level off the soil and cut away the rooted branches and plant them out to make a set of strong roots before final transplanting for fruiting. From the plant thus employed, (called a stool plant,) another set of shoots will grow, and at the proper time in summer it can be earthed up, and thus an actual crop of plants produced.—Vick's Magazine.

POISONS.

The oleander has a deadly poison in its leaves and flowers, and should not be set where young children are. It is too dangerous, beautiful though it is. The flower and the berries of the wild bryony possess a powerful purgative, and the red berries, so attractive to children, have proved fatal in some cases. The catalpa tree has a poisonous bark. Fool's parsley has tuberous roots, sometimes mistaken by children for turnips, while the leaves may be mistaken for parsley, though their darker color and nauseous taste should prevent this. This plant has produced death an hour after eating. This must rank among the most dangerous plants belonging to the umbelliferous order. Meadow hemlock, thought to be that which Socrates drank, kills by its intense action on the nerves, producing complete insensibility and palsy of the arms and legs, and is a most dangerous drug except in skilful hands. In

THE JOKERS' BUDGET.

Jests and Yarns Made and Told by Funny Men of the Press.

TURNED THE OTHER CHEEK.

I kissed her lightly on the cheek,
Her face blazed up as I could see,
I thought in scathing terms she'd speak—
She turned the other cheek to me!

SO FAR AND YET SO NEAR.

"Can you tell me how far it is to Muggleton?"

"Well, the way you're going it's about 25,000 miles."

NOT HER OWN.

Mrs. Nutte—Don't you think there is a noticeable improvement in my appearance?

Nutte—Ye-es; but I fear it's patented.

ONE CASE WHERE IT DOES.

Optimus—I don't think that the world is always willing to believe the worst about a man.

Pessimus—Get a black eye and see.

A GENTLE HINT.

Mr. Kashbocks—My money is a lot of trouble to me.

Miss Wayting—They say every man ought to have some woman to share his troubles.

SWITCHING HIM OFF.

Mrs. Youngish—Oh, Bob, what shall I do? Baby is crying because I won't let him pull all the fur off my new muff.

Mr. Youngish—Well, that's all right. Give him the cat!

THE TEMPTATION TOO GREAT.

Ellen—Why don't you put a couple of oysters on those black eyes o' yourn?

Tom—I did. I tried it twiced, but somehow I can't never get them no furder up than my mout'.

NOT A SENSITIVE PLANT.

"What is a hardy rose bush?"

"It is one that doesn't mind your wife pulling it up by the roots every few days to see if it has begun to grow yet."

A RECIPE.

Dick—One is so apt to lose sight of one's friends.

Harry—That's not necessary. Mine stick to me with touching fidelity.

Dick—How do you manage it?

Harry—Oh, I borrow money of them.

A MODERN SCHEHEREZADE.

"Meeker," observed a friend of the family, "is a very superior woman. She can converse intelligently, I believe, on a thousand different topics."

"Yes," sighed Mr. Meeker, "and she does."

A DECIDED HINT.

Mother—What in the world ever possessed you to give Mr. Bingo a shaving set?

Daughter—He never seems to realize how tender my face is.

HIS TOOLS.

Nonie—They found nothing on that dead cashier in Canada but a cake of soap.

Laura—That's probably what he cleaned up the bank with.

KNEW THEIR DUTY.

"How did the passengers behave after it was discovered that the vessel was on fire?"

"Admirably! They got the panic-stricken crew into the boats and then subdued the flames."

ARTFUL AUDACITY.

"So Boracks is going to marry that aged Munn girl, is he?"

"Yes, and the funny part of it is that he told her he wanted to marry her on account of her fortune."

"Eh?"

"He told her she was too young and foolish to have the care of so much money."

SOME EXCUSE.

Blinks—"The paper says the Czar is a very illiterate man."

Winks—"Not up in the classics, eh?"

Blinks—"Worse. They say his letters are full of errors in orthography."

Winks—"But, my dear sir, just think. He has to spell in Russian."

A WARNING.

"It seems to me," said the living skeleton, as he reached for the plate of beef steak, "that your business is falling off.'

"So is yours," hissed the manager, as he quickly removed the dish from the table, "and you'd better be doing it."

The leaves should be removed from the portions of stems which are covered. Leave the plants earthed up in this way all winter, and in the spring level off the soil and cut away the rooted branches and plant them out to make a set of strong roots before final transplanting for fruiting. From the plant thus employed, (called a stool plant,) another set of shoots will grow, and at the proper time in summer it can be earthed up, and thus an actual crop of plants produced.—Vick's Magazine.

POISONS.

The oleander has a deadly poison in its leaves and flowers, and should not be set where young children are. It is too dangerous, beautiful though it is. The flower and the berries of the wild bryony possess a powerful purgative, and the red berries, so attractive to children, have proved fatal in some cases. The catalpa tree has a poisonous bark. Fool's parsley has tuberous roots, sometimes mistaken by children for turnips, while the leaves may be mistaken for parsley, though their darker color and nauseous taste should prevent this. This plant has produced death an hour after eating. This must rank among the most dangerous plants belonging to the umbelliferous order. Meadow hemlock, thought to be that which Socrates drank, kills by its intense action on the nerves, producing complete insensibility and palsy of the arms and legs, and is a most dangerous drug except in skilful hands. In August it is found in the fields by the seashore and near mountain tops in full bloom, and ladies and children gather its large clusters of tiny flowers in large quantities, not suspecting their poisonous character. The ball hemlock is everywhere known to be poisonous. It is distinguished by a peculiar "mousy" odor, which generally can be recognized by squeezing the leaves, which are deep green in color and trebly compound, the small lobes being lanceolate and deeply cut. It is said that the peculiar smell of this plant can be detected in water containing not more than one-fifty-thousandth part of the juice.—The Silver Knight.

THE HORN FLY.

The best way of fighting the troublesome horn fly is by the application to the cattle of an emulsion of some kind which will kill the insects already there, and keep others away. Fish oil, to which a little carbolic acid—about a teaspoonful of the acid to a pint of the oil—has been added, makes a very cheap and effective application. Kerosene emulsion used as a spray is also good, being especiallly adapted to large herds. The emulsion is made by adding a half pound of soap (dissolved in a gallon of boiling water) or two gallons of kerosene. This emulsion when thoroughly mixed and allowed to cool, assumes the consistency of clabber milk; when used as a spray, it is diluted with water in which tobacco stems have been boiled.

In the Northwest, a "horn-fly trap" is in use. The device is described as a structure six feet wide and four feet high, fitting closely in a stable door. On the outer side is hung a curtain, while the inner side, next to the doorway, is composed of broom corn, extending from the top downward and from each side toward the center, so that the cow in going through, is brushed over every part of the body, while the elastic broom corn, springing back into place, prevents the flies from following her into the stable. The roof of the structure is of wire netting, in which is a trap which the flies can enter but cannot leave. In use, the cow is driven into the pen, the curtain let down behind her, and as she passes into the stable, the broom corn brush sweeps off the flies, which by a shake of the curtain are sent up into the trap. The editor of the Canadian Live Stock Journal saw twenty-eight cows put through this contrivance in twenty-eight minutes, including the placing of the device at three barn doors.—Farm News.

THE VALUE OF THE TOAD.

The Massachusetts Experiment Station summarizes the evidence in regard to the economic value of the toad as follows:

Favorable.

1. It feeds on worms, snails and sow bugs, common greenhouse pests.
2. It devours a large number of myriapods which damage greenhouse and garden plants.
3. It feeds to some extent on grasshoppers and crickets.
4. It destroys large quantities of ants, insects often injurious and usually obnoxious.
5. It consumes a considerable quantity of May beetles, Rose chafers, "click beetles," potato beetles, cucumber beetles and weevils, all more or less injurious to crops of various kinds.
6. It feeds on tent carterpillars, gypsy moths and other fruit-tree pests.
7. It is a prime destroyer of cut worms and army worms, common pests which often cause great damage.

Unfavorable.

1. It destroys carabid beetles, insects of a highly beneficial character.
2. It devours an occasional ichneumon fly and "lady bird," beneficial insects.
3. It feeds to a small extent on spiders, generally considered to be valuable as insect destroyers.
4. It devours carrion beetles, insects indirectly helpful to man.

To recapitulate, 11 per cent. of the toad's food is composed of insects and spiders beneficial or indirectly helpful to man; 80 per cent. of insects and other animals directly injurious to cultivated crops or in any other ways obnoxious to man. Further comment upon the valuable services of the toad would seem unnecessary.

BIRD CULTIVATION.

The cultivation of birds is one of the legitimate branches of horticulture. It is a mistake to suppose that because many, like the robin, bluebird, catbird and grosbeaks, take their meals from our trees, they are therefore a detriment to our employment. On the contrary, if we count the birds into the family, and plant with the understanding that our policemen must have free board and lodging, we will soon find that they take very little more than that. The birds that are of most advantage to me are grosbeaks, robins, catbirds, song-sparrows and their cousins, the indigo-bird, the wren, king-bird and all the finches. The only birds to be driven out are English sparrow, blackbird and crow. The orioles are sometimes more destructive than helpful; but as a rule they do little mischief, unless they get at a field of peas. The fly-catchers, like the swift, are exceedingly welcome. But above all I prefer to encourage the catbird. When this bird finds himself thoroughly at home and quite safe from molestation, he pays his way with music alone. What he cannot do in this line few birds can.

He fools me by imitating other birds, squirrels and Guinea hens. I think him fully equal to the Southern mocking-bird. A cousin of the robin, his habits are exactly opposite. The robins build anywhere, without secretiveness; but the catbird has a marvellous gift at hiding its nest. It is therefore well to have big clumps of mock-orange and other thick shrubs, and hedges of arbor-vitae. In these he will manage to stow away his nest so that you will be compelled to hunt closely to find it. I live in the centre of nine acres of shrubbery and gardens. Without the birds I should be the helpless prey of insects. The robin gets here from about March 5th to the 15th; the grosbeak about the first of April; the swift touches us almost invariably on April 24th; the catbird on or about about May 5th; scarlet-tanagers reach us soon after; but I am unable to determine their exact arrival. These superb birds have become quite at home with me, after many rebuffs from naturalists. At last I am able to make the surroundings safe, so that no bird is ever molested. In turn all varieties unite to fight out the English sparrow and the blackbirds as common enemies.—New York Independent.

"IT MADE THEM WILD."

The Reason Why Apache Indians Wear Their Hair Long.

As with Samson of old, the Indians' wildness lay in their long hair, which the returned educated Indians wore because, as they boasted, "It made them wild." All energies were bent to compel the adult males to cut their hair and adopt civilized attire in vain. Even the police would not wear their uniforms. A proposition to cut their hair, from a former agent, resulted in a mutiny. The duties of the police are to arrest offenders and to herd the beef cattle purchased for their own consumption. Rations were considerably increased to the police to make it worth their while to think twice before leaving the force, and they were informed that when there were no police to herd the beeves the tribe would go without. That was a different proposition. Two members who had been to school were discharged for wearing long hair. One old fellow, as a special favor, cut his hair, but it cost me $5. His wife made his life a burden, and he in turn appealed to me to hasten with the rest.

By using rations and other supplies as a lever, I induced a few more to cut, and then I directed the police to cut theirs or leave the force. They reluctantly complied, but once accomplished they were only too eager to compel the rest, and they cheerfully, under orders, arrested and brought to me every educated Indian on the reservation. There were twenty of these, georgeous in paint, feathers, long hair and blankets, educated at an expense of thousands of dollars, living in their brush shelters wilder than any uneducated Indian on the reservation, and fully as lazy and ambitionless. The "leaven" had failed to work. The mass absorbed them and compelled them to backslide. They soon had a hair-cut and a suit of clothes put on them. The Indian office, at my request, issued a peremptory order for all to cut their hair and adopt civilized attire; and in six weeks from the start every male Indian had been changed into the semblance of a decent man, with the warning that confinement at hard labor awaited any backsliders. There has been none, and the task of moving them upward has been perceptibly easier from the time scissors clipped off their wildness.—The Outlook.

Russian Flax.

Despite the fact that Russia is the largest grower of hemp and flax in the world and possesses an unlimited supply of the cheapest labor, the industry has not developed according to expectation, one of the principal reasons being unscientific cultivation and preparation. A government experiment flax station was established, and the results in that district showed an increase of fifty per-cent in the value of the fiber, and seventy-five per cent in quantity, and similar stations will be established throughout the flax regions and better methods adopted for collecting and sorting the flax grown by the peasantry.

Popocatepetl's Rabbits.

One would hardly look for a new species of rabbit high up on the sides of a great volcanic mountain. Yet Dr. C. H. Merriam has recently described just such an animal, which was discovered at an elevation of 10,000 feet, on the flank of Popocatepetl, the "mountain that smokes," near the city of Mexico. It is remarkably small, does not jump like an ordinary rabbit, but runs on all fours, possesses no tail, has short ears, and lives on grass covering the slopes of the mountain below the region of snow and volcanic sand.

GOSSIP FOR THE FAIR SEX.

Items of Interest on Feminine Topics.

The Queen's Parasol. Ningpo Work Bag. To Clean Gloves. New Fad of Fashionable Women. Etc., Etc.

THE QUEEN'S PARASOL.

The parasol or sunshade which the queen carried in procession, was presented to her by the oldest member of the House of Commons, the Hon. C. Villiers, who is known as the "Father of the House." The parasol was entirely covered with costly flounces of the finest Chantilly lace. It was mounted upon an ebony stick with gold top, and a knob handle of gun metal set with the Queen's cypher and V. R. I. in diamonds, and had an inscription in gold letters inlaid round the handle thus: "Presented to her Majesty on the occasion of her Diamond Jubilee, by her oldest parliamentary member, C. Villiers."

NINGO WORK BAG.

Have you a Ningpo fan among your summer toggery? If so, you will appreciate the frivolous little work bag which can be fashioned from the rustic wind wooer. The fans are quite inexpensive, twenty cents being the price for the gayest designs in scarlet and orange. Let us suppose you have selected one as vivid in its coloring as the heart of a Jack Rose. Now, all you have to do is to prepare a bag of silk, leaving the bottom open, so the edges may be fastened to the edge of the fan. When the drawing strings are brought into place the pliable straw will curl upward, forming on each side of the silk bag quite a substantial guard for its contents. The handle, which is left on the fan, gives you a fine grip.—New Orleans Picayune.

TO CLEAN GLOVES.

Put the glove into a bowl and pour naphtha on it, squeezing it up in the hand and seeing that every part is thoroughly wet; so long as this is accomplished, not a great deal of naphtha need be used. Three or four tablespoonsful have been made to clean a pair of gloves.

Lay the wet glove on a clean cloth and use another for the rubbing, which should be gently continued until the glove is dry, using fresh parts of the cloth as it becomes soiled, and not neglecting any portion of the kid surface, or there will be streaks to show for this oversight.

Open the window for a few moments, and you may wear these same gloves, without the slightest odor from them in the course of an hour or two.

NEW FAD OF FASHIONABLE WOMEN.

The fashionable maids and matrons in town have taken unto themselves a brand new fad. They are actually crowding out the men from the shops which heretofore have catered only to masculine trade. No longer do the best dressed women in town purchase their shirt waists at a dry goods shop, nor their gloves and neckties at an establishment which purveys only to women patrons. It is to the men's furnishing stores they go when these and many other accessories of their toilet are purchased.

The idea is of English origin and comes straight from London. The price asked by the outfitter is invariably twice as much as the dry goods houses charge. This is particularly so in the case of shirt waists. But the fashionable woman will tell you that she gets her money's worth in the superior cut of the waist and the knowledge that it possesses all the latest frills.—New Orleans Picayune.

SHAKESPEARE'S HEROINES.

From the following list of Shakespeare's heroines it is evident that the bard had a knack for selecting beautiful names: Adriana, Aemilia Alice, Anne, Andromache, Beatrice, Bianca, Blanche, Bona, Culphurnia, Cassandra, Celia, Ceres, Charmian, Cleopatra, Constance, Cordelia, Cressida, Desdemona, Diana, Dionyeza, Dorcas, Eleanor, Elinor, Elizabeth, Emila, Francisca, Gertrude, Goneril, Helen, Helena, Hermia, Hermione, Hero, Hippolyta, Imtogen, Iras, Iris, Isabel, Isabella, Jacquenetta, Jessica, Joan, Julia, Juliet, Juno, Kate, Katharina, Katherine, Lavinia, Lucetta, Lychorida, Margaret, Margery, Maria, Mariana, Marina, Miranda, Mopsa, Nerissa, Octavia, Olivia, Ophelia, Patience, Pauline, Perdita, Phebe, Phrynia, Portia, Regan, Rosalind, Rosalie, Sylvia, Tamora, Thaisa, Timandra, Titania, Ursula, Valeria, Venus, Viola, Violenta, Virgilia, Volumnia.

GOLD HOOP EARRINGS.

In spite of the continued protests by physicians and lovers of simplicity, the downfall of the earring is not yet accomplished. Not only that, but the newest earrings are far more of an offense than their immediate predecessors. It is announced that the immense jeweled hoops of a quarter of a century ago are again to be revived, and the announcement is considerably strengthened by the fact that several of the fashionable set in New York have already appeared wearing these striking articles of jewelry. The newest hoops are nearly as large as bracelets. They are studded with diamonds or other gems, but in some cases the chased gold is its own ornamentation. The effect is barbaric but not unbecoming. Women who have adopted this fashion prefer antique jewelry, when it is obtainable, to the modern imitations. Old Etruscan hoops, imported from Italy for a season's wear, are now particularly in demand.

LAUGHTER AND WRINKLES.

Nine persons out of ten, if asked to give what they consider the cause of wrinkles, would probably reply that it is worry and care. This, however, is by no means always the case, for, as a matter of fact, many of them come from laughing. There is, after all, an art in laughter, and to know how to laugh is really quite as important as to know when to do so. If you laugh with the sides of your face the skin will work loose in time, and wrinkles will form in exact accordance with the kind of laugh you indulge in. The man who always wears a smirk will have a series of semi-circular wrinkles covering his cheeks. A gambler, who is accustomed to suppress his feelings, generally has a deep line running from each side of his nose to the upper corner of his mouth, which in time extends to the chin, forming the shape of a half-moon. A cadaverous person is usually marked with two wrinkles, one on the jaw and the other under the eye, meeting at right angles at the cheek bones. The student's wrinkles form on the brow, while those of the schemer come round his eyes and resemble the spokes of a wheel.

LATEST IN SLEEVES.

There are at least a hundred kinds of new sleeves, from the severely plain graduating to the slightly fulled ones at the shoulders, and then those of extreme fluffiness. A very odd one for a grenadine gown is a puff of the grenadine, then a flounce of lace three inches deep, then another puff, more lace, still a smaller puff, and lace falling almost to hide the hand. For organdie and dimity gowns the tight sleeve is in high favor with the narrow ruche of the same organdie at intervals of every two or three inches from the wrist to a deep ruche at the shoulder. One graceful Persian lawn sleeve is made quite tight with three draped ruffles forming scollops, one over the other at the shoulders, and the lace of the yoke made a top scollop. The mountain resorts call for so many cloth gowns that great ingenuity is being used in the sleeves. The upper puff from the shoulder half way to the elbow is graceful, made from a plaid material, while the cloth from the cuff meets the upper in slashed tabs ornamented in three rows of buttons. Another fancy one is the reverse of this—the tabs being on the shoulder part and buttoned down at the elbow.

FASHION NOTES.

The embroidered cloths and cashmeres remain popular in heavy gowns.

Jet coronets are seen on many of the summer bonnets.

Trimmed skirts increase in favor as the season advances.

With the light hat or bonnet wear a white veil with black dots.

Sashes of chiffon and crepe de chine in light, dainty colors are a pretty feature of the summer gowns.

There is a rage in Paris for gray in every tint and tone and in every material from serge to satin brocade.

Some especially up to date purposes are of white leather stamped with violets.

Most of the new tucked evening gowns of gauzy material have rows of handsome Venetian lace insertion on bodice and skirt.

Cloth, pique, India silk, mousseline, chiffon and simple organdie are all honored alike, the question of perference being a purely a personal one.

Gros de Tours is one of the popular silks this summer, and has a soft finished corded surface, slightly heavier in quality than taffeta, but less glossy.

Dark blue veils are all the rage in Paris, with cornflower blue hats trimmed with feathers in two shades of blue, blue chiffon and green roses.

Pure snow white is in fashion again, and nothing can be much prettier than the colored straw hats trimmed with white chiffon, white ostrich feathers or dead white wings.

The season's frocks for little people are quite as elaborate as those designed for older people and follow closely the same rules in regard to smaller skirts and sleeves.

Tailor-made costumes have a much shorter coat than those worn last year, and are more closely fitted to the figure, so it is an easy matter to bring [illegible]

CHILTON COUNTY CALL.

Subscription price, $1.00 per year in advance.

Entered at the postoffice at Thorsby, Ala., as second-class matter.

The British possessions in America have an area of 250,000 square miles more than the United States.

On every quarter turned out the United States mint makes a profit of about five cents. On every ton of pennies produced there is a profit of over $1200.

Belgium now contains 6,495,886 inhabitants, according to the latest official returns. Thus the little kingdom continues one of the most densely populated countries in the world.

An Italian scientist who has written a book on "Female Crime in Naples," wherein he shows that there are more women criminals in Naples than in other cities of Italy, observed that there was little drunkenness among them, and that their criminal bent was due mostly to lack of education.

A genius has invented an instrument which will register any time played on a piano. This will be a godsend to the improvisatore, as it will enable him to keep track of his "lost chords."

The cost of the completed capitol at Albany, N. Y., with the central tower left out, foots up to $23,000,000, twice as much as the national capitol, conjecturally more than the golden house of Nero, the Dalmatian palace of Diocletian, or the white house of Chosroes.

The hoosiers have the gift of biting epigram, if the Indianapolis Journal reports them correctly, "They may say what they like against him," said the convicted one's defender, "but his heart is in the right place." "Yes," assented the other, "and so is the rest of him, for a few years."

Earthquakes occasionally profit mankind, as in the case of Ouzoun-Ada, a port of the Caspian, which is the starting point of the transcaspian railway. The port was visited by an earthquake some years ago, and since then it has become open to steamers which could not enter it before, owing to the shallow water.

While the growth of our urban population since the war has been phenominal, it is painful to the Atlanta Constitution to note that "much of this increase has been wrought at the expense of the rural districts. On good authority it is stated that, during the two decades extending from 1870 to 1891, not less than 6,000,000 people in the United States moved from the rural districts to the cities. If this process continues for any length of time it is evident that the growth of our cities will soon exhaust the rural districts completely. But is this process likely to continue? Most certainly not. There must come a time when the drift of population, instead of proceeding from the rural districts to the cities, will proceed from the cities to the rural districts; and already there are hopeful signs of this change. Improved facilities of transportation have virtually bestowed upon the farmer the same privileges enjoyed by his city brethren; and, without the slightest inconvenience, one can live in the country and yet make daily trips to the city. The force of this statement is emphasized by the number of suburban homes which are going up in the neighborhood of most of our large cities. Within the next few years it is likely that this tendency to return to rural life will be even more distinctly marked than it is at present. Without prosperity in the fields of grain there can be no prosperity in the marts of trade, and in vain will our cities increase in population if they are built up at the expense of the rural districts."

In poetry violets are always "blue," never purple, but as a matter of fact but half of the twenty and odd varieties in the United States are purple, yellow, white, blue and cream.

TO MAKE GOOD ROADS.

THE GOVERNMENT UNDERTAKES TO TEACH THE ART.

An Experiment Now Under Way in New Jersey—Intended to Benefit Suburban Highways—Instruction in the Government's Methods of Road-Building.

Few persons know that the United States government has begun to instruct the citizens of this country in the art of road-building. This is a fact, however, and the first experiment of the sort is being tried at New Brunswick, a New Jersey town not far from New York city, known to fame as the seat of Rutgers college.

Not so many months ago an appropriation was put through congress at a rapid gait. The bill making the appropriation provided ostensibly that only in places where what are known as the State experiment stations are located, should the government show the people how to build roads. It seems, however, according to the Detroit Free Press, that the bill was rather loosely constructed, and so it happens that any place that goes through the proper formula and unwinds sufficient yards of red tape may learn all about building the right sort of roads according to government ideas.

The experiments do not consist in building the roads of an entire village or town, but the men who have the matter in charge select a section of what seems to them the most convenient throughfare to illustrate the ideas it hopes to impress upon that portion of the American people that has to do with the building of highways. While the bill making the appropriation provides that the work shall be done at government expense, there is a reservation in this regard which might be overlooked by the enthusiast until too late. It is this: That the government shall furnish crushers, rollers and carts, but that the township, village or town or city shall furnish the labor and material.

As a matter of fact, the idea is not intended for the benefit of the city at all. The promotors of the plan believed that the cities should surely be able to take care of their own roads as well as employ men who understand thoroughly the art of building them. It is the ordinary highway of suburban civilization at which the bill is aimed. No reasonable person expects asphalt pavements in a wilderness, but there is nothing unreasonable in thinking that at least a road when made at all should be made well. The complaint that has gone forth is that the rural road-builder is not an expert in the art, and so the government is going to send men who know all about it to teach him the knowledge that he lacks.

With the aid that the government furnishes the road-building experiment will prove no additional expense to the communities where it is tried. The material and the labor are usually the cheapest elements in the matter of constructing roads. It is the first-class implement needed to bring the highways to a moderate degree of perfection that costs money and makes the taxpayers groan. In the superlatively rural community the roads are generally made by the citizens themselves and their "hired men." This is known as working out the highway tax. Therefore the community itself would receive no money in any event, but simply the labor of the person taxed or his representative, at the rate of what is considered a fair compensation for such tasks.

These facts were realized by the wheelmen who were behind the movement that is giving practical results. It is, they claim, merely the diversion of labor from work that had accomplished small good to work that will accomplish great good. They hold that there is no necessity of the deeply rutted and the liberally sluiced road that one meets with so often outside the village and sometimes inside. It is, they say, like the difference between a man who knows how to sail a boat and one who is making trouble for himself. The one who does has a very comfortable time of it.

There is a good roads department of the department of agriculture. It is this portion of the government that has the road-building matter in charge. Professor E. B. Voorhees has charge of the New Jersey state experiment station in New Brunswick. He was the first one to petition for the building of a section of road by the government. The matter was placed in charge of E. B. Harrison, a special agent of the good roads department, and he was sent to New Brunswick to lay the matter before the municipal authorities. New Brunswick people are rather enterprising, though their numbers are small, and so Mr. Harrison's visit resulted just as Professor Voorhees has believed it would.

College avenue, the widest of New Brunswick's thoroughfares, was selected as the place to try the experiment. The greatest interest is being taken by not only the residents of New Brunswick, but all the people who live in the neighboring towns and villages. The boys of Rutgers college are also being instructed. Farmers' sons, the most of them, the knowledge they will gain will be of the greatest use to them and may add probably will result in a far wider dissemination of knowledge of what good roads really are than could be accomplished in any other manner. New Brunswick, in fact, is in one of the most thickly populated sections of New Jersey, and therefore this government experiment is bound to produce widespread results.

So far, twenty-two experiment stations in the United States have applied to be considered as the scene of road-building experiments. Secretary Wilson, of the United States department of agriculture, has the matter under consideration, and will allot the necessary time as soon as possible.

HUMOROUS.

She—I think it is cruel to catch fish. He—But I'm not catching any. I'm merely feeding them.

If you have an enemy that you want to get even with, why not try giving his boy a young Newfoundland pup?

The Husband—Have you any invisible veils? The Saleslady—Yes, sir. It is impossible to see them. "I'd like to look at some."

Bobby (to his little sister)—Edith, you are the biggest goose I ever saw. Mamma (severely)—Bobby, you seem to forget your mother's presence.

"George, father has failed." "That's just like him! I told you all along, darling, that he was going to do all he could to keep us from marrying."

The Strong-Minded One—My dear child, you ought to join us. You want a vote, don't you? The Pretty One—No-o; I guess a voter will do me.

Hojak—Do you think that navigation of the air will ever be a success? Tomdik—Certainly. All that is necessary is to obtain a repeal of the law of gravitation.

"Where's that son of yours, Mrs. Mulrany, that went to London?" "Well, sir, they tell me as 'e's carrying all before him." "Indeed!" "'E's a waiter, sir."

Freshy—Professor, is it ever possible to take the greater from the less? Professor Potterby—There is a pretty close approach to it when the conceit is taken out of a freshman.

She—Now, why couldn't that conductor just as well have stopped at the corner where you asked him to stop? He—Perhaps there was some one waiting to get on at that corner.

"Two hours of sleep before midnight are better than four after that hour." "Fiddlesticks! Two hours of sleep after one is called in the morning are better than all the others."

Beggar—Can you help a poor man to— Pedestrian—I think you have touched me before. Beggar Possibly, sir—possibly. You see I'm a stranded photographer, and the old habit of retouching clings, sir.

Jones—How much do you pay your typewriter? Brown—Sh! I used to pay her fifteen dollars a week. Jones—But how much do you pay her now? Brown—Sh! She allows me fifteen dollars a week, now—we're married.

Violet—How did Mr. Bighed come to accept the doctrine of reincarnation? Rose—Well, you know he always had an impression that the world couldn't get along without him, and if that is so, it stands to reason that he must come back.

The Parson—Your neighbor looks like a very persistent man. He does'nt look as if he would give up anything. The Deacon—Well, I've been passin' the plate for hard on ten years, and I never see him give up anything yet.

Miss Passe—I accepted Dick Bradford last night. Miss Younge—Yes, I expected it. Miss Passe—Why? Miss Younge—Because, when I refused him, he said the next time he would propose to some one old enough to know her own mind.

"Ah, the memories of childhood!" exclaimed Bifkins. "I was a mischievous boy, and many a time went to bed without my supper." "Humph!" murmured Adolphus Ichabod, tragedian. "Nor do I have to return to happy childhood's days to conjure up such recollections."

Ella—You know I have only just arrived and have'nt learned the ropes yet. You must tell me everything. Now, at what hour in the morning do the girls go in bathing? Stella—That depends on the one man here; whenever he happens to get out on the beach.

"Young man," said the statesman, "I decline to be interviewed." The hopeful reporter looked sad. "I always interview myself," the statesman explained. "It is a great plan for missing mistakes. Just sit down and I will have your copy ready in about twenty minutes."

Little Teddie—I guess sister Laura likes you pretty well, Mr. Twiddle. Charles Twiddle—Indeed? Come, now, my little man, what makes you think so? Little Teddie—When Sue Dollyers and her was talkin' about you yistady, she just kept callin' you that sweet thing all the time.

Lack of Cordiality.

Miss Cynic—I hope we shall be entirely settled the next time you call.

He—When do you expect to be settled?

She—Oh, not for a month or so.—Yale Record.

THORSBY, ALABAMA.

RATES. by the day, $1.00.
by the week, $4.00.

HOME HITS AND HAPPENINGS.

NEWS BOILED DOWN AND ADMINISTERED IN BROKEN DOSES.

The county surveyor has finished the job of surveying a plat for the village of Jemison.

The farmers in this section have very little to complain of this season. We are having plenty of rain and crops are not suffering as they are in other parts of the country where droughts have spoiled the farmers prospects.

John Erickson, father of Mrs. A. Thorson, is now making his home in Thorsby. He claims that the Alabama climate is far superior to that of Iowa.

S. D. Hawkins, advertising manager of the Lutheran Augustana Book concern, of Rock Island, Ill., has purchased a vineyard tract in Thorsby and expects to make this his home in the future.

Watermelons are now selling in Thorsby for 3 cents apiece, or two for 5.

A watermelon party was given Monday night by Nels Peterson.

Tomatoes are now ripe. Several bushels are being picked daily from a small patch in the experimental garden.

John Stevens, the jolly proprietor of the Concordia hotel, has got the Alaska gold fever and is now preparing to leave for Alaska in the spring, by way of the overland route. Mr. Stevens is an old and experienced land looker and woodsman, of Northern Michigan, and is capable of standing the hardships to be endured in the Klondyke region. His son who is now in Michigan, will accompany him.

The second crop of corn is now doing very good and will be all tassled out in a few days.

Last May there were twelve different varieties of grapes planted in the horticultural garden and among them were nine varieties of white grapes. The vines are growing exceedingly fast and are a very convincing argument that Alabama soil is capable of growing grapes that cannot be equaled by any other state in the union.

J. F. Camberg and Otto Engstrom, who were visiting here for several days, left Tuesday, for their home in Boone, Ia. Before leaving they each purchased a vineyard tract and expect to return in the near future and make Thorsby their home.

The Concordia Company have sold three vineyard tracts this week to parties in Boone, Ia. The CALL was unable to get the names of the parties who have bought.

TWO NEGROES KILLED BY A TRAIN.

Northeastern Road Grinds Up Two Men Who Were Asleep.

The mangled remains of two negro men were found on the Northeastern railroad track near Columbia, S. C., last Friday morning. From letters and papers found on their persons they were Willis Gibbes, of Hartsville, S. C., and Tom Trimble, of Staunton, Va. They seemed to have been traveling together and were well dressed. The body of Trimble was torn to pieces, parts being picked up at different places for miles along the road. One arm was lodged under the engine and taken six miles before it was discovered. A coroner's jury decided that they had gone to sleep on the rails. They were not dressed like tramps.

Kansas Crops.

Secretary D. E. Coburn, of the Kansas State board of agriculture, Friday, issued a report on Kansas crops, in which he says: "The yield of winter wheat aggregates 49,502,087 bushels, with two exceptions—1891 and 1892—the largest in the State's history. The yield per acre is 14.91 of the 3,318,763 acres sown. The crop is reported 'good' from almost every county. The estimates indicate that 40 per cent. of the year's product will be marketed within sixty days and that the acreage sown the coming fall will be at least an increase of 10 per cent. over last year's sowing. There were 983,335 acres of oats, yield 25,151,379 bushels; yield per acre, 25.57 bushels. In corn the average condition for the State is 60; in 44 counties it is higher. It is 60 or over in 7 counties and 75 or above in 25 counties, in 8 it is 80 or above, in 20 it ranges from 30 down to 5."

County Treasurer Disappears.

John Madden, treasurer of Modoc county, Cal., disappeared two weeks ago, and District Attorney Baker, believing Madden to be a defaulter for at least $35,000, has asked the board of supervisors to declare the office vacant and appoint a new treasurer. The funds of the county were deposited in the bank at Sacramento, and checks drawn in payment of county warrants have been returned unpaid for lack of funds.

THE SMALLPOX SCARE.

MANY CASES ARE SAID TO HAVE BEEN DISCOVERED IN BIRMINGHAM.

People Are Leaving Birmingham for Atlanta and Other Places—The Disease Cannot Spread in Atlanta, Says the Board of Health.

Reports from Birmingham indicate that the city is in a state of alarm over the prevalence of smallpox in that city. It is said the dread disease has made considerable progress in the Magic City and that there are now as many as 180 cases in the local pesthouse there.

It was stated Friday by a gentleman from Birmingham that the disease had had the effect of running many citizens away from Birmingham and that those remaining are taking every precaution to prevent the further spread of the disease.

It is said the city of Birmingham has just started the work of enlarging the pesthouse, the old structure not being large enough to accommodate the patients. The surrounding country has taken alarm and nearby towns and villages have quarantined against Birmingham. Chattanooga and Montgomery are also said to have quarantined against the city and the refugees are going to Atlanta in large numbers, according to reports.

The Birmingham officials are said to be confident that they will be able to quickly stamp out the disease and they say there is little danger of it spreading much more. The city is being cleaned and fumigated and every effort is being made to kill the deadly germs. The people have all been, or are being, vaccinated and it is said dozens and dozens of people can be seen on the streets with their sleeves rolled up showing vaccination spots and sores.

The Birmingham papers are said to minimize the prevalence of the disease and it is claimed that its ravages are more serious than has been announced.

The Atlanta board of health does not fear the spread of smallpox in Atlanta and no restrictions will be put on Birmingham. Atlanta welcomes the refugees.

STRUCK BY A WATERSPOUT.

Much Damage Done in a South Dakota Town.

Reports received in Omaha, Neb., state that a waterspout struck the town of Hot Springs, S. D., between 9 and 10 o'clock Friday night. It raised the water in the creek which runs through the town, between ten and twelve feet. This creek winds through the town in a circuitous way and the railroad crosses it several times. Four small wooden bridges on the Elkhorn railroad cross the track. They were carried away. Three or four bridges of the company within a radius of four miles of the town, are badly damaged. Several small houses were carried away by the high waters of the creek. One life has been reported lost. There has been no railway traffic there for several days.

Silver Mines Shut Down.

Superintendent Chambers, of the Ontario and Daly mines, Park City, Utah, Friday received a telegram from New York to close down both mines at once, owing to the recent decline in silver. These are two of the largest silver mines in Utah and give employment to about 700 men. The Ontario mine is one of the greatest producers in the country and has been in active operation for twenty years, and has paid about $13,500,000 in dividends. It is claimed that these mines cannot be worked with profit at the present price of silver.

A Liberal Victory.

The parliamentary election to fill the vacancy in the Sheffield division, caused by the death of Hon. Anthony J. Mundella, liberal, Friday resulted in a victory for the liberal and radical candidate, Mr. Frederick Madison, who polled 4,289 votes, against 4,106 polled by the conservative candidate.

SHERIFF'S SALE.

By virtue of two certain writs of attachment issued out of the Circuit Court of Chilton County, in the State of Alabama, and to me directed whereby I am commended to attach so much of the estate of C. W. Reynolds as shall be sufficient to satisfy the debts and costs according to the complaints filed in the said Court respectively by Schloss & Kahn and May & Thomas Hardware Company against the said C. W. Reynolds. I have seized the following property, now particularly described in the return on said attachment writs now on file in the sheriff's office at Clanton, belonging to the said Reynolds and on account of the perishable nature of the same and also on account of the cost or charge of keeping the same being very great I shall proceed to sell the same at public auction in Jemison, Ala., on Tuesday the 24th day of August, 1897, to-wit:

One lot of general merchandise consisting of dry goods, notions, hardware, cutlery, groceries, produce, farmers supplies, books, undertakers goods, store fixtures and supplies, tobacco and snuffs, extracts, glassware, powder and cans, earthenware, furniture, tinware and miscellaneous articles of merchandise.

J. T. COOLEY,
Sheriff of Chilton County.

This 9th day of August, 1897.

An Insurance Sensation.

Quite a sensation has developed in life insurance circles at Menominee, Mich., over a report that Chas. E. Martin, who disappeared three years ago, and was supposed to have been drowned, is alive. An agent of a large insurance company interested in the case imparts the information that Martin is still alive and will be carried back to Menominee within four or five weeks. He refuses, however, to give any idea of where the missing man is located. Martin was heavily insured. Some of the companies paid over the amount of their policies after his disappearance, while others refused to do so. The general belief is that Martin was drowned while sailing with two fishermen for Sturgeon bay. No trace of the boat or men has since been discovered.

HOUSE BUILDING

Is the order of the day in Thorsby. We are now prepared to keep up with the procession. Our new planing mill, which has recently been put in, and is now run in connection with our saw mill, enables us to furnish all kinds of lumber for building purposes. Our prices are more reasonable than those of others, and, being prepared to turn out an order on short notice, we can save the builder a large amount of inconvenience and expenses. By buying at home you have no freight to pay and you are helping along home industries. We also are prepared to ship lumber by the car load or in small quantities.

A NEW AND NOTABLE COLONY.

THORSBY AS SEEN THROUGH THE SPECTACLES OF OUTSIDERS.

WHAT A LEADING MAGAZINE OF SOUTHERN PROGRESS SAYS CONCERNING OUR COLONY

In Speaking of the more prominent and progressive points in this section, The Illustrated South, of Birmingham, Ala., has the following to say of Thorsby:

A number of Northern colonies have been founded in the South within the last double decade, and we know of none that has failed to realize the brightest dreams of its promoters.

Thorsby is one of the newest and most notable of these colonies, and merits special mention because it is more advanced for its age than any of its competitors. In fact, it is a fin de siecle revelation in the matter of community building, and we know of no place in the wide and wonderful sweep of our Southland that possesses a more promising future.

It is situated in the highlands of central Alabama, on the picturesque and prolific Chilton plateau, and has direct communication with the seaports of the South and the markets of the North through the medium of the Louisville & Nashville Railway, one of the great grand trunk lines of our continent.

Speaking of Thorsby a recent writer remarks: "In June, 1896, Messrs. Thorson and Peterson came to this country on a prospecting expedition, and finally decided to settle their colony on the present site (in Chilton County, Ala). It was several months before any work was begun, but within the last eighteen months a beautiful village and settlement has sprung up like magic. The Concordia Land and Improvemnt Association was organized, with Mr. Thorson as President, and Mr. Peterson as Secretary. They bought up about 2,500 or 3,000 acres of this land, laid off a town into lots and the surrounding country into ten acre blocks and at once began improvements, naming the new settlement Thorsby. Every obstacle vanished before the hand of energy, pluck and industry, and now there are at Thorsby a fine hotel, three stores, a postoffice, a newspaper, a saw-mill, a shingle and lath mill, blacksmith-shop, two churches and a two-story school-house, about thirty-four dwellings and as many families, and more coming all the time. A green-house and experimental garden is a new feature for this year, at which I saw tomato-plants a foot high. This colony seems to be making grape culture a specialty, and now have about 80 acres in grapes, and I understand, are putting out this Spring 18,000 cuttings. Young orchards are being set with all kinds of fruit, the houses are substantial and well-built, mostly two story. The urgent need now is a canning-factory, and negotiations are pending looking toward the establishment of one in the near future."

The Concordia Land and Improvement Association, spoken of in the foregoing excerpt is incorporated under the laws of Alabama, possesses a capital of $150,000, and has land for sale in all directions from Thorsby—some of it adjoining the town limits and some of it further out to a distance of nine miles.

From a booklet lately published by the Association we learn that "this land is of different varieties, but it is all very productive. Some parts are level, while other parts are more rolling. That which is not under cultivation is covered with timber of many different varieties, such as the long leaf yellow pine, all kinds of oak, hickory, chestnut, persimmon, poplar, beach, all kinds of gum trees and black walnut.

"Therefore fuel costs nothing but the labor of cutting it, and lumber is very cheap. Good, fine, hard pine lumber is bought here for only $5 to $7 per 1000 feet. This growth of timber sufficiently shows the good quality and strength of the soil. The Association has some improved farms for sale at very reasonable prices. It has the land surveyed in tracts of from ten to eighty acres each, so that the purchaser may have his choice also in this respect, but it is to be remembered that twenty acres of this fertile farm and fruit land is a good-sized farm, because the crops are so abundant. Each tract of land has a road laid out at least on one side."

The proximity of Thorsby to the Gulf, and the fact that it is 790 feet above tide-water, combine to make its climate ideally equable. It is never too hot, never too cold, and one season melts into another with none of the abruptness that is so unpleasantly common in the higher latitudes. This fact, together with the absolute absence of malaria, and the purity of the freestone water, combine to make this locality one of the healthiest that can anywhere be fond.

The soil of Thorsby and Chilton county cannot be surpassed for fertility. They are of the rich, dark, grayish, red and brown loam lands, with a proper mixture of sand on a clay subsoil, and are adapted for general farming, stock-raising and fruit-growing.

Where the North can only raise one crop of corn, potatoes and other hardy products in a year, this part of the South can raise two, and can raise, at the same time, cotton, sugar-cane and all the other semi-tropic staples, to say nothing of fruit!

Let the new-comer select a spot like Thorsby for his home, let him set to work with a stout heart and a steady hand, and he will find that Fortune will change her frowns to smiles and reward him according to his deserts, no matter what they may be to be.

SOME OTHER DAY

There are wonderful things we are going to do,
Some other day.
And harbors we hope to drift into
Some other day.
With folded hands the oars that trail,
We watch and wait for a favorite gale
To fill the folds of an idle sail
Some other day.

We know we must toil if ever we win,
Some other day.
But we say to ourselves there's time to begin
Some other day.
And so deferring, we loiter on,
Until at last we find withdrawn
The strength of the hope we leaned upon,
Some other day.

And when we are old, and our race is run,
Some other day.
We fret for the things that might have been done
Some other day.
We trace the path that leads us where
The beckoning hand of grim despair
Leads us yonder out of the here,
Some other day.

CECILY.

"It's the fault of there being such a large family, dear, that is all."

"And a very bad fault, too."

"Dick! Don't you like the family?"

"Not as I like you, child, and not enough to like them to monopolize you and take up all your time and thoughts and interests, so that I, whom you are going to marry, can hardly get so much as a word or look from you."

"Who is with you now, Dick?"

"Yes, for three minutes at the garden gate, because if I come inside you will be surrounded by the whole lot of them the next moment, and for anything we want to say to one another we might as well be at opposite poles. You mayn't mind it, Cecily—you don't seem to do so, at any rate—but, upon my soul, it's hard lines on a man who loves you."

It is an evening in April. The land is all aflush with the pink blossoms of the almond and the white blossoms of the pear.

He is rather handsome always, rather angry now, my lover, but I know that the anger comes from love, and so I think more of the first fact than the second as I look up smilingly into the brave blue eyes, bright with a passionate gleam, and mark how well the broad, square cut shoulders and shapely head stand out against the golden glory of that evening sky.

"And pray, Sir, do you expect me to be always at your beck and call?" I ask. "I'm sure you get your fair share of attention."

"Do I?" he says gravely. "When I wait a whole week for the chance of one walk with you, and when the promised day comes you coolly send me word that you've got something else to do, and are too busy even to see me! I might have claimed your promise to marry me two Summers ago, and again last Autumn, when I was offered the making of that new Canadian line. I refused it, only because I knew you wouldn't leave home so soon after your mother's death, and I could not bear to go away without you; but now there is this other job of the same sort in Perthshire, and they say I can have it for the asking. The works are to begin in July, and if we are married in June—dear Cecily, my own darling love, do say that we shall be; do give me what I ask. Think how long I have waited for you already and how badly I want you, and come to me. Cecily, dearest, if you love me say you will. Say it now."

"In June!" I repeat, my eyes wide with dismay, and drawing myself still further back. "Dick, you promised not to be in a hurry."

"I never promised anything of the sort; but if I had done so I should have kept my promise over and over again. Cecily, will you ever find a lover who has waited as long as I have done already? And yet you talk of my waiting on for another year still! If you loved me in the least you would be as tired of these delays as I am; but you don't, and I see it only too plainly. You don't even know what love is. You—"

"Hullabullero, hullabulloo! Cecily, Cis, where are you?" shouts a boy's voice from the laburnum bushes behind.

"Don't be silly, Dick. Let me go. Please let me go," I stammered out hurriedly; but I have no need to repeat the request. At the first sound of my rough-tongued little brother's voice Dick has dropped my hands and stepped back.

"Let you go? Oh, certainly," he says, with a strange, bitter accent in his voice. "For good, if you like. I expect it will come to that some day. Good-bye," and off he goes, striding over the dewy grass and under the milk-white blossoms of the thorn trees without another word or look.

It is too bad. Of course the children don't really mean to hurt me; but it is too bad; and the worst of it is that I dare not show my vexation.

Poor Dick's spurt of temper is forgotten, and tea proceeds without further allusion to him. I cannot bear Dick to be angry with me; Dick, who for all his quick, fiery nature, is as gentle as a woman in general with those he loves, and who has been so tender and true to me all these years, that at times his very generosity makes one forget that those who give much have a right to expect much in return.

A long engagement is a very trying thing. Not that it diminishes the mutual love of those most concerned; but that it is apt to lessen the outward expression of it, and bring about unintentional slights and apparent coolnesses, and it is trying, too, from the fact that the longer it lasts the less consideration or sympathy it seems to elicit from those even most nearly allied to the lovers; and who, when the first eclat of the affair is over, are apt to regard its lengthened existence with something of impatience, not to say contempt. Dick and I have been engaged an immense while, four years before mother died; and he was ready and waiting for me when he was first taken ill, nearly a year before that.

I don't see him often. He is a civil engineer and too busy to pay frequent visits to our quiet village; but during this one his patience has been tried more than usual.

Is there ever a gayer, gladder time in all the year; or a gayer, gladder morning than this when I rise and look across the frothing snow of pear blossoms and meadows paved with golden buttercups, to the red roof of the village inn, half hidden in elm trees, beneath which Dick lodges? Perhaps he may be striding across those meadows now to pay us an early visit and bring me a bunch of violets. He has done so once or twice; but father doesn't like visitors at breakfast, and I'm afraid Dick has found it out; at any rate, he does not come today, and so I go down to breakfast, give the orders for dinner, and am just going to assist my little sister through her laborous efforts at wading up the scale on the piano when the maid brings me a letter which she says has just come from the inn, and I see it is from Dick.

How thankful I have been since then that I left Maud and went away to read it by myself; for even the first words seem to daze and dazzle me! It begins, "My dear Cecily," and then I sit and read and re-read the rest over and over again, how long I never knew, with eyes that see, yet see not, and a heart which beats, yet refuses to comprehend. Dick is gone, and this is what he tells me:

When he went back to the inn he found a letter awaiting him from the contractors for that Canadian railroad of which he had told me before. It was a very liberal offer, and he was still very hot and angry. On the spur of the moment he sat down and accepted it; and then, in the act of sealing the letter, repented of what he had done. Perhaps he remembered how long we had loved one another and what bitter pain parting would be; at any rate, he put the letter in his pocket and came up to the vicarage to tell me again that if I would marry him in June, he would still accept the smaller appointment in lieu of this; or, if that were really impossible, would arrange to come back from Canada in the autumn, make me his wife, and take me back to Canada with him.

Well, you guess what he found? A whole family laughing and making game of him, mocking at the pain which had driven him away; the love which had brought him back; my laugh—heaven help me, mine!—the loudest in the party, my hand aiding in the jest which was amusing a set of thoughtless boys. "And so," he wrote, "I went away, and I write this now to bid you good-bye. My eyes have been opened at last, and I see only too plainly that the years which have only intensified my love for you have withered yours at the root, that my visits have been a weariness, my fidelity a jest. Perhaps some day I may live to be thankful that I have learned this lesson even so late, but I cannot do so yet, nor can I bring myself to the useless pain of meeting you again. I go back to my lodgings at once, and sail for Canada this week. Would to heaven you had told me the truth which sends me from you before, but I do not blame you for not doing so. You were always gentle at heart, and I believe you could not bear to hurt me to my face." And then he bade God bless me, and signed himself, "Yours ever faithfully, Richard Meredith."

I cut the meat and serve the pudding that day at dinner, and though I cannot say one word, and there must be something in my face which frightens the boys, for they stare at me with wondering eyes and are strangely good and quiet, I never break down once, or rise until the meal is quite ended; and then at last I escape, and as I write to Dick the tears which have been frozen till now break forth like rain and blot the words as fast as they are penned.

For of course I answer him. I have read—in novels—of girls who, when they have hurt or angered their lovers, are too proud to write or say one word for pardon; but I am not like that. I love him too dearly, ill as I may have proved it, and stupid and shy as I have been of showing my affection by outward signs. I am too sure of his love for me to let any false shame or misunderstanding rest between us; and so I write and just tell him the whole truth about that luckless scene, tell him how dear he is to me, and beg him humbly and with tears to forgive me and love me still; not to give up his journey, (if he has accepted the post I know that cannot be,) but at least come to me before he goes and say good-bye; and to take my promise that at whatever time he wants me I will be ready to be his wife, whether he can come back for me or I have to go out to him. Other women have done that much for men who love them, and why not I for Dick, who has waited for me longer than many lovers already and signs himself mine "faithfully" still?

So my letter is finished at last, and I walk across the fields myself (I will not trust it to any other hand) to put it in the post.

And I do wait, wait patiently indeed, but with a daily lessening hope, a daily failing heart; for Dick does not come, nor is there any answer to my poor, tear-blotted letter. Suns rise and suns set. Dick has left me. His love, tried perhaps before to stretching, snapped before the forced merriment of that foolish laugh; and because he had not the heart to say so he has held his peace and gone; gone for good.

It is Spring again now; the second Spring since my lover left me. Twice have we dressed the church with ivy and holly, and hung big bunches of mistletoe in the vicarage hall.

I have come up to London to buy summer dresses for my sisters, and on other domestic business; but these duties have been achieved; and now, before I go home again, I am bound on an errand which, though I would not dare own it to any one, (for indeed I know it to be both vain and foolish,) has been pressing on my heart ever since I left home, with a yearning persistence to which, even though it be unmaidenly, I cannot choose but yield.

It is to visit Dick's lodgings, where he always lived when he was in London and the address of which I have known by heart this many a year.

I go there and make my little excuse about wanting to see the rooms for a friend—I hope it is not very wrong to say so—and even manage to get out his name as the person who once recommended them to me. That proves an "open sesame," however, for Mrs. Brown beams with smiles on the instant, and begs me to walk up stairs, "which fortunately the rooms are vacant, and just as they was when Mr. Meredith was there hisself, for times and again he'd said to me: 'Now, Mrs. Brown, don't you do nothing to these rooms; for comforbler couldn't be, and if ever I returns to London it's back to them I shall come and nowhere else.' And, by the way, ma'am, if so be you're a friend of that dear gentleman's, perhaps you can give me his address. There's a letter been lying' ere for him this ever so long. It come about six months after he left, inclosed in a note to the owner of the 'ouse,' saying as whoever posted it had dropped it into a gap between the postbox and the inside of the wall, and there it had stuck, no one finding it till a few days before."

I am standing there in Dick's room, the room where he sat and worked and wrote many and many a letter to me in the happy days of old; the last room, perhaps, in which he ever ate a meal or rested before he sailed away from me and England together; and yet I cannot look at it. I cannot think of it. A haze has come before my eyes, and a numbness over my brain, for there on the table before me lies my letter, the very letter, blotted with tears and soiled and crumpled with age, which I posted with my own hand two years ago, and which—ah! I see it all now, how could I think him so hard, so unforgiving, I who ought to have known his nature better—which he never received at all.

I must be very weak, or the shock is too great; for as Mrs. Brown leaves the room I sit quietly down and faint away.

It is only for a minute, however. The sunbeams which were shining on a pot of yellow crocuses in the window have not moved a hair's breadth; and faintly on the clear cool air I can still hear the bells from some distant church which were calling the people to a saint's day service when I came in.

There is a step at the door; but though I know it is Mrs. Brown I cannot look up, or raise my head from the hard deal table where it is bowed. All my long self-restraint, all my painful, pitiful efforts at womanly reticence and bravery have broken down at last in a burst of childish grief; and the tears so long held back break forth in a blinding rain, and my face is hidden in my hands. So it happens that some one coming in sees me before I see him, or can so much as dry my eyes, and utters an exclamation of surprise.

"I beg your pardon," he adds very quickly, "I only came in because my old landlady has been telling me something about a letter, and a lady—" And there he breaks off, for I have lifted my head, and at our first meeting there is a cry.

"Cecily! Cecily! Is it you? Oh, my darling, my love, what good angel brought you here to give me the sight of you!" and somehow, somehow, in one moment, all the pain and grief and weariness, all the bitter bravery of days when "the burden laid upon me seemed greater than I could bear" are gone, blotted out like breath from a glass; and there is nothing but joy and peace and rest, rest perfect and serene to mind and heart and body; for I am in my lover's arms, and my tired head is drawn down upon his breast; and I hear his voice, the dear, tender voice of old, murmuring prayers for forgiveness mingled with such words of love and fondness as I never thought would greet my ears again on this side of the grave.

The bells have ceased to chime. The yellow crocuses bend and shiver before the sharp cold breeze, but we two stand in the April sunshine, and the light, which falls on Dick's bronzed head and kisses the crushed white hyacinths in my breast, is no brighter than that which brightens our two hearts on this the sweetest springtide of our lives.—All the Year Round.

AN ANCIENT MEXICAN CITY.

A Curious Legend—Relics of the Empero Maximilian.

Queretaro was a town before the Spanish conquest, and was made a city in 1655. A legend of Queretaro is that an Otomite chief, Fernando de Tapia by name, undertook to convert the city to Christianity in a way that seems novel to us, but was common enough to his day. He came from Tulu with a challenge to the people of Queretaro to a fair stand-up fight. If he won the people surviving were to be baptized. The challenge was accepted, but, while the fight was in progress, a dark cloud came up, and the Blessed Santiago was seen in the heavens with a fiery cross, whereupon the people of Queretaro gave up and were baptized. They set up a stone cross to commemorate the event on the site of the present Church of Santa Cruz. There is scarcely a church in Mexico which has not a legend of this kind attached to it. The town is identified with the history of Mexico.

Here the treaty of peace between the United States and Mexico was ratified in 1848, and here Maximilian made his last stand in 1867, was obliged to surrender and was shot. Everybody is interested in Maximilian mainly on account of poor Carlotta, who by the way, has just obtained permission to revisit Mexico. Maximilian was executed on the Cerro de las Campanas, and with him Generals Miramin and Media. The place is marked by three little crosses of stone. The two generals were killed at the first volley, but Maximilian, who had requested that he be shot through the body that his mother might look upon his face, was only wounded, and a second firing was required to kill him. The emperor had been led to believe that Carlotta was dead. She became insane from grief and was kept in an asylum for many years, but she still lives, and still mourns for her dead husband and the loss of her throne. The United States government protested against the execution of Maximilian, but in vain, Juarez refusing to spare him. There are all kinds of relics of Maximilian in Mexico. The Yturbide theater, where he was tried and condemned, the table on which the death warrant was signed, the wooden stools on which the prisoners sat during the trial and the coffin of Maximilian, whose remains were subsequently sent to Austria and buried at Miramar. I confess I do not share in any sentiment of pity for Maximilian, who was an adventurer without a shadow of right in Mexico and took the chances of war. He was, it is true, a victim of Napoleon and of his own ambition and was very scurvily treated by those who had induced him to set up his throne; but to have released him would have been to establish a claimant for the Mexican throne. It was better that this man should die than that thousands should be sacrificed in the wars he would surely have fomented if he had been allowed to live.—Philadelphia Ledger.

Successful Skin Grafting.

Ten-year-old Prischer Orter is at her home in Newark, N. J., after a four months' stay at the German Hospital, in that city. The girl was frightfully burned on February 26 by falling into a fire at the coal docks on Pacific street. For a time her life was despaired of.

Her burns gradually healed, except one spot four inches in diameter, above the right knee. This refused to respond to ordinary treatment, and it was decided to try skin grafting. Strips of skin were removed from the other leg and bound upon the unhealed spot. They adhered, and gradually over-spread the whole sore and the little girl is now as well as ever.

France has again not only to report a decrease in the birth rate, but of the number of foreigners who became naturalized in 1896. The number is twenty-two per cent. less than for any twelve months since the passage of the naturalization law in 1889.

The patent leather half shoe is good form with the white gown. In fact, these shoes trimmed with perforated bands in graceful curves along the sides are the very newest summer footgear.

Wash silks, mousseline and chiffons are shown in truly surprising variety. Satin duchess, satin brocade, moire velours and taffeta in black are sold for skirts to be worn with dressy bodices.

Anything purple, green, red or blue seems to sell well at the silk counters. Although some grays, browns and deep pinks are displayed, brightness predominates, and it will be a gay season. Taffeta and foulard are reigning silks for summer.

Accordion-pleated skirts of black silk grenadine, canvas tulle, black Swiss muslin dotted in silk, fancy French and Russian nets and similar diaphanous textiles are made up over good foundations of brilliant Turkish red or golden-yellow satin.

The thin, diaphanous materials naturally call for lace frills and ribbon, while the heavier stuffs allow of greater severity in style and cut, but it is the total absence of color which gives them their peculiar charm and makes such gowns cool in appearance, as well as in fact.

The beautiful shades of green appear this summer in great variety. Some of the new tints are exquisitely delicate and beautiful, and combinations of green with certain shades of blue, violet, amber, brown and many shades of red are noted among Paris gowns and millinery.

True art in dress means a study of effect, not alone as pertains to the wearer, but as felt by the observer also, when the colorless costume therefore is recognized as a relief and comfort to the looker-on and a boon to the individual at one and the same time, the reason of its undying popularity is explained.

All the latest hats and bonnets are more or less transparent. If a straw, they are of the zephyr variety, light and cool; and countless new midsummer models are made of shirred and accordion plaited gauze, tulle, lisse, India mull and similar airy textures. The brims vary in size, as do the crowns, which are high, low and medium to suit all tastes and faces.

Treacherous Chemicals.

It is remarkable how many really dangerous chemical compositions are daily handled in a great city with a carelessness which is appalling, but which the necessities of modern civilization demand in large amounts. Thousands of gallons of "liquid" carbonic acid gas in steel cylinders under high pressure may be seen at all hours being carted from place to place; other gases are similarly stored under pressure in "tubes," as, for instance, oxygen, hydrogen and nitrous oxide, all of which might expose the public to danger. Solid bricks of metallic sodium (kept under naphtha, of course) are every day carried from port to port as a part of a ship's cargo and dangerous accidents have occasionally occurred from the mixture of treacherous chemicals in the holds of tossing vessels.

PROF. N. A. PATILLO

Selected for the Chair of Mathematics in the State Normal College.

Out of more than forty applicants for the Chair of Mathematics in the State Normal College, Mr. N. A. Patillo has been selected.

Mr. Patillo is a native of Lee county, Ala. He graduated first at the Southern University, Greensboro, and taught mathematics in that institution. He afterwards taught for several years in the Millsaps College, Jackson, Miss. He gave up this work to pursue his studies at Johns Hopkins University, where he obtained the degree of Ph. D., with mathematics for his principal subject. He is a most accomplished Christian gentleman, and has indorsements of the very highest character from many of the best known university professors and presidents of this country.

In selecting Mr. Patillo, the Normal is only carrying out its well-known policy of getting the very best teachers for its faculty. Such a policy merits patronage and gets it.—Florence Standard-Journal.

A Royal Wall Layer.

It is said that Moses Fielding, a lineal descendant in the royal line of the great Chief Uncas, of the Mohegan Indians, who dwell in the woods of Norwich, Conn., and who died a few days ago at Mohegan, in addition to his other many excellent qualities was one of the best builders of stone wall to be found in this country. There are many rods of stone wall in eastern Connecticut, it is said, that will stand for ages, the work of Fielding's hands.

The University of Alabama.

The advantages of being educated in ones own State University cannot be over estimated. Equal strength acquired abroad or in an Institution of less prestige, would be far less valuable in a practical sense. University Alumni are and are to be leading men in all walks of life.

Parents with sons to educate should make a note of this.

Greece has given the world a beautiful object lesson. But it will leave her bankrupt and humiliated. An ounce of powder is worth a pound of sentiment in actual warfare.

Exit Tompkins.

Tompkins is one of those gentlemen of kind disposition who are ever on the outlook for a chance to improve their neighbors' mind. Seeing a man, apparently a country fellow, sitting on the fence, regarding the telegraph wires carefully, Tompkins approached and said:

"Watching the wires, eh?"

"Yes."

"Waiting to see a message go by, eh?"

"Yes, sir," the man replied, smiling.

Then Tompkins spoke kindly to him and explained the mystery of the electric current, and that the messages were invisible, and finished up with:

"Now you know something about it." Then, as he was going away, he said, by the way, "What do you work at?"

"Me and my mate over yonder are telegraph workers, and we've just finished putting up a new wire."

He Made a Sale.

He was a very small boy and very ragged, but there was a look in his eyes of shrewd intelligence beyond his years. His left hand he held behind his back, but his right was extended, and between two grimy fingers he held a half-smoked stump of a cigarette. He had his eye on a well-dressed man who was walking jauntily along the street swinging his cane.

"Say, mister," said the boy, "gimme a match, will yer, please."

The man stopped good-naturedly and smiled when he saw the dirty cigarette stump. He made a pretence of searching his pockets for a match, and finally said:

"I haven't one, bub."

The boy hastily slipped the stump into his pocket, and withdrawing his left hand from behind his back displayed a large box containing an assortment of small boxes.

"If yer ain't got no matches," said he, "now's a good time for yer ter buy. I got 'em all, wax and wood, and some what won't blow out in the wind and udders what will. Yer takes yer pick."

He sold two boxes for a nickel.

Comfort Costs 50 Cents.

Irritating, aggravating, agonizing Tetter, Eczema, Ringworm and all other itching skin diseases are quickly cured by the use of Tetterine. It is soothing, cooling, healing. Costs 50 cents a box, post paid—brings comfort at once. Address J. T. Shuptrine, Savannah, Ga.

Few men really know when they are well treated.

How's This?

We offer One Hundred Dollars Reward for any case of Catarrh that cannot be cured by Hall's Catarrh Cure.

F. J. CHENEY & Co., Props., Toledo, O.

We, the undersigned, have known F. J. Cheney for the last 15 years, and believe him perfectly honorable in all business transactions and financially able to carry out any obligation made by their firm.

WEST & TRUAX, Wholesale Druggists, Toledo, O.

WALDING, KINNAN & MARVIN, Wholesale Druggists, Toledo, Ohio.

Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system. Price, 75c. per bottle. Sold by all Druggists. Testimonials free.

Hall's Family Pills are the best.

I believe Piso's Cure for Consumption saved my boy's life last summer.—Mrs. ALLIE DOUGLASS, Le Roy, Mich., Oct. 30, 1895.

Mrs. Winslow's Soothing Syrup for children teething, softens the gums, reducing inflammation, allays pain, cures wind colic. 25c. a bottle.

Fits permanently cured. No fits or nervousness after first day's use of Dr. Kline's Great Nerve Restorer. $2 trial bottle and treatise free DR. R. H. KLINE, Ltd., 931 Arch St., Phila., Pa.

DRUNK ARDS can be saved without their knowledge by Anti-Jag the marvelous cure for the drink habit. Write Benova Chemical Co., 46 Broadway, N. Y. Full information (in plain wrapper) mailed free.

50 CTS. FOR 10 CTS.

A complete novel, good paper and large type, and a 100-page illustrated book, telling how to be better looking, sent free for 10 cents. Two fine volumes. Actual value, 60 cents.

B. E. LAY, 108 Park Row, New York, N. Y.

25 CTS. PISO'S CURE FOR CURES WHERE ALL ELSE FAILS. Best Cough Syrup. Tastes Good. Use in time. Sold by druggists. CONSUMPTION 25 CTS.

Accordion-pleated skirts of black silk grenadine, canvas tulle, black Swiss muslin dotted in silk, fancy French and Russian nets and similar diaphanous textiles are made up over good foundations of brilliant Turkish red or golden-yellow satin.

The thin, diaphanous materials naturally call for lace frills and ribbon, while the heavier stuffs allow of greater severity in style and cut, but it is the total absence of color which gives them their peculiar charm and makes such gowns cool in appearance, as well as in fact.

The beautiful shades of green appear this summer in great variety. Some of the new tints are exquisitely delicate and beautiful, and combinations of green with certain shades of blue, violet, amber, brown and many shades of red are noted among Paris gowns and millinery.

True art in dress means a study of effect, not alone as pertains to the wearer, but as felt by the observer also, when the colorless costume therefore is recognized as a relief and comfort to the looker-on and a boon to the individual at one and the same time, the reason of its undying popularity is explained.

All the latest hats and bonnets are more or less transparent. If a straw, they are of the zephyr variety, light and cool; and countless new midsummer models are made of shirred and accordion plaited gauze, tulle, lisse, India mull and similar airy textures. The brims vary in size, as do the crowns, which are high, low and medium to suit all tastes and faces.

Treacherous Chemicals.

It is remarkable how many really dangerous chemical compositions are daily handled in a great city with a carelessness which is appalling, but which the necessities of modern civilization demand in large amounts. Thousands of gallons of "liquid" carbonic acid gas in steel cylinders under high pressure may be seen at all hours being carted from place to place; other gases are similarly stored under pressure in "tubes," as, for instance, oxygen, hydrogen and nitrous oxide, all of which might expose the public to danger. Solid bricks of metallic sodium (kept under naphtha, of course) are every day carried from port to port as a part of a ship's cargo and dangerous accidents have occasionally occurred from the mixture of treacherous chemicals in the holds of tossing vessels.

PROF. N. A. PATILLO

Selected for the Chair of Mathematics in the State Normal College.

Out of more than forty applicants for the Chair of Mathematics in the State Normal College, Mr. N. A. Patillo has been selected.

Mr. Patillo is a native of Lee county, Ala. He graduated first at the Southern University, Greensboro, and taught mathematics in that institution. He afterwards taught for several years in the Millsaps College, Jackson, Miss. He gave up this work to pursue his studies at Johns Hopkins University, where he obtained the degree of Ph. D., with mathematics for his principal subject. He is a most accomplished Christian gentleman, and has indorsements of the very highest character from many of the best known university professors and presidents of this country.

In selecting Mr. Patillo, the Normal is only carrying out its well-known policy of getting the very best teachers for its faculty. Such a policy merits patronage and gets it.—Florence Standard-Journal.

A Royal Wall Layer.

It is said that Moses Fielding, a lineal descendant in the royal line of the great Chief Uncas, of the Mohegan Indians, who dwell in the woods of Norwich, Conn., and who died a few days ago at Mohegan, in addition to his other many excellent qualities was one of the best builders of stone wall to be found in this country. There are many rods of stone wall in eastern Connecticut, it is said, that will stand for ages, the work of Fielding's hands.

The University of Alabama.

The advantages of being educated in ones own State University cannot be over estimated. Equal strength acquired abroad or in an Institution of less prestige, would be far less valuable in a practical sense. University Alumni are and are to be leading men in all walks of life.

Parents with sons to educate should make a note of this.

Greece has given the world a beautiful object lesson. But it will leave her bankrupt and humiliated. An ounce of powder is worth a pound of sentiment in actual warfare.

Exit Tompkins.

Tompkins is one of those gentlemen of kind disposition who are ever on the outlook for a chance to improve their neighbors' mind. Seeing a man, apparently a country fellow, sitting on the fence, regarding the telegraph wires carefully, Tompkins approached and said:

"Watching the wires, eh?"

"Yes."

"Waiting to see a message go by, eh?"

"Yes, sir," the man replied, smiling.

Then Tompkins spoke kindly to him and explained the mystery of the electric current, and that the messages were invisible, and finished up with:

"Now you know something about it." Then, as he was going away, he said, by the way, "What do you work at?"

"Me and my mate over yonder are telegraph workers, and we've just finished putting up a new wire."

He Made a Sale.

He was a very small boy and very ragged, but there was a look in his eyes of shrewd intelligence beyond his years. His left hand he held behind his back, but his right was extended, and between two grimy fingers he held a half-smoked stump of a cigarette. He had his eye on a well-dressed man who was walking jauntily along the street swinging his cane.

"Say, mister," said the boy, "gimme a match, will yer, please."

The man stopped good-naturedly and smiled when he saw the dirty cigarette stump. He made a pretence of searching his pockets for a match, and finally said:

"I haven't one, bub."

The boy hastily slipped the stump into his pocket, and withdrawing his left hand from behind his back displayed a large box containing an assortment of small boxes.

"If yer ain't got no matches," said he, "now's a good time for yer ter buy. I got 'em all, wax and wood, and some what won't blow out in the wind and udders what will. Yer takes yer pick."

He sold two boxes for a nickel.

Comfort Costs 50 Cents.

Irritating, aggravating, agonizing Tetter, Eczema, Ringworm and all other itching skin diseases are quickly cured by the use of Tetterine. It is soothing, cooling, healing. Costs 50 cents a box, post paid—brings comfort at once. Address J. T. Shuptrine, Savannah, Ga.

Few men really know when they are well treated.

How's This?

We offer One Hundred Dollars Reward for any case of Catarrh that cannot be cured by Hall's Catarrh Cure.

F. J. CHENEY & Co., Props., Toledo, O.

We, the undersigned, have known F. J. Cheney for the last 15 years, and believe him perfectly honorable in all business transactions and financially able to carry out any obligation made by their firm.

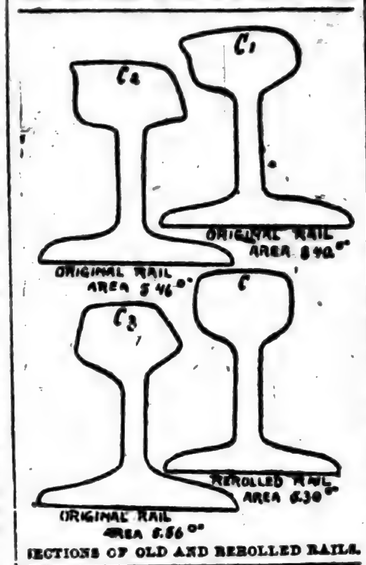
Cheap Method of Renewing Worn Out Railroad Tracks.

A new method of treating worn out steel rails, and one that has received the indorsement of a practical steel rail maker, Capt. R. W. Hunt, is described by him in Cassier's Magazine. This is the invention of Mr. E. W. McKenna, for years identified with large railway systems. His idea was to heat the worn rail in its entirety and cause as little reduction of weight of section as possible, and restore it to perfect section and make it suitable for its original main track use. Experiments with the renewed rails in actual service proved eminently satisfactory.

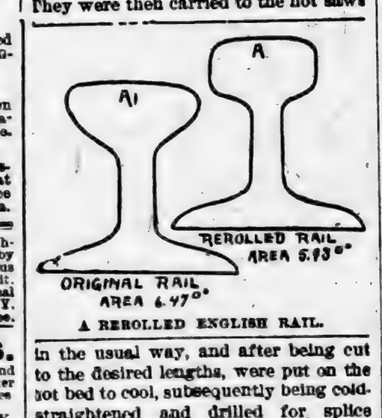


SECTIONS OF OLD AND REROLLED RAILS.

In the accompanying illustration are shown three sections of worn rails. The sections given show the different ways in which steel rails wear, together with flowage of metal—i. e., excessive curve wear, ordinary curve wear, and tread wear. The fact that these different forms of worn rails, varying in weight from 54.6 pounds to 55.6 pounds per yard, were all renewed to the standard C, weighing 53 pounds per yard, demonstrates that the maximum reduction due to the process need not exceed 2.5 pounds per yard and the resultant product of any lot of worn rails will be within five pounds of the original weight.

In sections of rails shown in the second illustration the original rail was of English make, and was in the track twenty-nine years. In the rerolling process the rails were altered to admit the use of modern joint material.

In operating the process the rails were charged into a furnace that was sufficiently long to accommodate the whole rail. After being brought up to a bright red heat the rails were drawn from the end of the furnace opposite to that used for charging, and carried by a steam-driven carriage to the back side of a three-high set of rolls, and entered between the top and middle rolls. After passing through they fell upon driven rollers, and by them entered into the final or finishing pass between the middle and bottom rolls. They were then carried to the hot saws in the usual way, and after being cut to the desired lengths, were put on the hot bed to cool, subsequently being cold-straightened and drilled for splice bolts. The loss in heating and rolling ran from .05 per cent. to .08 per cent. With one heating furnace the product was over 100 tons per turn. A plant is being built at Joliet, Ill., to renew rails by this process.



A REROLLED ENGLISH RAIL.

RUSSIAN PICKPOCKETS.

Their Excellent Cleverness Illustrated by an Anecdote.

One day, while dining together, the French ambassador and a Grand Duke of Russia were discussing the cleverness of the pickpockets of their respective countries.

The Grand Duke claimed that the Russian pickpocket was the more skilful. Seeing the ambassador incredulous, he told him he would, without knowing it, be relieved of his watch before leaving the table.

He then telephoned to the head of the police to send at once the cleverest pickpocket he could lay his hands on.

The man came and was put into livery, and was told to wait at table with the other servants. He was to give the Grand Duke a sign directly he had done the trick.

But this was not given very soon, for the ambassador was very wary, and always kept on the alert, and held his hand on his fob, even when conversing with the most distinguished guest.

At last the Grand Duke received the preconcerted signal. He at once requested the ambassador to tell him the time. The latter triumphantly put his hand to his pocket, and pulled out a potato instead of his watch.

To conceal his feelings he would take a pinch of snuff—his snuff-box was gone. Then he missed his ring from his finger, and his gold toothpick, which he had been holding in his hand in its little case.

Amid the hilarity of the guests, the sham lackey was requested to restore the articles; but the Grand Duke's merriment was changed into alarm and surprise when the thief produced two watches, two rings, two snuff-boxes, etc.

His Imperial Highness then made the discovery that he himself had been robbed at the same time that the French ambassador had been despoiled so craftily.—Harper's Round Table.

An Incombustible Tree.

A Government report from Colombia contains a description of a tree, known as the chaparro, which is said to possess the quality of being fireproof. It grows on the vast plains of Colombia and the north of South America, called savannas, extensive districts which are parched with heat except during the rainy season.

It has long been the custom to clear the ground for the new vegetation which springs up so luxuriantly on these plains after the rainy season by means of fires—and such fires, miles in extent, kindled by the herdsmen, destroy everything in the shape of vegetation, except the chapparo tree, which survives to afford a welcome shade in an almost treeless region.

It is a small tree, seldom growing to more than twenty feet in height, with a girth of about three feet, and it owes its protection from fire to the nature of its hard, thick bark. The bark lies on the trunk in loose layers, which do not readily conduct heat to the more delicate parts of the structure. It is a general idea among the natives that this tree grows only where gold is abundant in the soil below. That it is common in auriferous districts is indisputable, but there is no ground for supposing that it does not grow elsewhere.—The Manufacturer.

A Curious Village of Ants.

George Brook describes, in Popular Science News, a singular community of small brown ants observed by him inhabiting little dome-shaped structures, made of wood fibre, and stuck on the panels of a fence and the neighboring shoots of a Virginia creeper. These shelters, which presented the appearance of a little village, were from a quarter of an inch to an inch in diameter, and about an eighth of an inch high. On breaking them open Mr. Brook found them occupied by ants. During a shower, he says, the little houses were quite full of ants. He saw the industrious creatures at work building and repairing their singular shelters. The Virginia creeper was inhabited by many aphides, or plant lice, which, it is well known, furnish a secretion that ants are very fond of, and which is sometimes likened to the milk of cows. When, with the growth of the creeper, the location in which the aphides abounded was changed, the ants abandoned their original huts and constructed new ones nearer to their "herd of cows." The permanent home of the ants was in a pile of boards several yards away.

Rock Pictures.

There are on the face of the basaltic rock in Lake County, Ore., a large number of pictures of Indians, animals, birds and reptiles of various sorts. They have evidently been cut with some sharp instrument, and the work is very creditable, some of the drawings being excellent. The figures and pictures are arranged in rows and groups. It is thought that the pictures resemble those found in Central America and Mexico. Students of archæology are of the opinion that they may indicate the existence of a civilization which long ago passed from the memory and knowledge of man.

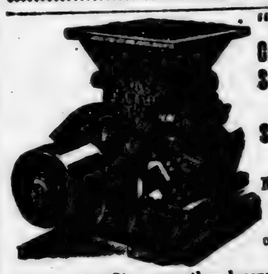
GROVES

TASTELESS
CHILL
TONIC

IS JUST AS GOOD FOR ADULTS.
WARRANTED. PRICE 50 cts.

GALATIA, ILLS., Nov. 16, 1893.

Paris Medicine Co., St. Louis, Mo.
Gentlemen:—We sold last year, 600 bottles of GROVE'S TASTELESS CHILL TONIC and have bought three gross already this year. In all our experience of 14 years, in the drug business, have never sold an article that gave such universal satisfaction as your Tonic. Yours truly,
ABNEY, CARR & Co.



"Success" Cotton..... Seed Huller and Separator.

THE DAISY.

Brightest little daisy,
Nodding in the grass,
Swaying with the breezes
As they gently pass;
Now a look of wonder
In your golden eye—
Tell me what you whisper
To the passing sky.

Tell me, little daisy,
With your petals white,
Do you love the green fields
And the sunshine bright?
Dainty little flower,
Full of light and love,
Can you hear the lark sing
In the clouds above?

Are you never weary
Of the world below?
Dearest little daisy,
Tell me all you know.
Is your life all gladness,
All so fair and bright?
Bravest little flower,
Is it ever night?

Can't you see the shadows
Of the autumn eves?
Hear the quivering sadness
Of the falling leaves?
Farewell, gentle daisy;
Will you tell me more
When I learn the language
I've not learned before?

—Kathleen Phillips, in Boston Transcript.

IN THE FLOOD.

BY MAJOR ALVRED R. CALHOUN.

Those who have seen the bayous of Louisiana, west of the Mississippi, cannot be said to have a thorough knowledge of America, even if they have visited every other state and territory. It is a country level as a prairie, yet covered with mighty forests, whose interlocking live oaks and cypresses make grand arcades of eternal solitude and silence.

The roads in this land are few and short—the only means of communication being the deep, canal-like bayous that are usually currentless and stagnate in the shadows of the bordering trees.

The plantations along these bayous are famed for their sugar and cotton, and they would be the most valuable in the world were it not for the great sums of money expended by the planters in building levees, or heavy artificial banks, to keep the bayous from overflowing in time of high water, which usually comes when the ice is melting in the upper valleys of the Missouri and Mississippi.

But, though the precaution taken to shut out the floods is great, it is not always effective. Heavy falls of snow in the winter to the North mean heavy floods when spring comes to the plains of the South.

The floods in the spring of 1883 will be long remembered as the most severe that ever swept over the plantations bordering the bayous. Rich plantations were ruined, forests leveled, embankments swept away, homes borne off to the sea, herds drowned and scores of human beings perished in the flood or of hunger.

The plantations of Judge Riel and Mr. Gordon were on opposite sides of the Bayou Rouge, about 60 miles south of the point where the Red river enters the Mississippi.

These gentlemen, though neighbors, were not neighborly. They had had a quarrel when young men at college—a foolish, causeless quarrel, and, though 25 years had passed since, they had never spoken. Both had married in the meantime, but their families held no intercourse.

Judge Riel had two sons, one 23, the other a year or two younger; and Mr. Gordon had two daughters, aged respectively 19 and 17.

Florence and Jennie Gordon were pretty, accomplished girls, and, though they loved their parents and their quaint, solitary home, it was but natural that they should now and then yearn to know something of the great world outside the water-girdled plantation.

They often saw the sons of their neighbor—of their father's "enemy," as they thought Judge Riel, rowing past in their graceful boat, and they always acknowledged the salute of the handsome young men, but beyond this no courtesy was interchanged.

"What news, John?" asked Mrs. Gordon, as her husband came into the house about midnight with a dim lamp in his hand and his rubber garments shining with water like a recently polished stove.

"It is still raining as if it had not been at it a week," replied Mr. Gordon, with something like a sigh.

"And the levee?" asked Florence, who, with her sister Jennie, had been waiting up for the report on which home and perhaps life depended.

"Every man on the place is patrolling and watching to prevent a break," said Mr. Gordon, throwing off his coat and running his fingers nervously through his damp, brown hair.

"And the water is still rising," said Mrs. Gordon; "still rising; three inches more and Bayou Rouge will be over the levee and the place will be gone."

Mrs. Gordon set before him some supper and a hot cup of coffee, for which he seemed to have but little appetite. As he stirred the coffee he said, without looking up:

"I think, wife, it would be well if you and the girls would put on warm clothing and have your waterproofs ready, with any light articles you may want to save."

"Do you think the danger is as great as that?" asked Mrs. Gordon, pressing her hands to her breast and trying to speak as if his words had brought her no alarm.

"It is better to be prepared, my dear," said Mr. Gordon, with enforced calmness. "I have had rafts made to carry off the hands if the flood comes in, and the boat has been carried to the door."

In times of great peril women are more apt to be cool and uncomplaining than men. Mrs. Gordon and her daughters realized that a great peril threatened them, but they prepared to meet it with a courage and calmness that lifted a heavy burden from the father's shoulders.

After drinking his coffee, Mr. Gordon put on his waterproof coat and went out again with the lamp in his hand.

He had not been gone many seconds when the ladies were startled by a shrill cry that was taken up by other voices till it rose above the storm.

"The crevasse! The levee is gone!"

They caught these words, and they heard the roar of the waters coming nearer and nearer.

Mrs. Gordon threw open the door to call to her husband to return, but at that instant he burst in shouting:

"Come, wife—Florence—Jennie—to the boat!"

They ran out after him and got into the boat. Mrs. Gordon extinguished the only light in the house as she left, and Mr. Gordon's lamp had gone out.

The shouting of the black people—men, women and children—as they made for the rafts, could be heard above the howling of the wind and the roar of the oncoming torrent.

The darkness added to the horror of the situation, as did the cries of the frightened cattle.

Nearer and nearer came the flood; they could hear it dashing against the house and feel it splashing fiercely on their faces.

The maddened waters reached the boat and shook it.

Then the frail craft began to rise with its precious freight and to tug at the rope which held it to a live-oak tree near the house.

Day came at length and revealed such a change as the dwellers in the ark must have seen when they looked out after the waters had been pouring down for weeks and the fountains of the great deep were broken up.

Where fertile fields had been there was now a lake dotted with trees that seemed yielding to the torrent. The cattle were gone. The quarters of the laborers and the laborers themselves were gone. The sugar-house and the dwelling house were the only two buildings left out of a hundred, and up to their sides the waves were rising, and about them the fierce waters roared.

"It looks as if the world were being washed away," said Florence.

"And that we were the only living beings left on it," added Jennie.

Mrs. Gordon had thoughtfully placed a basket of provisions in the boat, so that there was no danger of immediate danger.

"There is only one place within 60 miles that is not under water," said Mr. Gordon in reply to his wife's question.

"Where is that?" she asked, after a pause.

"Judge Riel's," he replied. "That plantation is six feet higher than this, and the levees are the best in the state."

"Might it not be well," said Mrs. Gordon, thoughtfully, "for us to try and reach them?"

The question seemed to startle Mr. Gordon, for he looked at his wife for some time without speaking. Finally he said:

"I do not hate Judge Riel, and I would help him were he in the same situation, but I cannot go to him now of all times. No, we must get the boat loose, and, trusting in heaven, go on with the current."

Mr. Gordon unloosened the rope, took the oars, and the boat drifted slowly away from its moorings till it was caught by the white waters of the current, and then it shot away with a speed that was startling.

Like all men raised in this land, Mr. Gordon was a good boatman, but for once he found himself in a position where his great strength did not avail and his great skill was useless.

There was no need to pull the oars; it would have been impossible to drive against the current, so they had to go with it.

There was no trouble so long as the boat was drifting over the cleared fields, but this security could not last long. Beyond the fields were the woods, through which it would have been difficult to pass under the most favorable circumstances, but against which it now seemed that the boat must be dashed.

Mr. Gordon realized this, for he said, as if thinking aloud:

"We must try to get into the bayou; there, at least, we shall be safe from the trees."

It is doubtful if he could have kept the boat in the course of the bayou had he succeeded in reaching there, for the currents were rushing through new channels, and the bayou had expanded into an angry sea. By care and the exercise of great strength, Mr. Gordon succeeded in passing safely the first line of timber, but it was only getting deeper and deeper into the inextricable tangle of drooping branches and swinging vines.

They had not been long in this maze when one of the oars was broken, and the other became practically useless. By reaching forward in the bow, Mr. Gordon succeeded in keeping the boat from plunging against the trunks of trees and so being dashed to pieces, but no man could long keep up this work.

After long hours they reached an open space, an expansion of the bayou, where the waters were comparatively calm, and here Mr. Gordon succeeded in making the boat fast to the branch of a tree.

"Let us wait," he said, desperately, "till succor or the end comes."

During the rest of the day they saw the dead bodies of cattle and the wreck of once happy homes drifting past, and now and then caught sight of a boat floating by with the bottom up.

The never-ceasing rain added to their discomfort and kept one of them continually bailing out the water.

They abandoned their first attempt to keep dry, and all were now as wet as if they had been plunged into the seething, yellow flood.

Shortly before dark they ate the balance of the cooked food Mrs. Gordon had put in the boat.

Night came—a more horrible night than any words can describe. Sleep was out of the question. All felt that there was but one labor before them, viz., to keep the boat afloat by constantly using the tin dipper that served as a bailer.

Now and then Mr. Gordon muttered against his hard fate, but not a word escaped the lips of his wife and daughters expressive of the tortures of mind and body which they were so heroically enduring; indeed, they tried to speak a cheer they did not feel by assuring him that succor would come on the morrow.

The dawn of the second day found them in the boat. All were famished and broken down with fatigue.

The waters were higher than the day before, and still the cruel rain poured steadily down.

The wind howled and the waves dashed about them, threatening every moment to swamp the boat.

Mr. Gordon saw by the pinched faces and changed color of his wife and daughters that they could not stand another day of this suffering, yet, what could he do to help them? If his own death could save them he would gladly have yielded his life, but neither his aid nor sacrifice would avail.

The afternoon was wearing on, and the night fast approaching, when a sudden, terrific gust of wind upset the boat.

Floating debris was all about them, and Florence and Jennie managed to grasp part of the roof of a shanty that was swirling by them and struggled upon it—holding on with that desperation which lent them strength.

Mr. Gordon and his wife clung to the upturned boat and were borne away by the rushing flood.

Darkness now lent horror to the situation. The poor girls were about to resign themselves to the fate that seemed inevitable, when, from out of the deep gloom, they heard a faint halloo. They answered with all their might.

After waiting a few minutes and straining their eyes in the direction from which the sound came, they caught the gleam of a torch, and the next instant a boat shot up to them, and in it were Judge Riel and his two stalwart sons, Paul and Leon.

The brave girls assured them that they were in no immediate danger, and implored the judge and his sons to search for their parents—telling them that they were clinging to the boat after it had been capsized and had been swept away, but the girls still hoped that the boat might have become entangled in the flooded forest and that their father and mother might yet be saved. But the judge insisted upon Florence and Jennie getting into his boat. The stout boat was then driven forward in the direction pointed out by the girls as that in which they had last seen their parents. At intervals the young men united in shouting and waving their torch, but the howling of the wind for a time drowned their voices.

During a slight lull a faint cry was heard, which was answered by the united shouts of all in the judge's boat. Soon they were enabled to distinguish from whence the cry proceeded, and a few strokes of the oars brought them to a clump of submerged forest trees, and there, clinging to the branches, they found Mr. Gordon and his brave wife. Their rescue was but the work of a moment, and soon they were safely seated in their "enemy's" boat.

"Mr. Gordon," said Judge Riel, "your hands are all safe at our place, and we have been searching all day for you. Our plantation is still above water, there is a fire on the hearth and a welcome awaiting you."

Thus was the last vestige of animosity between the two men swept away.

At Judge Riel's the fire and the welcome were found, and Mr. Gordon's family were welcomed as if there had never been aught but the warmest friendship between him and the judge.

The old men soon learned that it was a misunderstanding that parted them in youth, and that during all these silent years each had retained the greatest respect for the other.

The floods have shrunk into their beds along the Bayou Rouge; the levees are rebuilt; the cabins are up once more, and the old home is standing. But Florence Gordon is a permanent resident at Judge Riel's, she having recently married Leon, and the gossips say that Paul Riel will take up his home in the fall with Mr. Gordon as the husband of Jennie.

The old men are never happy apart, and Mr. Gordon often whispers to his wife:

"Yes, my dear, we lost a great deal by the flood, but I sometimes think it was a blessing in disguise."

And Mrs. Gordon agrees with him.

HUNTING FROM ELEPHANTS.

A Recently Tamed Beast That Would Stand Any Charge.

Mr. H. W. Seton-Karr, in the Century, tells of his experiences when "After Big Game in Africa and India." In the latter country he hunted as the guest of the Maharaja of Kuck Behar. Mr. Karr says:

One of the first things the Maharaja did after our arrival was to hand to each guest a slip of paper on which was written the name of the elephant allotted to him for shooting purposes, which bore on its back the structure known as a "howdah," to carry the shooter and his guns. As these elephants were necessarily large, and the howdah is high, the oscillation was much greater than if one were seated upon a plain pad upon the elephant's back, or on one of the smaller elephants, which have a smoother gait. We usually, therefore, went to the cover, or jungle, upon one of the "beating," or "pad," elephants, which afterward during the operations of the day were employed in a long line to force the rhinoceroses and other animals out of the dense thickets in which they live.

The howdah-elephant which the Maharaja allotted to me was named "Secunder." Three years previously it was as uncaptured wild elephant ranging at liberty the jungles of Bengal. It was a fine female, between nine and ten feet in height at the shoulder, with short but perfect "tushes," projecting a few inches beyond the upper lip. There are other elephants in the Maharaja's stud which have been tamed more recently still. It was very gentle and obedient, and perfectly fearless, and therefore very valuable as a shooting-elephant: as for example, on several occasions during the following three weeks it stood without flinching the charge of wounded buffalo, tiger, and rhinoceros, thus enabling me to take a steady shot. Almost all elephants show great fear of the Indian rhinoceros; there are few that will not turn tail when they scent their enemy, and fewer still that will stand the crash and short snorts that precede the charge.

About breakfast-time each morning the elephant told off for each guest was brought to the neighborhood of his tent, and the howdah placed upon it, resting upon a saddle composed of two cushions of strong sacking about six feet by two, which rested in turn upon a large cloth covering the whole of the elephant's back. The howdahs for shooting are lightly built of wood and cane-work, and contain two seats, and racks to hold guns or rifles, three on each side. All this is lashed on by ropes passing under the elephant's neck, belly, and tail. The weight which an elephant is able to carry upon its back exceeds a ton; for short distances they have been known to carry as much as three thousand pounds, but for long marches half a ton is considered the limit. Many of the Maharaja's elephants had fine tusks, but most tusks are cut at regular intervals to prevent them from injuring one another. One or two of the fighting-elephants, however, had pointed tusks.

A Church Without Plaster.

Chicago is about to have a church devoid of plaster. The inner walls will be of brick. There will not be even wooden window sashes, as the panes of glass will be set into the brick. It is St. Paul's Catholic church, Hoyne avenue and Twenty-second place. The foundations are being laid directly on bedrock, which comes near the surface at this point. The brick for the interior trim is being especially pressed in fanciful designs. The church will be completed by the winter of 1898. It will be 209 feet long by 108 feet wide, and its two towers will be 32 feet square by 245 feet high.

A Martyr to Swelldom.

Laura—What did she mean? Suicide?

Nonie—No, she was trying to turn her blood blue.—Pittsburg News.

A BLOODY TRAGEDY.

Cattlemen Fight a Duel With Rifles at Kissimmee, Florida.

Much ill-feeling has been caused at Kissimmee, Fla., of late by the frequent stealing of cattle and the actions of a few of the larger cattlemen in fencing the large tract owned by northern companies for their own cattle. Saturday it culminated in a rifle duel, wounding one man badly. While parties headed by George Summerton, of Bortow, and Will Shiver, were on the prairie, they met. After passing a few words Shiver challenged Summerton, and immediately the shooting commenced; the first shots not taking effect, they separated some distance and continued shooting. Shiver got a hole through his hat and was shot in the neck. Summerton's horse was shot and his hat was plugged by a bullet, this last was fired by Mrs. Shiver, who stood by her husband, firing at his opponent. The blood which flowed from Shiver frightened his wife, and she asked that the shooting stop. The other men of the two parties stood off at a safe distance and witnessed the fight, neither side daring to interfere. There are several thousand acres there fenced in that belong to New York, Chicago and Philadelphia syndicates. They refused to have the fences taken down on the application of the smaller cattlemen on account of the expense. The county commissioners then raised the taxes from 50 cents per acre to $1, thinking that would bring them to terms, but it did not, as they simply made an appeal from the assessment and will fight it. The larger cattlemen are guarding the fences and will fight for them. Then, too, men from over the Kissimmee river made raids upon this section, and hundreds of cattle have been stolen in the past month, causing a very ugly feeling to spring up. More trouble is feared, as all the cowboys are armed, and they take sides and are feeling very bitter and hot for a fight.

The University of Alabama.

For many years this old and justly celebrated institution of learning has occupied a position second to none for the ability and learning of its faculty and the thoroughness of its scholarship. Its graduates are scattered all over the South, and scarcely without an exception have made their mark and gained eminent positions in the various professions and avocations which they have pursued. In our midst may be mentioned Col. J. O. Banks, Col. S. M. Meek, Mr. W. C. Meek, Mr. B. L. Owen (county treasurer), Mr. J. I. Sturdivant, Maj. H. B. Whitfield, Mr. J. O. Banks, Jr., and perhaps others whose names at this moment escape us.

One of her graduates, Prof. J. W. Beeson, is the distinguished president of the East Mississippi Female College at Meridian; another, Dr. T. J. Mitchell, is superintendent of the Mississippi Insane Asylum.

She has furnished one governor of Texas, Hon. O. M. Roberts, and three judges of the supreme court, one of whom, Judge Robert L. Gould, was for some time a tutor in the University. At the last meeting of the trustees, Gen. Richard C. Jones, its then distinguished president, having, with almost universal regret, resigned the position to return to the bar, to fill this vacancy the trustees, by a unanimous vote, elected James K. Powers, LL. D. In the selection of Dr. Powers the trustees made no mistake. For scholarship, ability, untiring energy and magnificent executive attainments, he stands second to no man in the South. His life having been devoted to the high calling of a teacher, his success has been phenomenal, and we predict that, by the aid of the able faculty at his back, he will advance this institution, if possible, to a still higher grade of distinction and usefulness. Under his guidance and control, every man connected with this institution will do his duty.—Columbus, (Miss.) Commercial.

The Tennyson Beacon Unveiled.

The Rev. George Granville Bradley, dean of Westminster, unveiled Friday on Freshwater Downs, Isle of Wight, the Tennyson memorial beacon. The beacon, which will take the place of one that has long stood there, is in the form of an Ionic cross and is visible for miles. Its site is in the immediate vicinity of the poet's favorite walk. Although the family preferred not to issue many invitations to the ceremony, there was a large gathering. Among those present were the Archbishop of Canterbury, Bishop Whipple, Lord and Lady Tennyson and the Hon. Alfred Tennyson, with other members of the family and many literary celebrities. The Rev. Jos. Harriman, chairman of the memorial committee, pointed out that a considerable proportion of the subscription had come from the United States. A special interest was attached to the ceremony because Friday was the anniversary of the poet's birth. On Sunday next Bishop Whipple will preach a commemorative discourse, at Freshwater, at a memorial service to be held in the parish church where the Tennysons attended.

GOING SOUTH!

The tide of immigration is rapidly turning towards the South. The West and the Northwest has had its day, and the antiquature advice of Horace Greely "go west young man; go west!" has been superseded by the more timely advice of Chauncey Depew and others, "go South young man, go South."

Shrewd investors have observed that the South is on the dawn of a new era of peace and prosperity, and are rapidly investing their wealth where sound judgment assures them that values are increasing. Every section in the South has taken on new life, and through the coming in of new capital a new impetus has been given to the developement of the rich resource so abundently lavished upon the South by a kind providence.

Especially is the case so with the state of Alabama and its centrally located fruit and agricultural lands. Say nothing about its immense mineral fields.

THORSBY, Chilton county, Alabama,

The Ideal Northern Collony,

Located on the famous Chilton plateau is an index to the largest and most prosperous settlements of its days and is a Aoucher for what capital and labor, combined, will accomplish.

The Concordia Land and Improvement Association, give the following advice to home seekers.

1st, locate on a main line with good shipping facilities.

2nd, locate on an allitude that will insure you good health.

3rd, locate where good water is obtainable.

4th, locate where a few acres of fruits and vegetables will bring you a good living.

5th, locate where you can raise corn, small grain and all kinds of grasses to the capacity of any other state in the Union.

6th, locate where you have a ready market for all products raised.

7th, locate where you will have the benefit of a settlement with churches, schools, and good society, so that your family will feel at home.

Please notice the following and see if Thorsby will do for you:

THORSBY

Is located on the main line of the great Louisville & Nashville Railroad, which directly combines the Gulf with the whole Northern Territory.

THORSBY

Is located on an altitude of 800 feet above sea level, and consequently has an excellent climate, not too hot in summer nor too cold in winter.

THORSBY.

Is located where good, pure freestone water is obtainable at a depth from 25 to 40 feet, besides being well watered with springs and creeks.

THORSBY

Is located where farm land can be had in connection with fruit land, and a stranger will be surprised to see its corn and oat fields. If you doubt this, or any other statement, please write the undersigned and you will be referred to people living in nearly every state of the Union who have had the opportunity to see our crops.

THORSBY

Is located 48 miles each way, north and south, from the great mining and manufacturing center, Birmingham, with its 68,000 people, and the Capital City of Alabama, Montgomery, to which points daily shipments are how being made from here.

THORSBY

Is located where 140 Northern families have already cast their lot, and about one-half of them are now on the grounds. Two church organizations and the Thorsby School Society, besides other social circles, are the results of our seventeen months' faithful work towards making Thorsby a success.

For general information and printed matter please write us, and we will give it prompt attention.

THE WAR IN CUBA.

UNITED STATES MAY TAKE A HAND IN THE CONFLICT.

Minister Woodford Has Specific Instructions --- Unless the Situation Improves Uncle Sam Will Interfere --- Policy Outlined by President Grant to be Followed.

Officials of the State Department at Washington were very reticent Friday when asked regarding the report in circulation that definite instructions have been given all our foreign ambassadors and ministers to European countries to sound and ascertain the attitude of European governments in case the United States should intervene in behalf of Cuba. While general denials were made by some of them, others intimated that the United States was ready to assume the position taken by President Grant in 1874, as shown by the instructions of Secretary Fish to Minister Cushing. Although it never appeared that these instructions were carried out, and there is no knowledge as to what Spain would have done in the premises, it is possible that Minister Woodford will have a different report to make. It can be stated on information received at Washington that Lord Salisbury has sent an unfavorable answer to a suggestion that the United States should interfere, the fact being that he has not replied at all to the attempt of our ambassador to sound him on the subject, and that his attitude gives reason to believe he will not oppose such action as our interests may make necessary.

Minister Woodford's instructions are to intimate to Spain that the United States will intervene, unless the situation in Cuba speedily improves. This, in effect, was the instructions which were given Mr. Cushing by Mr. Fish, and it is understood that the attitude of the United States is almost identical with the position taken during Gen. Grant's administration. Then, as now, the good offices of the United States had been tendered to Spain to bring about a settlement of the war; "but," said Secretary Fish, "the well-intended proffers of the United States were rejected by Spain."

The secretary reviewed the situation, which presents many similar phases to that which exists now. President Grant, said the secretary, regarded independence as the only certain and necessary solution of the Cuban question. The attitude of the present administration is said to be on the same lines, and it is said Minister Woodford will make it clear to the Spanish authorities that our interest will make intervention by the United States imperative unless something is done speedily by Spain to improve the present situation, disastrous as it is to all our interests.

THE POSTAL COMPANY.

Secures Control of the Mexican Telegraph Lines.

Under separate agreements entered into with the great systems of the Republic of Mexico, respectively, the Mexican National Railway Company, and the Mexican Central Railway Company, the telegraph lines of those companies have passed under control of the Postal Telegraph Company. Heretofore telegraphing into the Mexican capital has either been by cable, via Galveston and Vera Cruz, or by the American land lines to the Mexican border, and thence by the railway companies' lines from Laredo or El Paso to the city of Mexico. The contracts entered into gives the Postal Company a continuous system from the United States to all the principal cities in the neighboring republic. To make this possible the Postal Company extended its lines south from Denver through Albuquerque to El Paso, to connect with the Mexican Central system, and is now building from Little Rock to Laredo to connect with the Mexican National system, which extension will be completed on January 1, 1898. As a consequence of the extension, the messages from American cities have been reduced 40 per cent, making the message rate from New York to the city of Mexico $1.85 for ten words, and the cable rate from the City of Mexico to London has been reduced from 60 cents a word to 39 cents a word.

It is pretty hard to decide on the meanest man you ever knew.

CHILTON COUNTY CALL.

SOUTHWARD THE STAR OF EMPIRE TAKES ITS WAY.

VOL. I. NO. 21. THORSBY, ALA., FRIDAY, AUGUST 27, 1897. $1.00 PER YEAR.

EVERYBODY

GOING SOUTH!

The tide of immigration is rapidly turning towards the South. The West and the Northwest has had its day, and the antiquature advice of Horace Greely "go west young man; go west!" has been superseded by the more timely advice of Chauncey Depew and others, "go South young man, go South."

Shrewd investors have observed that the South is on the dawn of a new era of peace and prosperity, and are rapidly investing their wealth where sound judgment assures them that values are increasing. Every section in the South has taken on new life, and through the coming in of new capital a new impetus has been given to the developement of the rich resource so abundantly lavished upon the South by a kind providence.

Especially is the case so with the state of Alabama and its centrally located fruit and agricultural lands. Say nothing about its immense mineral fields.

THORSBY, Chilton county, Alabama,

The Ideal Northern Colony,

Located on the famous Chilton plateau is an index to the largest and most prosperous settlements of its days and is a voucher for what capital and labor, combined, will accomplish.

The Concordia Land and Improvement Association, give the following advice to home seekers.

1st, locate on a main line with good shipping facilities.
2nd, locate on an allitude that will insure you good health.
3rd, locate where good water is obtainable.
4th, locate where a few acres of fruits and vegetables will bring you a good living.
5th, locate where you can raise corn, small grain and all kinds of grasses to the capacity of any other state in the Union.
6th, locate where you have a ready market for all products raised.
7th, locate where you will have the benefit of a settlement with churches, schools, and good society, so that your family will feel at home.

Please notice the following and see if Thorsby will do for you:

THORSBY

Is located on the main line of the great Louisville & Nashville Railroad, which directly combines the Gulf with the whole Northern Territory.

THORSBY

Is located on an altitude of 800 feet above sea level, and consequently has an excellent climate, not too hot in summer nor too cold in winter.

THORSBY.

Is located where good, pure freestone water is obtainable at a depth from 25 to 40 feet, besides being well watered with springs and creeks.

THORSBY

Is located where farm land can be had in connection with fruit land, and a stranger will be surprised to see its corn and oat fields. If you doubt this, or any other statement, please write the undersigned and you will be referred to people living in nearly every state of the Union who have had the opportunity to see our crops.

THORSBY

Is located 48 miles each way, north and south, from the great mining and manufacturing center, Birmingham, with its 68,000 people, and the Capital City of Alabama, Montgomery, to which points daily shipments are now being made from here.

THORSBY

Is located where 140 Northern families have already cast their lot, and about one-half of them are now on the grounds. Two church organizations and the Thorsby School Society, besides other social circles, are the results of our seventeen months' faithful work towards making Thorsby a success.

For general information and printed matter please write us, and we will give it prompt attention.

THE WAR IN CUBA.

UNITED STATES MAY TAKE A HAND IN THE CONFLICT.

Minister Woodford Has Specific Instructions — Unless the Situation Improves Uncle Sam Will Interfere — Policy Outlined by President Grant to be Followed.

Officials of the State Department at Washington were very reticent Friday when asked regarding the report in circulation that definite instructions have been given all our foreign ambassadors and ministers to European countries to sound and ascertain the attitude of European governments in case the United States should intervene in behalf of Cuba. While general denials were made by some of them, others intimated that the United States was ready to assume the position taken by President Grant in 1874, as shown by the instructions of Secretary Fish to Minister Cushing. Although it never appeared that these instructions were carried out, and there is no knowledge as to what Spain would have done in the premises, it is possible that Minister Woodford will have a different report to make. It can be stated on information received at Washington that Lord Salisbury has sent an unfavorable answer to a suggestion that the United States should interfere, the fact being that he has not replied at all to the attempt of our ambassador to sound him on the subject, and that his attitude gives reason to believe he will not oppose such action as our interests may make necessary.

Minister Woodford's instructions are to intimate to Spain that the United States will intervene unless the situation in Cuba speedily improves. This, in effect, was the instructions which were given Mr. Cushing by Mr. Fish, and it is understood that the attitude of the United States is almost identical with the position taken during Gen. Grant's administration. Then, as now, the good offices of the United States had been tendered to Spain to bring about a settlement of the war; "but," said Secretary Fish, "the well-intended proffers of the United States were rejected by Spain."

The secretary reviewed the situation, which presents many similar phases to that which exists now. President Grant, said the secretary, regarded independence as the only certain and necessary solution of the Cuban question. The attitude of the present administration is said to be on the same lines, and it is said Minister Woodford will make it clear to the Spanish authorities that our interest will make intervention by the United States imperative unless something is done speedily by Spain to improve the present situation, disastrous as it is to all our interests.

THE POSTAL COMPANY

Secures Control of the Mexican Telegraph Lines.

Under separate agreements entered into with the great systems of the Republic of Mexico, respectively, the Mexican National Railway Company, and the Mexican Central Railway Company, the telegraph lines of those companies have passed under control of the Postal Telegraph Company. Heretofore telegraphing into the Mexican capital has either been by cable, via Galveston and Vera Cruz, or by the American land lines to the Mexican border, and thence by the railway companies' lines from Laredo or El Paso to the city of Mexico. The contracts entered into gives the Postal Company a continuous system from the United States to all the principal cities in the neighboring republic. To make this possible the Postal Company extended its lines south from Denver through Albuquerque to El Paso, to connect with the Mexican Central system, and is now building from Little Rock to Laredo to connect with the Mexican National system, which extension will be completed on January 1, 1898. As a consequence of the extension, the messages from American cities have been reduced 40 per cent, making the message rate from New York to the city of Mexico $1.85 for ten words, and the cable rate from the City of Mexico to London has been reduced from 60 cents a word to 39 cents a word.

It is pretty hard to decide on the meanest man you ever knew.

YOUR MONEY

Buys more goods now than it would a few weeks ago, because SUMMER Goods MUST be Sold.

YOUR LIFE

Can be made pleasant by the conscientiousness that you are dealing in the very best and most economical way. We are determined to close out our Summer stock to make room for our FALL GOODS, which are partly here, and daily arriving. We have made such

Tremendous Reductions

that it is the Talk of the state.

Such Offerings, such values, at such unheard-of prices, has never occurred before.

IT WILL SAVE YOU

Many dollars on desirable Bargains in CLOTHING, HATS, MEN'S FURNISHINGS, SHOES, if you purchase now.

Mail orders accompanied by cash will receive prompt attention.

J. BLACH & SONS,

CASH CLOTHIERS,

1912-1914 First Ave.,

Birmingham, - Alabama.

SING A SONG.

If you'll sing a song as you go along,
In the face of the real or the fancied wrong;
In spite of the doubt if you'll fight it out,
And show a heart that is brave and stout;
If you'll laugh at the jeers and refuse the tears,
You'll force the ever-reluctant cheers
That the world denies when the coward cries,
To give to the man who bravely tries;
And you'll win success with a little song—
If you'll sing a song as you go along!

If you'll sing a song as you plod along,
You'll find that the busy, rushing throng
Will catch the strain of the glad refrain;
That the sun will follow the blinding rain;
That the clouds will fly from the blackened sky;
And the stars will come out by and by;
And you'll make new friends, till hope descends
From where the placid rainbow bends;
And all because of a little song—
If you'll sing a song as you plod along!

If you'll sing a song as you trudge along,
You'll see that the singing will make you strong;
And the heavy load and the rugged road,
And the sting and the stripe of the tortuous goad
Will soar with the note you set afloat;
That the beam will change to a trifling mote;
That the world is bad when you are sad,
And bright and beautiful when glad,
That all you need is a little song—
If you'll sing the song as you trudge along!

—Philadelphia Telegraph.

RAMAPO PASS.

In the summer of 1781 the forces of Washington lay six weeks at Dobbs Ferry on the Hudson. Every day Sir Henry Clinton, who was in command of the British in New York, had been expecting an attack, and we now know Washington had been preparing to move against the city, but the failure of Count de Grasse, who was holding the French fleet at the West Indies, to co-operate with the troops on land, had compelled him to abandon the project, and he had decided to move rapidly to the south and attack Cornwallis, who was then in Virginia.

But he was very desirous that Clinton should not suspect his plan, for he might prevent the march or send reinforcements to Cornwallis, and either action would hinder, if it did not defeat, his project. So the American commander bent all his energies to deceive the British, and make them think that New York was still the place to be attacked. Indeed, we know that even after the march was begun the French troops, who went by the way of Perth Amboy, there stopped to build ovens and boats, and gave out that they were about to attack the posts on Staten Island and then move against the city. There were other means that Washington used, however, to produce the same impression even before his army left Dobbs Ferry, and it is with one of these that this story has to do.

"I want to see Dominie Montagnie!" said an orderly to a company of men who were seated near a tent in the camp at Dobbs Ferry.

"There he is over there," replied one of the soldiers, pointing to a young man not far away.

"That Dominie Montagnie!" said the orderly. "Why he's only a boy."

"Boy or not, he's one of the stanchest Whigs in all this region. There isn't a better man in all the Continental army," replied the soldier.

The orderly left, and as he approached the young man shrewdly scanned his face. Evidently he was satisfied with what he saw, for he at once addressed him:

"Is this Dominie Montagnie?"

"Yes," replied the young preacher, returning the look to the officer.

"Well, Gen. Washington wants to see you at once."

"Wants to see me? What for?"

"I don't know. Come with me and you will soon know."

Young Montagnie asked no further questions, but arose and accompanied his guide to the quarters of the commander. He had never spoken to him before, but he shared fully in the feeling of respect which all the army had for their leader, and he was somewhat abashed when the General rose to receive him, and could scarcely reply to the kind words he spoke when he was presented.

"Yes, I have known of you," said Washington, "and from all I can hear I am certain I can rely upon you. Is this true?"

"I try to do my best, General," said Montagnie modestly.

"That's right. Now, I have a very important commission for you," and the General paused a moment to note the effect of his words, but the young man only bowed, and he continued: "I want to send some despatches by you to Morristown. You will cross the river at King's Ferry, go up by Haverstraw and through Ramapo Pass."

Montagnie looked up quickly at the words. "Ramapo Pass." Yes, he knew the place, and too well. It was a narrow defile among the hills of New Jersey, and already had been the scene of some of the most exciting events in the Revolution. And now the cowboys and skinners held it, and if he should once fall into their hands he knew what would occur.

"But, General," he ventured to stammer, "Ramapo Pass is one of the headquarters of the Tories, and I shall surely be taken if I try to go that way. Why may I not go by the upper road? I am familiar with every foot of the country."

"Young man," said Washington, stamping his foot in real or pretended anger, "your duty is not to talk but to obey."

The young preacher saw that all remonstrance would be in vain, and although he could not understand why he should not be left to select his own route, especially since he was to go through a country he knew thoroughly, he only bowed his head and promised to do his best. "When am I to go?" he inquired.

"Now. Just as soon as you can get ready."

Just at dusk, dressed in citizen's clothing, and with the despatches sewed inside the lining of his sleeve, young Montagnie was carried across the river and started on his journey. Even a horse was denied him, but the hard young Continental cared little for that, and all night long he kept steadily on his way.

It was about half an hour before sunrise when he came near to Ramapo Pass. "My time has come," he said to himself. "If I can once get safely through this place I have no fear of the rest of the way." But he was more excited than he knew, and he was breathing rapidly as he entered the pass. He grasped his heavy walking stick more tightly and glanced about him. The passage between the hills was becoming very narrow. Beside the roadway there was only a narrow little strip of land and the swift-flowing stream that ran noisily on its way. The steep hillsides rose abrupt and rocky. The damp, cool air of the early morning, the noise of the stream, the threatening cliffs and bowlders, which might conceal some of his enemies, all increased the nervous dread of the messenger, and he quickened his steps. Once through, his greatest danger would be passed.

"Hark! What was that? He stopped and listened, and in a moment he knew he had not been deceived. He could hear the sound of approaching horsemen, and they were coming rapidly down the road behind him.

He glanced behind for a hiding place, and already had started to climb the cliffs, when he caught sight of the approaching men and realized that he could not gain a place of concealment before they would be near enough to see him. Perhaps they had already discovered him. There was nothing left but to resume his place in the road, walk on as though he neither feared nor suspected anything, and keep on as bold a face as possible. But if his face was bold, it was the only thing bold about him, for his heart sank when he saw the six men enter the pass, and bring their horses to a walk when they noticed the stranger.

He could see their faces now, and his alarm increased when he recognized the leader as Richard Smith. He had been at Goshen when his father, Claudius Smith, along with Gordon and De la Mar, had been hanged. Montagnie knew what a desperado Claudius Smith had been, and what a terror his gang of cowboys had been in Orange county and along the borders of New Jersey. Many rewards had been offered for his arrest, and about a year and a half before this time he had been captured at Oyster Bay and taken to Goshen, where he was chained to the floor of the jail and a strong guard placed over him.

All his efforts to escape had been in vain, and with his two companions he had been hanged, as Montagnie himself knew, for he had been in Goshen on that very day. But Smith's son Richard had been avenging the death of his father, and the poor Whigs in that region had been suffering more at his hands than they had from his father. These were the thoughts that were passing rapidly through the mind of the messenger, and there was this desperado, Richard Smith, approaching, and with him five men as desperate as he at his back. What villainous-looking men they were. He grasped his walking-stick more firmly and tried to appear calm.

"Good morrow, gentlemen," said Montagnie.

A gruff word was the only reply, but each man was glancing sharply at him. Evidently they were suspicious, but, as they passed on, Montagnie breathed more easily. The danger was almost passed and in a moment he would be beyond their sight.

But he was not to escape so easily. Without turning his head he was aware they had stopped and were watching him. The moment was a critical one. Would it never come to an end?

"Hold, stranger," called one of the men. "You travel early."

The messenger stopped, for there was nothing else to be done, and waited their approach. They soon gathered about him, and he knew his only hope lay in being calm.

"Yes," he replied, "and neither are you late in your start."

"Whither might you be bound?" said Smith, ignoring his words.

"Oh, up the road here, among the hills."

Smith laughed derisively as he replied; "That won't do. Up the road may lead you to Morristown, or it may be New York. You'll have to give an account of yourself."

The young preacher glanced quickly about him. Should he try to fight? Six men, armed and mounted, were before him, and they would think no more of shooting him than they would a squirrel by the roadside. But the leader had not failed to note his hesitation, and he turned to his men and said: "Search him, boys. If he's straight it'll do no harm; and if he isn't, it's the thing to be done."

In a moment Montagnie had forgotten his caution. If the papers were found they would perhaps kill him, and if he must die he would sell his life as dearly as possible. He had been so quiet that the two men who approached were taken off their guard when he suddenly whirled his heavy stick and struck one of them a heavy blow and then turned to the other. With a bound he leaped over the fallen men and started for the cliffs. It was a desperate venture and every moment he expected to hear the sound of their guns. He struggled on, however, unmindful of everything but his own desire to escape.

"Don't shoot! Don't shoot!" he heard Smith call, "He may be worth more alive than dead. Ha! ha! Who would have thought such a peaceful looking youngster would have given such a rap?" and he laughed again when he saw how angry his companions were. "Take after him; be quick or he'll get away."

Montagnie was struggling desperately to make his way up the hillside. For a moment he thought they had abandoned the pursuit, although he wondered why they didn't shoot, but he soon understood it all when he saw two of the men coming toward him. They had known of a path, and by taking it had been able to gain the heights above.

To attempt further flight was useless now, and without a word he followed his captors to the road beneath.

"Take him up to the hut, boys," said Smith and the messenger soon found himself in a rude log house about 200 yards from the road and concealed among the defiles of the hills.

"Now search him," said the leader, and the men immediately began to do his bidding. His three-corned hat was cut into pieces, but nothing was found in it. Next his coat was taken off, and in a moment one of them exclaimed: "Here's something; it's inside the lining," and he cut open the sleeve and took out the dispatches, which he tossed to Smith. The leader quickly opened them, and as he read the others watched him keenly.

"It's a good find, boys, and all right. That's what comes of making a general out of a farmer. Who was the fool that tried to hide this in the lining of a sleeve?" he inquired, turning to Montagnie. "Why, it's the very first place we'd look into. And you must have been drunk to think you could get through Ramapo Pass with them. You don't look like a lack-wit, but you must have been not to have taken the upper road. But Clinton will be glad to get this! Now, boys, what shall we do with this fellow, hang him or send him away?"

"Shoot him," said the one whom the messenger had struck. "It's none too good for him."

"We'll see about that a little later," replied Smith. "We've got to get this letter to Clinton the first thing we do."

Two were left with the prisoner as a guard and the others soon rode way. For three days and nights Montagnie lay in the hut, bound hand and foot. Not for a moment were the cords loosened, and each day his guard told him they were about to take him out and hang him and leave his body on a tree by the roadside as a warning to all Whigs. The preacher had fully resigned himself and expected daily the threat would be put into execution.

On the fourth day Smith returned, and, after a hurried consultation with the guards, rode away. The prisoner's hands were loosed, and his aching limbs were rubbed by the guard, but he had no other thought than that he was being prepared for his execution. Accordingly when in a few hours he was bidden to follow them out of the hut he glanced on every side for the rope he thought to see dangling from some tree. As he walked his thoughts were somewhat bitter against Washington. Why had he insisted upon his coming through Ramapo Pass? If he had been left to his own device he would have taken the upper road and never would have fallen into the power of those desperadoes.

"Can you ride," said one of the men abruptly.

"Yes," replied the preacher. Were they about to mount him on a horse and then start the horse off after the noose had been adjusted? He had heard of that plan having been used.

But he had no time for meditation, for they came to a place where three horses were waiting. Almost before he knew what had occurred, the prisoner found himself mounted and riding rapidly along the road, with one guard on either side.

What could it mean? He saw no rope and not a word was spoken. On and on they went, and gradually it dawned upon the young man's mind what the destination was to be. Nor was he mistaken, for he soon was carried across the river and placed in the old Sugar House prison in New York, one of the famous provost prisons of that day.

"You're a great one," said the guard to Montagnie the next day. "Those letters you had were all about Washinton's plan to attack New York. But Clinton can take a hint, and everybody in the city is getting ready to receive the rebels." Then he took from his pocket a copy of Rivington's Gazette, which contained a long account of his capture, the nature of the dispatches he had carried and the use Sir Henry was making of the information he had gained.

Suddenly, as the guard finished his reading, Montagnie laughed aloud.

"What are you laughing at?" asked the angry guard as he left. "I don't see anything funny in that?"

But the prisoner did, and all his bitterness toward Washington had vanished in a moment. Now he understood it all. Washington had intended all the time to have him taken prisoner with those dispatches on his person and thus to hold the British in New York while he started for Virginia.

How well he held them we know from the fact that when Sir Henry next heard of him he was already beyond the Delaware, too far away to be pursued, and it was too late to send word or aid to Cornwallis.

As for Parson Montagnie, he was not long kept a prisoner, for the war was soon ended; but for years it was his delight to tell the story of his capture. "I had read about the Greeks holding the pass of Thermopylae," he would say, "and keeping out the enemy; but I kept the enemy in by failing to hold the pass at Ramapo."—Atlanta Constitution.

The Shut-Up Closet.

The Ohio Sanitary Bulletin thus discourses upon the shut-up clothes closet: "It is the usual thing to have one or more closets for clothing opening into each bed-room. Often these are in inner walls; that is, do not have a window opening out of doors, and are consequently dark, unventilated pockets. This is exceedingly objectionable for closets anywhere, and especially so for closets opening into a bed-room. An outer garment, which has been worn for several days—the frock of the woman, the coat and trousers of the man—is taken off and hung up in this dark, unventilated box of a place. The garments are more or less impregnated, even with the most cleanly people, with effete matters which it is the function of the skin to remove from the body. These are of organic character and must decay, adding impurities to the atmosphere. Where such closets already exist care at least may be taken to thoroughly air all clothing before placing it in the closet, and the closet door may be left open while the bedroom is being aired and sunned, as it should be, for several hours each morning."

A Valuable Fowl.

Henry W. Brodt, proprietor of the Commercial Hotel of this city, made a remarkable discovery yesterday, which confirms the theory of geologists that the small gravel-bottom creeks southeast of here contain gold washed from the sides of the knobs. Andrew Blackall, a poultry dealer here, purchased some chickens of a farmer who lives in Finley township, on one of these gravel streams, close to the Knobs. One of the fowls, a large rooster, he sold to Mr. Brodt, who had it prepared for dinner. The surprise of the cook can be imagined when, on dressing the chicken, she found in its craw a nugget of what appeared to be gold. It was taken to a jeweler, who pronounced it a pure specimen of the precious metal. Its weight was found to be thirty-eight grains. The nugget is a bright, solid lump, in its natural state, which shows that the gold is a native product of the county.—Indianapolis News.

Purple Blue Orchid.

A purple blue orchid of a color never seen before in England, discovered by M. Robelin in the Philippine Islands, 6,000 feet above sea level, has just been introduced to the British public under the name of Dandrobium Victorise Reginæ. Three hundred of the dried-up roots were sold in London at from $4 to $10 a piece.

DO YOU KNOW HIM?

One who is always a-grumbling,
Whose life is all out of place,
Who imagines the world would stop moving
If he should drop out of the race.

Who imagines he's born with great talents,
That the busy world never can see,
Who exalts himself with the folly
That none so brilliant as he.

Who believes that a tithe of his knowledge
If sought in matters of state
Would result in such wonderful changes
As only his brain can create.

And while such as he goes on grumbling,
As he bows at the shrine of the fates,
The busy old world keeps a-moving,
The grumbler still grumbles and waits.

He grumbles while those all around him
Have their places in the front of the strife.
"Never give up" is their motto,
And it wins them the battle of life.

—Buffalo Evening Times.

HUMOROUS.

Do you have any trouble about sleeping? She—Not at all. I can scarcely keep awake now.

Edith—Do you care much for fiction? Ethel—I read very little except the bargain advertisements.

Diffident Lover—I called to—to—ask—um—er— Her Father—Yes, take her. This is my busy day. Get out.

Lost Child (to policeman)—Please, sir, have you seen a man without a little boy? 'Cause, if you have, I's that little boy.

Jack—Where's Bill now? Jill—Out West. "What doing?" "Raising palms—making the tenderfeet throw up their hands."

Tommy—Paw, why do they call a single woman a spinster? Mr. Figg—I guess it's because of her ability to turn men's heads.

Mamma—Now, Bobby, give nurse a kiss and say good-night. Bobby—No. If I kiss her she'll box my ears, like she did papa's last night.

She—What do they mean by the centre of gravity? He—Tell a joke to a party of Englishmen, and that's precisely what you would be.

Wheeler—I see they have been trying bicycle ambulances. Walker—I thought these scorchers would make something of the kind necessary.

Suburbs—I am not at all good enough for you, dear. Miss Boston—I'm glad you confess it before we were married. You're the fellow for me.

"I often experience a shock of disappointment when I get up close to some apparently beautiful woman." "Probably they feel the same way about you."

Excited Wife—Oh, professor, the cook has fallen and broken her collarbone! Professor—Discharge her at once! You told her what to expect if she broke anything more.

"Now, I play the piano. Would you say 'I play it beautiful' or 'play it beautifully?'" "Neither." "What would you say, then?" "I'd say you 'play a beautiful piano.'"

"Julia had her husband's photograph taken with his head stuck in a newspaper." "Why did she do that?" "She said that was the way he always looked at her when he was at home."

"That young Goldplate is so fascinating!" declared Laura. "He's a man after my own heart." "He told me last night that he was after mine," replied Dorothy, with downcast eyes.

Jones—Ever formed any impressions of what the millennium will be like? Smith—Yes. I've often pictured it to myself as a happy time when people would be allowed to let their bills run!

"I never go to a sad play," said the young woman who poses. "It is almost sure to make me cry, and then it is bad for my eyes." "Yes," replied Miss Cayenne; "and sometimes for the complexion."

"Ow!" said the cockney. "You don't really like 'ngging, then?" "Well," she confessed, "I cawn't really say that I dislike it, don't you know, but I 'ave halways hunderstood that it was a 'armful practice."

Mr. Van Rentshy—That man is becoming a fearful bore. He comes in here every day and makes a nuisance of himself. If he doesn't let up I will be forced to move. Caller—Who is he? Mr. Van Rentshy—My landlord.

"That was a mean trick they played on the Human Snake at the last place he performed," observed the Ossified Man, cracking a hickory nut with himself. "He'd tied himself into a beautiful sailor's knot, and the Dwarf, who was envious, walked up and stuck a scarfpin into him."

"These people next door lead a sort of hand-to-mouth existence, don't they?" said the president of the Helping Hand to the Worthy Poor Sewing and Mission society. "No," responded the good dame addressed. "They're awful poor, but I guess they know enough to handle forks properly."

Cruel.

The maiden blushed. "I have seen only nineteen summers," she murmured.

"Snow-blindness?" sneered the cold, unfeeling man, rudely.

This was a harsh, unsympathetic [illegible]

EDIBLE WEEDS.

The Department of Agriculture Tells of Many That May Be Eaten.

The Department of Agriculture believes that in the plant life of this continent may be found many additions to our dietary. Frederick V. Coville, botanist of the department, has spent considerable effort to examine many of the plants now classed as "weeds" which are capable of sustaining vitality in man. He takes the position that a "wider use of green vegetables in the dietaries of most people, particularly those with healthy digestions, would be a marked benefit."

Chemistry has demonstrated largely the substances which the human system needs, and Botanist Coville finds the essentials present in a great many plants, some of which are nowhere considered as effective food for man, and some of which have only a local use as human food.

Mr. Coville points out that wild herbivorous animals feed on the fats and carbohydrates stored up in plant seeds in the fall. They fatten on this diet and gather in bodily fuel for the winter. Having exhausted their supply of fat by spring, they make green herbage their principal food. This renews their muscular vigor and vitality. This dietary system prevails among savage peoples, and is largely followed by the Indians of the Western States. Man's food has grown more artificial with the advance of civilization, until, as Botanist Coville says, "foods are now selected more by custom than by instinct." The European races are more given to eating salads and boiled green vegetables than the people of the United States are. The greater part of the plant food consumed by Americans is made up of seeds, roots, and tubers. It is because of this that the people of this country are bilious.

The first weed which Botanist Coville would have us eat is charlock. This plant grows as a weed from New England to the Pacific coast, and is considered a troublesome weed in the wheat districts of Wisconsin, Minnesota and North Dakota. It is closely related to black mustard, another familiar weed. Charlock is known in New York State as "wild mustard," and is considered poisonous. Charlock was a common pot herb in northern Europe centuries ago, but it has not been recognized as a food for man in the new world.

The leaves of the chiccory plant are also good to eat, and in some neighborhoods are thus utilized. It occurs as a weed in the Atlantic and Pacific States, and here and there in the interior. Its leaves grow in form of a rosette, after the fashion of the dandelion. Yellow rocket is a weed common throughout the Eastern States which man might eat. It is closely allied to the winter cress, which is used as a winter salad and pot herb in Washington and Baltimore.

The dandelion is a weed which has already gained considerable favor as a food in the United States, though it is not grown for market. It is very common throughout the United States, except in the extreme South and west of the great plains, though it has rooted itself in certain parts of Washington and California. The truckers around Paris have been cultivating the dandelion for many years with good results and have developed several horticultural varieties. There it is used largely as a salad, the plants being eaten green or blanched.

The Department of Agriculture calls especial attention to the dock, two species of which, the broad-leafed and the curled, occur as common weeds in meadows, pastures and cultivated fields. Several species of dock are used widely as a pot herb in Europe. Dock was used extensively by two tribes of American Indians, the Pimas and the Maricopas. Dock grows in the arid regions of Arizona, New Mexico, and Texas, where succulent vegetation is rare.

Lambs-quarters, or pig-weed or goose-foot is a weed which belongs to the same plant family as the beet and spinach, and ought to be used as a table vegetable. It is cultivated in Europe, and is very common throughout the United States.

Marsh marigold, or "cowslip," is a native plant of North America. It grows in swamp land all over the northern part of the United States and British America. It has a local use as a pot herb, but its value in this respect is not generallp appreciated. Pig-weed occurs in many fields all over this country, but the average American does not know its value as a food plant. It is eaten by the Indians of the Southwest and by the people of Mexico. In some parts of California it is cultivated by the Chinese.

Pokeweed is used locally in some parts of the South, but its more general use would be gratifying to the economic botanists of the Department of Agriculture. The French people have introduced this plant into their country, and esteem it highly.

The department thinks it probable that common nettle, milkweed, and round-leafed mallow will come to be regarded as good food.

The suggestions made by the department may be offensive to some people, but then it wasn't so very long ago when the tomato, or "love apple," was thought to be poisonous.

DO YOU KNOW HIM?

One who is always a-grumbling,
Whose life is all out of place,

If he should drop out of the race.

Who imagines he's born with great talents,
That the busy world never can see,
Who exalts himself with the folly
That none so brilliant as he.

Who believes that a tithe of his knowledge
If sought in matters of state
Would result in such wonderful changes
As only his brain can create.

And while such as he goes on grumbling,
As he bows at the shrine of the fates,
The busy old world keeps a-moving,
The grumbler still grumbles and waits.

He grumbles while those all around him
Have their places in the front rank of the strife.
"Never give up" is their motto,
And it wins them the battle of life.
—Buffalo Evening Times.

HUMOROUS.

Do you have any trouble about sleeping? She—Not at all. I can scarcely keep awake now.

Edith—Do you care much for fiction? Ethel—I read very little except the bargain advertisements.

Diffident Lover—I called to—to—ask—um—er— Her Father—Yes, take her. This is my busy day. Get out.

Lost Child (to policeman)—Please, sir, have you seen a man without a little boy? 'Cause, if you have, I's that little boy.

Jack—Where's Bill now? Jill—Out West. "What doing?" "Raising palms—making the tenderfeet throw up their hands."

Tommy—Paw, why do they call a single woman a spinster? Mr. Figg—I guess it's because of her ability to turn men's heads.

Mamma—Now, Bobby, give nurse a kiss and say good-night. Bobby—No. If I kiss her she'll box my ears, like she did papa's last night.

She—What do they mean by the centre of gravity? He—Tell a joke to a party of Englishmen, and that's precisely what you would be.

Wheeler—I see they have been trying bicycle ambulances. Walker—I thought these scorchers would make something of the kind necessary.

Suburbs—I am not at all good enough for you, dear. Miss Boston—I'm glad you confess it before we were married. You're a nice fellow for me.

"I often experience a shock of disappointment when I get up close to some apparently beautiful woman." "Probably they feel the same way about you."

Excited Wife—Oh, professor, the cook has fallen and broken her collar-bone! Professor—Discharge her at once! You told her what to expect if she broke anything more.

"Now, I play the piano. Would you say 'I play it beautiful' or 'play it beautifully?'" "Neither." "What would you say, then?" "I'd say you 'play a beautiful piano.'"

"Julia had her husband's photograph taken with his head stuck in a newspaper." "Why did she do that?" "She said that was the way he always looked at her when he was at home."

"That young Goldplate is so fascinating!" declared Laura. "He's a man after my own heart." "He told me last night that he was after mine," replied Dorothy, with downcast eyes.

Jones—Ever formed any impressions of what the millennium will be like? Smith—Yes. I've often pictured it to myself as a happy time when people would be allowed to let their balls run!

"I never go to a sad play," said the young woman who poses. "It is almost sure to make me cry, and then it is bad for my eyes." "Yes," replied Miss Cayenne; "and sometimes for the complexion."

"Ow!" said the cockney. "You don't really like 'ugging, then?" "Well," she confessed, "I cawn't really say that I dislike it, don't you know, but I 'ave halways hunderstood that it was a 'armful practice."

Mr. Van Rentshy—That man is becoming a fearful bore. He comes in here every day and makes a nuisance of himself. If he doesn't let up I will be forced to move. Caller—Who is he? Mr. Van Rentshy—My landlord.

"That was a mean trick they played on the Human Snake at the last place he performed," observed the Ossified Man, cracking a hickory nut with himself. "He'd tied himself into a beautiful sailor's knot, and the Dwarf, who was envious, walked up and stuck a scarfpin into him."

"These people next door lead a sort of hand-to-mouth existence, don't they?" said the president of the Helping Hand to the Worthy Poor Sewing and Mission society. "No," responded the good dame addressed. "They're awful poor, but I guess they know enough to handle forks properly."

Cruel.

The maiden blushed. "I have seen only nineteen summers," she murmured.

"Snow-blindness?" sneered the cold, unfeeling man, rudely.

It was a harsh, unsympathetic

EDIBLE WEEDS.

The Department of Agriculture Tells of Many That May Be Eaten.

The Department of Agriculture believes that in the plant life of this continent may be found many additions to our dietary. Frederick V. Coville, botanist of the department, has spent considerable effort to examine many of the plants now classed as "weeds" which are capable of sustaining vitality in man. He takes the position that a "wider use of green vegetables in the dietaries of most people, particularly those with healthy digestions, would be a marked benefit."

Chemistry has demonstrated largely the substances which the human system needs, and Botanist Coville finds the essentials present in a great many plants, some of which are nowhere considered as effective food for man, and some of which have only a local use as human food.

Mr. Coville points out that wild herbivorous animals feed on the fats and carbohydrates stored up in plant seeds in the fall. They fatten on this diet and gather in bodily fuel for the winter. Having exhausted their supply of fat by spring, they make green herbage their principal food. This renews their muscular vigor and vitality. This dietary system prevails among savage peoples, and is largely followed by the Indians of the Western States. Man's food has grown more artificial with the advance of civilization, until, as Botanist Coville says, "foods are now selected more by custom than by instinct." The European races are more given to eating salads and boiled green vegetables than the people of the United States are. The greater part of the plant food consumed by Americans is made up of seeds, roots, and tubers. It is because of this that the people of this country are bilious.

The first weed which Botanist Coville would have us eat is charlock. This plant grows as a weed from New England to the Pacific coast, and is considered a troublesome weed in the wheat districts of Wisconsin, Minnesota and North Dakota. It is closely related to black mustard, another familiar weed. Charlock is known in New York State as "wild mustard," and is considered poisonous. Charlock was a common pot herb in northern Europe centuries ago, but it has not been recognized as a food for man in the new world.

The leaves of the chiccory plant are also good to eat, and in some neighborhoods are thus utilized. It occurs as a weed in the Atlantic and Pacific States, and here and there in the interior. Its leaves grow in form of a rosette, after the fashion of the dandelion. Yellow rocket is a weed common throughout the Eastern States which man might eat. It is closely allied to the winter cress, which is used as a winter salad and pot herb in Washington and Baltimore.

The dandelion is a weed which has already gained considerable favor as a food in the United States, though it is not grown for market. It is very common throughout the United States, except in the extreme South and west of the great plains, though it has rooted itself in certain parts of Washington and California. The truckers around Paris have been cultivating the dandelion for many years with good results and have developed several horticultural varieties. There it is used largely as a salad, the plants being eaten green or blanched.

The Department of Agriculture calls especial attention to the dock, two species of which, the broad-leafed and the curled, occur as common weeds in meadows, pastures and cultivated fields. Several species of dock are used widely as a pot herb in Europe. Dock was used extensively by two tribes of American Indians, the Pimas and the Maricopas. Dock grows in the arid regions of Arizona, New Mexico, and Texas, where succulent vegetation is rare.

Lambs-quarters, or pig-weed or goose-foot is a weed which belongs to the same plant family as the beet and spinach, and ought to be used as a table vegetable. It is cultivated in Europe, and is very common throughout the United States.

Marsh marigold, or "cowslip," is a native plant of North America. It grows in swamp land all over the northern part of the United States and British America. It has a local use as a pot herb, but its value in this respect is not generallp appreciated. Pig-weed occurs in many fields all over this country, but the average American does not know its value as a food plant. It is eaten by the Indians of the Southwest and by the people of Mexico. In some parts of California it is cultivated by the Chinese.

Pokeweed is used locally in some parts of the South, but its more general use would be gratifying to the economic botanists of the Department of Agriculture. The French people have introduced this plant into their country, and esteem it highly.

The department thinks it probable that common nettle, milkweed, and round-loafed mallow will come to be regarded as good food.

The suggestions made by the department may be offensive to some people, but then it wasn't so very long ago when the tomato, or "love apple," was thought to be poisonous, when the cucumber was looked upon as a fatal dose, and when people of the North were prejudiced against the banana.—Washington Times.

No Free "Pub. Doc." in England.

The British Government sells all its publications. It gives nothing away. If you want a copy of a bill that has been introduced into the House of Commons, or a report that has been presented to the House of Lords, or any public matter in the London County Council or the Board of Aldermen of the city, you have to buy it from the official printers, and you have to pay postage if it is sent through the mails. In our country nearly all official documents of this kind are given away, and are sent free through the mails under a frank. The British plan seems to be the more sensible. It saves millions of dollars every year that are wasted in the United States to furnish public documents to people who do not care anything for them, and who throw them into the waste paper basket as soon as they are received. The charge for official publications over here is only sufficient to pay the cost and a small margin for wastage. Thus the government printing office is self-supporting, and the postal service pays a profit of $10,000,000 or $12,000,000 annually into the treasury. On the contrary, on our side of the Atlantic, it costs $5,000,000 or more to pay for printing for which no one is the wiser, and our Post Office Department declares a dividend of $9,000,000 or $10,000,000 every year, much of which is due to the transportation of "pub. docs."—Chicago Record.

A Novel Bridge.

Engineers are naturally interested in the novel work which has lately been undertaken at Rouen, France, called a "pont transbordeur," serving all the purposes of a bridge, while not interfering with the free passage of ships, even those with masts 150 feet high. Two small Eiffel towers are to be erected—one at each bank of the Seine, three-quarters of a mile below the lowest existing bridge at Rouen—and a narrow iron bridge will be suspended by chain cables between their heads. It is to be not less than 160 feet from the level of the quays, but is not intended either for carriages or foot passengers. Several lines of rail are to be carried along it, and on these a skeleton carriage or platform on wheels will run; this will be dragged from side to side of the river by steel ropes passing over a driving wheel, to be worked by steam or electricity from one of the banks. To the skeleton platform will be hung, by steel hawsers, at the level of the quays, or 160 feet below the bridge, the transbordeur—a strong carriage, within which passengers and vehicles will be transported from one bank to the other. This carriage is to be forty feet in width by thirty-three feet in length; electric tramways running on the quays on both sides of the river are to make a connection at this point, and this transbordeur will be fitted to carry the tramcars so that passengers by them will cross the river without changing their seats.

Finding Coin in Delaware.

The finding of a considerable quantity of gold coin on the old Potter farm about three miles from Wilmington, Del., has caused considerable excitement among the residents of McKees Hill. A colored man was at work in a meadow on the farm when his shovel turned up a piece of yellow metal, which, upon examination, proved to be a $20 gold piece. Although excited, the man kept on digging until he had unearthed several more golden coins. Then John Banks and George Clymer, seeing his antics, thought he had gone stark mad and went over to the field where he was digging. They also were amazed at the discovery of gold, and the three men were rewarded by finding about $1,000 in gold. The money was chiefly in denominations of $5 and $10 and gave evidence of excellent preservation. The fact that the coins bore dates ranging from 1830 to 1850 led some to believe that the farm laborers had discovered one of the places where John Hare, the noted highwayman and robber, secreted his ill-gotten gains years ago. Hare for many years was the terror of the neighborhood. It was a frequent occurrence for him to hold up men on the roads leading to and from Wilmington and relieve them of their money and valuables.—Camden (N. J.) Courier.

Free Fight on a High Pillar.

A free fight on top of Nelson's pillar, in Sackville street, furnished excitement for a Dublin (Ireland) crowd one morning recently. The monument is 120 feet high and the platform on which the statue stands about eighteen feet square. A Carlow farmer, having made his way up to the platform, threw down his hat and stick, climbed up the flagstaff, and when the keeper and a policeman interfered, tried to throw them over the railing. They succeeded in holding him off till men from the street came to their help, and had a hard time getting the crazy man down after they had bound him.

FATE OF A GENERATION.

Out of 1,000,000 People Only 223 Live to be 100 Years Old.

In answer to the above question one of the leading statisticans of England has recently compiled a number of interesting figures showing that out of every 1,000,000 children born yearly in Great Britian only a small percentage reach middle life.

Several thousand come into the world with such feeble constitutions that they do not survive more than a few hours. During the first five years of life scarlet fever carries off 17,000, whooping cough 15,000 and infantile cholera 200,000. Before the sixth year is reached death has claimed at least 250,000. From this time on, however, the generation makes steadly progress, and during the next five years only 34,000 fall by the way. Between the ages ten and fifteen only a few deaths occur among children, but from fifteen on consumption and other inherited maladies become active. Out of 28,000 deaths occurring between the ages of twenty and twenty-five more than one-half are due to consumption. Typhoid fever gets in its deadliest work when its victims are between twenty-five and thirty. Between these ages overwork carries off several hundred, and violent deaths, including suicide, accident and murder, not less than 1,700.

But this time barely more than one-half of the generation is left, and between the ages of thirty-five and forty 27,000 fall prey to consumption. During this period diseases of the heart, kidneys and other internal organs of the body make their appearance with great fatality. Between the ages of forty-five over 31,000 deaths occur, most of them due to consumption. Cancer usually asserts itself during this period with fatal and steadily multiplying results. Only 300,000 of the generation enter their sixty-fifth year, which number, during the next decade, is cut down to 160,000. At ninety-five only 2,000 are left and when the century mark is reached only 223 are living. Within the next ten years the last remnant of the generation is extinguished.—Atlanta Constitution.

How an Ostrich Runs.

Considerable misconception prevails as to the manner in which the ostrich runs, says the Zoologist. It seems to be still generally held that when running it spreads out its wings, and, aided by them, skims lightly over the ground. This is not correct. When a bird really settles itself to run, it holds its head lower than usual, and a little forward, with a deep loop in the neck. The neck vibrates sinuously, but the head remains steady, thus enabling the bird, even at top speed, to look around with unshaken glance in any direction. The wings lie along the sides, about on a level with, or a little higher than, the back, and are held loosely just free of the plunging "thigh." There is no attempt to hold them extended or to derive any assistance from them as organs of flight. When an ostrich, after a long run, is very tired, its wings sometimes droop; this is due to exhaustion; they are never, by a running bird exerting itself to the utmost, held out away from the sides to lighten its weight or to increase its pace. But the wings appear to be of great service in turning, enabling the bird to double abruptly even when going at top speed.

An Extraordinary Migration.

One of the modern mysteries to scientists, one for which there seems to be no reasonable explanation, is that concerning the migration of the lemming or Norway rat. Instead of taking place once a year, these migrations occur only once in eleven years. When the time comes for the exodus the little animals journey westward from Scandinavia, allowing nothing to stop their movements, which virtually amount to a headlong flight. They swim the lakes and rivers and climb the highest mountains in incalculable numbers, devastating the whole country through which they travel. Naturalists attribute the movement to some inherited memory of a flight to escape an expected cataclysm but this seems somewhat far fetched. —Pittsburg Dispatch.

Python Eggs.

In a house on Rhode Island avenue is a female python. This reptile is the pet of a young man who is interested in herpetology. He bought the "vermin" a week ago in New York, whither it was brought by a traveler from India. Day before yesterday, to the complete astonishment of the young student of snakes, he found in his python's quarters a mess of white objects unlike anything he had before seen. They were eggs, and there were twenty-five of them. In size and color they are much like a hen's egg. The shell or skin which envelops the yolk is not rigid as in a hen's egg, but as flexible and tough as leather. The shape is oblong, but not symmetrical and somewhat irregular. The whole twenty-five eggs were laid in a few hours.—Washington Star.

It is estimated that more than eighty tons of diamonds have been unearthed in the South African fields during the last eighteen years. These represent a total value of $800,000,000.

Earth Movements.

Professor Joseph Le Conte recently read a paper before the Geological Society of America, from which we learn that there are two primary and permanent kinds of movements of the earth's crust, namely, those which cause continental surfaces and oceanic basins, and those which, by interior contraction, determine mountains of folded structure. These two are determined, the one by unequal radial contraction, the other by unequal concentric contraction—that is, contraction of the interior more than the exterior. There are also two secondary kinds of movements which modify the effects of the other two, and confuse our understanding of them. These are, first, oscillatory movements, affecting large areas, and isostatic movements, or gravitative readjustment, by erosion and sedimentation. In the minds of some writers, oscillatory movements have masked and obscured the effects of continent and ocean basin making, and isostasy has concealed the effects and prevented the proper interpretation of all the others. It is believed that to make secure progress we must keep these several kinds of movements distinct in our minds.

A Stone Full of Diamonds.

Mr. Banckhaus, a farmer, of Lancaster, N. Y., has found a big, hollow stone on his farm, almost literally filled with large and flawless diamonds.

He tells his visitors that he supposed the stone was nothing but an ordinary one and of no consequence, but he was not able to put it out of his mind, and at last investigated. He found it hollow and the inner walls so thickly lined with diamonds of large size that he at once took rank as a great capitalist. There are in all nearly 500 gems, most of them of large size. The farmer has brought a few of them to the city, and reports that jewelers pronounce them genuine and of great value.

But for this the inference would be natural that the farmer had stumbled on a geode, although this rock, the inner walls of which glitter with crystals, is not fonnd commonly in this vicinity. The farmer is extremely reticent, and will not say what he intends to do with the diamonds.—New York Tress.

Cork Tires.

Among the improvements in tires are those with coiled wire springs, surrounded with sections of cork. The idea of a cork tire is not new, neither does it seem practical for long distance or hard riding. For nearby trips and perfectly smooth roads they might work all right, but the cross-country rider who takes wheel-track and footpath, as the case may be, coming in contact with broken stone, gravel, concrete and what not, they appear somewhat faulty in the way of durability. The sharp edge of a stone will take a piece from cork as quickly as a knife, and a few long trips would make short work of one of these tires if much bad road were encountered. Take it all in all, it is likely that a good rubber tire will be found the cheapest and best in the long run.

Wild Celery for Ducks.

It is well known that the favorite food of the canvasback duck is the tubers of wild celery. A few years ago a large part of the best feeding ground in the upper Chesapeake was destroyed by a combination of strong winds and a heavy snowfall, which was followed by severe cold. Exceptionally low water was produced and ice formed on the exposed flats, so that when the tide at last came in and lifted it the plants were torn away and floated off. At a meeting of the Biological Society of Washington, F. R. Coville lately called attention to the fact that the wild celery had been successfully transplanted to western lakes and that the ducks now linger there to feed in their migrations. He advocated the restocking of the shallow water in the Chesapeake with the wild celery.

The Green Turtle.

The best known of all the turtles is the green turtle, so called from the green color of its fat.

This useful animal is found in the seas and on the shores of both continents and is most plentiful about the Island of Ascension and in the Antilles. The shell of this reptile is of very little use and of small value, but the flesh is remarkably rich and well flavored, and the green fat has long enjoyed a world wide and fully deserved reputation.

The eggs of the turtle are thought as great delicacies as its flesh. It is while the female turtle is visiting the shore for the purpose of depositing her eggs that she is usually captured, as these sea reptiles care little for the shore except for this purpose.—Detroit Free Press.

Relations Between Weight and Health.

A French scientific journal points out that a mere gain in weight should not, initself be taken as an indication of improved bodily condition. It is, according to him, rather a question of the density than of the quantity of tissue that covers the bones. When increase of weight results from increase density, then the health is really improved.

DOOM OF THE LOCOMOTIVE.

It Has Done Its Work and Must Soon Give Way to Motors.

About 100 years ago Oliver Evans, the inventor, was rash enough to say that the time would come when his high pressure locomotive would take people after breakfast in Washington and get them to New York for supper. The idea of covering 200 miles in this time was of course preposterous, and he was the butt of many a joke. But when the rails were finally laid, which was not so many years ago, the passengers soon began to want more speed, and thus it has gone on. Americans accept inventions as marvels for a whole day sometimes, and then demand more. Some people have been known to complain of the telephone.

But the locomotive has been a faithful old friend. Locomotive engineering goes so far as to say it "was always kept equal to any speed requirements put upon it," and that the only obstacles to fast trains a half a century ago were the tracks and the lack of signals, and the absence of efficient means of stopping the trains. How human this sounds. If we only had the right sort of tracks, the proper warnings, and the power to stop, how many of us would arrive at our destination in time to sup on success and prosperity instead of getting sidetracked or wrecked?

It is the fact, however, that the locomotive has kept strictly up with the times and few of us care to travel faster than on the limited trains that allow us to breakfast in Washington and take luncheon in New York—a beggarly five hours of smooth motion that could easily be reduced to four if the railroads wanted to do it. But the faithful old puller, varying in size from the shifting, if not shiftless, busy-body that puffs around stations, to the marvelous machine of a hundred tons, is reading the handwriting along its tracks. The electrical motor, dumpy and ugly, is preparing to retire its handsomer rival. It is like a mean little torpedo boat sending the beautiful full rigged man-of-war into retirement; but it represents force, and force rules. Millions upon millions of dollars are represented in these locomotives, but even millions cannot prevent the advance of invention. And so, after awhile, the old locomotive may be as rare as the old street car horse; but let us be grateful for what it has done and admit that the man was almost right when he called it "the plowshare of civilization," for wherever its whistle has been heard progress has found a way and the furrow has been plowed.—Leslie's Weekly.

Strange Scenes in Java.

In the Century, which is a "Travel Number," there is an article entitled "Down to Java," by Eliza. R. Scidmore. The writer says of Batavia, the capital of the island:

"When one has driven about the old town and seen its crowded bazaras and streets, and has followed the lines of bricked canals, where small natives splash and swim, women beat the family linen, and men go to and fro in tiny boats, all in strange travesty of the solemn canals of the old country, he comes to the broader avenues of the new town, lined with tall tamarind and waringen-trees, a species of Ficus, with plumes of palms, and pyramids of blazing Madagascar flame-trees in blossom. He is driven into the long garden-court of the Hotel Nederlandon, and there has presented a spectacle of social life and customs that nothing in all travel can equal for distinct shock and sensation. We had seen some queer things in the streets—women lolling barefooted and in startling dishabille in splendid equipages—but concluded them to be servants or half-castes, but there in the hotel was an undress parade that beggars description, and was as astounding on the last as on the first day in the country. Women's vanity and men's conventional ideas evidently wilt at the line, and no formalities pass the equator, when distinguished citizens and officials can roam and lounge about hotel courts in pajamas and bath slippers, and women clad only in the native sarong or skirt, and a white dressing jacket, go unconcernedly about their affairs in streets and public places until afternoon. It is a dishabille beyond all burlesque pantomime, and only shipwreck on a desert island would seem a sufficient excuse for women being seen in such an ungraceful, unbecoming attire—an undress that reveals every defect, while concealing beauty, that no loveliness can overcome, and that has neither color nor grace nor picturesqueness to recommend it in itself."

"On the Nail."

"On the nail" means on the spot, at once, immediately, without delay or postponement, as, to pay money on the nail. This phrase is said to have originated from the custom of making payments, in the exchange at Bristol, England, and elsewhere, on the top of a pillar called "the nail."

The Augusta Chronicle says that "burglars who shoot should be suppressed." Certainly; burglars should be given to understand that unless they want to get themselves disliked they must beware the gentleman.

CHILTON COUNTY CALL.

H. W. RYDING, Editor & Publisher.

Published every Friday at Thorsby, Alabama.

Subscription price, $1.00 per year in advance.

Entered at the postoffice at Thorsby, Ala., as second-class matter.

A WORD OF EXPLANATION.

The Chilton County Call has changed hands during the week.

The present management is not responsible for any possible outstanding liabilities of the former management of the Call.

The paper will be sent regularly every week to its subscribers, who are kindly requested to notify us if they fail to receive it.

If you receive the Call without having subscribed for it, you will consider it as an invitation to become a subscriber, but in no case will anyone be considered a subscriber unless he has so notified us.

The advertisements will be carried out as contracts provide.

LYNCHINGS IN THE SOUTH.

Papers in the North and East make a big ado about lynchings in the South—and viewed at that distance it must be confessed that it does appear very barbarous and uncivilized. We shall not reply by calling attention to similar barbarous and uncivilized acts committed East, North and West, because it does no good, and will not in the least remove the causes of either the unspeakable crime or the lynchings. But there certainly ought to be a reform somewhere, and Northern papers insist that this reform must take place here in the South. These lawless outbursts must be restrained, and the lynchers punished to the full extent of the law. But these papers are all wrong, and insist upon reform at the wrong place. It may be a surprise to these papers to be told that they are in a measure morally responsible, not for the lynchings, but for frequent commissions of the crime, and so are the members of that society which was organized in Great Britain some time ago with the avowed intention of "reforming" the South. This will be made clear when it is known how these black brutes consider the condemnation and vials of wrath that have been hurled against the lynchers. All that is said and written in other sections of the country against lynching directly encourages the brutes to commit that especial crime. Why is this so? Because the white people East, North and West always take the side of the black man as against the white man of the South; the black rascal therefore considers the condemnation of lynching as a defense of his crime, and acts accordingly.

A colored man, and one who could lay claim to some education, was heard to remark to some of his fellows: "The white man of the North sticks up for the black man of the South. The tables are turned, and we are having our revenge." This is the long and short of it. When Northern papers begin to condemn the crime and its perpetrators in as unmistakable and unmeasured terms as they have lynching, we shall see some abatement of the crime, but not until then.

The government seems to be ready at any time to go to war to prevent the destruction of a few seals, but it does not seem to care to interfere in the interest of humanity by stopping the atrocious outrages committed by the barbarous Spaniards in Cuba. We rail at the murderous Turk, and chide and ridicule the European powers for not putting an end to the Turk's bloody regime, while we are ourselves guilty of the same sin. The "great powers" have sent one ultimatum after another to the Sultan without the least effect. Our government has given Spain "three months in which to subdue Cuba," only to again extend the time. What a pusillanimous policy!

Calamity howling is a mental disease. It makes misanthropes and hypochondriacs of its followers and devotees. It makes good men indifferent; indifferent men bad; bad men wicked. It kills patriotism, devours industrial energy and lowers humanity's standard of morality. Beware of its deadly poison!

Crushed to Death by a Train.

Stephen Wheeler, clerk of the United States Court at Fort Smith, was killed by the north-bound Santa Fe passenger train Saturday night at the depot in Gainesville, Tex. The wheels of two coaches had passed over him when discovered. The train was stopped and his body removed from the track. His body was terribly mangled, his head cut off below the ears, his right shoulder and side crushed and his right leg broken near the hip. No one knows how the accident happened, but it is thought that he had attempted to board the train while it was in motion and fell beneath the wheels.

LATE TELEGRAPH ITEMS.

A DYNAMITE MAGAZINE TOTALLY DEMOLISHED BY LIGHTNING.

Poisoned by Rough on Rats—Two Attempts to Wreck a Train—Atlanta's Police Chief Dead—Murderer Breaks Jail—Will Not Employ Pinkerton Detectives.

Shut Out of India.

The Official Gazette, Calcutta, publishes a notification to the effect that the Turkish newspapers, Sabah and Malumat, will hereafter be prohibited from circulation in India.

Washington Selected.

At Thursday's session of the national council of the Daughters of America, Washington, D. C., was selected as the place of meeting in 1898. The council has adjourned.

Anarchists to be Punished.

An official note issued Friday afternoon in Constantinople says: "Six Armenian anarchists who perpetrated criminal acts yesterday have been arrested and will be shortly tried. They will receive prompt punishment."

A Rolling Mill to Resume.

The Union Rolling Mill, Cleveland, Ohio, resumed operations Monday, after a shut down lasting nearly two months, owing to the scarcity of coal and the men refusing to work until the amalgamated scale was signed. All departments resumed, giving work to 400 men.

Murderer Breaks Jail.

Albert Voiers, one of the notorious Lewis gang of murderers, under sentence to hang, broke jail at Fayetteville, W. Va., Thursday morning just before daylight. The sheriff and posse are after him. Jerry Brown is condemned to hang with Voiers.

Poisoned by Rough on Rats.

The family of a farmer named John Britt, who live near Roanoke, Ala., were poisoned a few days ago and several of them became very ill. A diagnosis showed that Rough on Rats had been sprinkled in their food. All of the members of the family are recovering, and an effort is being made to locate who poisoned them.

A Michigan Bank Failure.

The People's Savings Bank, of Mount Pleasant, closed its doors Friday morning and is now in the hands of the commissioner of banking. No statement has been given out. According to the last statement, made in January, the capital stock of the bank was $100,000, with $90,000 in deposits. George E. Newall is president and C. A. Carahon cashier.

A Change in Routing.

The roads of the Central Passenger Association passed a resolution at Chicago to the effect that hereafter all business from Mobile, New Orleans and the Southwest, south of the main line of the Missouri Pacific between Kansas City and Put in Bay must be routed via Toledo and not via Detroit.

Say Pinkerton Will Not Be Employed.

The operators at Pittsburg, Pa., are determined to start their mines, but many of them are willing to submit the question to arbitration before any radical steps are taken towards ending the strike and with this in view an effort is being made to have a conference with mine owners and officials If any agreement can not be reached at this conference, then the operators will immediately prepare for a resumption with new men. The operators admit that a plan of action has been decided upon, but refuse to say what mines will be started first. The report that Pinkertons were to be employed was denied, but assurance was given that the men would have ample protection.

Two Attempts to Wreck Freight Trains.

An attempt was made to wreck a southbound freight train two and a half miles north of Embry, Texas, Thursday, by placing two piles of fish plates on the track. The engineer discovered them and stopped the train. The same thing occurred Friday. Five piles of plates were placed on the track. The engineer of the southbound freight No. 31 saw the plates but could not stop his train until they were struck. No damage was done.

Atlanta's Police Chief Dead.

Arthur B. Connolly, for sixteen years chief of police of Atlanta, died at his home in this city at 4 o'clock Friday morning, after a long illness. He began his career on the force as a patrolman, rose to be captain and was finally elected chief, which position he held through eight successive terms until his death. He was a prominent member of the National Association of Police Chiefs, and known throughout the country as an able and vigilant official.

Struck by Lightning.

What was at first thought to have been an earthquake shock, felt at Buffalo, N. Y., Thursday morning, turns out to have been the blowing up of a powder and dynamite magazine at Port Colborne, Ont., about eighteen miles from Buffalo. About 5:30 Thursday morning lightning struck the magazine of John Reed, located half a mile west of Port Colborne. It was a small frame and stone building, the foundations of which were in bedrock, in which Mr. Reed kept a quantity of gunpowder and dynamite. The shock shattered windows in all the houses of Port Colborne, woke up all the residents of the town and heaved up the waters of the Welland canal. The only person nearby was the watchman employed in a limekiln and glass factory close by. He escaped uninjured. There is nothing left to show where the lightning struck.

Heartrending Distress in Cuba.

The correspondent of the Daily Chronicle, London, in a letter from Cuba, tells of further cruelty and distress in that island. He says the pacificos are dying by the hundreds, "their bodies tainting the air close to a Spanish fort." The Daily Chronicle correspondent, continuing, remarks that a private letter has been received at Havana from Senor Sagasta, the liberal leader in Spain, in which he says: "These atrocities are raising a thrill of horror in Europe and I fear that it is impossible to raise fresh loans, without which we cannot retain Cuba." The correspondent further says: "German syndicates are buying the devastated estates at nominal sums and intend to go in extensively for coffee planting, abandoning sugar. This will directly concern the United States and French sugar trusts, and will probably lead to extensive sugar growing in Georgia and Florida.

CHEAP ARMOR PLATE.

The Government Considering the Carpenter Process.

J. H. Carpenter, founder of the Carpenter Steel Works, Reading, Pa., of which he was formerly general manager, has prepared a statement showing that steel armor plate can be furnished to the government at a trifling figure compared with what is now being paid. Mr. Carpenter is a well known steel expert and inventor and was formerly in the United States navy. The Carpenter Steel Works, from which Mr. Carpenter has retired, have up to this time furnished the government with nearly $1,000,000 worth of projectiles, and a $500,000 order is now being filled. His price is so far below the government limit of $300 a ton, which the Bethlehem and Carnegie companies say they cannot meet with their Harveyized nickel steel plates, as to occasion the armor plate board much surprise.

Mr. Carpenter claims that by new pneumatic process steel of the best physical properties and chemical conditions can be uniformly made and much waste avoided. A plant can be built for this plan at half the money and the steel can be made and cast in a quarter of the time now required. Experts in steel and government inspectors of manufactures seem satisfied of the value of the process and his ability to perform his promises. His estimates of cost have been compared with the cost sheets forward to congress by the examining board, and was found to agree except where less work is done.

Originally Mr. Carpenter's plans were to organize and equip the works himself, but now he concludes to give the option to the government. If it is declined, he says he will organize his own company and sell the armor plate at $150 per ton, allowing $50 for profit and contingencies. The board has written him that it will be ready to consider his proposals in a few days.

JOHN P. LOVELL.

A General Expression of Sympathy Called Out by His Death.

Seldom has there been such a general expression of sympathy over the loss of one whose life has been devoted to business pursuits, as has been called forth by the recent death at Cottage City, Mass., of that venerable landmark of the business world, the late John P. Lovell, founder and president of the John P. Lovell Arms Company of Boston. Almost numberless messages and letters of condolence, on the death of his honored father, have been received by Colonel Benjamin S. Lovell, treasurer of the Lovell Arms Company. The wide scope covered by these communications is in itself evidence of the great regard in which he was held by the leaders in business and public life. These expressions of sympathy have not been confined to New England, but they have come from every prominent business centre of the North, East, West and South—in fact from every portion of the Union; because the name of John P. Lovell, and the corporation created by him, have been for more than a half century the synonym of honest dealing and business integrity. Even from England, from firms with whom Mr. Lovell had enjoyed the pleasantest business relations for more than fifty years, Colonel Lovell has received messages of sympathy.

Mistaken Pride.

Phil May, the artist and caricaturist, tells of a funny experience he had on his return from a tour for the Graphic: When I came back to London I hastened to the office, and imagine my gratification when I saw everywhere scription in large letters, "Welcome to May."

HOME HITS AND HAPPENINGS.

NEWS BOILED DOWN AND ADMINISTERED IN BROKEN DOSES.

S. A. Thorson was in Birmingham last Friday.

W. Braley was in Verbena the first part of the week.

J. Bill was in Clanton on business last Saturday.

J. F. Peterson was in Bessemer last week on business.

Rev. J. E. Hedberg paid Jemison a visit last Saturday.

Cotton brought eight cents a pound in New York last Tuesday.

"The melancholy days have come—The saddest of the year."

Services in Collins' Chapel first Sunday in September at 11 o'clock a. m.

Charles A. Peterson's family arrived from La Cross, Wis., a few days ago.

Mr. Graham, of the Calera (Ala.) Sentinel, gave us a call last Wednesday.

Our friend Rierson can pull a saw and wield a hammer as easily as any of the youngsters.

This is the refrain our friends in the Northern States will all be singing in a very short time.

Snow and frost in South Dakota on August 14! We thank Providence that we were not there.

Grapes planted last spring and taken good care of have grown four to eight feet at this writing.

Who wants better weather than we are now enjoying? Moderately warm days; cool and refreshing nights.

Birmingham exports pig iron to England. Uncle Sam will soon be thinking of annexing that busy little island.

If you wish to see how a place can be improved in one summer, betake yourself to A. Malmgren's, and see what he has done. What he has done others can do.

The programme at the meeting of the Thorsby Literary Circle last Friday evening was well rendered, and the young people deserve our support in their good work.

Married, Wednesday evening, August 18, Mr. S. A. Thorson and Miss Anna Turnquist, Rev. J. E. Hedberg officiating. The Call extends its most cordial congratulations.

A number of the Thorsby ladies met Tuesday evening at the home of Mrs. T. T. Thorson for an afternoon tea, and as usual on such occasions, enjoyed themselves to the full extent of their capacity.

The buzz of the saw and the click of the hammer have been heard in the school house for several days. A fine stairway has been put in, and a room in the second story has been fitted up for an office.

We read of storms and cloudbursts of terrible magnitude everywhere, but Chilton county seems to be a sheltered nook, where the rain comes quietly and beautifully without the usual accompaniment of storms and tornadoes.

The date for the next one-half rate excursion to Thorsby, Ala., is September 7. Those wishing to take advantage of this excursion should ask their depot agent for a ticket to Thorsby, Ala., and if he is not prepared to sell to Thorsby, buy to Strasburg, Ala., the old station one-half mile south of Thorsby.

Why should you go to Klondike? Expend the same amount of energy, time and money in Thorsby on a vineyard as you would in going to Klondike, and you will have an income equal to the interest on twenty-five thousand dollars invested at 6 per cent, and in the bargain have splendid health, which you certainly will lose if you go to Klondike.

The Hawkins Lumber Co., in Birmingham, is one of the most reliable firms in Alabama. They have everything the builder desires. Well seasoned lumber from the forests of Alabama and Georgia, sash, doors, blinds, casings, finishing lumber, stair work, cabinet work, office fixtures, church pews, pulpits, etc. Out of town purchasers will receive courteous treatment and get special low prices.

GARDEN WORK FOR SEPTEMBER.

Every housewife wants sweet herbs, such as anise, caraway, coriander, sage and sweet marjoram to season the various dishes. Strawberry beds may be prepared and the plants set out. Sow mustard and cabbage for winter use. Of the latter, Early York and the other early sorts may be sown to set out the first of February.

Advice of what is proper to plant each month will be given from time to time in the Courier. Clip these notes out and paste them in a book kept for that purpose, and act upon their suggestions.

Spanish Cabinet Changes.

It is rumored that several members of the cabinet will resign at Madrid, Spain, when the queen regent and the court return from San Sebastian.

BILL ARP'S WEEKLY LETTER.

BOUNTIFUL CROPS MAKES BARTOW'S SAGE REJOICE

AND PROPHECY BETTER TIMES.

Politics and Politicians Have Nothing to Do With Blessings That a Large Harvest Brings.

"I don't complain
When the Lord sends rain,
When the tanks in the sky run over;
For the rain you know
Makes the corn to grow,
And gives a lift to the clover."

But my humble friend, Cobe, says we've had 'bout enuf and he wants it to stop right now. "We've had a 'bundance," says Cobe, "and I'm afeerd there won't be any nubbins to feed the steers on this winter and no seed 'taters to plant next spring."

Another one horse farmer says he is afeerd he will make more cotton than he can get picked out.

Was there ever such a bountiful crop year? Wheat, corn, cotton, potatoes and fruit! Mr. Roberts, who farms on Pumpkin Vine creek, says he feels sure of 1,000 bushels of corn from one field of ten acres—that he can select one or two acres that will yield 120 bushels each, and there are several square rods that will make a bushel to the rod. That would make 160 bushels per acre, if every rod was as good. Mr. Roberts is no brag. He is a conservative, truthful man and a good farmer. Mr. Akerman made twenty-two bushels of wheat to the acre right in the suburbs of the town, and he has more beautiful fruit than was ever grown here before. Our market is running over with good things—apples, peaches, pears, grapes and melons. Country wagons drive to the residences every day loaded with delicious fruit and you can buy at your own prices, for the supply is greater than the demand. We luxuriate on soft peaches and cream, which is the next best thing to strawberries and cream, and we buy fine large cantaloupes at a nickel apiece. Old folks lose their relish for meat, but they never get tired of fruit. I was ruminating about the kindness of Providence in arranging the succession to suit our health and appetite. Strawberries, raspberries, dewberries, huckleberries, blackberries, June apples, cherries and then peaches and grapes, with melons thrown in, and before long the town will be flooded with apples. Oh, the jelly and jam and preserves that my folks have put up, and the sugar that I have had to pay for. Thank goodness, I bought it before the McKinley trust cornered the market. A clever republican neighbor told me that the Almighty was smiling on the land because good men were now in power, and he quoted scripture which said when the righteous are in power the people rejoice.

"Yes," said I, "the devil can quote scripture to suit his purpose. David understood the situation when he said: 'I have seen the wicked in great power, spreading himself like a green bay tree, yet he passed away, and lo he was not.'"

I don't think the Lord is paying much attention to congress or the administration, but He does seem to have pity on the people, and is showering blessings upon them.

There was a campmeeting story that old Allen Turner told when I was a boy that I have not forgotten. He was preaching about the perils of riches and said there was a good old darkey who had a kind but un-Christian and skeptical master, and he tried in his humble way to convert him, but his master only laughed at him and one day said to him: "Now, Uncle Jack, if the Lord is so wise and so good and loves us all so much as you say, what makes him let Jim Austin get so rich and keep on buying more land and more niggers and mules, when you know that Jim Austin is the meanest man in the county. He swindles his neighbors and oppresses the poor. He drinks and gambles and curses, but everything he touches makes him richer and richer. How do you explain that?"

"Master! master!" said Uncle Jack, "dat is all jes' so and it's becaus' de Lord don't keer nothin' about Jim Austin, his name ain't on de book. No, sir, de Lord ain't payin' no 'tention to him at all and de debil is runnin' him. No, master! I tell you how it is. When de Lord take a likin' to a man and got his name on de book He don't let him get fat and slick like Jim Austin. Whom de Lord loveth He chastiseth, and dat's de reason your ginhouse git burned up and your buggy mare die, and maybe dat's why Miss Juliann take sick away off at school and come home in de coffin. She was a blessed child, she was, and seems to me dat sometimes away in de night I hear her callin' you. Master, old Jack don't like to trouble you about dese things and he wouldent if your name wasent on de book."

Uncle Allen used to deliver up the story with the master's conversion and Jim Austin being killed.

Better times are coming sure enough, but politics has nothing to do with it. Politics dident give us a great crop of wheat and a short crop in Europe. My friend Kirkpatrick, of Atlanta, says these revulsions in trade and prosperity go by cycles of seven years, and that our cycle of distress and disaster has about expired. He almost proves it by reference to the past and tells how the failure of Jay Cooke precipitated the panic of '73, and our trouble lasted seven years, and the failure of Baring Brothers brought on the next panic and that lasted seven years.

But wheat and cotton are filling the farmers' pockets with money and by the time this cotton crop is marketed a new era of prosperity will be fairly on us. Within the last three months the mining business has revived in our county and labor is in demand; nobody, neither white or black, is going about begging for work in this region. I havent seen a tramp in six months. The gardens are teeming with vegetables and the flowers are more beautiful and more abundant than ever before but McKinley didnt do it, nor the tariff, nor his party. If they won't undo it is all we ask. Just let things alone. They are determined to humiliate the south, but as long as the Lord smiles on us we will be content.—BILL ARP in Atlanta Constitution.

SURVEY FOR CANAL.

Project to Connect Birmingham With Mobile and the Gulf.

Joseph Ripley, assistant government engineer at Sault Ste. Marie, Mich., arrived in Birmingham last week for the purpose of making a preliminary examination of the route of the proposed canal from North lake, near Birmingham, to the Warrior river, near Tuskaloosa. His visit is in accordance with an act of congress, passed at the recent extra session, which provides for a survey of the canal route by the government and a report on the same to the war department, including the feasibility of the project, cost, etc. After looking over the route and making preliminary estimates Mr. Ripley will return north and bring back with him about Sept. 1 a corps of surveyors for the purpose of making a final survey of the canal. Such a waterway would give the Birmingham district an all water route for coal and iron to Mobile and the gulf, and would it is believed, revolutionize the coal and iron business in this section by the introduction of cheap freight rates. If the project is reported upon as feasible every effort will be made to have the government aid in building the canal. The route will be along Five Mile creek from North lake to the Warrior, about thirty miles.

Claimants for the Davis Millions.

Two claimants to the Davis estate, now in litigation in San Francisco, have appeared in Atlanta. They are Harry E. Davis, a young business man on Whitehall street, and his sister, now Mrs. W. Hillyer Bagsdale. Their father William H. Davis, came from Pittsburg, Pa., to Atlanta, and they claim that he was a brother to Jacob C. Davis the California millionaire. The Atlanta Davises have employed counsel to prosecute their claim and propose to make a vigorous fight for a share in the big estate.

Important to Teachers.

The Howard College, at East Lake, Alabama, is the only college in the south which offers a complete university course in Psychology and Pedagogy. The degree of Master of Pedagogy, conferred upon the graduates of this department, will be their strongest recommendation as teachers of the first order and worthy of the highest salary.

There is a strong and growing demand for teachers, possessing collegiate and professional education. The collegiate course and the professional course can both be pursued at the same time in the Howard, and without extra charge. Teachers, and those preparing to teach would do well to write the Howard for terms.

The Medical Congress.

The international congress of medicine was opened at Moscow Thursday by Grand Duke Sergius, representing the czar. There are altogether 730 delegates, of whom half come from abroad. Among the honorary presidents, Dr. Taylor and Dr. Billings were elected for the United States. Count Deiloff, minister of public instruction, delivered the address of welcome.

The University of Alabama.

One hundred and thirty dollars will cover all necessary expenses for a year except books and clothing. This includes board, laundry and all College Fees. Books will cost about $10 a year, and clothing will be as cheap as elsewhere.

And this too in the State University, with an able Faculty and a fine equipment. For Announcement with particulars, address

Jas. K. Powers, President,
University, Ala.

ALABAMA LETTER.

From the Emmet County, Iowa, Republican, for June 8th, 1897.

I feel it my duty to comply with my promises given to friends in and about Estherville before I left there for my home here in the sunny South, that I should let them hear from me before long. I have received many letters asking for general information, etc., and therefore take the liberty to ask you an opportunity to "let them hear from me" through your valuable columns.

I left Estherville on the 24th day of March and arrived here in Thorsby on the 28th with my car of immigrant goods, including a pair of horses and Iowa poultry, all safe. I at once began to improve my home property, a 10 acre vineyard tract, and had in about six weeks a cosy home complete and my family arrived here, all well, on the 6th day of May.

I am pleased to state that we are well and enjoy this fine climate, I have for my part gained considerable in strength and I am justified in saying that this is the place for a good many of my Iowa friends. A few days after I came here I planted different kinds of vegetables and have them now daily on my table, I have now my 1,500 grape vines, which the Concordia Land Company have planted in my vineyard, all trellised, and they are fine. They were planted in May last year and some are bearing, so I can now see what Thorsby has in store for a future,-over 70,000 vines are now flourishing here, and I understand that the association has already contracted for 30,000 to 40,000 for fall and next spring planting.

The weather here is not so hot as I thought I would have to experience it, and I have in several Northern papers seen statements of higher temperature up there than we have here so far.

I and my family are well satisfied with the change and have reasons for so being. Thorsby has two church organizations; good schools and good society, so we are not strangers here, although are in a strange land, and I wish to call the readers attention to the fact that this is one of the main points for a home seeker to consider.

Yesterday I had a pleasant call from H. A. Hanson and G. W. Gilbertson, of Estherville, Jacob Brecker from Gractinger and Ole Larson from Ruthven, Iowa. These gentlemen came here on a prospecting trip and they all told me that they had purchased land for their future homes here. I understand this makes the number of Northern families located here 140 and about one-half of them are now on the ground. Everybody busy, "none idle here" and improvements of all kinds are my daily observations.

I have now been here long enough to experience the climate, the soil and the water, and am justified in expressing in my opinion very favorable for Thorsby, and will say to a home-seeker, if he can command a few hundred dollars do not fear the South.

A. MALGREM.

Thorsby, Ala., June 24th, 1897.

LANGVILLE & SON,
General Blacksmiths

Prices reasonable and first-class workmanship.

HOUSE BUILDING

Is the order of the day in Thorsby. We are now prepared to keep up with the procession. Our new planing mill, which has recently been put in, and is now run in connection with our saw mill, enables us to furnish all kinds of lumber for building purposes. Our prices are more reasonable than those of others, and, being prepared to turn out an order on short notice, we can save the builder a large amount of inconvenience and expenses. By buying at home you have no freight to pay and you are helping aglong home industries. We also are prepared to ship lumber by the car load or in small quantities.

THORSBY LUMBER CO.

THORSBY, ALA.

THE FARM AND GARDEN.

ITEMS OF INTEREST ON AGRICULTURAL TOPICS.

Manuring Hillsides—Growing Foreign Grapes—The Best Turnip—Continuous Egg Laying, Etc., Etc.

MANURING HILLSIDES.

Because the level valley is richer than the hillside, it is quite common for farmers to suppose that there must be each year a heavy deposit from the hillside in the valley below. But if anyone manures a hillside with the expectation that it will appreciably fertilize the soil farther down the hill he will learn his mistake. We have several times tried it, and could never see that the manure had any appreciable effect more than two or three feet below the line where it was applied.—Boston Cultivator.

GROWING FOREIGN GRAPES.

To our liking, some of the best kinds of American grapes have much better flavor than do foreign varieties. But tastes differ, and there are those who think no grapes are so good as the foreign varieties that in this country have, until now, been grown only under glass. But these varieties are hardy enough to stand our winters and ripen early enough to succeed in our summers, if the foliage can only be kept from mildewing. What has been learned about fungicides for destroying mildew and rot is very likely to succeed as well on foreign grape vines, enabling them to be cheaply grown out of doors instead of as now in hothouses.—American Cultivator.

THE BEST TURNIP.

For winter use there is no better variety of turnip than the Yellow Aberdeen, especially if one can get hold of a pure strain of honestly grown seeds. This old well known kind has been given a multitude of names altogether in the past twenty years. It is not a quick grower like the Flat Dutch, but it is a turnip that will keep a long time after being made. It is equal to a rutabaga in texture, but is not prone to rot like the rutabaga.

The southern dairymen or stock growers cannot well dispense with the crop; that is, unless he raises a large crop of artichokes or sweet potatoes for his stock. But as an acre of turnips need not cost over $3 there is no need of not having them in abundance, even then. With cotton seed boiled they constitute the cheapest milk-producing food the southern dairyman can get.—Atlanta Journal.

CONTINUOUS EGG LAYING.

No breed of hens will lay an egg each day for any very long time without a period of rest. This is true even of what are called the non-sitting varieties. There are a few days rest, generally, though sometimes not more than one or two between different settings. It is really surprising to see a small hen—and some of the best layers are usually of small breeds—producing her weight in eggs within three or four weeks. For its bulk the egg furnishes the most nutritious food that a man can eat. Except its shell, everything is eatable and nutritious. But all hens have to pass some time in moulting. To produce a new coat of feathers takes much the same kind of nutrition as to produce an egg. During this period, therefore, egg production ceases, and if moulting is delayed until cold weather the fowl does not usually begin laying until spring.

GREEN HAY IN THE MOW.

When hay, especially clover, begins to heat in the mow the safest way is to pitch it all on the rack and take it out in the barnyard, spreading it as much as possible. By the time it has all been pitched over once the hay will be dried out enough so that it will not sweat or heat again. Few realize that the heat developed by fermentation dries out of grass quite as rapidly as would the same temperature out of doors. But it is much easier to prevent this injury than to cure it after it has been done. One or two layers of dry straw on the mow will absorb all the surplus moisture. It is well also to put some of the dry straw on the mow, to hold the moisture given off by the warm air from the mow as it comes in contact with the cold air that blows over it. Quite often the top of the mow will be entirely rotten, while all the hay beneath it has dried without injury. If dry straw had been thrown over such mows the moisture from the clover or the grass beneath it would be absorbed, greatly increasing its value for feeding purposes.

RUSTED OATS.

The oat crop is much more likely to rust than any other grain, mainly because it ripens later in the season, and when increasing warmth has filled the soil so full of plant food that the grain gets more sap than it can use. This is especially true if there has previously been a good deal of rain to make the plant food available. Oats will also rust if they have been sown so thinly as to make their growth very rank. Thick seeding is necessary, so that the plants being from the first crowded will find use for all the fertility their roots can gather. Oats nearly always rust in the Northwest, where the soil is rich in nitrogenous matter but is not so rich in mineral fertility. It is partly to prevent rusting that we advise heavy seeding and a dressing of 150 pounds per acre of phosphate. It is probable that one effect of the mineral is to obstruct the sap, preventing it from flowing faster than the plant can use. Potash for this use is quite as good as phosphate, though to perfect the grain the phosphate is also needed. Potash dissolves sand, and it is this silicate of potash that makes grain straw gritty, and dulls the tools used in cutting it. The straw of rusted grain lacks grit.

A CHICKEN-PROOF FENCE.

C. P. Reynolds, of Michigan, writes:—I have tried various modes of fencing chicken yards with more or less success, but have never found anything that gave really good satisfaction until recently. One of my former difficulties was to so arrange the posts that the fowls could not alight on the tops and then hop out.

Two years ago I built another yard and worked another idea into my fence. I procured some short posts four or five feet long and placed them in the ground the usual depth. I then finished out the remaining necessary height by nailing a three-inch board to the outer edge so that it made the post six and one-half feet high. At the bottom I placed two six-inch boards five inches apart. I then used five-foot netting, which was put on in the usual way, making a fence between six and seven feet high.

If I were to build the fence again I should do everything as I did before except possibly make my posts seven feet high as I found later that I could easily have stretched the netting the extra distance. In fact to give the netting a good shape I was obliged to nail it from four to eight inches below the top of my base-boards. I think, also, I should place my posts eight feet apart instead of twelve as I now have them. I find the wider the netting the nearer the posts should be.

SELLING POULTRY.

Farmers have learned that they cannot afford to keep any kind of poultry that does not bring the highest price to be obtained. No matter how low the regular quotations may be, there are sometimes good prices paid, as the very fact that the supply is abundant induces buyers to select more carefully, because they have a larger amount from which to do so, as there is no sentiment or favoritism shown in the trade when the buyer desires the best to be had. The farmer who gets into the market with a choice article will secure the highest price. It may be an admonition that is disregarded, but the time will come, or has already arrived, when the farmer cannot afford to ignore the value of breeds; and he must also give his personal attention to the poultry, for by so doing he can keep more fowls and have fewer losses of chicks. Whether the fowls are sent to market alive or dressed, the condition in which they reach the stalls will have much to do with the prices obtained. It will be useless to keep good breeds, or even common stock, if the advantages are to be sacrificed at the last moment by carelessness in shipping. The wise farmer will not fill a coop with fowls of all kinds—roosters, hens and large chicks—to be sold in one lot, as the price will be influenced by the inferior birds. The maxim that "a chain is no stronger than its weakest link" applies also to shipping of fowls to market, as the very best will be governed by those that should not have been sent at all. Fat hens sell on sight, and should be separated from the males, while poor hens and late chicks will not bring good prices at any time.

FARM AND GARDEN NOTES.

Just as soon as young chicks, as the saying goes, get "off their feed," growth ceases and they stand still, and such chicks never afterward grow with the vigor they previously did.

There is one point in favor of corn as a crop which should not be overlooked, and that is the large amount of fodder, produced. The value of the fodder however, depends upon how it is cured and cut down.

The farmer with a few acres can only compete with the large farm by growing more produce on an acre. He can give personal supervision to all details and afford better cultivation than can be given by owners of very large farms.

The food controls the flavor of milk and butter. When the hay is properly cured it will be better than if any defect exists, because it will affect the flavor to a certain extent. All foods for cows should be of the best quality if a superior product is desired.

There is one product of the farm that the majority of farmers buy—beans. The white navy bean can be produced in all sections, and if not profitable as a crop should at least be grown for home consumption. Compared with the staple crops, however, it will be found more profitable than some.

What the farmer grows to sell is not for himself, but for others. He may have his personal preferences for some kinds of products, and can grow such for his own use, but the articles that are to be marketed must be of the kinds and quality to please the customers. Study the markets and endeavor to learn what is wanted and then supply the demand.

There is no crop more neglected than fodder and the waste of this valuable cattle food over the whole country is enormous. In some sections the fodder is considered of sufficient value to pay the cost of the corn crop, but there are farmers who attach little or no value to it if they have hay, but such farmers make a mistake in not using the fodder in connection with the hay.

Every year deep and shallow cultivation of corn is tested at the experiment stations and there has been no conclusion as to which is the better method, owing to the difference in soils and location. Thirteen stations, however, have made experiments with results rather favorable to shallow cultivation. At the Ohio station the average yield from cultivating one inch and a half deep with a spring-tooth cultivator was six bushels per acre greater than from four inches cultivation with a double shovel. Deep cultivation may be beneficial when the plants are very small, but after the roots have spread through the surface of the soil the cultivation should be shallow.

Knowledge is power in farming. The farmer who reads what others are doing is receiving the experience of those who have been successful or made mistakes, which enables him to adopt any superior methods or avoid errors that he may make unless informed. The most unwise course pursued by some farmers is their opposition to anything seen in print, and it is strange that this class of persons is a large one. Without experiment and improvement, and a diffusion of knowledge of agriculture, the farming interests would retrograde instead of progress. The farmer who reads about what others are doing can sift the wheat from the chaff and adopt the best.

New Material for Matches.

It is predicted that paper is the coming material for matches. The prospect of the wooden match industry being appreciably affected by a new process for manufacturing matches of paper is held to be extremely probable, particularly as the best wood for this purpose is constantly growing scarcer and more costly. The new matches are considerably cheaper than the wooden product and weigh much less, which counts for much in exportation. The sticks of the matches consist of paper rolled together on the bias. The paper itself is rather strong and porous, and, when immersed in a solution of wax, stearine and similar substances, sticks well together and burns with a bright, smokeless and odorless flame. Strips one-half inch in width are first drawn through the combustible mass and then turned by machinery into long, thin tubes, pieces of the ordinary length of wood or wax matches being cut off automatically by the machine. When the sticks are cut to size they are dipped into phosphorus, also by machinery, and the dried head easily ignites by friction on any surface.

There is some talk of utilizing the new invention in the manufacture of matches on an extensive scale for export in India. The invention involves no waste whatever and the paper is delivered in rolls like the telegraph tape, and converted at one operation into match sticks, and by a second into matches that would dry without stoving for a large part of the year in India. One thing, however, must be made sure of—that a wax is used which will harden at a shade temperature of 140 degrees Fahrenheit at least.—Boston Transcript.

Power of Sunshine.

A French scientist calculates that in an average day the sun will pour on two and a half acres of ground heat which might be turned into energy equal to the muscle power of 4,163 horses.

M. Mouchot believed that this heat might be utilized and made to do the work now done by steam and electricity. He found that by condensing the heat playing on less than a yard and a half of ground he could boil two pints of water. By arresting sunshine and condensing it, small steam engines have been operated successfully in Paris, but nothing has yet been done to realize practically the great hopes of revolutionizing civilization by using directly the enormous power which comes to us daily from the sun. This power is calculated at that of two hundred and seventeen trillion, three hundred and sixteen billion horses, and a thousandth part of one per cent of it would run all the factories the world will ever need.

FOR THE YOUNG FOLKS.

A MARVEL.

An old astronomer there was
Who lived up in a tower;
Named Ptolemy Copernicus
Flammarion McGower.
He said: "I can prognosticate,
With estimates correct;
And when the skies I contemplate,
I know what to expect.
When dark'ning clouds obscure my sight,
I think perhaps 'twill rain:
And when the stars are shining bright,
I know 'tis clear again."
And then abstractedly he scanned
The heavens, hour by hour,
Old Ptolemy Copernicus
Flammarion McGower.

—Carolyn Wells.

A ROYAL ROMP.

In St. Nicholas there is an article on the "Girlhood Days of England's Queen," written by James Cassidy. Mr. Cassidy says:

On a road in Malvern named, out of compliment to her Majesty, the Queen's Road, there stood, and maybe now stands, a large house where the Princess and the Duchess stayed for a time. The young lady was a "great romp and a rattle," we are assured by those who should know. Nor did she confine her exploits to the level ground. She liked to climb walls and trees. It is told that one day, while staying at Malvern, she climbed an apple-tree. That was easy enough; but next came the harder task of descending. In vain she placed one small foot before the other; she dared not venture, though again and again she tried. So she did what, most likely, you would have done had you been in her sorry plight, she began to cry. Her cries drew to the spot a gardener, named Davis; and he, fetching a ladder, soon brought her safely down from her dangerous position. For his trouble a reward of a guinea was given him, and this coin, the reward for rescuing the Princess, may still be seen by the curious, neatly framed.

"NO FISH."

Fine as are the salmon of land, they are without honor in their own country, as the following incident from Dr. S. T. Davis's "Caribou Shooting in Newfoundland" will show:

Our way into the interior was over a lovely pond. We had made an early start, and left the foot of the pond just as day was breaking. We had not proceeded far when the writer thought he could occasionally see the water break with a splash in close proximity to the canoe. Seated as he was in the bow, he turned to the native, who was handling the paddle in the stern, and inquired whether there were any fish in the pond.

"Fish? No, sir, no fish, sir."

Presently, when about half way up the pond, and just as the sun was peeping over the eastern horizon, he saw, not six feet from the bow of the canoe, a magnificent salmon rise to the surface, and with a swish of his tail disappear. Again the writer turned to his friend with the remark, "Daddy, did I understand you to say that there were no fish in this pond?"

"No fish, sir; no fish."

"Yes, but—I beg your pardon—I a moment ago saw what I took to be a twelve or fifteen pound salmon break the water not six feet from the bow of the canoe."

"Oh, that was a salmon. There are plenty of trout and salmon in all these waters, but no fish, sir. Nothing counts as fish in these parts but codfish, sir."

PEARLS AND PEARL SHELLS

In St. Nicholas, Captain H. D. Smith, of the United States Revenue Cutter Service, tells of his experiences, "Hunting for Shells," from the Island of Ceylon to the Dry Tortugas. Captain Smith says:

Pearl shells are valuable, and fine specimens are hard to obtain. They are found in the Treamotee, Gambier, and Tribual groups of islands. The choicest come from Macassar; these are the white-edged shells, worth $800 a ton, and from these the finest pearl buttons are manufactured.

The most celebrated pearl-fisheries lie near the coast of Ceylon, the Persian Gulf, and in the waters of Java and Sumatra. The Australian coast in the neighborhood of Shank's Bay and at Roebuck Bay furnishes some very large shells, some of them weighing from two to three pounds each. The fisheries of Baja, Gulf of California, are very rich, France controlling the gems procured there. The meat of the pearl-oyster is readily bought by the Chinamen, who dry the leathery little bivalves or seal them up in cans and ship them to their countrymen in San Francisco. The pearl-shells readily sell upon the spot at from $1.50 to $5 per pound.

Pearls and tears have for ages been associated, and the magic virtues of the pearl were held in high esteem in early times, as they are to-day with the East Indians.

It is said that Queen Margaret Tudor, consort of James IV. of Scotland, previous to the battle of Flodden Field, had many presentiments of the disastrous issue of that conflict, owing to a dream she had three nights in succession, that jewels and sparkling cordnets were suddenly turned into pearls—which the superstitious believed were a sign of coming widowhood and of tears.

Pearls are of various colors, and in India the red pearls were highly prized by the Buddhists, who used them in adorning their temples. Pearls are formed to protect the shell-fish. They are due to a secretion of shelly substance around some irritating particle, and their composition is the same as that of mother of-pearl.

THE SNAIL'S ADVICE.

It was a pleasant afternoon and the Snail was taking a quiet walk across the garden path with the intention of reaching the wall beyond it. His slender horns moved gracefully from side to side as he succeeded his supple neck for one of his shell to enjoy the sun as he went on his journey. Suddenly he felt himself snatched from the ground and a finger laid on one of his bright black eyes. Quick as thought, folding his eyes [illegible] his horns and his horns into his head, he drew back into the shelter of his shell.

"Snail, snail, put out your horns," sang the little girl who had seized him, and in whose hand he now lay; but the snail lay close.

"Snail, snail, put out your horns," she sang again, impatiently, but in vain, for never a stir made the snail.

"Nasty, disagreeable, slimy thing! I hate you, and I hate everyone; every single person I know is disagreeable today," said the little girl, angrily throwing the snail on the grass.

"Little girl," said the Snail in a gentle voice, which sounded far away inside his shell, "if you were like me you would be happier. I don't mean to be disagreeable."

"Like you! Like a snail! I'd be very sorry."

"I don't mean in appearance, but if you would act as I do when you are vexed it would make you happier. When anyone hurts me, as you did just now, I just shut my eyes into my horns, and curl my horns into my head, and turn my head inside my body, and draw my body into my shell, and don't even look out to see what they are like, or give them another chance of annoying me. Why don't you do that?"

"How could I, you stupid thing? I have no shell, and I couldn't possibly turn my head inside my body."

"I know that; but you have got things that you are always keeping stretched out that I think must be very like my horns, though you call them 'feelings' and 'pride,' and if you were to draw in those horns when you fancy something has offended or vexed you, you would be much wiser. I often hear you in the garden quarrelling with your brothers, or grumbling to your mother, or complaining of something. And I have often thought what a pity it is that you will keep stretching out your horns."

"It's easy for you to talk; you are only an old snail. You don't know how horrid the boys are, and how often mother won't let me do as I like."

"I know more than you think, for I see you here very often, though you don't see me. And I tell you that you wouldn't think people or things half so disagreeable if you didn't keep looking at what they may have said or done to vex you. Just fold up your horns, and even when your brothers try to make you put them out by calling you names do as I did when you called to me to put out my horns—just don't answer one word, shut up your eyes to everything that vexes you, curl in your horns, and you'll get on ever so much happier."

"I like what you say," sighed the little girl. "Perhaps I'll try. I'm sorry I hurt you."

"Oh, I'm all right again. You see, you might have hurt me much more if I had looked out when you called me."

"Where would you like me to put you? I must go in now."

"If you would kindly leave me safe up on one of those loose bricks, half-way up the wall, near the current bush, I would be obliged. It would save me a great journey and I have lost time talking."

Sparrow's Ruse.

The sparrow seldom retaliates except upon his own kind. Even the polite chaffinch always ready to give place and never coming forward without a "by your leave," gets out of patience with the sparrow and dabs it on the back when it hustles it. But the sparrow has a fine street-boy sort of revenge upon them all, and from observation, I am almost certain that one trick it plays is deliberate. The birds are all feeding, ten or twenty sparrows to one of any other kind, and suddenly they all rise together. Whir-r-r! All the other birds are frightened and fly to a long distance and there wait for a catastrophe that never occurs, or some danger to pass by that never threatened, and lo! the sparrows are all back among the food again. They had only flown up into the tree overhead or on to the wall behind, and had hardly alighted before they returned. But the other birds are too sincerely perturbed to come back for a long time; some of them never come back at all.

These panics among the sparrows are so causeless and so advantageous to themselves that I am convinced they are a ruse. A blackbird among them is a nuisance; he bullies them. So up they get—whir-r-r!—and where is the blackbird? Gone so far and alarmed so thoroughly that he will not be back for an hour at least. But the sparrows are all there again within five seconds, and going on with the crumbs just where they had left off. Dogs, we know, practice this "swike" regularly and of plan prepense. One dog has a bone which the other covets. The boneless dog suddenly rushes out of the room barking excitedly; the other follows him. Back comes first dog and carries off the bone. Enter second dog. Tableau!—Contemporary Review.

A Slow Town.

The Rev. John Watson (Ian Maclaren) tells this story about his trip to the Holy land. As he was nearing the centre of historic Palestine he met an American. After a few greetings the American asked Dr. Watson where he was going.

"To Jerusalem," was the reply.

"Jerusalem!" exclaimed the American, in tones of unfeigned disgust; "you don't want to go there. I've just come away. It's a slow town. Why, there isn't a daily newspaper in the whole place!"—New York Sun.

Yukon and Klondike Gold Fields.

Parties intending to visit the Klondike Gold Fields or invest in stock companies operating in that country, are advised to get the Canadian Government Alaskan Boundary Commissioner, Prof. Ogilvie's, Report on the Yukon and Klondike Gold Fields, before deciding. This is the official report made last spring which so astounded the Canadian Government that they did not publish it till Prof. Ogilvie confirmed it personally on his arrival in Ottawa. The report is very extensive, abounding in Photogravures and Maps and giving the most reliable information as to routes, climate, and the indescribable wealth awaiting the miners. Sent, postage paid, on receipt of 50c. in stamps, by the Toronto Newspaper Union Publishers, 44 Bay St., Toronto, Canada.

Fits permanently cured. No fits or nervousness after first day's use of Dr. Kline's Great Nerve Restorer. $2 trial bottle and treatise free. DR. R. H. KLINE, Ltd., 931 Arch St., Phila., Pa.

Piso's Cure is a wonderful cough medicine.—Mrs. W. PICKETT, Van Sicklen and Blake Aves., Brooklyn, N. Y., Oct. 26, 1895.

Mrs. Winslow's Soothing Syrup for children teething, softens the gums, reducing inflammation, allays pain, cures wind colic. 25c. a bottle.

LAGRANGE FEMALE COLLEGE.

This Institution Leads in the Advantages of . . .

Solid Christian Education, Music, Art, Elocution, Health, and Economy of Dress.

WRITE INVESTIGATION. CATALOGUE BEAUTIFUL

Session Begins September 15, 1897.

RUFUS W. SMITH, President, LaGrange, Georgia.

BOOKKEEPING

Thoroughly Taught for . . $1.00 by Abrahamson's Bookkeeping Chart.

NO TEACHER REQUIRED.

Booklet giving full particulars, free. Address

Chas. M. Abrahamson, Camden, N. J.

Principal and Founder Abrahamson Business Colleges. Established 1880.

MOUNT LOOKOUT INSTITUTE —FOR— YOUNG LADIES,

Opens 15th of September, 1897.

Is beautifully situated, at Bellview, near Gadsden, on one of the peaks of Lookout Mountain. It is famous for its healthy and salubrious climate, and picturesque landscape.

Mount Lookout Institute is reasonable in charges; one hundred and sixty-five dollars pays board and tuition in all literary branches for entire session of nine months.

For further information, apply to MISS GEORGIETTE CLARKE, Principal, or F. L. HOLMES, Business Manager, Gadsden, Ala.

CLAREMONT COLLEGE, HICKORY, N. C.

Girls and young women. Location a noted health resort. Ten schools in one. $400 PIANO given to the best music graduate. Mountain air and water. For catalogue, S. P. Hatton, A. M., Pres.

VIRGINIA BUSINESS COLLEGE, RICHMOND, VA.

305—matriculates last session.—305
10—States Represented.—10
GRADUATES ASSISTED TO POSITIONS.

"I like what you say," sighed the little girl. "Perhaps I'll try. I'm sorry I hurt you."

"Oh, I'm all right again. You see, you might have hurt me much more if I had looked out when you called me."

"Where would you like me to put you? I must go in now."

"If you would kindly leave me safe up on one of those loose bricks, half-way up the wall, near the current bush, I would be obliged, it would save me a great journey and I have lost time talking."

Sparrow's Ruse.

The sparrow seldom retaliates except upon his own kind. Even the polite chaffinch always ready to give place and never coming forward without a "by your leave," gets out of patience with the sparrow and dabs it on the back when it hustles it. But the sparrow has a fine street-boy sort of revenge upon them all, and from observation, I am almost certain that one trick it plays is deliberate. The birds are all feeding, ten or twenty sparrows to one of any other kind, and suddenly they all rise together. Whir-r-r! All the other birds are frightened and fly to a long distance and there wait for a catastrophe that never occurs, or some danger to pass by that never threatened, and lo! the sparrows are all back among the food again. They had only flown up into the tree overhead or on to the wall behind, and had hardly alighted before they returned. But the other birds are too sincerely perturbed to come back for a long time; some of them never come back at all.

These panics among the sparrows are so causeless and so advantageous to themselves that I am convinced they are a ruse. A blackbird among them is a nuisance; he bullies them. So up they get—whir-r-r!—and where is the blackbird? Gone so far and alarmed so thoroughly that he will not be back for an hour at least. But the sparrows are all there again within five seconds, and going on with the crumbs just where they had left off. Dogs, we know, practice this "awike" regularly and of plan prepense. One dog has a bone which the other covets. The boneless dog suddenly rushes out of the room barking excitedly; the other follows him. Back comes first dog and carries off the bone. Enter second dog. Tableau!—Contemporary Review.

A Slow Town.

The Rev. John Watson (Ian Maclaren) tells this story about his trip to the Holy land. As he was nearing the centre of historic Palestine he met an American. After a few greetings the American asked Dr. Watson where he was going.

"To Jerusalem," was the reply.

"Jerusalem!" exclaimed the American, in tones of unfeigned disgust; "you don't want to go there. I've just come away. It's a slow town. Why, there isn't a daily newspaper in the whole place?"—New York Sun.

Yukon and Klondike Gold Fields?

Parties intending to visit the Klondike Gold Fields or invest in stock companies operating in that country, are advised to get the Canadian Government Alaskan Boundary Commissioner, Prof. Ogilvie's, Report on the Yukon and Klondike Gold Fields, before doing so. This is the official report made last spring which so astounded the Canadian Government that they did not publish it till Prof. Ogilvie confirmed it personally on his arrival in Ottawa. The report is very extensive, abounding in Photogravures and Maps and giving the most reliable information as to routes, climate, and the indescribable wealth awaiting the miners. Sent, postage paid, on receipt of 50c. in stamps, by the Toronto Newspaper Union Publishers, 44 Bay St., Toronto, Canada.

Fits permanently cured. No fits or nervousness after first day's use of Dr. Kline's Great Nerve Restorer. $2 trial bottle and treatise free Dr. R. H. Kline, Ltd., 931 Arch St., Phila., Pa.

Piso's Cure is a wonderful Cough medicine.—Mrs. W. Pickert, Van Siclen and Blake Aves., Brooklyn, N. Y., Oct. 26, 1894.

Women Look Here.

If you want to learn about a Washing Machine which even a child can operate easily be sure to read advertisement in this paper of H. F. Brammer Mfg. Co., Davenport, Iowa. To introduce their new Machine everywhere they will for a short time only sell at wholesale price—where dealers as yet do not keep them in stock. The firm guarantees every Machine first-class and to give satisfaction. Write them at once for circulars and price. They will be pleased to hear from you.

WRECK OF A WORK OF ART.

Statue of Agnes Gilkerson Is Demolished.

The costly marble statue of Agnes Gilkerson, for years an object of interest on the lawn of the Hezekiah B. Smith's mansion at Smithville, N. J., was broken into thousands of pieces the other day. The wreckage of this remarkable work of art was then cast in Rancocas Creek, and the testimonial to Congressman Hezekiah B. Smith's folly went out of sight forever.

The story of Smith and Agnes Gilkerson is one of extraordinary romance and wrong, and, when first made public, stirred the whole country. The man had deserted his rightful family at Woodstock, Vt., and made a new home at Smithville with the woman of his infatuation. He became a millionaire manufacturer, creating a great industrial plant in the out of the way retreat he had selected. He also went to Congress and grew to be a political figure in the State, Agnes Gilkerson, known to those who knew Smith then as his wife, pushing him onward and upward. He would doubtless have won higher political honors, but his past became known. When the woman died the inconsolable and aged manufacturer had a statue of her made in Italy and placed it on his front lawn where he could see it always.

Captain Elton Smith, one of the manufacturer's surviving children, recently come into the great property of his

THE AGNES GILKERSON STATUE.

father, and one of his first acts was to order the statue of Agnes Gilkerson destroyed, so it should never more plague him or his. A dozen stalwart men armed with sledges and axes sent the white statue crashing to the ground and hammered the marble fiercely until nothing but a pile of debris remained. Some of the villagers tried to secure pieces of the statue as souvenirs, but a cart took the whole mass to the creek, where it was dumped into ten feet of water and covered with stones.

Pistols and Pestles.

The duelling pistol now occupies its proper place, in the museum of the collector of relics of barbarism. The pistol ought to have beside it the pestle that turned out pills like bullets, to be shot like bullets at the target of the liver. But the pestle is still in evidence, and will be, probably, until everybody has tested the virtue of Ayer's sugar coated pills. They treat the liver as a friend, not as an enemy. Instead of driving it, they coax it. They are compounded on the theory that the liver does its work thoroughly and faithfully under obstructing conditions, and if the obstructions are removed, the liver will do its daily duty. When your liver wants help, get "the pill that will."

Ayer's Cathartic Pills.

THE JOKERS' BUDGET.

Jests and Yarns Made and Told by Funny Men of the press.

HIS CHOICE.

"What, in your opinion, is the most pleasing decoration for a wheel?"

"A pretty woman."

COSTLY EXPERIENCE.

"So you broke the engagement, Yawply?"

"Yes, but not till after the engagement broke me."

DOUBTFUL COMPLIMENT.

Mrs. Scareface—Why, General, I didn't think you would remember me. What a memory you have for faces!

Gen. Blunt—Madam, yours is a face one could never forget!

A TRUE LIKENESS.

Miss Cawstic—"Don't you think monkeys are cute?"

Blowdust—"Naw, they remind me too much of some people."

Miss Cawstic—"O, you shouldn't be so sensitive."

PHYSIOGNOMICAL.

"The face," said the oracular boarder, "is an exact index to the mind."

"Not an exact one," said the Cheerful Idiot. "For instance, when a man has his temper ruffled his brows are knit."

A SUGGESTION.

Mother—What would poor mamma do without her boy if he went away?

Her Boy—You could whip Fido when you were cross and just pretend it was me, couldn't you?

EASY TO CURE.

The Wife—Doctor, can you do anything for my husband?

Doctor—What seems to be the matter?

The Wife—Worrying about money.

Doctor—Oh, I can relieve him of that all right.

THE LIMIT FOUND.

"There," said the man of schemes, "is a limit to the toleration of the public."

"And you found it?"

"Yup. I met a total frost when I started out with a lecture on 'How I Intend to Find the North Pole.'"

PLEASURES OF THE IMAGINATION.

"Mrs. Stebbins is the meanest woman on earth."

"What has she done now?"

"She gave her little boy a slice of bread and butter, and told him to go out and sit where he could smell the blackberry jam Mrs. Perkins was making."

EASILY COMPREHENDED.

American Boy—"Papa, what's an absolute monarchy?"

Papa—"A country ruled by a king whose authority is unlimited. His word is law, and the people must do his bidding. Do you understand?"

American Boy—"Oh, yes, a sort of political boss."

CONSOLATORY THOUGHT.

Professor (disgustedly)—It's hard to get any knowledge into your head, your skull's so thick.

Pupil—But, remember, Professor, for the same reason it will be hard for the knowledge to ever get out.

A GREAT DISADVANTAGE.

"I suppose," remarked the sarcastic housewife, "that in the course of time ice will be worth as much as diamonds."

"Well," replied the iceman, reflectively, "diamonds are pretty good in their way, but you can't rely on their melting down so as to keep up a steady demand."

HOW HE GOT AROUND IT

Chalumeau has just returned from a fishing expedition.

"Well," his friends ask him, "did you catch anything?"

"I missed my twelfth fish!" answers Chalumeau, who thus spares himself the humiliation of telling that he missed his first as well.

THE MODERN MUSICALE.

Young lady—You are a wonderful master of the piano, I hear.

Professor von Spieler (hired for the occasion)—I blay aggompaniments zometimes.

Young lady—Accompaniments to singing?

Professor von Spieler—Aggompaniments to gonversations.

THE FRIEND.

Wallace—Hargreaves had the impudence to accuse you of laughing at your own jokes, but I called him down all right.

Ferry—That was very kind of you—oh, by the way, what did you say to him?

"I told him that they were not your own jokes at all."

LEGAL LORE.

"Well, proceed," said the lawyer.

"The plaintiff resorted to an ingenius use of circumstantial evidence," said the witness.

"For the benefit of the jury state in plainer language exactly what you mean by that," interrupted the Judge.

"Well, my meaning is—that he lied!"

He Swamped Chicago's Violet Market.

The original "Allegretti" ice cream man is now living in Chicago at the age of seventy. Ignazo Allegretti left Italy in 1860 for political reasons, and went to the United States. In the early '70's he sought San Francisco and made money as a confectioner.

Five years ago he shipped 1,000,000 violets from California to Chicago in a refrigerator car, and, placing them on sale in the Masonic Temple, offered them at prices that broke the market there. In 1895 he went to Chicago and opened a little candy store in State street. The first day he made fifteen cents. Now he occupies an entire building and has a large corps of clerks to attend to his business.—London Sun.

Business Vicissitudes.

The annals of commerce are not entirely without a spice of romance. There is a little retributive justice that savors of the novelist's art in the way the spoiler is sometimes spoiled in business relations. In an article entitled "Made in Japan," the Pall Mall Gazette shows how nations have encroached upon one another's business, and reaped for a time a rich harvest, only to see the same tactics employed by a rival people, and be forced to stand aside while the trade slipped from their hands into the keeping of another nation.

In old times the Dutch, by importing English clay, made a good profit out of imitations of Chinese porcelain, and presently the Dutch product became world as Delft ware.

But the Dutchman was no more secure in his profitable trade than had been his predecessor, the Chinaman. The English potters took to copying the Dutch patterns, and sold their pottery much cheaper, and the north of England became headquarters for the Delft china.

Again, however, the spoiler has been spoiled. Of late the Japanese have made themselves masters of the art of reproducing the patterns best liked in England, and have begun to encroach on the domain long monopolized by the English potter. The Japanese product is finer and stronger, and above all cheaper than the best English ware, and Japan is providing the markets with goods which were originally a Chinese monopoly.

LYON & CO'S PICK LEAF EXTRA SMOKING TOBACCO

Made from the Purest, Ripest and Sweetest leaf grown in the Golden Belt of North Carolina. Cigarette Book goes with each 2-oz. pouch.

ALL FOR 10 CENTS.

A Pleasant, Cool and Delightful Smoke.

DRUNKARDS can be saved without their knowledge by Anti-Jag the marvelous cure for the drink habit. Write Renova Chemical Co., 66 Broadway, N. Y. Full information (in plain wrapper) mailed free.

PISO'S CURE FOR CURES WHERE ALL ELSE FAILS. Best Cough Syrup. Tastes Good. Use in time. Sold by druggists. CONSUMPTION 25 CTS.

TEXAS LADIES Don't Lie.

Mrs. M. K. Kemp

Quitman, Tex., writes: After 12 years' suffering from Dyspepsia and Sick Headache I was cured by Dr. M. A. Simmons Liver Medicine. It cured my Husband of Constipation, our little Girl of Nervousness, and our Son of Catarrh of the Bowels. It cured Mrs. Newman of Painful Menstruation, and carried Mrs. Fields safely through Change of Life. It perfectly regulates the Liver, Stomach and Bowels, and leaves no bad effects, while both "Black Draught" and "Zeilin's Liver Regulator" did not leave my bowels in such good condition. I found more of it in the Package, and it only required half the quantity for a dose, and I had rather pay 25 cts. per Package for it than use "Zeilin's" or "Black Draught" as a free gift.

Bad Taste in the Mouth.

Digestion is the grand process by which nature repairs the wasted tissues of the body, which, when the individual is in health is performed with great faithfulness and regularity, and without giving rise to any disagreeable sensations.

Indigestion is a disease which consists of a deviation from this ordinary mode of health and in the deficiency or vitiated character of those secretions which are essential to the conversion of food into blood. The best corrective for this complaint is Dr. M. A. Simmons Liver Medicine a few doses of which will remove the offensive taste.

A. C. Perkins

Randolph, Ky., writes: I will never be without Dr. M. A. Simmons Liver Medicine. It cured me of Chronic Constipation and Torpidity of Liver after several Physicians and many Patent Medicines had failed. I took three times as much "Black Draught" as the directions said take, and it had but little effect on me, and I don't think it had much strength.

Backaches Common to Mothers.

The busy mother sometimes feels an inability to perform her accustomed duties. She feels inactive, weary and depressed. Her back, oh, how it aches! When she sits down she feels as though she must get right up, and when she stands, that she must sit down. The truth is, the capacity of her nervous system has been overworked, it has become exhausted and there is a breaking down. What she needs is a course of Dr. Simmons Squaw Vine Wine to restore healthy functional activity and give tone and vitality to her nervous system.

GROVES

TASTELESS CHILL TONIC

IS JUST AS GOOD FOR ADULTS. WARRANTED. PRICE 50cts.

GALATIA, ILLS., Nov. 16, 1893.

Paris Medicine Co., St. Louis, Mo.

Gentlemen:—We sold last year, 600 bottles of GROVE'S TASTELESS CHILL TONIC and have bought three gross already this year. In all our experience of 14 years, in the drug business, have never sold an article that gave such universal satisfaction as your Tonic. Yours truly,

ABNEY, CARR & CO.

"Success" Cotton...... Seed Huller and Separator. ......

Young People FREE: $20.00 IN GOLD, Bicycle, Gold Watch, Diamond Ring, or a Scholarship in Draughon's Practical Business College, Nashville, Tenn., or Texarkana, Tex., or a scholarship in most any other reputable business college or literary school in the U. S. can be secured by doing a little work at home for the Youths' Advocate, an illustrated semi-monthly journal. It is elevating in character, moral in tone, and especially interesting and profitable to young people, but read with interest and profit by people of all ages. Stories and other interesting matter well illustrated. Sample copies sent free. Agents wanted. Address Youths' Advocate Pub. Co., Nashville, Tenn. [Mention this paper.]

"ALABAMA BRAND" ROLLED OATS

are manufactured from specially selected White Oats. Unlike the cheap Western goods, they are Pan-Dried (by direct fire) more thoroughly than can be accomplished by steam heat, being slightly parched, keeping sweet longer, besides being the most perfectly cleaned from hulls and all impurities of any Rolled Oats in the markets of the world. We bring these goods on in Car Lots, making the boxes and packing the goods in Birmingham, using for this purpose deserving women and children. The goods are the best to be had. Ask for this brand and see that you get it. Do not allow yourself to be imposed upon by accepting inferior goods when you ask for "ALABAMA BRAND." Remember, every package is guaranteed.

McMILLAN-LEE CO., BIRMINGHAM, ALABAMA.

"THE TENDERFOOT."

The overland stage started
From the station at Cheyenne,
With me, the one girl passenger,
Amid a dozen men.
On either side a cowboy sat,
With pistol, knife and braided hat.

They talked of hold-ups, Pi-utes,
Of ambush, of stampedes;
It terrified my woman's heart
To hear their bloody deeds.
I was a pale school teacher then,
And gloried in the strength of men.

There was one who sat and hearkened
To the awful tales we heard.
A "tenderfoot," they called him—
Their contempt might be inferred—
A sort that under frontier laws
Was ranked with clergymen and squaws.

And though I liked his quiet ways,
And kindly, honest face,
I felt that 'mid these heroes fierce
He looked quite out of place,
As he sat and meekly listened
To the way they had him christened.

We went rattling down the canyon;
From ledge to ledge we dropped,
When from a bush a shotgun flashed;
The bronchos reared and stopped.

A slashin' at the traces,
A volley of commands,
And the heroes looked like deacons
As they lifted up their hands.

In deadly fright I fumbled
For my slender purse of gold,
While the cowboys sat like yokels
In a pillory of old;
But while I thought the strength of men
A mockery and a shame,
That "tenderfoot" rose to his feet,
A Gatling gun of flame.

It might have been a minute,
Or, for all I know, a week,
When I saw the light returning,
And I heard a calm voice speak:
"All right, poor girl; no danger."
And he lifted up my head.
"There's lots of heroes missing,
But only two men dead."

And then our stage went on again,
Beneath the noonday light;
But the daring deeds of reckless men
Somehow, were ended quite,
And when I talk about it now
My husband's eyes will shine,
But he only gives my hand a squeeze—
This "tenderfoot" of mine.
—F. H. Gassaway, in New York Journal.

NOT GROOMSMAN.

"What time is it, Madeline?" asked Gaffer Hitchcock, carefully folding the evening paper and placing it on the table.

The person addressed—a tall, slender woman about 35—looked up from her knitting and answered with a pleasant smile: "About half past eight, I believe," and, rising, began to put away her work.

Gaffer's question had been for the last six years the signal for retiring to rest, and although it was full an hour and a half before the usual hour, Madeline never thought for a moment of hesitating to obey.

"Something has occurred," she thought, "and he will tell me before long," for Gaffer had looked at his watch at eight, and a few minutes after, and at a quarter past had changed his chair and coughed uneasily, and now he asked: "What time is it?"

Madeline was the orphan daughter of an old schoolmate; Gaffer had taken her home with him when she was only 10 years old, and his sister cared for her with motherly solicitude until she was wooed and won by Frank Reynolds and went to a distant city to live. Gaffer had made a terrible to-do about her marrying, called her an ungrateful good-for-nothing, and declared it was proper punishment for taking her in the beginning; but, nevertheless, he spared no expense on the wedding trousseau. And when, about nine years after, she came back to her old home, widowed and childless, she was tenderly welcomed by the lonely man, for the grass waved over the grave of the good, true-hearted sister.

For six years she had kept house for him, humored him, and made everything bend to his comfort, as few daughters ever do. Lovers she had in plenty; those who would at any moment have laid heart, fortune and hand at her feet; and when Gaffer heard that Madeline had refused them he chuckled at their discomfiture and smoothed her soft brown hair, telling her she was a good girl, every way worthy of their love, only he knew that she would never leave him.

He had grown so accustomed to seeing her happy, contented face by the opposite side of the fire, with some kind of work in her hands that occupied neither brain not attention, but left her always free to listen to him when he spoke, that he felt no fear at the attentions she received. He seldom spent an evening from home unless Madeline was with him; and he had never left his native city since she came home. He was thinking of all this tonight, as he watched her folding her work so carefully.

"What are you going to do Madeline?" he asked, at last.

"Going to put away my work," she answered, simply.

"What are you putting it away for?"

"You ask the time, and that is equivalent to saying: 'I am tired of you, Madeline; go to bed.'"

"No, it ain't," said Gaffer, gruffly; "come back here, I want to talk with you—there, let that knitting work alone. What is it, that you are in such a hurry to finish it?"

"Stockings," answered Madeline, sententiously; "stockings for Madeline Reynolds."

Gaffer sat for a few moments in perfect silence; at last, with a voilent effort and with very much the air of a man who has just made up his mind to have a tooth pulled, said:

"Maddy, I am going away."

"Going away?" she repeated. "Where to, pray?"

The tone of surprise in which the question was asked fully satisfied Gaffer of the importance of the revelation.

"Yes; I am going to New York. Bonnehue is going to be married on New Year's day, and wants me to be groomsman. Who would have thought old Bonnehue would have got married at last? Why, he's at least ten years older than I, and I am most fifty. You see, Maddy, child, your old batchelor friend is not too old to get married yet. Dreadful pity leap year is most over. Here I am, a hale, hearty man, in the prime of life, with plenty of money to support a wife, and no wife forthcoming. But what makes you so quiet—don't you want me to go?"

"No," said Madeline, gravely, "I would rather you would not go. I had made different calculations for New Year's; in fact, I rather think of getting married myself."

"Madeline, are you crazy?" and Gaffer fairly bounded in his chair with astonishment. "Why, what will become of me? I'll starve, I know I shall."

"You might live with me," remarked Maddy, in the same grave, business-like tone.

"You know very well," said Gaffer, testily, "that I could never live with another man in the house; I should put him out before the honeymoon was over. And who may the happy man be? Some blind old dotard? Some conceited dandy? Some lame mendicant? Some lazy vagabond, who sings love ditties to carry away Gaffer's money? Or—or——"

Gaffer did not stop for breath, but for lack of sufficiently expressive words to convey his detestation of the projected union.

"No," said Madeline; "he is not blind, or lame, or seeking after your fortune." She hesitated for a moment, and then continued slowly: "He is neither very young nor very old, very kind nor very cross, very good nor very bad, very rich nor very poor—but I think he likes me."

"Of course he has told you so in most affecting tones," muttered Gaffer; ironically.

"No," she said, quietly, "he has not."

"Madeline, you are crazy, or going into a dotage! Why did you not tell me that you were so anxious to get married and I would have advertised in all the daily papers for 'a suitable lover for a widow not very far advanced in life, well preserved and anxious to leave Gaffer Hitchcock?' Why did you not tell me all this?" and his face clouded wofully. "It's too bad, Maddy! I would never have believed you would go away again. It was bad enough to leave me when sister was here, but now, now, why, Maddy! Maddy! think better of it—do, and don't leave me alone, child."

Madeline's fingers worked nervously. How she longed for the knitting work! "Gaffer," she said, without looking up, "perhaps tomorrow you will not feel so badly about it. It is no sudden thing, my determination to get married; I have thought about it for over a year, and yet last night I would have said there was no telling when the wedding would take place."

Poor Gaffer seemed perfectly undone at the news Madeline had imparted, but at her last words he started from his seat, and, drawing up a chair, took a seat in front of her. "It is not too late, then," he said, his face raidiant with hope. "You can yet retreat. Oh! by the memory of past days; by the solemn agreement I entered into with your father, to guard his little girl; by all the years I have loved and striven to serve you, do not leave me now. You know it would be taking away my life to part with you." He took the two cold hands in his. "Will you leave me? Dare you leave me?" Still no answer. "If you would be happy away from me, my dear girl, say so, and Gaffer will not say another word. Speak, Maddy, speak; don't mind me."

The face of the woman was averted, but the words, though soft and tremulous, were distinctly heard by the anxious mrn before her: "I never said I was going to leave you. If ever I marry again it will be to be forever near you."

The look of anxiety on Gaffer's face gave place to one of bewilderment, and then utter astonishment. "Do you mean what you say?" he asked.

"I do, and it is for you to judge whether he is a blind old dotard, a conceited dandy or after Gaffer's money."

Then Gaffer rose, walked across the room and took his old seat, picked up the evening paper and asked: "What time is it?"

"Half-past nine. Good-night."

"Good-night," he answered as if nothing had happened; and Madeline put the knitting in her work basket and left the room.

The next morning at the usual hour the bell was rung, and Gaffer walked down to the breakfast table in dressing gown and slippers, to see Madeline arranging the cups and saucers in her own quiet, precise way. They talked very quietly together until Madeline asked: "When are you going to New York, Gaffer?"

"Not till after the first of the month, for I expect to be married on New Year's day myself."

There was nothing more said, and if Maddy ate little, Gaffer ate less "Maddy," he said, when they had adjourned to the library, "you are a very sensible girl, and I never knew before last night that I needed a wife; but I am 15 years older than you, and what will the world say?"

"You suit me," she answered, putting up her face for a kiss, "and we will not invite the 'world' to the wedding."

VIGILANTES IN MONTANA AGAIN.

Work of the Criminal Element Demands Radical Measures.

An old-time vigilance committee has been organized in Butte, Montana, as the only means of ridding the city of the criminal element which of late has made its headquarters there, and it now looks as if some other towns in the state would have to follow in the same line. Criminals of every character and degree, from the petty thief to the highwayman and murderer, are to be found in the gangs of vagrants and hoboes now swarming throughout this portion of Montana.

Within a short time several murders have occurred in Butte, besides innumerable hold-ups, burglaries and assaults, and in every instance the criminals have made their escape, the police seeming powerless either to apprehend them or to prevent a repetition of the crimes. Recently, however, the whole city was aroused to action by the murder of one of its most reputable citizens, a German-American of the name of Kroeger. The Kroeger brothers were returning home at rather a late hour when they were suddenly confronted by two or three masked men and heard the order, "Hands up!" One of the brothers immediately raised his hands, but the other refused to comply with the order and was instantly shot. A few moments later the police arrived, but the villains had escaped and the wounded man lived only a few hours.

The people felt that they had a desperate criminal element to deal with, and that extreme measures would have to be resorted to. Extra policemen and deputy sheriffs were appointed and a mass meeting of several thousand citizens, including both business and professional men, was held in the Auditorium. The forming of a vigilance committee was advocated by ex-judges, ex-sheriffs and attorneys and many of the most prominent citizens. As a result of this meeting a secret executive committee of ten was appointed, with power to select 100 other men to carry out its orders, and later it was reported to the sheriff's office that a regular vigilance committee had been organized and the following warning, signed by the "committee of eighty," was published in the Butte papers:

"To the Murderers, Highwaymen and Hoboes: We demand you to leave this region and leave it quick. The dastardly attack upon the Kroeger brothers last night, resultant in the cold-blooded shooting of William Kroeger, has aroused the passions of all right-minded citizens and consolidated not a few determined men who purpose to destroy the sentiment of personal unsafety that is becoming fastened upon the minds of law-abiding people. In order to restore this freedom from fear you must leave town quietly, peacefully and quickly.

"If you fail to heed this command you will be forced to leave in a manner distasteful to you and to us, and you will never come back. Twenty-four hours is the limit, commencing at 6 o'clock tonight, and it is ample time for you to pack up and start.

"Hoboes, whether innocent or guilty of crime, will go at once and be considered innocent; but those who remain over the allotted time are guilty in our belief and God have mercy on their souls."

This warning had the desired effect, and there has been a mighty exodus of vagrants from Butte, but in proportion as that town has been relieved, other towns, hamlets and localities along the line of the Montana Central railway have suffered. A large band of these hoboes, numbering nearly 100, immediately headed for Helena, but the city authorities were on the lookout for them with plenty of men stationed along the lines of the Montana Central and Northern Pacific, and few of them ventured within the city limits, though hundreds were seen skulking along the two lines of railroad on the outskirts of the city.—Chicago Record.

A Success.

"Was your last bicycle meet a success," she inquired.

"Yes, I consider it so, he said, as he pointed to the arm which he carried in a sling. "Neither of us was killed."

A MINISTERING ANGEL.

SOMETHING ABOUT THE CAREER OF FLORENCE NIGHTINGALE.

The Heroine of the Crimea and Her Life Work—Devoting Herself to the Amelioration of the Sufferings of Sick and Wounded Soldiers—Her Majestic Appearance.

Apropos of the serious illness of Florence Nightingale, the heroine of the Crimea, writes M. L. Rayne in the Chicago Times-Herald, it is seldom recorded of a great public character to have so completely fulfilled the mission to which she was devoted and lived up to its demands throughout a lifetime as exclusively and completely as in the case of this idol of the British soldier. Although generations have passed since 1854, when she went at the age of 34 to the British army in Crimea as superintendent of a corps of women volunteer nurses, her work and influence there has never been forgotten, and her name, handed down from father to son, represents all that is helpful and lovable in woman.

Miss Nightingale, out of the pity and sympathy of her heart and a noble philanthropic organization, established a hospital at Scutari for sick and wounded soldiers. She began with a force of 100 volunteer nurses, ninety of the number being women. The hospital was ready for occupancy on November 5, and on the 7th 600 wounded soldiers were received, those who participated in the battle of Inkerman, and within a month the number increased to 3000. So admirable was the executive ability of this grand woman that she made her hospital a model for good nursing and perfection of arrangement, while she moved among the sick and dying soldiers like a ministering angel, which indeed she proved to be.

One wounded private soldier said of her, "We watched for her coming as a child watches for its mother. When we were too weak to speak to her as she passed through the wards we would kiss her shadow where it fell on our pillows and feel comforted."

Such an example of devotion to the cause of suffering had many followers. The young English girl renounced the drawing-room and its luxuries for the hospital and its privations, and there was no lack of young women nurses, for the impetus of a real nobility carried with it an earnest of success. That nursing is the honorable profession it is today is owing to Florence Nightingale, who did not believe, as the majority of sick people and even physicians of that day pretended to, that "any old woman" would do for a nurse. Sairey Gamp and her tribe disappeared before the trained forces of the Nightingale and her band of assistants, never to return, and superstition made way for science.

When the nurse-in-chief of the British forces returned to England she received the joyous welcome of a conqueror. A gold medal of rare workmanship and studded with costly diamonds was presented to her by the Queen as a symbol of her majesty's gratitude to her distinguished subject. Among branches of palm in green and gold enamel—green signifying eternal friendship—and embossed by a band of black, are the words inscribed in letters of gold:

"Blessed Are the Merciful."

Florence Nightingale received her Christian name from the town in which she was born—Florence, Italy. Her name is not Nightingale, but Shore, her father being a Nottingham banker, who inherited the estate of Peter Nightingale on condition that he assume the name. Florence, a tall, handsome girl, was highly educated, both in the solid studies of the time and in the accomplishments, but, strange as it may seem, her favorite study was the care of the sick. She first took a course of training in Pastor Fliedner's School of Deaconesses at Kaiserworth. This was in 1849. In order to gain practical experience she took care of a sanitarium for invalid governesses in London, making such special innovations in its management as to call forth favorable comments from the physicians, who yielded slowly to conviction that here was a woman who understood the necessity of sanitary reforms. It must have been a gratification to those who admitted her ability to hear from her a few years later as superintendent of the hospital system on the Bosporus.

Miss Nightingale never recovered from the severe attack of hospital fever which closed her public labors and resulted in years of suffering, which she has borne with the greatest patience and with heroic fortitude. Her home in London furnished her with every comfort, and she has divided her time between it and the home of her sister, Lady Verney, in Buckinghamshire, where she was always a welcome and beloved guest. She surrounds herself with books when she is able to read, which has been until very recently. Her personal appearance is most agreeable, she being majestic in height, with fine gray hair and a cheerful smile, which is winsome and attractive.

While an earnest advocate of sunlight and fresh air, Miss Nightingale dared to draw upon herself the displeasure of the doctors by declining the general opinion that night air is injurious, a fallacy of the most absurd sort. It is through her influence and publicly expressed belief that London sick people dared to sleep with their windows open. Said this advanced and thoughtful woman:

"What air can we breathe at night but night air? The choice is between pure night air without and impure night air within. Most people prefer the latter—a most unaccountable choice. In great cities night air is often the best and purest to be had in the twenty-four hours."

For her magnificent services in the Crimean war Florence Nightingale received not a dollar in pay above the actual expenses which she incurred, and the $250,000 given to her by the British government was donated by her to the establishment of the Nightingale Training School for Nurses in St. Thomas hospital, London.

This woman, who in her life with a little band of assistants broke down a Chinese wall of prejudice—religious, social, professional—has builded to herself a monument more enduring than that of brass or marble in her practical alleviation of human pain.

MORE ACCURATE PREDICTIONS.

Interesting Experiments Recently Made by the Weather Bureau.

The most significant development in weather forecasting for years, making it possible to forecast for a period at least sixteen hours longer than at present and more accurately, has been attained by the weather bureau and soon will bear practical fruit. This is the result of experiments with kites flown at distances one to two miles above the surface of the earth, which have been quietly conducted in this city for some weeks. Daily readings have been taken at this altitude and the fact has been established that shifting of the wind occurs at a mile level above the earth's surface, from twelve to sixteen hours before the same change of direction occurs on the surface. This is due to the same forces which operate to cause wind shifts to produce a storm; one condition being dependent on the other.

Secretary of Agriculture Wilson has taken great interest in the experiments, which were made by Chief Moore of the weather bureau, and his consultations with Professor Moore have resulted in the formulation of a policy which will make weather predictions more valuable in the future.

The most imperfect part of weather forecasts now is the prediction as to rain or snow. Meteorologists for the past ten years have been impressed with the fact that future data as to storms must come from a knowledge of upper air conditions. The aeroplane investigations have reached that point where it can be safely stated that within six months the government weather bureau, for the first time in the history of any meteorological service, can construct a telegraphic synchronis chart based on air conditions one mile above the earth. This chart will cover the conditions between the Alleghanies and the Rockies at the outset.

Chief Moore says this step probably will mark a new epoch in the weather forecasting problem. With these high-level readings the bureau will have the moisture content of the upper strata as well as the lower. It will be seen how important this double information is when it is considered that the two strata of air may by shifting of the wind become mixed within twenty-four hours and that the precipitation will depend upon the average moisture of the mass.—Washington Star.

Original American Degenerates.

The extreme southern point of the American hemisphere is inhabited by a curious race of degenerates. It is the island of Terra del Fuego, and its inhabitants, who are called Fuegans, are among the lowest, if they are not the lowest people on earth.

The men are only five feet high and the women are not more than four feet and a half. That this is not due either to barbarism or to climate is shown by the fact that the neighboring tribes of the mainland, the Patagonians, average well up to six feet, while some of them are tall enough to deserve their reputation as giants.

Although the climate is intensely cold and there is an abundance of fur in easy reach, the only clothing of these degenerates is a single skin, worn loosely over the shoulder. They are virtually naked, with the thermometer far below zero. They never walk upright, but stoop and shuffle along as if they had just risen from all fours. They are very quarrelsome and are continually fighting among themselves. They have no approach to government, not even in its lowest form. In this and in other respects they are lower than the Hottentots.—New York World.

His Very Worst.

"Ha!" exclaimed the Spanish general. "It is a splendid idea!"

"Have you hit upon a new man for harrassing the enemy?"

"Yes. It's a little cruel, but all's fair in war. I'm going to have a free distribution of thermometers so that every man in the Cuban army will be tempted to worry over the heat!"—Washington Star.

GOING SOUTH!

The tide of immigration is rapidly turning towards the South. The West and the Northwest has had its day, and the antiquature advice of Horace Greely "go west young man; go west!" has been superseded by the more timely advice of Chauncey Depew and others, "go South young man, go South."

Shrewd investors have observed that the South is on the dawn of a new era of peace and prosperity, and are rapidly investing their wealth where sound judgment assures them that values are increasing. Every section in the South has taken on new life, and through the coming in of new capital a new impetus has been given to the developement of the rich resource so abundantly lavished upon the South by a kind providence.

Especially is the case so with the state of Alabama and its centrally located fruit and agricultural lands. Say nothing about its immense mineral fields.

THORSBY, Chilton county, Alabama,

The Ideal Northern Colony,

Located on the famous Chilton plateau is an index to the largest and most prosperous settlements of its days and is a Aoucher for what capital and labor, combined, will accomplish.

The Concordia Land and Improvement Association, give the following advice to home seekers.

1st, locate on a main line with good shipping facilities.
2nd, locate on an allitude that will insure you good health.
3rd, locate where good water is obtainable.
4th, locate where a few acres of fruits and vegetables will bring you a good living.
5th, locate where you can raise corn, small grain and all kinds of grasses to the capacity of any other state in the Union.
6th, locate where you have a ready market for all products raised.
7th, locate where you will have the benefit of a settlement with churches, schools, and good society, so that your family will feel at home.

Please notice the following and see if Thorsby will do for you:

THORSBY

Is located on the main line of the great Louisville & Nashville Railroad, which directly combines the Gulf with the whole Northern Territory.

THORSBY

Is located on an altitude of 800 feet above sea level, and consequently has an excellent climate, not too hot in summer nor too cold in winter.

THORSBY

Is located where good, pure freestone water is obtainable at a depth from 25 to 40 feet, besides being well watered with springs and creeks.

THORSBY

Is located where farm land can be had in connection with fruit land, and a stranger will be surprised to see its corn and oat fields. If you doubt this, or any other statement, please write the undersigned and you will be referred to people living in nearly every state of the Union who have had the opportunity to see our crops.

THORSBY

Is located 48 miles each way, north and south, from the great mining and manufacturing center, Birmingham, with its 68,000 people, and the Capital City of Alabama, Montgomery, to which points daily shipments are now being made from here.

THORSBY

Is located where 140 Northern families have already cast their lot, and about one-half of them are now on the grounds. Two church organizations and the Thorsby School Society, besides other social circles, are the results of our seventeen months' faithful work towards making Thorsby a success.

For general information and printed matter please write us, and we will give it prompt attention.

DUN'S WEEKLY REVIEW.

CONSIDERABLE REACTION OBSERVED IN THE SPECULATION MARKETS.

Sixteen Iron Works Have Begun Operation During the Past Week--Receipts of Corn Bear Strong Testimony to the Seriousness of Foreign Needs.

R. G. Dun & Co., in their weekly review of trade says: Speculative markets have their returns of reactions, but business has none this season, gaining with a steadiness which is the most gratifying. The starting of works, increase in hands employed, advances in wages and in prices of products and the heavy movement of corps are facts before which all speculative influences have to bow.

The week's dispatches mention 16 iron works which have started against one closing, 15 woolen works started and so in many other branches, while many more works have increased force and many are preparing to resume and some increasing wages. While these things continue—with grain rising and going abroad in enormous quantities—money markets have reason for bounding confidence and speculative markets for strength. Crop prospects are contradictory, as usual at such a time, but it is noteworthy that none of them indicate anything less than an ample supply of the great staples. Wheat rose over six cents Saturday with exaggerated reports of injury, fell nearly 8c, advanced 4c and then declined sharply, closing 1c lower for the week. That some harm was done to spring wheat in three States appears, but no accounts entitled to respect indicate damage reducing the yield below 540,000,000 bushels, which be 25,000,000 larger than any other crop, except that of 1891. In spite of great lack of cars wheat receipts were 4,349,556 bushels for the week and for four weeks 15,589,381 bushels, against 14,896,647 last year, and at Atlantic export points, exports, flour included, were 3,586,369 for the week, against 2,207,516 last year, and for four weeks 13,387,687 bushels, against 7,310,177 bushels, last year.

Receipts of corn bear strong testimony to the seriousness of foreign needs, being 6,840,144 bushels for the week, against 2,813,919 last year, and Atlantic exports in four weeks have been 10,466,478 bushels, against 5,617,110 last year. The price rose 1½c for the week.

Sympathy with other markets rather than repeats of injury which capable authorities deem not important, accounts for the advance of 3-16c in cotton. But the mills are resuming work with a rush and will require heavy supplies of material to meet the large demand for goods. A general replenishment of stocks by dealers will call for heavy additional supplies. The wool market also remains in greater strength and further advance in some grades, the heavy buying of woolens, which has set many mills at work night and day.

At last demand has so far overtaken capacity of iron works that prices are growing stronger, Bessemer and grey forge going 25c higher at Pittsburg, and pig in eastern markets as much higher, because rebates and concessions are stopped. Billets are $1 per ton higher, structural angles, bars and plates about as much, rods $1.50 and $2.00, and wire nails 5c per keg higher. The demand is also heavy for merchant pipe and steel and sheets are very active. The advance in iron and steel prices averages 2.7 per cent for the week. Buying of ore continues heavy, 400,000 tons in two weeks, at Cleveland and among the iron works starting are four more furnaces.

While tin is weaker at 13.70, with large arrivals, copper is quoted at 11½c for lake by large orders and deliveries and lead is scarcely obtainable below 4c, sales having been heavy.

Hides are again stronger at Chicago, the packers no longer lead, but country hides are called scarce, although cattle receipts at the four chief markets, 151,400 head are the largest for the corresponding week since 1892.

Failures for the week have been 223 in the United States, against 286 last year, and 34 in Canada, against 33 last year.

The French Cabinet.

The London Financial News says the French cabinet is negotiating the floating of a loan of £80,000,000 in 2½ per cent. bonds partly for the redemption of the floating debt and partly for the reconstruction of the French navy.

A Song of Harvest.

Sing a song of harvest—sing it, ring it sweet;
Set it to the music of the ripple of the wheat!

Sweetheart, sweetheart,
Reaping as we go,
A kiss amid the music
And the wheat would never know!

Sing a song of harvest—sing it, ring it true!
Symphonies of sunlight and mysteries of dew;

Sweetheart, sweetheart
Summer sighs to go.
A kiss amid the music
And the wheat would never know!

Sing a song of harvest—of many a golden tithe;
Set it to the tinkle and the twinkle of the scythe;

Sweetheart, sweetheart
Love's a reaper, too;
Love is in the music
And the thrilling heart of you.

Sing a song of harvest like the ripple of a stream,
Till the shadows kiss the meadows and the stars above us dream;

Sweetheart, sweetheart,
Summer sighs to go;
A kiss amid the music
And the wheat would never know.

—F. L. Stanton, in Atlanta Constitution.

BARD VS. BOXER.

Ferdinand de Cruza was, in his own opinion, the greatest man of the day in right of being the most illustrious living poet. Neither part of this modest definition was entirely endorsed by the world at large, though to some degree it ran current in a certain literary circle.

Ferdinand de Cruza was a decadent poet. Like Agag, he walked delicately, but the same manner was not observable in his compositions. Realism was what he delighted in. His enemies described his soulful yearnings as "decompositions." In appearance he was large and heavy in build. He wore his hair tangling over his collar in the true poetic style. Also, his eyes were big and black, like plums, and under the influence of what he wished to be taken for extreme emotion he would roll them with startling effect.

Ferdinand was once described as a young man with a talent for conversation. Oh, how he would talk! And the subjects which were ever most in his mouth were himself, his works, his eminence. He had a curious knack of spreading himself out like a peacock's tail as he spoke, until he seemed to dominate the entire room. He had a theory that the world will only take one at half one's own valuation, and that, therefore, it is as well to pitch the estimate high. Certainly he never erred on this point, and there were those who said that the process of self-puffery produced some curious internal expansion as well. Poets of this calibre have usually a considerable feminine following. Nor was Ferdinand any exception to this rule. Lank damsels languished metaphorically at his feet and lent eager ears to his utterances with soulful squirmings. Large ladies of exalted rank but less exalted taste listened with much laughter to his "brilliant dialogue." "Mr. de Cruza is so amusing," they said, by which they meant that he told offensive anecdotes well.

The homage of the fair sex was sweet to Ferdinand. Specially delicious, moreover, was the adoration of a woman like Lady Laelia Disdebar, the daughter of the Earl of Harrogate, and the widow of old George Holofernes Disdebar, who made a huge fortune, don't you know, out of coal tar, and was for some years Chancellor of the Exchequer. Lady Laelia was old George's second wife whom he had married some time after the coal tar episode, and within a few years of his death. There were no fewer than forty years between the pair; and it was said at the time that Lady Laelia had been led like a lamb to the altar solely by the indomitable will of her careful parent. As it turned out old George died four years after the wedding, and Lady Laelia was left a widow of twenty-four with a very handsome jointure to begin life over again with the view of getting some enjoyment out of it.

As the wife of the Chancellor of the Exchequer she had been bored to death by serious people at an age when she was utterably incapable of appreciating them. When she was free, she flew to the opposite extreme. Ferdinand de Cruza may be regarded as one of the symbols of this revolt. He gave her new and pleasurable sensations which she only half understood, which were delightful to her. He had sufficient acuteness not to descend too low in her presence. She openly declared that she was devoted to "dear Mr. de Cruza."

Now Ferdinand, in spite of his poetic temperament and habit of railing at the sordid practice of money-grubbing, was a capital man of business. It occurred to him that Lady Laelia, with her large jointure, would be an excellent investment. At the same time, her beauty was not only grateful to his senses, but would constitute her a trophy of no inconsiderable value to his self-esteem. Also it would be far preferable to be master in a house which he could style his own than to continue the social free lance with the duty of earning his dinner.

These circumstances may account for the fact that little Lord Hounslow, who was calling on Lady Laelia, was by no means pleased when the door opened and Mr. de Cruza was announced.

Little Lord Hounslow was honestly in love with Lady Laelia. He would have married her if she had not had a penny in the world. He had stated his sentiments to her with as much fervor of expression as he could command. She had replied coldly that she did not intend to marry again, and that if she did, she should not marry a little man. She added, gratuitously, that she thought that a woman ought not to marry a man whom she could not look up to and respect. At this she drew herself up to her full height and towered a head and shoulders above him. Also she declared that she liked him very much as a friend, and offered to be a sister to him. At which he had uttered a bad word, but had immediately apologized with the utmost abasement. Eventually, like another person, he went away in a rage. When he had cooled down a little he decided that he would never give her up.

Therefore, when he heard of the De Cruza intimacy he felt an unholy wish to maul and mangle that eminent man. He could not really believe that Lady Laelia could actually have any tender feelings toward "a fellow whose hair hung half way down his back, and whose appearance and talk were enough to make one ill for a month," but he did not like the idea that "such an animal's" name should be coupled with that of his adored one. Still less did he like the anxiety which racked his breast whenever he thought of this friendship and its possibilities.

"This is a most fortunate coincidence," said Lady Laelia after she had responded to De Cruza's large and effusive greeting. "I can now introduce two of my great friends to each other."

The interview did not proceed felicitously. De Cruza blundered on to a subject on which Hounslow, as a military man, entertained strong opinions. To do him justice, the poet did not know Hounslow's profession, but the knowledge would not have caused him to change his topic—especially as Lady Laelia agreed with him.

"Moral suasion and the dignity of being in the right are all rot," said Hounslow, hotly. "A nation must be able to defend itself, just as a man ought to be able to defend himself. What should you do supposing some rough came and demanded your purse?"

"I should call a policeman," replied De Cruza, with dignity.

"I have no doubt of it," replied Hounslow, contemptuously. "It would perhaps be too inquisitive to inquire what you would do if the policeman did not turn up."

"And what would you do?" inquired Lady Laelia, haughtily; "supposing the man were bigger than you?"

Lord Hounslow flushed hotly, for he suspected a covert hand.

"Well, seeing that I am the champion light-weight of the brigade, I expect that if the other man was game there would be a decent little set-to for a few minutes."

"How horrible!" ejaculated Lady Laelia.

"Barbarous!" echoed De Cruza.

Hounslow stood up straight, every inch of his trim little figure bristling erect with indignation. For the first time in his life he said good-bye to Lady Laelia with a feeling of strain. He regarded De Cruza's observations no more than the snarling of a drawing room lap dog which relies on the protection of his mistress's skirts; but that she should take part with it against him!

Lady Laelia was decidedly imprudent with regard to Mr. De Cruza. It was distinctly foolish, for instance, to be seen so often bicycling with him. The world would probably have said something strong if it knew that she made that arrangement to ride down to Richmond Park on bicycles with him. If there was one thing more silly than making the engagement, it was keeping it. Lady Laelia did both.

It was a delightful day, warm and bright, yet not too hot. The roads were smooth and hard, and though the water-carts had been active, the effects of their passage had worn off sufficiently to prevent danger from side-slip.

De Cruza was gorgeously arrayed. He wore a bright blue coat, orange waistcoat, trousers to match the coat, a white broad-brimmed (Jameson) hat, patent leather shoes and tie of a new and wonderful shade of red. Instead of the usual transfer on the lower main tube of the machine his own signature sprawled in gold.

Richmond Park was at its best. It was deserted save by the deer. The heavy woodlands shut out the horizon, the houses, the busy life which teemed all around at such a short distance. It was possible to imagine oneself in the heart of a fabulous desert of oak and fern and chestnut, traversed by excellent roads, tempered only occasionally by low hills.

Lady Laelia most unwisely called a halt by a clump of towering trees. The pair dismounted, and, abandoning their bicycles, sat down on the comfortable bank to rest.

The spirit of the scene, of his art, of the divine passion, entered the breast of the poet. Hand in hand came the thought of that excellent business speculation. Here in the wilderness (that was so near town), under the open sky (just ten minutes' run from a first-class hotel), he would declare himself to Lady Laelia. The proposal should be a veritable poem in prose. It should thrill her to the very soul, and reveal to her, as in a lightning flash, what manner of man he was.

"Dear Lady," he began, with impassioned tenderness.

Lady Laelia turned toward him, and by that movement fate willed that her eyes should catch a sidelong glimpse of the two bicycles which leaned in close company against a tree.

"Oh, Mr. De Cruza," she cried in great excitement, "what is that man doing to my bike?"

Much disgusted at this prosaic interruption, the poet turned his head impatiently in the direction indicated. A distinctly ruffianly and unkempt individual was undoubtedly standing in suspicious proximity to the machines. Lady Laelia sprang to her feet with the impetuosity of a mother who sees her child in danger. Mr. De Curza rose with far more deliberation, and a feeling of uneasiness became manifest in his breast. Good heavens! was there going to be an altercation with a common, low, uncultured person who would probably use the most unrefined language? How odious! How unpoetic! How excruciatingly discordant to the artistic sense! Besides, the common person appeared to carry an ugly, thick stick, which he held precisely as Irishmen do their—what were they called?—oh, shillelaghs in pictures.

Lady Laelia rushed into the fray without thought of art or poetry, or even of the stick.

"How dare you touch my bicycle?" she cried. "What are you doing to it?"

"No 'arm, lydy," replied the tramp volubly. "Not a 'apoth of 'arm, s'elp me. Only hadmirin' of 'em, that's all."

"Then you will be good enough to proceed on your way," retorted Lady Laelia. "Mr. De Cruza tell this man to go away."

There was a pause. Then De Cruza observed in a high voice that had a curious lack of the commanding note:

"Yes, do as the lady tells you. You are not wanted here."

There was another pause. The tramp looked from the woman to the man. He moved a step forward, and so stood between them and their machines. Lady Laelia commanded him indignantly to go away. De Cruza drew back a step in silence.

"I'm thinkin'," said the tramp, and his tone had less of the fawning whine, "that a pious and charitable lydy like you 'ud be willin' to 'elp a pore 'onest, 'hard-working cove with a trifle."

"I have nothing to give you," cried Lady Laelia; "and honest men don't meddle with bicycles behind their owners' backs."

"I'm obleeged to yer, lydy," said the tramp, with an evil grin. "I will, since yer are so pressin', tyke the purse yer hoffer, and likewise them pretty sparklers yer 'ave on yer wrists."

"How dare you!" cried Lady Laelia. "Mr. De Cruza, drive this ruffian away!"

Was there ever such a horrible, unpoetic, barbarous request addressed before to an eminent bard?

"Yes, do go away. We have nothing for you," quavered De Cruza. "If you don't go away I shall inform the police about you!"

"Stow gammon," cried the uncultured intruder rudely, "or I'll smash your tallow-colored mug fer yer. And now, 'and over the dibs."

With a quick forward movement he caught Lady Laelia by the arm.

"Help, Mr. De Cruza, help!" she cried, struggling bravely with the assailant; and then, as De Cruza gave no sign, she added: "Help, you coward! Do you mean to see me murdered?"

With his heart sinking into his boots, De Cruza made a doubtful forward movement with his hands extended in a fashion eminently unscientific. But when the ruffian, flinging Lady Laelia to the ground by a brutal effort of strength, turned upon her male companion with a stick uplifted and the glare of a savage, the poet's heart seemed to fly out of his body far away, and that illustrious man fairly turned tail and fled in the same direction.

If he had preferred to refrain from this exhibition he would have heard Lady Laelia's cry of "Thank Heavens!" as a newly arrived bicyclist descended suddenly on the scene and dashed in to the rescue.

It was little Hounslow.

The tramp came up to the scratch nothing loth, for his club and the small size of the new arrival made him overconfident. Hounslow, however, was as active as a cat, and in excellent condition. He dodged a blow that would have felled an ox, darted in, countered heavily with his right, and put in one straight from the shoulder with his left. Over the other went, completely knocked out of time. Whereupon Hounslow naturally took possession of the club and pitched it far.

When Lord Hounslow repeated his proposal to Lady Laelia, which he did as soon as possible without the smallest delicacy, she owned that she had somewhat altered her views, not only on the subject of moral suasion and the dignity of being in the right, but also with regard to the question of height as a gauge of respect. She said that she realized that what a woman wanted was a man who was thoroughly able to protect her, and that she did not know any one who was more completely competent for the purpose than the present aspirant. Therefore——

Mr. De Cruza was not at the wedding. Nor did he call on Lady Laelia either before or after. He had many engagements, you see. — London World.

Fish as Food.

Fish is regarded by Sir Henry Thompson as in many cases a preferable food to meat. In Food and Feeding he thus expresses his views on the subject:

"For the sedentary man, whatever his calling in life, whose engagements permit only just that moderate amount of muscular exercise which is in all circumstances essential to health; for a great proportion of women whose habits mostly are not, and often cannot be active, the nutritive elements afforded by fish admirably supply an important part of the body's wants. The moderate amount of flesh-forming material present in fish, and in a form which entails little labor on the digestive organs (for most persons eat less fish than meat), and the facility with which fish may be associated with other elements—some fatty matters, with cereals and vegetables, as well as fruits—place it in the first rank of foods in that mixed dietary which is so suitable to those who lead more or less the kind of life referred to. I by no means say that it should supersede the use of meat altogether, although it may do sometimes with advantage—a point only to be determined in each individual instance after some observation and experiment. For in all cases it is to be remembered that no man who has habitually eaten meat two or three times daily can at once exchange it for fish and cereals or vegetables without some discomfort, to say the least. All radical changes in diet, even in the right direction, require to be gradually made. The stomach conforms slowly when long accustomed to deal with highly nitrogenized animal food, to the task of deriving from unaccustomed materials the support necessary to the body."

The Cost of Straws.

"The straws through which we imbibe supposably cooling decoctions in summer cost the saloon men about as much as do their free lunches," said a red-faced man who sat at a table in the St. Nicholas cafe. "I just found this out the other day, and I have felt sorry for the saloon men ever since, because every fellow who uses a straw feels that it is duty to destroy it with his drink. The saloon men get their supply of straws from the big glass houses, and most of these establishments keep a regular force of hands employed all through the summer season cutting and preparing the straw for use. Usually somebody has to be sent to the country to select the straw from the farmer, and then it has to be handled with great care in getting it to the city. This, of course, is an item of expense which must be made out of the saloon men. The straws have to be of the uniform length of about ten inches, and if there are flaws in them they are of no use whatever, so that the work of preparing is very particular."—St. Louis Republic.

A Lucky Klondike Woman.

Luck, like lightning, strikes in curious places. It is so in the Klondike. Mrs. J. T. Willis was less than three months ago a poor washwoman, living in Dawson City. She set out alone for the gold fields of the frozen North from Tacoma, Wash., about two years ago. She was not successful in her prospecting, but she managed to make a fair living as a laundry-woman in Dawson City. When the news of the Klondike discoveries of gold reached that place she joined a party of cattlemen, and went at once to the new diggings. She staked out a claim as soon as she got there, and it turned out to be a good one. She is now worth at last $250,000. Mrs. Willis has a husband living in Tacoma. He is a blacksmith and a great sufferer from rheumatism. It was his inability to work that caused her to start out for the gold-mining country, resolved to return rich or not at all. Incidentally she has the fame of introducing the first "boiled shirt" among the Yukon miners. She paid $2.50 for the box of starch with which she starched it and $4 a day and board to the Indian squaw who was her first assistant in the laundry.

THE JOKERS' BUDGET.

Facts and Yarns Made and Told by Funny Men of the press.

MUSICAL NOTE.

He—When you were abroad, Miss Parvenue, how did you like the Matterhorn?

She—I—I don't believe I heard it.

THE SOCIETY MOTHER'S DUTIES.

Little Miss Avnoo—"What is mammas for?"

Little Miss De Fashion—"Why, they is to scold the nurses when we make a noise."

VERY CLOSE.

"Isn't there some sort of a relationship between Madge and Mr. Dashing?"

"Oh, yes, indeed; he was the first man she was ever engaged to."

WHY HE DIDN'T KNOW IT.

Barber—You say you have shaved here before? I don't remember your face.

Customer—Probably not. It has healed up since.

AN EFFECT.

He—How dull it was at Wilkins' party last night.

She—Yes; in the early part of the evening. It got brighter soon after you left.

FEW AND FAR BETWEEN.

Browne—Who wrote "Birds of a feather flock together?"

Towne—Some idiot who had never been out shooting.

A PATRIOT.

Ten Broke—Let me hold your hand.

Penelope—The one that shook Queen Victoria's?

Ten Broke—No, the one in which you carry your pocketbook.

HOSTILITIES END.

First Indian—I have met my old foe, Scrapping Squirrel, and I have buried the hatchet.

Second Indian—Where?

First Indian—In his neck.

MORE USEFUL.

Perdita—So you are really engaged to him. Where is your engagement ring?

Penelope—I haven't got any. I made him give me a bicycle instead.

HIS OWN PROVERB.

"He gives twice that gives quickly," urged the collector earnestly.

"True," responded Snagge calmly, "but I've often noticed that he that gives slowly very frequently doesn't have to give at all."

FOILED.

She (insinuatingly)—There are more single than married men in the penitentiaries.

He (hastily)—Yes; that shows that there are a great many men who would rather go to prison than get married.

NOT THE RIGHT SHADE.

Miss De Style—"What? Going to cut the De Goode girls?"

Mrs. De Style—"Why yes, ma—I have to at this season of the year. They have skins that never tan, and guests will think we associate with people who stay in town all summer."

BROTHERLY SOLICITUDE

Bertie (mournfully)—I s'pose it'll take a hundred years for you to be big enough to have beaux!

Gertie—I s'pose so.

Bertie (despairingly)—And Dicky Jones has more fun playing tricks on his big sister's ones! Oh, I ain't got anything to live for!

CAUSE FOR REJOICING.

Sunday School Teacher—And when the prodigal son returned home his father fell upon his neck and blessed him—why did he do that?

Scholar—'Cause he was so glad to think he didn't come back with a wife and family, I s'pose.

GRACEFUL COMPLIMENT.

"Sweets to the sweet," murmured young Mr. Goslin as he handed the sugar to Miss Fosdick.

"Spoons to the spoony," replied that young lady, passing him the spoon holder.

WAITING FOR WORK.

"I assure you, madam," said he, "that I would not be begging my bread from door to door if I could but procure employment at my profession."

"Poor man," replied the good woman as she handed out a pie, "what is your profession?"

"I am an airship pilot, madam."

UNPROMISING OUT-LOOK.

"Mamma," said little Fanny Fangle, "I've been watching the people moving in next door, and there are only two children's wheels."

"Well, my dear, what of that?"

"Why, there are four of us children, and we'll just have to take turns borrowing them."

COMPARATIVE COST.

Handel Bar—Your wheel may be a very good one, but it can't quite come up to mine. Why, Great Sprockets! I paid a hundred and eighty dollars for mine. You paid only ninety for yours.

Scorchleigh—That's all true enough, but you must consider this fact: Besides that ninety dollars I have paid over one hundred dollars for repairs thus far this season.

Victoria's Tutor.

Soon after Lord Grey came into office the King proposed that a Bishop should be appointed to preside over the education of the young Princess Victoria. This proposal was frequently forced upon the Duchess of Kent who resisted it, perfectly satisfied with the capacity of Rev. Mr. Davys, then the tutor. When it was pointed out to her that a dignitary of the church ought to undertake the important office, the Duchess replied "There surely can be no difficulty in preferring Mr. Davys to the dignities of the church." He was shortly afterward made Dean of Chester.

GOSSIP FOR THE FAIR SEX.

Items of Interest on Feminine Topics.

The Kaiserin's Charity—Newest Collars—The Rose and Poppy in Favor—About Pockets—Etc., Etc.

THE KAISERIN'S CHARITY.

Empress Augusta Victoria has sensibly insisted that the money subscribed for the statue of her father, the late Duke Frederick of Schleswig-Holstein, shall be used for charitable purposes.

NEWEST COLLARS.

The newest collars have a white standard surmounted by an exceedingly full knife-plaited frill, which is also box-plaited as well, of colored organdies in the richest patterns and most delicate shades of the popular colors—heliotrope, red, green and blue—the hem of the ruffle being edged with Valenciennes lace. The cuffs are trimmed in a similar style to match. These are worn with cloth suits, and can be laundered successfully, taking the place of chiffon ruche of the same general effect.

THE ROSE AND POPPY IN FAVOR.

The rose and the poppy are about neck and neck in the race for flower favor in millinery this year. Curiously enough, though, the blossoms are so variously colored that were it not for their general outlines they would be hardly recognizable. There are poppies blue as well as poppies red, to say nothing of green and mauve, while blue, green, purple, and even variegated roses have become the commonest thing in the world. Fullest of the full pink roses are worn more than anything else this season, and the most striking thing about these is their extreme naturalness. They look for all the world as though they had been just gathered, the stems and leaves being by no means the least natural thing about them. Never, indeed, have the millinery manufacturers paid so much attention to foliage, the result being all that is effective and artistic. For the most part roses, as employed in millinery this year, stand up just as if growing on a bush, while when applied to frocks the they wander up the sides, as they might do on a wall. They are also much used, however, for frock trimming, with the blooms stemless and close-set, like a ruche. This appears chiefly as a skirt edging and a finish to the top of a low-cut bodice.—New York Sun.

WHEN PATTI SINGS TO HER DOLL.

Mme. Salvador Patti, Adelina's mother, was anxious that I should hear the child sing, and so she brought her little daughter to my rooms one day. (This was in New York.) Bottesini and I were highly amused to see the air of importance with which the tiny songstress first selected a comfortable seat for her doll in such proximity that she was able to see her while singing, and then, having said "La, ma bonne petite, attende qua ta mama te chante quelque chose de jolie," she demurely placed her music on the piano and asked me to accompany her in the rondo of "Sonnambula."

How am I able to give an adequate description of the effect which that child's miraculous notes produced upon our enchanted senses? Perhaps if I say that both Bottesini and I wept genuine tears of emotion, tears which were the outcome of the original and never-to-be-forgotten impression her voice made when it stirred our innermost feelings, that may in some slight measure convince my readers of the extraordinary vocal power and beauty of which little Adelina was at that tender age possessed. We were simply amazed, nay, electrified, at the well nigh perfect manner in which she delivered some of the most difficult and varied arias without the slightest effort or self-consciousness. — From "My Reminiscences," by Arditi, the conductor.

ABOUT POCKETS.

In these days when pockets are virtually abolished, while the need of them remains the same, an ingenious contrivance can be substituted, says Harper's Bazar.

A double bow of ribbon of any color is made with all the ends left about three inches too long. These ends are to be turned up underneath, and the edges of the ribbon whipped together. Small as are the little pockets thus made, they serve very conveniently for many things, and are quite large enough to hold a handkerchief, or card case or railway ticket. The bow is fastened with a shield clasp-pin at the side of the waist, and until it has been tried it will scarcely be realized how necessary it becomes to a woman's comfort.

In providing for a woman's comfort after this fashion let us not forget to make happy the little toddler in kilts. Two wallets fastened on a band, so that one will hang on either side of the waist, can be tied around a little boy

ABOUT POCKETS.

In these days when pockets are virtually abolished, while the need of them remains the same, an ingenious contrivance can be substituted, says Harper's Bazar.

A double bow of ribbon of any color is made with all the ends left about three inches too long. These ends are to be turned up underneath, and the edges of the ribbon whipped together. Small as are the little pockets thus made, they serve very conveniently for many things, and are quite large enough to hold a handkerchief, or card case or railway ticket. The bow is fastened with a shield clasp-pin at the side of the waist, and until it has been tried it will scarcely be realized how necessary it becomes to a woman's comfort.

In providing for a woman's comfort after this fashion let us not forget to make happy the little toddler in kilts. Two wallets fastened on a band, so that one will hang on either side of the waist, can be tied around a little boy when he is dressed in the morning, and will make him happy all the day with so little trouble to the loving seamstress. The pockets should be flat to the side, and the opening slit, which is cut in the upper line, must be neatly faced. This contrivance can be made of heavy sheeting, and so be readily laundered, for they do get very soiled, or a brown denim will serve perhaps better as keeping clean longer, and also being stronger for holding the magpie-like treasures of a small boy.

A WOMAN IN THE FACULTY.

One of the most important university honors yet awarded to a woman has been conferred by the University of Wisconsin upon a graduate and Ph. D. of Bryn Mawr College, Miss Annie Crosby Emery, who has been elected dean of women and assistant professor of classical philology.

Although a very young woman, Miss Emery is splendidly equipped for the place. The new dean is a daughter of Judge Emery, of Ellsworth, Me., and received her early education in the public schools of Ellsworth and in a school in Dresden. In 1888 she entered Bryn Mawr College, where she specialized in Latin and Greek. In 1892 she received the degree of A. B and was awarded the Bryn Mawr European fellowship of that year. During the years 1892-'93 she worked as a graduate student in the classical departments of Bryn Mawr. During 1893-'94 she attended the University of Leipsic, hearing lectures by Profs. Brugmann, Ribbeck, Gardthausen, Arndt, Lipsius and Windisch. During the second semester of 1894-'95 and during 1895-'96 she continued graduate work in the departments of Latin and Greek at Bryn Mawr. In May, 1896, she passed her examination for the degree of Ph. D. in Latin as her principal and in Greek as her subordinate subject, presenting for the degree a dissertation upon the "Historical Present in Early Latin"—a work which has won her great praise.

It will be remembered that Cornell University has also recently placed a woman in a faculty position, having appointed Miss Louise Sheffield Brownell, of New York City (A. B. 1893, and Ph. D. 1897, Bryn Mawr), warden of Sage College and lecturer on English literature.—Chicago Tribune.

THE SHOP GIRL'S GRIEVANCE.

A counter piled high with tumbled dress goods showed that a customer had been there. The flushed face and disgusted expression of the young saleswoman showed that the customer had bought nothing. "Plague take the sympathetic cranks, anyhow," muttered the tired girl, as she set about restoring the rolls of goods to their proper form and place.

"What's the matter, Kity?" asked the girl at the cambric counter.

"Oh, I just had a dose from one of those sympathetic cranks," replied Kitty. "She said that she did not see how we poor girls managed to get through these hot days, and then she had me pull down every piece of goods on the shelves for her to look at. I don't believe she intended to buy anything, for she scarcely looked at the goods, but kept telling me how sorry she was for me. She wanted to know if I had a place to sit down, and how much time I was allowed for my lunch, and then she said something about wanting to help ameliorate our condition—"

"Ameliorate!" interrupted the cambric girl, scornfully. "That's the word they all use. I suppose that some of them are really kind-hearted, and want to do some good, but most of the women that come around offering to 'ameliorate' the condition of the shop girls are simply putting up a big bluff. The wouldn't go to the trouble of taking off a glove to help us."

"That's right," put in Kitty, with the bitterness of fresh recollection. "They take up more time and make more trouble than half a dozen women who simply come in on business and don't try to monkey with sympathy. See here—fourteen, fifteen, sixteen, seventeen. That woman who just went out made me take down seventeen pieces of lawn, and if she really wanted to buy a pattern, I am sure that here is variety enough to suit any taste. But she didn't want to buy anything. She just wanted to talk, and I happened to be the victim. Ameliorate my condition, huh! Perhaps if she had to put back these goods she would not talk so much."

"Didn't she start in by saying that you must be awfully tired?" asked the cambric girl, by way of fanning the flame.

"Oh, yes; she told me that her heart often ached for us poor girls. She said that there was not sufficient consideration given us by our employers, and she talked a lot about white slavery. She had often thought that the women shoppers of New York ought to organize and compel the proprietors of stores to treat us poor girls better. She would get up an organization of that kind herself, only she had heart trouble, and was afraid that the excitement would be too exhausting for her. I only wish that her heart trouble had shut her off before she got me to take down seventeen pieces of goods."

"Well, well, Kitty, what are you grumbling about?" interposed the floor-walker. "Your feathers seem to be unusually ruffled this morning."

"Just had a run in with one of those sympathetic cranks," said Kitty, sententiously.

"Ah, I see. One of those birds lit on you, did she?" commented the floor-walker in a matter-of-fact way, as he resumed his promenade.—New York Times.

FASHION NOTES.

The very large dots on veils are not worn by women of the best taste.

Half a cantaloupe filled with peach ice cream is considered a most delicious dainty at a woman's luncheon.

No matter how blue you may feel, don't weep, unless you are absolutely sure that tears are becoming to your especial type of beauty.

Sashes of every description increase in favor as the season advances, and fashion allows us to fasten them how and where we will.

With the English coatmakers, there is nothing that rivals the reefer jacket. Each new year shows the reefer in some modified form.

The graceful and pretty Marie Antoinette fichus and fichu draperies complete the trimmings of very many of the dressy summer gowns.

What woman can forgive a man when he puts a compliment in this fashion: "You are very homely, but the most charming individual I know."

Ostrich promises to be in very good demand. Plumes of extra length will be more in use during the coming season than has been the case for a number of years.

How many of us have experienced that phase of reactionary generosity when we realize that something we have given away would have come in, oh, so good, for ourselves!

The dripping umbrella of the unthinking passenger always rests lovingly against the freshly laundered linen skirt of some fair passenger afraid to ask to have it removed.

Changeable moire antique ribbons with small border in Turkish effects resemble the ribbons of thirty years ago. Armure weaves in glace effect are being shown, and faillettine ribbons are in evinence.

The very pronounced taste for linens, lawns, piques, fancy etamines and canvas goods has extended even to tailor gowns, much to the detriment of the various styles of woolen fabrics which have served almost exclusively for them hitherto.

The French mohairs are finer, softer and silkier of surface than they have ever been, but in dark colors or black; they are no longer considered dressy gowns, to be lined with colored silks and decorated in various ways, but are relegated to the reign of utility fabrics.

A novelty suit has a ruffle of embroidery set around the pointed bodice at the back. This ruffle extends over the hips, and instead of following the outline of the point in front it curves back from the bodice on either side and narrows to a point about ten inches below the waist line on either side of the front of the skirt.

The muslin necktie has arrived. It is a costly trifle, for the muslin must be of the best quality, and should be decorated at the ends with a motif of real lace. Treated in this way the muslin necktie, tied beneath the muslin stock collar, which has ousted from favor the linen collar of that ilk, is pretty, cool to look at and most pleasing of manipulation.

There is a decided tendency in millinery toward elaborateness in the way of hat trimming. Many of the new models have a brim at least half larger at the extreme edge than would suffice to make a plain circle around the hat. This fullness is crimped up and plaited, pinched over and twisted over each convolution, forming a space for trimming of various sorts.

Never before has there been such a variety of beautiful effects in batiste embroidery as there is this season. Every tint of ecru, from cream to the brownish flax color, is represented in these lovely trimmings, and the latest designs come in deep flouncings and wide insertions, with irregular edges and open patterns exquisitely embroidered in various colored silks of subdued shades artistically harmonized.

Do Ants Ever Sleep?

Some years ago the leading naturalists startled the world with the intelligence that the common ant had never been known to sleep. They claimed to have made a long series of observations, which warranted such remarkable conclusions. The published statements of the results of these observations excited considerable comment; for, if the assertion should prove true, the ant would be the only exception known in the animal world where sleep at some time or other is not an absolute necessity. Later observations on this point prove that the sensational naturalists who made the announcement were not in possession of facts which would justify such a conclusion.

A HUGE FAMILY.

IT CONTAINS MORE THAN 12,000 PERSONS.

Letcher County, Kentucky, Populated by the Descendants of Old Benjamin Webb—Thirty Birthdays Every Day the Year Around—Curious Complications.

There is an entire county in the eastern part of Kentucky which is populated by the descendants and relatives of a single family. The original Webb family consists of more than eight hundred direct descendants, while the number of those who are more or less closely related to them by marriage is considerably more than twelve thousand. The family has up to the present time practically filled Letcher County, and has commenced to overflow the boundary lines into the adjoining counties.

This remarkable population, says a correspondent of the New York World, traces its ancestry directly to a Benjamin Webb, who settled in this section nearly a century ago. At the present time there are still living six of his children.

The most numerous branch of the family is descended from Jason Webb, who is now in his seventy-eighth year. Other children have families nearly as large, however. Jason lives in the house, now sixty years old, in which he began housekeeping and raised a family of nineteen children. Of this remarkable family sixteen are still living. The next generation, which consists of 150 grandchildren, are all living. There are besides 80 great-grandchildren and 60 great-great-grand-children, all of whom are at present living within ten miles of Jason.

It will occur to most people that a family of such remarkable proportions must give rise to many complications.

The descendants of old Benjamin Webb have for one thing been obliged to select about eight hundred names for their children, and the entire family has been obliged to go through the ordeal of agreeing upon more than twelve thousand names. Compared with this task the work of naming the streets of an entire city like New York would be trifling.

If each member of the family should attempt to give presents at Christmas to all the other members the expense would be something startling.

In the immediate family there is an average of nearly three birthdays celebrated every day. The entire family, it may readily be calculated, might celebrate thirty birthdays every day in the year.

One of the most remarkable of the original family is Uncle Miles, who though seventy-five years old, is about to marry a sister-in-law. This remarkable old man has fourteen children, all of whom are married and have large families. He is unable to tell the exact number of descendants who should be credited to him, but thinks that a conservative estimate would place the number of grandchildren at 100, great-grandchildren seventy-five, and great-great-grandchildren at about forty.

The oldest living member of the family is Aunt Polly, who is eighty-two years old. Her branch of the family tree comprises eight living children, seventy grandchildren, forty-five great-grandchildren, and twenty-two great-great-grandchildren. Her little sister, who is known as the worker of the family, is but seventy-three years old. Her branch, which includes five generations, is made up of some ninety-eight members.

The entire population of Letcher County, it is claimed, can trace their ancestry very clearly back to but four families, who were the first to settle in this section. These families were the Crafts, Adamses and Halbrookes, and, of course, the Webbs. The descendants have married and intermarried in a most perplexing manner. Only a very few of them have ever seen a railroad train.

The little county, as might be imagined, is in reality a small kingdom, over which the elder Webbs are political monarchs. Whenever a Webb wishes to hold any office in the county the result is a foregone conclusion. Such a condition of affairs does not, it is very safe to say, exist in any other State in the Union.

HOUSEHOLD HINTS.

A NON-BLISTERING MUSTARD PLASTER—In making a mustard plaster take a piece of lard and stir the dry mustard into the lard until it is a thick paste and will just spread. Spread on a piece of lawn and apply to the affected part. This will not blister.

BOOT BLACKING—The best blacking for boots is orange juice. Take a slice or quarter of an orange and rub it on the shoe or boot; then, when dry, brush with a soft brush till the shoe shine like a looking glass.

FOR ACID DISCOLORATIONS—If the juice of a lemon or any acid fruit has taken the color from gown or apron, it may be restored by touching the spot with household ammonia. If soda or the like has caused the same trouble, touch with vinegar.

TO FREE THE HOUSE OF ANTS—To free a house from ants, sprinkle fine white sugar on a large sponge. When full of ants drop into boiling water. To drive away ants, scrub the shelves or drawers that they frequent with strong carbolic soap, after which sprinkle red pepper in every crevice.

GETTING RID OF ROACHES.—Sprinkle powdered borax plentifully down into their hiding places wherever they may be, and in a week, or before very long, they will disappear. Oil of cedar will kill roaches. Put the oil into an atomizer and spray all the cracks and crevices in the wall and places where they inhabit. This is a sure way to kill them.

TURPENTINE IN THE HOUSEHOLD.—Turpentine is the best friend housekeepers have and a supply should be always kept on hand. It is good for burns, excellent for corns, good for rheumatism and sore throat, and a quick remedy for fits and convulsions. It is a sure preventive against moths, a few drops rendering garments safe from such invasion during the summer. It drives away ants and bugs from cupboards and corners by putting a few drops on the shelves. It effectually destroys bugs, and injures neither furniture nor clothing. For cleaning paint add a spoonful to a pail of warm water. A little in the suds on washday makes washing easier

A KITCHEN CONVENIENCE.—A small, flat paint-brush, about one inch in width, is a kitchen convenience that no housewife should be without. For the greasing of all pans it is both neater and more effectual than the usual bit of paper. Also, if all meats were brushed over with sweet oil and vinegar before sending to the refrigerator they would retain their juices and flavor far more perfectly than is commonly the case.

"Bicycle Catarrh."

It would occasionally seem as if physicians devote much of their time to hunting up reasons why mankind should give up the wheel. Long ago it was the bicycle hump, then the bicycle face, these being followed by the bicycle voice and other equally serious troubles, all of which have been laughed to scorn by devotees of the wheel. Now comes a medical person of Philadelphia with the alarming information that bicycle catarrh is among the perils that must be faced by those who ride wheels. Says the Quakertown Galen:

"It's no fancied ill, this 'bicycle catarrh,' and it's putting lots of money into the pockets of eye specialists and opticians as well as physicians whose practice is general. The bicycle crank, you know, nearly always overdoes the sport and rides five times as far and five times as long as he ought to. His own motion creates a continual wind pressure on his face, and the strain upon eyes, ears, nose and throat is abnormal. I have found in my practice that three wheelmen out of every ten are afflicted with catarrh in a more or less advanced stage, the condition generally affecting the eyes. The same state of affairs is noticeable in motormen, locomotive engineers and others who are constantly facing the wind, but the modern instrument of locomotion is responsible for such a large increase in the number of cases that we feel perfectly justified in calling the ailment 'bicycle catarrh.'"—Louisville Post.

New Street Sweeping Apparatus.

A Berlin inventor has constructed a new street sweeping apparatus which combines the construction of a carpet-sweeper with that of a tricycle. It is worked by one man, who can cover as much ground with this machine as four men working with brooms and shovels. Compared to the street sweepers propelled by horses, the cost of covering a given ground is smaller; moreover, the new machines are widely superior on hygienic grounds, since the dust and sweepings are not thrown into the air, but absorbed by the machine and dropped in bulk into boxes specially provided for the purposes, which are to be sunk in the ground at different points and covered until called for during the night when there is least traffic in the streets. The new sweepers are intended to travel through the best streets at a fair rate of speed several times a day, and the receptacle for the sweepings will hold about forty pounds before it becomes necessary to empty it. Sidewalks and footpaths in the parks are to be swept by similar but somewhat smaller machines.

The Next Solar Eclipse.

British astronomers are taking a lively interest in the next eclipse of the sun—on January 22d, 1898—and the Royal and Royal Astronomical Societies are arranging to send out three parties of observers. The central line crosses Western India, the duration of totality at the most favorable stations being about two minutes. The prospects of fair weather are considered exceptionally good, as the January skies of India, south of Bombay, are remarkable for their freedom from cloud, and the probability that any given January day will be rainy is less than 1 in 150 in the Kohnkan.

The belt slightly pointed front and back gives a very much better figure than the perfectly round one.

DON'T talk about continually falling prices. In 1848, in the halcyon days before the war, when the moon shone with a more bewitching light than now, cotton sold at 4½ cents per pound.

TALK less nonsense about "McKinley prosperity," boodleism, robbery and bloated plutocrats, and turn your attention, energy and thrift to your own business and you will soon find no more cause for complaint.

WHEAT at a dollar and silver at or about 50 cents is stigmatized in some quarters as the crime of '97.—Ex.

Certainly. It made liars out of some very good people.

PRESIDENT DEWBERRY, of the Fourth District Agricultural School, will make military a feature of his school and has applied to the State for sixty guns. —Outlook.

Great guns! You mean sixty muskets, don't you?

THE Age Herald's bachelor philosopher remarked some time ago that if the husbands knew the past history of their wives, the population of North Dakota would soon be equal to one-half the population of Europe. Suppose the wives knew the past history of their husbands, don't you think there would be a mighty stampede to the Dakotas?

DEBS advocates bloody revolution as a means of obtaining relief for the laboring classes. Debs should profit by the bloody fate of the bloody leaders of the bloody French Revolution. Does he not know that not one of those "reformers" survived the horrible carnage? One by one they went down—killing each other like wild beasts, when there were no more kings and aristocrats to slaughter.

Two young men of Chicago have invented or discovered a new explosive which they call mirex. A projectile eight inches long and three and a half inches in diameter, it is claimed, "will blow into atoms any ship that will float in the lake." If this is true, Spain and Japan and other nations who think of bulldozing Uncle Sam, had better become a little more respectful.

Two years ago prosperity would have been welcomed by everybody, irrespective of party. But now there are thousands who use all their ingenuity in ridiculing, villifying and explaining away the coming prosperity. What is the trouble? Are the croakers losing their means for making an easy living? If this ridiculous and unholy nonsense about prosperity does not stop, God Almighty will punish this nation with war and pestilence.

ONLY OBEYED ORDERS.

McKinley Refused Admission to a Grand Army Camp.

The president of the United States was refused admission to the Grand Army camp at Buffalo, N. Y., Thursday morning, although he had come at the special invitation of the veterans and everything was in readiness to receive him. To the president, at first, the incident was a trifle annoying, but in a few minutes after the episode he was having a hearty laugh over it and excusing the official who refused him entrance, and said the man was perfectly right in obeying orders, no matter who demanded admission.

The reason for the refusal was that the centry had been ordered to admit no carriages to the camp.

Later, the president visited Cayuga, the site of the Panamerican Exposition, and with a mallet, on which his name was inscribed, drove a stake in a grass plot in the centre of the island. Returning from the island, the presidential party boarded Senator Hanna's yacht for Cleveland.

On July 1 over $9,000,000 in interest was due in Philadelphia, the city interest alone being $1,289,570.94. This is an age of debt, exclaims the Boston Globe.

LATE TELEGRAPH ITEMS.

AN ENTIRE FAMILY POISONED BY EATING A STOLEN WATERMELON.

Shot by their Boarder—Tobacco Dealers Combine—France Will Not Modify Duties—The Plague Increasing—Two Aeronauts Killed.

France Will Not Modify Duties.

The cabinet decided at Paris Thursday morning that there is no ground at present for modifying the duties on cereals.

President Leaves for Cleveland.

The President and Mrs. McKinley and Secretary and Miss Alger left Buffalo, N. Y., Thursday afternoon for Cleveland on board Senator Hanna's yacht.

Hogs Advancing.

Prices for hogs are the highest in two years at Kansas City, having advanced 40 cents a hundred within a week, 70 cents since August 1 and nearly a dollar since the middle of July.

Thinks Edmunds is Innocent.

Sheriff Boynton believes that John Edmunds, of Colorado Springs, Col., who was arrested at Kansas City, Thursday, on the charge of having murdered Herbert H. Kay, on Pike's Peak, did not commit the murder.

Banker Seligman Dead.

Banker David J. Seligman, of New York City, died at Hollywood Hotel, Long, Branch, N. Y., Friday night, aged 47. An operation was performed on him Wednesday for appendicitis. Mr. Seligman was the senior member of the banking firm which his father founded.

The Plague Increasing.

Advices from Poona state that the ravages of the bubonic plague are increasing seriously, and the Kirbee bazar has been closed entirely. Prof. Haffkine is inoculating the people at Kirbee with the preventive virus. The segregation camp is full and the cantonment camp has been re-opened.

Encouraging Outlook.

Secretary Joseph Brown, of the Wrought Iron Pipe Manufacturers Association at Pittsburg, announces an advance in prices of about 5 per cent. At a meeting of the organization Friday the action of the executive committee was endorsed. The outlook for a good business this fall is encouraging.

Detroit the Next Place of Meeting.

By a unanimous vote at Denver, Col., Friday, the Foresters' Supreme convention selected Detroit, Mich., as the next meeting place for 1899. There was practically no opposition. Considerable discussion was engendered by a motion to eliminate the endowment plan of the order, but it was finally carried.

An Arkansas Tragedy.

News of a terrible tragedy in Bayou township, Baxter county, has been received at Little Rock, Ark. Dan Horton accused his brother-in-law named Lehr, of insulting his wife. A fight ensued in which Lehr was shot and perhaps fatally wounded, and Horton's father, aged 80, was killed by being struck over the head with a rifle.

Two Aeronauts Killed.

Two aeronauts were fatally hurt at the fair grounds at Toledo, O., Friday afternoon. Walter Steele, of Columbus, had his back broken and several ribs crushed by a fall, due to the failure of his parachute to work, and Leroy Northcott was frightfully burned while inside a balloon which took fire while being inflated.

Ate a Poisoned Watermelon.

A special to the Louisville Courier-Journal from Paducah, Ky., says: The meagre particulars of a wholesale case of poisoning has reached the city from Calloway county. Eight persons are reported to have been poisoned by eating a melon stolen from a neighbor's patch. Seven of the number are dead and the eighth is in a critical condition.

Killed by His Tenant.

Dr. John R. Cabell, a prominent citizen of Danville, was killed last Friday night at his country home, near Callands, twenty-five miles from Danville, Va., by Edward Hankins, his tenant. Cabell had refused to rent Hankins the farm for another year and Hankins had refused to move away, from which arose the dispute that resulted in the killing.

Tobacco Dealers' Combine.

Seventy-five dealers and manufacturers at Chicago, Thursday night, organized the Tobacco Dealers and Manufacturers' Association, and decided that after September 1 the price of five-cent cigarettes should be ten cents, and other cigarettes should be advanced accordingly on condition that two-thirds of the dealers should come into the association and make its action binding.

Nicaragua's New Tariff.

Consul Wilsike informs the State department that a new tariff will go into effect in Nicaragua in October. A commission having the matter in charge had recommended the free importation of sugar, cocoa, in grain and ground, coffee, in grain and ground, rennet for the coagulation of milk, fresh fruits in their natural state, hog lard and table salt. The department is also informed that Nicaragua will adopt the decimal system of weights and measures.

Shot by Their Boarder.

Arthur Storey and his wife were shot and probably fatally injured at their department, No. 65 Forty-third street, Chicago, Friday, by H. C. Dunker, a barber, who had boarded with the couple for several years. That night Dunker accompanied Mrs. Storey to the theater. On returning home they found Storey awaiting them. A violent quarrel ensued. Dunker drew a revolver and fired two shots. The first bullet entered Storey's groin, the second lodged in Mrs. Storey's spine. The wounded couple were removed to a hospital and there is but little hope for their recovery.

Two Convicts Escape.

W. N. Thompson, a white convict from Escambia county, and Will Turner, a colored convict from Jefferson, escaped from the Coalburg prison at Birmingham Thursday. They were plowing, under guard, in a field adjacent to the prison. Thompson, who is subject to fits, complained that he had one coming on, and was allowed to leave for the hospital. Just after he left, Turner said he had cramps and lay down under a shade tree. The guards' attention was slackened, thinking the men were sick, and both men made use of the opportunity and fled. Joe Burke, colored, a fifteen-year convict at Pratt City, also slipped by the guards.

A Narrow Escape From Death

An engine of the Dade Coal Mining Co's. narrow gauge railroad, jumped the track while on a trestle near the top of Sand Mountain, near Chattanooga, Tenn., Friday, fell a distance of twenty feet and rolled nearly to the bottom of the mountain, taking trees down with it. There were six people on the engine when it went down, none of whom, strange to say, were seriously hurt except the company's manager, Mr. F. H. Connor, of Chattanooga, who was caught under the tender and had two ribs broken and was badly shaken. A Mr. Sheddon, of St. Louis, was on the engine but escaped with a few bruises. The fireman, whose name was not learned, had a leg broken and the engineer and Dr. Brock, the mine superintendent, who was on the engine, escaped unhurt.

Senator Pritchard's Brother Killed.

A special from Cloudland, N. C., says: George C. Pritchard, brother of Senator Pritchard of North Carolina, who is the sheriff of Mitchell county, was fatally wounded Friday while attempting to arrest Monroe Garland, a noted desperado, near Cloudland. Sheriff Pritchard had a warrant for Garland and with a deputy went after him. The desperado fired on the sheriff, one bullet penetrating the lungs and another passing through his neck. Garland, after he had shot Pritchard, turned on Deputy Blalock and began firing, but Blalock was too quick for him and shot him twice, either one of which would have been fatal. Garland died in a few minutes and Pritchard was taken to a nearby house and surgical aid summoned. His wounds are regarded as necessarily fatal. Pritchard is 41 years old and has a large family. Officer Blalock was slightly wounded.

ON A CURVE.

Freight Trains on the Georgia Pacific Collide With Fatal Results.

A disastrous wreck occurred on the Georgia Pacific division of the Southern railway, three miles from Eden, and thirty miles from Birmingham, Ala., at 6 o'clock Thursday morning. Two heavy freights, one going east, and the other west-bound, collided near a curve in a dip at the foot of two grades. Both were going at full speed, and the engineers did not see each other until the trains were but a hundred feet apart. Both engineers and both firemen jumped, but were caught in the wreckage. John A. Cheaves, of Atlanta, engineer of the west-bound train, was so badly crushed that he died soon after being taken out of the wreck. J. C. Schwain, of Birmingham, engineer of the east-bound train, was dangerously and perhaps fatally hurt internally. An unknown tramp was fatally injured. Both engines and ten cars were demolished. The injured were taken to Birmingham. The cause of the collision is not yet known. The wreckage blocked the track all day.

Brothers Injure a Lady and Gentleman.

A. B. Faidley, one of the leading grain merchants of Chattanooga, Tenn., was struck Thursday by a boy riding a wheel at a rapid rate, thrown violently to the ground and knocked senseless. When assistance reached him he was found to be paralyzed on the right side and when he recovered consciousness several hours later it was found he had lost the power of speech. The physicians say that his recovery is very doubtful. A brother of the boy who ran over Mr. Faidley a few days since ran over a lady named Mrs. Martin, injuring her so that her recovery is exceedingly doubtful. The two accidents have led the police authorities to issue very rigid orders against fast riding in the city limits.

BUILDING MATERIAL,

Lime, Sand, Cement Plaster, Hair and Lath. Ivory Cement Plaster. Ricketson's Mortor colors.

THE STOCK WE ARE SHOWING.

AND THE BARGAINS WE ARE OFFERING.

Shades, Lace Curtains, Matting, Carpets, Baby Buggies Dishes, Stoves, Safes, Sideboards, Refrigerators, Etc.

Which can be bought for CASH or on EASY PAYMENTS.

PETER ZINSZER'S,

Mammoth Furniture House, 2115 to 2119 2nd Ave.
BIRMINGHAM, - ALABAMA.

HOTEL CONCORDIA,

JOHN STEVENS, PROP'R.

THORSBY, ALABAMA.

RATES. by the day, $1.00.
by the week, $4.00.

AT HOME.

Mrs. C. L. Forsman arrived from Meridian, Miss., a few days ago. She is, of course, most cordially welcome to Thorsby.

Sweet potatoes are growing fast these days. Herman Langville brought a half bushel of them to the hotel last Saturday.

M. E. Taylor, of Austelle, Ga., gave us a call during the week.

E. F. Mead has had his upper story shingled.

Now is the time to put up pear preserves.

J. P. Peterson was in Birmingham on business one day last week.

Don't cut down all the trees on your land. Leave a few for a park; it will be a source of joy and pleasure forever.

Anton Thorson brought in a bean vine the other day that measured nine feet in length.

Mr. W. A. Lee and family arrived from Lucile, W. Va., last Sunday morning. As Mr. Lee bought a farm here last July he will make Thorsby his future home. The Call and the whole colony with it extend Mr. Lee and his family their right had of fellowship and a most cordial welcome.

Thorsby's public school begins on Monday, September 20. The term will be eight months.

The beans in the hotel grounds have been growing at express rate these last few days.

We need one or two good dairies. Who will take time by the forelock and establish them? Good dairy butter can be sold all the year round at twenty cents a pound. Green pasture can be had all winter by sowing oats, rye or crimson clover in the fall. Lumber for sheds for the cows can be bought for $6.50 a thousand feet.

Watermelons have been a staple article for the past two months and still they are coming.

W. A. Lee went to Birmingham last Monday on business.

Nels Peterson will build a carpenter shop. The foundation has already been laid.

The quarterly meeting of the school society occurs next Monday evening, Sept. 6, at 8 o'clock. All the members are expected to be present.

Religious services as usual next Sunday at 10:30 in the morning and 7:30 in the evening. All are cordially invited.

The Hawkins Lumber Co., in Birmingham, is one of the most reliable firms in Alabama. They have everything the builder desires. Well seasoned lumber from the forests of Alabama and Georgia, sash, doors, blinds, casings, finishing lumber, stair work, cabinet work, office fixtures, church pews, pulpits, etc. Out of town purchasers will receive courteous treatment and get special low prices.

GARDEN WORK FOR SEPTEMBER.

Every housewife wants sweet herbs, such as anise, caraway, coriander, sage and sweet marjoram to season the various dishes. Strawberry beds may be prepared and the plants set out. Sow mustard and cabbage for winter use. Of the latter, Early York and the other early sorts may be sown to set out the first of February.

Advice of what is proper to plant each month will be given from time to time in the Courier. Clip these notices out and paste them in a book kept for that purpose, and act upon their suggestions.

KILLED HIS FATHER.

Awful Mistake of a Youth in the Indian Territory.

Last Thursday night, near Paul's Valley, I. T., G. W. Jackson was shot and instantly killed by his sixteen-year-old son, Albert Jackson.

Jackson had been absent from home several days, leaving his son at home with his stepmother. At 1 o'clock Thursday morning Mrs. Jackson heard footsteps in the yard. She aroused the boy, and he arming himself with a Winchester, stood in readiness by Mrs. Jackson, her window curtain aside, when a man was discovered looking through the window with his face partly covered with his hat. The boy fired and the man fell a corpse. It was the father.

Two Firemen Crushed to Death.

Elmund & Perrin's furniture establishment at Pittsburg, was totally destroyed by fire Thursday night, entailing a loss of $165,000. A portion of the rear wall fell into the alley, burying under the debris two firemen, Zeke Glover and Harry Hilt. Their dead bodies were recovered soon afterward. The hunt is still going on for the bodies of two boys who are thought to have been caught in the ruins.

A Grain Cut.

The Kansas City, Fort Scott and Memphis Railroad Company announces a cut in the rate on grain for export from Kansas City to New Orleans from 21 to 15 cents.

AT HOME.

Mrs. C. L. Forsman arrived from Meridian, Miss., a few days ago. She is, of course, most cordially welcome to Thorsby.

Sweet potatoes are growing fast these days. Herman Langville brought a half bushel of them to the hotel last Saturday.

M. E. Taylor, of Austelle, Ga., gave us a call during the week.

E. F. Mead has had his upper story shingled.

Now is the time to put up pear preserves.

J. E. Peterson was in Birmingham on business one day last week.

Don't cut down all the trees on your land. Leave a few for a park; it will be a source of joy and pleasure forever.

Anton Thorson brought in a bean vine the other day that measured nine feet in length.

Mr. W. A. Lee and family arrived from Lucile, W. Va., last Sunday morning. As Mr. Lee bought a farm here last July he will make Thorsby his future home. The Call and the whole colony with it extend Mr. Lee and his family their right had of fellowship and a most cordial welcome.

Thorsby's public school begins on Monday, September 20. The term will be eight months.

The beans in the hotel grounds have been growing at express rate these last few days.

We need one or two good dairies. Who will take time by the forelock and establish them? Good dairy butter can be sold all the year round at twenty cents a pound. Green pasture can be had all winter by sowing oats, rye or crimson clover in the fall. Lumber for sheds for the cows can be bought for $6.50 a thousand feet.

Watermelons have been a staple article for the past two months and still they are coming.

W. A. Lee went to Birmingham last Monday on business.

Nels Peterson will build a carpenter shop. The foundation has already been laid.

The quarterly meeting of the school society occurs next Monday evening, Sept. 6, at 8 o'clock. All the members are expected to be present.

Religious services as usual next Sunday at 10:30 in the morning and 7:30 in the evening. All are cordially invited.

The Hawkins Lumber Co., in Birmingham, is one of the most reliable firms in Alabama. They have everything the builder desires. Well seasoned lumber from the forests of Alabama and Georgia, sash, doors, blinds, casings, finishing lumber, stair work, cabinet work, office fixtures, church pews, pulpits, etc. Out of town purchasers will receive courteous treatment and get special low prices.

KILLED HIS FATHER.

Awful Mistake of a Youth in the Indian Territory.

Last Thursday night, near Paul's Valley, I. T., G. W. Jackson was shot and instantly killed by his sixteen-year-old son, Albert Jackson.

Jackson had been absent from home several days, leaving his son at home with his stepmother. At 1 o'clock Thursday morning Mrs. Jackson heard footsteps in the yard. She aroused the boy, and he arming himself with a Winchester, stood in readiness by Mrs. Jackson, her window curtain aside, when a man was discovered looking through the window with his face partly covered with his hat. The boy fired and the man fell a corpse. It was the father.

Two Firemen Crushed to Death.

Edmund & Perrin's furniture establishment at Pittsburg, was totally destroyed by fire Thursday night, entailing a loss of $165,000. A portion of the rear wall fell into the alley, burying under the debris two firemen, Zeke Glover and Harry Hilt. Their dead bodies were recovered soon afterward. The hunt is still going on for the bodies of two boys who are thought to have been caught in the ruins.

A Grain Cut.

The Kansas City, Fort Scott and Memphis Railroad Company announces a cut in the rate on grain for export from Kansas City to New Orleans from 21 to 15 cents.

STATE TOPICS.

Long News Items of General Interest to Alabamians.

St. Florian's New Mill.

T. J. Rasch, of Florence, has been in Nashville inspecting flour mill machinery with a view of constructing a mill at St. Florian. Work will begin on the mill in a short time. St. Florian, the location of the mill, is a German settlement about six miles from Florence.

Lithographic Stone Quarry.

Operations at the lithographic stone quarry at Section, in Jackson county, have been suspended for several days, to await the arrival of improved machinery. The stone has to be sawed out, as the least jar from a hammer or an explosion shivers it to atoms.

Coal Land Assessments to Stand.

The proposed increase of $2,225,000 of the tax assessment on the Tennessee Coal, & Iron company's property in Alabama, was heard by the commissioners' court last week. The court declined to raise the assessment. It will be taxed as heretofore.

Temporarily Appointed.

Wm. H. Tisdall, whose term of office as United States Marshal for the Middle District of Alabama has expired, has been temporarily appointed to act until his successor is appointed. The marshals for the other districts of Alabama whose terms have expired have also been temporarily reappointed.

Equipping With Electricity.

Under the direction of Chief Electrical Engineer Harris, ten large cars are being wired and equipped for electricity, for use on the Enley line, which will be operated by the silent rent after September 1. Poles and feeders are up and the stringing of trolley wires begun. Of these ten cars, five are new, the others comparatively new. From a standpoint of beauty there will be none to put them to shame.

Pig Iron for England.

The railroads in the Birmingham district are doing a bigger freight business now than for several years past. This is particularly true as to the Louisville & Nashville railroad, which, among other freight, recently forwarded there solid train loads of pig iron to New Orleans to be shipped to England. All the railroad shops here are preparing to work longer hours in order to keep up with the repairs necessary.

Two Freight Trains Collide.

A head-end collision took place on the Southern railway, three miles west of Eden, which is thirty miles east of Birmingham, between train No. 45, freight, going to Birmingham, and an extra freight train going east. The collision was a complete one. Both engines were wrecked, and ten dump cars demolished. The track was torn up for some distance. Several people were seriously and one fatally injured. Engineer John A. Cheaves was so badly mangled that he died shortly after the accident.

Franklin Gold Mines.

T. H. Aldrich, of Birmingham, has bought a controlling interest in the Franklin gold mines in Clay county. These mines have been worked in a crude way for some time, and have made such an excellent showing that machinery will be introduced to more fully develop them. The West mines, in the same county, are being extensively developed by C. S. West and associates. Some specimens have analyzed over $50 per ton. Machinery has been ordered to work those mines also. A great deal of capital has lately gone into the mining business is North Alabama, especially in Clay and Cleburne counties.

Co-Education at the University

Young women of 18 years may have all the advantages of young gentlemen. Such may enter any class in the Institution for which they are prepared. Up to this time a few have taken one or two departments, but not one has entered on a regular course or taken a degree. It will be gratifying to the friends of co-education to know that the next session may break the record in this matter, that several young ladies have expressed a purpose to take one of the regular courses, and thus demonstrate their ability to come up to any standard set for young men. It is understood that President Powers believes they can do this and hopes to see his judgment vindicated. They must reside in private families, but rooms for study during the day are provided at the University.

Laden With Freight.

Thirty-three heavily laden freight trains passed through Birmingham one day last week, seventeen going South and sixteen North. This is the best record in the past three or four years. The southbound freights bore purchases of fall goods to Southern merchants, while Southern iron was largely the northbound cargo. A good deal of the iron was for export, that business having begun to show great liveliness of late. The officials state that every single engine they have is needed to attend to the heavy traffic, while the office force is worked hard day and night. The shops at Decatur and Birmingham are working on full time and doing their utmost to keep cars and machinery in order. The same activity exists on the Central of Georgia, the Southern, Alabama Great Southern and Kansas City, Memphis & Birmingham railroads.

"Rufus Sanders" Assassinated.

Francis Bartow Lloyd, aged 36 years, better known to the reading public as Rufus Sanders, a writer of quaint Alabama dialect miscellany, was assassinated at 6 o'clock last Wednesday near Greenville by John A. Gafford. Lloyd was found lying in the road with two gaping wounds in his body. Gafford had evidently used a double barreled shotgun and discharged both barrels. It is said that the deed was the outcome of Lloyd having improper relations with one of Gafford's sisters. Lloyd leaves a widow and three children. He was a native of Butler county, and served as a representative in the last legislature from that county. He represented Montgomery county in the General Assembly in 1894. In the last legislature he vigorously opposed the constitutional convention measure and the measure permitting women practicing law. He moved to Butler county later and began to publish a series of humorous letters in the Sunday newspapers. He was contemplating issuing them in book form. The deceased had considerable ability as a lecturer, and was known in Texas. Lloyd was a candidate for Secretary of State in the last democratic state convention, and was going to run again the next campaign.

Later advices state that Gafford has voluntarily surrendered to the sheriff.

Increasing the State's Revenue.

Judge W. J. Wood, of Florence, State Back Tax Commissioner, stated to a Birmingham reporter last week that he expected the increased valuations of property for taxing purposes by dint of the work of the county back tax officials would amount to about $10,000,000 in the whole state, which which would increase the State's revenues by about $150,000.

Judge Wood's visit to Birmingham was coincident with Tax Commissioner Badham's failure to get the Jefferson county commissioners to sustain his claim for a large increase of the tax valuation of the Tennessee Coal, Iron & Railroad Company, the Sloss Iron & Steel Company, the Thomas Furnace Company, Woodward Furnace Company and other leading industrial companies of the Birmingham district. Mr. Badham made claim for a total increase of about $4,500,000 and was allowed $100,000. He will appeal to the circuit court.

His failure was a terrific blow to the new tax law, it being supposed that the big mining and furnace companies would be made to contribute a very large additional revenue. The increase in tax valuations in Jefferson county, the largest in the state, which was first figured at $5,000.000, has been rudely reduced to $1,300,000, of which $1,000,000 was voluntary handed in and $200,000 obtained by agreement between the tax commissioner and tax payers.

Briefly Noted.

Will Burke, a 7-year convict, escaped from Pratt mines Friday.

The postoffice at Gurley was broken into Friday night and robbed of $72.47.

Birmingham is to have a galvanized iron mill, which will employ 100 skilled men.

Buck Finch was overcome by gas in a well at Opelika, and died in an hour after being brought out.

It is estimated that the tax raise in Cherokee county will range anywhere from $200,000 to $300,000.

Mayor Folmar, of Troy, says the Pike county cotton crop is short 25 per cent as a result of the recent rains.

The first bale of Madison county cotton was brought to Huntsville Friday by Sam Latham and sold for 11½ cents.

The Madison county commissioners will advertise for bids for the construction of a $30,000 jail next February.

The grand jury of Randolph county returned thirty-one true bills. It also recommended the building of a new court house.

George Carter, a well known citizen, was accidentally shot and killed by a neighbor, Bob Matthews, last week, while hunting cattle ten miles east of Tuscumbia.

The Governor has appointed M. V. Capps, of Abbeville, to fill the vacancy on the board of the Abbeville Agricultural school caused by the resignation of S. B. Woods.

The Governor has appointed A. C. Chisholm tax collector of Lauderdale county, to succeed W. T. Mitchell, who died on Tuesday. Mr. Chisholm was a gallant Confederate soldier, and is a citizen of high character.

ALABAMA LETTER.

From the Emmet County, Iowa, Republican, for June 8th, 1897.

I feel it my duty to comply with my promises given to friends in and about Estherville before I left there for my home here in the sunny South, that I should let them hear from me before long. I have received many letters asking for general information, etc., and therefore take the liberty to ask you an opportunity to "let them hear from me" through your valuable columns.

I left Estherville on the 24th day of March and arrived here in Thorsby on the 28th with my car of immigrant goods, including a pair of horses and Iowa poultry, all safe. I at once began to improve my home property, a 10 acre vineyard tract, and had in about six weeks a cosy home complete and my family arrived here, all well, on the 6th day of May.

I am pleased to state that we are well and enjoy this fine climate, I have for my part gained considerable in strength and I am justified in saying that this is the place for a good many of my Iowa friends. A few days after I came here I planted different kinds of vegetables and have them now daily on my table, I have now my 1,500 grape vines, which the Concordia Land Company have planted in my vineyard, all trellised, and they are fine. They were planted in May last year and some are bearing, so I can now see what Thorsby has in store for a future, over 70,000 vines are now flourishing here, and I understand that the association has already contracted for 30,000 to 40,000 for fall and next spring planting.

The weather here is not so hot as I thought I would have to experience it, and I have in several Northern papers seen statements of higher temperature up there than we have here so far.

I and my family are well satisfied with the change and have reasons for so being. Thorsby has two church organizations; good schools and good society, so we are not strangers here, although are in a strange land, and I wish to call the readers attention to the fact that this is one of the main points for a home seeker to consider.

Yesterday I had a pleasant call from H. A. Hanson and G. W. Gilbertson, of Estherville, Jacob Brecker from Graettinger and Ole Larson from Ruthven, Iowa. These gentlemen came here on a prospecting trip and they all told me that they had purchased land for their future homes here. I understand this makes the number of Northern families located here 140 and about one-half of them are now on the ground. Everybody busy, "none idle here" and improvements of all kinds are my daily observations.

I have now been here long enough to experience the climate, the soil and the water, and am justified in expressing my opinion very favorable for Thorsby, and will say, to a home-seeker, if he can command a few hundred dollars do not fear the South.

A. MALGREM.

Thorsby, Ala., June 24th, 1897.

LANGVILLE & SON,

General Blacksmiths
and
Wagon Makers.

Prices reasonable and first-class workmanship.

HOUSE BUILDING

Is the order of the day in Thorsby. We are now prepared to keep up with the procession. Our new planing mill, which has recently been put in, and is now run in connection with our saw mill, enables us to furnish all kinds of lumber for building purposes. Our prices are more reasonable than those of others, and, being prepared to turn out an order on short notice, we can save the builder a large amount of inconvenience and expenses. By buying at home you have no freight to pay and you are helping along home industries. We also are prepared to ship lumber by the car load or in small quantities.

THORSBY LUMBER CO.

THORSBY, ALA.

THE FARM AND GARDEN.

ITEMS OF INTEREST ON AGRICULTURAL TOPICS.

Good Hog Pasture—Improved Grain Sheck—Clearing Fence Corners—Preventing After Swarms, Etc., Etc.

GOOD HOG PASTURE.

At the Oklahoma experiment station a large quantity of excellent pasturage for hogs has been secured by sowing broadcast a mixture of Japan or soy beans, Kaffir and sorghum. The pigs evidently prefer the beans. The crop outgrowing the ability of the pigs to consume it, cows have been pastured on the plot to their great satisfaction. —New England Homestead.

IMPROVED GRAIN SHOCK.

According to a writer in the Farm Journal nine bundles of grain make a better "shock" than the old-fashioned dozen. Get up four in a cross, then four more, one in each of the spaces between two of the first four, and cap with the ninth, well broken, and the tops toward the prevailing wind. If well set, that is, each sheaf standing on its own bottom and thoroughly closed in at the top, such a shock will stand a stiff windstorm and a three days' rain without harm.

CLEARING FENCE CORNERS.

Nothing more clearly shows the painstaking and careful farmer than to have fence corners between fields or along the roadside kept free from weeds, grass or shrubs. As a rule all the old-time fence corners were kept scrupulously clean. A good deal of valuable hay was made from what the scythe reached in and cut there. But when the horse mower and the self-binding reaper came into use, it every year became harder to find anybody who could be hired to clear out the fence corners. The result was that the axe rather than the scythe was required, and the growth, instead of being restricted to fence corners, encroached each year more on the cultivated fields.—Boston Cultivator.

PREVENTING AFTER-SWARMS.

The best way to prevent after-swarms is to have all the bees that can fly go with the first swarm, and this is the way we manage it. Have all colonies strong, even if it should be necessary to double them up in spring, so that they will swarm at the beginning of the honey flow. Then hive the prime swarm on the old stand, removing the super, if any, from the parent hive to the swarm; then set the parent hive on top of the swarm's hive and allow it to remain there two or three days. All the young bees that have ever been out of the hive, when they come out, will go in below with the swarm. About the afternoon of the second day, if the weather has been favorable, the parent colony will have become so depleted of bees that they will give up swarming a second time, and will begin to carry out drone-brood. It is then safe to carry them to a new location; they will not swarm again, but will build up to a strong colony, and will store some fall honey and be a good colony to winter. In this way we get extra strong colonies that will store more honey than the two together would if the queen-cells had been cut out. Crowd the brood chamber with bees instead of contracting it.

FORCING CHICKS RAPIDLY.

One of the results of brooding chicks in the brooder is that they feather very rapidly, and the pullets mature much sooner than when they are hatched under hens and run at large. In fact, young pullets raised in brooders have been known to begin laying before they were four months old, even when but large enough to be sent to market. This is due to the forcing process practised. Those who feed young chicks heavily overlook the fact that they are kept very warm in the brooder-house, and they do not require as heavy feeding as if exposed to the cold. Young chicks always begin to feather as soon as they are two or three days old, which is weakening, but this is also due in many cases to the forcing process. Brahma and Cochin chicks do not feather so rapidly as some other kinds, but it is usually the case that quite a lot of the chicks perish from rapid feathering. There is no remedy to prevent this difficulty except to reduce the food and not feed oftener than three times a day, using meat and a little linseed meal and a proportion of bulky food. It is never necessary to force young chicks before they are eight weeks old, as they will lose more weight than they will gain, and there will also be less liability of loss of chicks.

CARE OF THE HORSE.

In cleaning up the stables remember the troughs and mangers.

Bad feet in the colt often ruin the value of an otherwise valuable horse.

The value of an old horse depends very largely upon his treatment while young.

Growing colts need plenty of exercise and good grooming to make a good growth.

Half blood horses may do well enough for work, but they should never be used for breeding.

Treat your horses as you would wish to be treated if you were dumb, and serving a master.

Look out for your horse's shoulders. No horse can do his duty with a sore shoulder, to say nothing of his suffering.

The feet and legs of horses used in the mud should have particular attention, or they will have "scratches" first thing you know.

Have all the parts of the harness soft and pliable, and well fitting to the animal. Treat well the noble servant of man and he will serve you faithfully.

When your colt is ten days' old commence to get it used to the halter. For this method you will find that he will be more easily led when you wean him.

The genealogy of a first class roadster shows many of them to have thoroughbred blood in their veins, it refines blood and muscle, quickens the locomotive force and gives them endurance.

BEST HOG FOR THE FARMER.

"Never buy a pig in a poke," we believe is still good advice, nor we we will add, ever give full credence to all that is told us when buying alleged thoroughbred stock, but ever hold a little mental reservation of doubt for safety's sake, as it were, says James I. Baird in an agricultural paper. Not that there are none strictly honest who deal in this line, but that there are so many not very scrupulous as regards exaggerating the facts in the case and who are usually more energetic in pushing forward their stock.

Now we have it from good authority, as we think, that nothing in the pig line is so questionable as the cant about thoroughbreds. Anway, our own, though limited, experience in the business verifies this. For after a short run with our thoroughbred stock we found it was not a fixed type, but rather the result of careful selection and skillful management, and so very soon, our fine stock degenerated.

Most if not quite all of our modern breeds are only crosses, and promiscuous crossing and breeding from crosses, is simply taking the back track in breeding. And it does not take long in this way to get back to the original type. And, as just intimated, many of the so-called thoroughbreds are only well-selected models, skillfully pampered, and which will, without much care and skill, revert back to the most dominant type from whence derived.

Now, that which is best for the ordinary farmer is a hog that will hold good his qualities without so much care to prevent deterioration. Indeed it is not verity of pedigree so much—good as this is—as individual excellence, for even though there be but two pigs in a litter, one will prove better than the other even with the same care and keeping. None of our domestic animals are so easily moulded, perhaps, as the hog, hence, in breeding for a purpose, the swine raiser has at his command any qualities he may wish to perpetuate. And, hence, if sows usually bring large litters, the manufacturer of false pedigrees has every opportunity to accomplish his purpose with but little risk of detection.

However the pedigree, the hog that will pay the farmer best is the one that will convert surplus corn into meat, making the greatest number of pounds for the amount of corn consumed, and do it at the earliest age. Such a hog, we believe, is a cross between the Berkshire and the Poland-China. Many, however, give the preference to the latter breed; others again to the former, but from our own experience in the matter, we find that the better qualities of each are found united in the cross. There is an increase of frame and flesh from the Poland-China, and a finer grained quality of meat, which is from the Berkshire, and, perhaps, a little more energy and hardiness. A pig of this cross, slaughtered at the age of eight or ten months, will usually weigh from 200 to 250 pounds, besides the flesh will be of better quality, and of a fair admixture of fat and lean.

In running seed wheat through the fanning mill, give it sufficient wind to blow at least a fourth of the wheat over. This will get away with the lighter grains, large or small, while the screens, properly adjusted, will separate the small grains.

Every year we see a great deal of late-sown wheat that barely clears the clods or the drill marks before the winter sets in. This is bad policy. For best results the wheat should come up early to make a growth that will nearly or quite cover the ground. It is its own best winter protection when it does this.

At the South cow-peas make an excellent preparation for wheat. By plowing the ground deeply and well in spring, before sowing the peas, it will not require plowing in the fall, as a better seed-bed can be secured by the use of a disc and harrow. Peas, being legumes, serve the same purpose as clover in trapping the nitrogen of air.

POULTRY NOTES.

Burying grain usually does away with idle hens.

Healthy fowls pick up their food quickly and relish it.

Build your poultry house so that it can be easily cleaned.

One male to fifty hens, one breeder declares, is plenty.

Pepper is not food, but a stimulant, and must be fed carefully.

Ducks lay in the morning and should not be turned out too early.

Feed one ounce of ground green bone to each fowl every third day.

Young ducks eat more than chickens, but are of marketable size sooner.

Ground clam shells are excellent for layers, but chicks need ground bone.

Some pullets will begin to lay much earlier if males do not run with them.

Kill poultry by bleeding in the mouth or opening the veins in the neck.

Lice mites or bed bugs spoil many hatches by drawing the hen from the nest.

Keep sawdust out of the poultry pens. If the fowls eat it, it is likely to pack the crop.

If hens are kept in idleness, you may look out for feather pulling. Keep Biddy busy.

The Toulouse geese sometimes weigh sixty pounds to the pair and are the largest geese.

BEE HINTS.

Covers to hives should not leak, as it will prove very damaging to the bees. The cover to the hive, or rather the lid, should answer all the purposes of a roof, and no other covering is needed, hence the lid is the most important part, and should be well made and painted.

A set of combs that have been built by the bees with foundation, contain too much drone comb as a general thing, and in every case it should be gone through and the drone comb removed. In natural comb building bees do not do the most profitable thing thus, as it is their nature to increase rather than to store surplus honey.

Swarming is the rule with bees during good honey seasons, and if we do not prevent it, our crop of honey will be small. On the other hand, if we keep down swarming and give the bees plenty of room, properly arranged, to store honey, the result will be a good honey crop. This can easily be accomplished by removing all queen cells the bees build preparatory to swarming.

Those who keep bees should acquaint themselves with the nature and habits of the same, so they can be successful with them. The loss of queens is perhaps the greatest loss that occurs with bees, and any one should be able to detect this loss by an examination of the interior of the hive. Usually the presence of brood is an indication of the presence of the queen, and when no brood is found it rather indicates that she is not there.

End of a Remarkable Romance.

A little, purring kitten rubbed herself last night in a friendly fashion against the great iron bars of the den of Old Paul, the Cincinnati Zoo's famed lion, of whom extreme age has made a pitiable show these many weeks. It was the kitten's way of coaxing Paul to come to say good night to her, for Paul and kittie were the best of friends. She was the only bit of outside life that Paul was ever friendly with.

Kittie has crept shyly up in front of the bars of the old lion's home every night for weeks, and when she mewed to him he came forward and put his great shaggy head as close to her as he could, and they caressed each other.

When kittie came last night and rubbed coaxingly against the bars and mewed softly, Paul just lay still, his head between his paws, and didn't notice her at all. Tiring of coaxing him, the faithful kittie stopped and looked at the noble, great fellow.

A keeper saw her do something that instinct never let her do before. She shyly crept through the big, black iron bars, and going in, caressed the great, bowed head in her most loving way. But there was no response. Then kittie slowly went away, and Paul slept the sleep that knows no waking.

Scores of people who had known the old lion for nearly twenty years had just been visiting him, and hosts of tiny children had tossed him kisses just as death was coming on. He died exactly as Superintendent Stephan a month ago said he would, "as if asleep, with his head between his paws."—New York Telegram.

Look After the Cellar.

One of the first things to receive attention at this season is the cellar, and throughout the year it demands care. No part of the house is so neglected. It is usually dark and illy ventilated. The air is impregnated with foul air arising from decomposed vegetables and refuse that is damp and mouldy.

NOTES AND COMMENTS.

Two Denver boys have lately floated the Stars and Stripes by kites a mile above the summit of Pike's Peak, and claim that it is the highest point ever attained by Old Glory.

Of the thousands of prisoners released from jails in India on Jubilee Day, some have voluntarily returned to jail, while others are committing burglary and other offences.

In order to reach the deep-water sailormen on the great lakes, the Navy Department has decided to establish recruiting stations in several of the lake cities. The Bureau of Navigation has just issued an order notifying recruiting officers that native-born Americans be regarded with especial favor.

The English sparrow has spread far hence and increased rapidly. The farmers of the Province of Ontario are complaining that he is an unmitigated nuisance to them, and they insist that he should be exterminated as soon as possible. He drives away the insectivorous and singing birds and does nothing to compensate for their loss.

A patent has been allowed by the British Patent Office for making gold. A similar application has been made to the United States Patent Office, and the Treasury Department has undertaken to test the process. Sensational versions of this fact have appeared in some of the daily papers, but the patent has so far been withheld, and it is not probable that it will be granted.

No one disputed the dictum of a Chinese physician who had been called to attend a Celestial who had fainted in a store at Portland, Oregon, when the doctor said, after filling the prostrate man's mouth and nose with red paint: "Him blow out paint, him all same not yet dead; him no catch 'im wind, no blow out paint, him heap dead." The man didn't blow out the paint and the coroner was called.

"In one respect," says an English paper, "the Siamese Army is superior to every other, and that is in its elephant corps. Eight hundred of these animals, which are stronger, though smaller, than those of India, are organized into a special corps, commanded by a retired Anglo-Indian officer, and their heads, trunks and other vulnerable parts are protected against bullets by India rubber armor."

"The Railway and Engineering Review" raises the question "whether the present tendency toward heavier track, more powerful locomotives and larger cars has not reached its practical limit, if, indeed, it has not already exceeded it. The fact that a railroad is primarily designed and operated for the purpose of making money is too often lost sight of, and some officials in charge of the various departments are apparently impressed with the idea that its chief use is for the exploitation of their various hobbies."

As knowledge of the Klondike region increases, says the New York Times, it will probably be discovered that to live from the resources of the country is not impossible or even especially difficult. From time immemorial men have managed to subsist in places fully as cold and much more sterile. Most of the Yukon Valley is heavily wooded, and wherever trees grow there are animals and the possibility of raising at least a few rapidly maturing crops. This, of course, will be of no immediate advantage to the multitudes now hurrying northward through the passes to camp on an open plain just as winter begins, but it will have much to do with the future development of the new gold fields.

A Liverpool medical man was called in to attend a patient seized with cholera cramps as the result of excessive drinking, and found together about a dozen persons, mostly young women, in a room with full glasses before them, a three-gallon jar of strong ale on the table, and several bottles of whiskey, which from time to time were replenished. This remarkable session was kept up for five days. It was in celebration of a wedding, and all had saved up for weeks in anticipation of the event. The father pawned his watch, and most of his furniture; one young fellow pawned his coat, hat and watch. The whole party, twenty or thirty in number, slept together on floors, or anywhere, the house being a small three-roomed cottage in one of the streets of Tox Teth Park. When the five days' revel was ended they all "proceeded to the house of Father Nugent and signed the pledge."

There was a narrow escape from a unique fatality in the Treasury Department at Washington. The vast accumulation of paper money and coin was being counted, an incident in the change of United States Treasurers. As fast as the bags of silver are weighed they are passed along from one man to another and piled from floor to ceiling in one of the steel vaults under the department building. It was suddenly noticed that the great pile of bags was toppling, and at the cry of warning the six men in the vault had barely time to escape before the mass came tumbling down with a crash. The bags were broken in the fall and the bright silver coin was heaped on the floor in a hopeless jumble. The store of public currency was literally shov-

elled up, new bags were procured and the money was carefully counted and sealed in the regular way. It took a whole day to get the money back into the bags.

A year or so ago Major Rose, the Texas Commissioner of Agriculture, secured some cottonseed from Egypt, which he distributed among planters of Southern Texas. In Peru this cotton does not have to be planted more than once every five or six years, the stalk standing through the winter and coming out green in the spring, like sugar-cane. It was thought probable that the cotton would grow equally as well in Southern Texas, but thorough experiment proves it to be a total failure. Among others who received seed from Major Rose was L. Allen, of San Antonio. Mr. Allen planted the seed on his farm, just south of that city, where the cotton came up, looked well and prospered finely during last year's drouth, when ordinary Texas cotton was almost burned up. The winter proved too severe for it, however, and in a letter to Major Rose Mr. Allen says he dug up some of the roots, and in each instance found them dead and perfectly devoid of life.

A Missourian, in speaking of Governor Stevens, of his State, said today: "He is a kindly disposed man, and has many eccentricities. He has amused the people more than once since he took his office. It had been the custom in Missouri for some years for the Governor to release two prisoners on each of the three principal holidays—July 4, Thanksgiving Day and December 25. Governor Stevens, without giving any reason at all, increased the number to three, and will exercise clemency on that ratio during his term. He calls the men in and gives them a little talk before bestowing their pardon upon them. He lectures them as to their duty, warns them against falling back into old ruts, points out how they may hope to regain the confidence of people, and, in parting, gives each a cordial handshake. He makes the whole proceeding as fatherly and as encouraging as possible. He caused the latest trio he released to stare at him pretty hard when he remarked that he had no doubt there were many innocent men in prison, and many men who ought to be in prison walking the streets free.

The continual growth of the great cities of the world has of late attracted much attention, particularly on the part of students of sociology and hygiene, and at the recent Hygienic Congress this subject was treated in a lecture by Dr. Stephan Sedleczek, who produced statistics of the increase in population of the greatest cities of the world since 1800. He showed some very interesting facts. The population of Amsterdam, Birmingham, Brussels, Manchester and Rome doubled in that period; Copenhagen and Marseilles have now a population three times as large as at the beginning of this century; London, Lyons, Paris, St. Petersburg and Prague have quadrupled in the number of inhabitants within the last ninety years; Breslau, Dresden, Hamburg, Cologne and Vienna have five times as many people; Leeds, Liverpool and Warsaw six times as many; Glasgow and Sheffield seven times as many; Munich eight times as many; Berlin, Budapest and Leipsic, nine times as many; Baltimore, ten times as many; New York and Philadelphia, twenty-five times as many; Chicago, 245 times, and Brooklyn, 339 times as many as ninety years ago. Dublin, while slightly larger now than ninety years ago, has lost 17,000 inhabitants within the last forty years, and is the only large city in Europe which shows a retrograde movement in its population.

As much glory as Nansen brought to Norway from the north a certain Lieut. De Gerlache is about to seek for Belgium at the other end of the world. His vessel, the steam bark Belgica, is now at Antwerp preparing for an exploring voyage to the Antarctic, and the residents of the city are intensely interested in both ship and commander. When she arrived to take in stores she was greeted with salutes from the fort at Saint Anne, (Tete de Flandre,) and all the shipping in port was decorated in honor of the handsome little vessel. Her hull is protected by a formidable armor of the hardest possible wood, bois de fer, as a protection against the pressure of antarctic ice. At her bows she carries a powerful steel spur for cutting her way through ice floes. The interior arrangements are cleverly made with a view to comfort, warmth, and economy of space, for not a single corner is wasted. The cabins and saloons are heated from the engine rooms, and as an extra precaution layers of felt are laid in between all the partitions to prevent the heat from escaping. The latest improvements and machinery for whaling are on board the Belgica, whose appearance is unique, and whose barrel, perched on the top of her mast for the "lookout," catches the eyes of the curious. The Belgica registers 250 tons, and makes seven knots with her 150-horse power engines, though with sails set she can easily make nine knots. There is on board the usual stock of arctic clothing, snow-shoes, or "skis," and a splendid collection of the most modern scientific instruments, of which Lieut. De Gerlache is extremely proud.

A REMARKABLE MEMORY.

That Displayed by the Vice President of the Confederacy.

Alexander H. Stephens, vice president of the Confederacy and Governor of Georgia, had a remarkable memory, says Col. C. W. Seldell, who was for a long time his private secretary. Once, says the Colonel, when we were in Washington, a big delegation visited the city to urge Dakota's claims to Statehood.

The delegates sent word to the distinguished Georgian that they would call on him at his hotel, and at the appointed time they filed into his parlor and were introduced.

As Mr. Stephens was at that time disabled by a fall he sat in his rolling chair in the middle of the room and held a running conversation with his visitors. There were about a hundred Dakotans present, stalwart, handsome men, representing the best type of Western manhood.

After they had sampled some fine old Georgia corn whisky their host discussed the matters in which they were most interested, and occasionally addressed one of the strangers personally, naming him as he spoke.

During the evening he singled out in this way at least twenty of his guests, and astonished us all by his ready recollection of names and faces. Every man in the crowd got the idea into his head that something striking or attractive in his personality had favorably impressed the little man in the rolling chair, and I could see that the delegates were delighted with their reception.

When they had bowed themselves out I asked Mr. Stephens how he managed to hold so many names and faces in his memory.

"Oh it is a mere trick," he replied. "I simply concentrated my attention upon about twenty names and faces, and as they were scattered around the room it naturally surprised my visitors when I turned to them and addressed them by name. Of course, it caused every man to believe that he had deeply impressed me."

Never deem it a light or unimportant matter to cultivate in the young that internal sense and appreciation of beauty which gladly respond to all real beauty, whether in nature, in art, in life, or in character, for you are thus planting seeds which may grow and develop into a richness of flower and fullness of fruit little dreamed of.

No Use to Cry.

No use to fret and worry and itch and scratch. That won't cure you. Tetterine will. Any sort of skin disease, Tetter, Eczema, Salt Rheum, Ringworm or mere abrasion of the skin. At drug stores, or by mail for 50c. in stamps from J. T. Shuptrine, Savannah, Ga.

Beware of Ointments for Catarrh That Contain Mercury,

as mercury will surely destroy the sense of smell and completely derange the whole system when entering it through the mucous surfaces. Such articles should never be used except on prescriptions from reputable physicians, as the damage they will do is ten fold to the good you can possibly derive from them. Hall's Catarrh Cure manufactured by F. J. Cheney & Co., Toledo, O., contains no mercury, and is taken internally, acting directly upon the blood and mucous surfaces of the system. In buying Hall's Catarrh Cure be sure to get the genuine. It is taken internally, and is made in Toledo, Ohio, by F. J. Cheney & Co. Testimonials free.

Sold by Druggists, price, 75c. per bottle.

Hall's Family Pills are the best.

Fits permanently cured. No fits or nervousness after first day's use of Dr. Kline's Great Nerve Restorer. $2 trial bottle and treatise free. DR. R. H. KLINE, Ltd., 931 Arch St., Phila., Pa.

Mrs. Winslow's Soothing Syrup for children teething, softens the gums, reducing inflammation, allays pain, cures wind colic. 25c. a bottle.

I cannot speak too highly of Piso's Cure for Consumption.—Mrs. FRANK MORSE, 215 W. 23d St., New York, Oct. 29, 1894.

If afflicted with sore eyes use Dr. Isaac Thompson's Eye-water. Druggists sell at 25c. per bottle.

MOUNT LOOKOUT INSTITUTE

—FOR—

YOUNG LADIES,

Opens 15th of September, 1897.

Is beautifully situated, at Bellview, near Gadsden, on one of the peaks of Lookout Mountain. It is famous for its healthy and salubrious climate, and picturesque landscape.

Mount Lookout Institute is reasonable in charges; one hundred and sixty-five dollars pays board and tuition in all literary branches for entire session of nine months.

For further information, apply to

MISS GEORGIETTE CLARKE, Principal, or F. L. HOLMES, Business Manager, Gadsden, Ala.

BETTER THAN KLONDYKE. Men and women wanted to establish branch agencies to sell guaranteed Colorado Gold Mine Stock. Reasonable commissions. For information, address, BEN A. BLOCK, Member Colorado Mining Stock Exchange, 303-307 Symes Building, Denver, Colorado.

CANCER CURED AT HOME; send stamp for book. Dr. J. B. HARRIS & CO., Pike Building, Cincinnati, Ohio.

Am. N. U. No. 35 1897.

NOTES AND COMMENTS.

After all it isn't so very remarkable that a Chicago man who recently failed for $1,000,000 should have "kept all his accounts in his head." His creditors are now seeing dividends "in their minds."

Improved sanitation, including clean streets, has reduced the mortality rate in New York from 27.15 per thousand in 1891 to 19.63 in 1897. The rate in London has been reduced to 17.25 by similar measures covering a longer period.

In England it was stated at a meeting of farmers that one acre under glass exceeded 100 acres in producing a profit, and that the labor and cost was no greater in proportion to area than for 100 acres, excepting the original cost of the glass and fixtures.

Paris has voted $20,000,000 to the Exposition of 1900, or more than double the amount appropriated for its last exhibition. Two great palaces will be erected in the Champs Elysees, and the Seine, crossed by a monumental bridge, is to be transformed into a Venetian canal, with terraced banks and ornamental pavilions.

An old colored woman, a former slave, who died the other day in Oakland, Cal., was commonly reputed to be 102 years old, and the death certificate so stated, but documentary proof has since been produced showing that she was only eighty-six. Many other reputed centenarians might suffer equal deductions in years if the truth could be established as easily.

"It is a remarkable fact," says a contributor to Knowledge, London, "that the two countries which are now competing most keenly with us in the industrial race—especially in those departments allied to engineering—are Germany and the United States; two which have for many years been in the van in the matter of providing facilities for education in matters pertaining to the industrial arts."

According to an estimate in the Sun, clergymen in preaching average about 90 words a minute, campaign speakers 110, and senators in debate from 150 to 200. Very rapid readers find difficulty in uttering intelligently so many as 275 words a minute. And yet a story is going the rounds about a stenographer who is able to write 402 words in 60 seconds. But of what practical use is such excessive rapidity?

To what extent flogging is still tolerated by English law is shown by certain prison returns just presented to Parliament, from which it would appear that no less than sixteen hundred floggings per annum take place in the local and convict prisons of the United Kingdom. Besides these, there are six hundred and seventy floggings a year in the military prisons, which means that the floggings of soldiers belonging to the British army average nearly two a day.

Not in years has there been such strife among the big cities, east and west, for commercial supremacy. New York, Chicago, Philadelphia and Baltimore are all striving to get the business of interior merchants and shippers of farm produce. This energetic competition among the trade centers must prove indirectly helpful to the farmer, because it means a further whittling down of middlemen's expenses and freights on what the farmer has to buy and has to sell.

The undependable character of many of the mighty modern engines of war has been forcibly illustrated in connection with the late manoeuvres of the British fleet. Both the Mars and the Terrible, the former a monster of 14,900 tons, were suddenly placed entirely out of the range of action by trouble with their high pressure cylinders. The truth is that naval construction at the present day is largely in an experimental stage. We have discarded sails and we cannot depend on our engines.

The national debt during the last five years in England shows an average daily increase of nearly $100,000. During the same period the national debt of the United States shows an average daily increase of more than $125,000. France's debt increased $120,000 daily, Germany's debt over $130,000, while that of Russia shows a daily growth of not less than $405,000. France's national debt to-day is the largest, heading the list with $6,000,000,000. Russia comes next, then Great Britain and then Germany.

"The East does not know," says the Denver Republican, "and will not believe that Colorado is a gold-producing State, except in a moderate way. Above all, it does not know that it will surpass California this year, and that in the course of a few years it will go ahead of the Rand district in South Africa. People are ready enough to believe stories of the discovery of almost fabulous wealth in the Yukon Valley, but they turn a deaf ear to the statement that Colorado is one of the greatest gold regions in the world."

Ireland of prehistoric times was the gold country of Europe. In no other country, at any rate, has so much manufactured gold of early ages been found, not less than four hundred specimens of Irish gold antiques being contained in the museum of the Royal Irish Academy alone, while the British Museum gold antiques, illustrative of British history, are entirely Irish. Trinity College, Dublin, has many fine examples, and there are large private collections. Native gold occurs in seven localities in Ireland, and the ancient miners may have had sources of supply that are now worked out or lost.

The managers of St. Elizabeth's Insane Asylum in Washington are engaged in an experiment that will be watched with great curiosity by those who are interested in the care of that class of unfortunates. A farm has been rented near Oxen Hill, Md., which contains fifty acres of good garden soil, twenty acres of hill side, sixty acres of corn and wheat land, with about one hundred acres of woodland and pasturage. New buildings have been erected, modern implements and machinery have been secured and skilled farmers have been employed, who have the patience and judgment to deal with men and women who are mentally distracted. Under these conditions an attempt will be made to solve the problem of the labor cure for the insane. Each patient will be intrusted with a certain degree of responsibility and persuaded but not compelled to undertake a certain amount of labor, which, with a diet carefully regulated and regular hours of sleep and recreation, will furnish an experiment under the best conditions possible. As Dr. Godding, the superintendent of St. Elizabeth's, put it, says the Chicago Record: "It is the intention to establish a pioneer colony of insane men, carefully selected from the quiet class of inmates, to whom a home where they can sit under their own vine and fig tree, enjoying the fruit of their labors, will be something hitherto unknown to their hospital life. A moderate outlay for inexpensive farm cottages, a little patience in the development of the work and an abiding faith in the result are all that is needed to take them away from the hospital atmosphere and out of the new farm vistas to open wider horizons to the every-day life of the insane."

THE GREAT LAKES.

Some Interesting Features About Those Vast Inland Seas.

Reports from the great fresh water lakes are to the effect that their level is much above what it was last year at this season. Fishermen on Lake Ontario, for instance, claim that the water of that lake is eighteen inches higher than it was in May, 1896, and three feet above the level of last summer. This increased volume of water is doubtless due to the melting of the great body of snow which fell last winter on the drainage area of these basins and to the abundant rains of the spring. The same heavy precipitation elsewhere has caused the greatest flood in the Mississippi River that this generation has known.

Two years ago, in 1895, the level of the lakes was extraordinarily low, and much apprehension was felt lest a permanent change had taken place and that hereafter a lower level of water would be the rule. This condition, however, was easily attributable to the dryness of the season, a much smaller quantity of water having fallen over the drainage area than the average. The level of the lakes is known to oscillate from year to year, but there is no trustworthy data on which to base calculation in the matter. The conditions are constantly changing also. A larger area of land is being brought under cultivation, which absorbs more rainfall, and consequently less runs off into the creeks and streams which help to feed the lakes. More forests are also being cut down, and a larger surface exposed to evaporation from the sun.

The meteorological cause for changing lake levels and the causes which come from an increasing population will doubtless continue and cannot probably be controlled. But there are artificial causes which are likely to influence lake levels seriously unless care is taken to regulate and check them.

Among these causes are the Chicago drainage canal, the project for cutting a ship canal between Lakes Erie and St. Clair and the plan of cutting a fourteen-foot channel throughout the whole length of the St. Lawrence River. There are other schemes, but these are the most important. The Chicago drainage canal will, as soon as finished, take 300,000 cubic feet of water per minute from Lake Michigan and ultimately double that amount. The ship canal between Lakes St. Clair and Erie, as projected, will be twenty-one feet deep and seventy-two feet wide at the bottom, and to supply it will require an additional drainage of water from Lakes Huron and Michigan, and consequently from Lake Superior. The enlargement of the Welland Canal has already had some effect in lowering the levels of Lake Erie, and if the channel of the St. Lawrence River is deepened so as to admit larger steamers and more of them to the lake trade, an increased demand will be made for water from the lakes and a further decline in both Lakes Erie and Ontario is probable.

Her Bier a Piano.

The latest thing in biers is a piano, and the credit for introducing the novelty belong to Jessie E. Clinton, a Kentucky music teacher. She had been a pianist and until her health failed a few months ago was a teacher in the Sumerset (Ky.) schools. She was compelled to resign and go to her mother's home in Louisville to die.

While she was able to be up she played daily at her piano, a large square model. When she became too weak to play she had some of her friends play on the instrument.

Just before her death she told her mother that she did not wish to be laid out in a coffin, but upon the piano, which she had owned for ten years. In compliance with her dying wish the body was laid out upon the piano, which was draped in white. There it remained until the funeral services were ended two days later, when the remains were transferred to a casket and buried.

Curious Dinner Menu.

An American traveling in Jerusalem describes an interesting dinner he ate recently at a hotel in Jericho. "We sat on the porch of the hotel at Jericho," he wrote, "after a dinner at which we were served with butter from Norway, cheese from Switzerland, marmalade from London, wine from Jerusalem diluted with water from the well of Elisha, raisins from Ramoth Gilead, oranges from Jericho (in no respect inferior to those from Jaffa or the Indian river, Florida), smoking Turkish tobacco, which, like the Turkish empire, is inferior to its reputation, and a cup of coffee from—the corner grocery of Jericho."

HALL'S
Vegetable Sicilian
HAIR RENEWER

Beautifies and restores Gray Hair to its original color and vitality; prevents baldness; cures itching and dandruff. A fine hair dressing.

R. P. Hall & Co., Props., Nashua, N. H. Sold by all Druggists.

PREFERRED PICK LEAF.

Farmer—Uncle Rufus, if you cut that wood I'll give you a nice turkey for your Sunday dinner.

Uncle Rufus—Thanks, Boss, but I'd rather hab Pick Leaf; I kin git all the fowl I want.

ALABAMA LADIES DON'T LIE

Mrs. W. A. Garrett

Oak Lowery, Ala., writes: Have used Dr. M. A. Simmons Liver Medicine in my family for 10 years, with good results. I think it is stronger than "Zeilin's" or "Black Draught."

Cramps

Are caused by an irritation of the nerves. They are local spasms, frequently the result of uterine disease. There are pinching, gnawing and contractive pains in the region of the stomach extending to the back and chest. They are often the symptom and effect of indigestion. Dr. M. A. Simmons Liver Medicine should be used to stimulate the digestive organs and Dr. Simmons Squaw Vine Wine to give immediate relief and permanent cure.

After the old proprietors of the article now called "Black Draught" were by the United States Court enjoined from using the words constituting our trade name—does not equity require that they stand on their own trade name and merits (if any) of their article, and not seek to appropriate the trade for our article called for and known as Dr. Simmons Liver Medicine, by publishing the picture of another Dr. Simmons on their wrapper and falsely advertising that their article "Black Draught" was established in 1840, that being the year in which our article was established, while no one ever heard of "Black Draught" till after 1876. Why do they advertise that falsehood and associate their article with ours (having the picture of Dr. M. A. Simmons on it) by their publication of the picture of another Dr. Simmons, if not done to unfairly appropriate our trade? Is not the motive apparent?

Pro. T. E. Riley

San Antonio, Tex., says: My wife has used Dr. M. A. Simmons Liver Medicine many years for Sick Headache and never fails to buy a package when she expects to travel. It saves one from taking injurious drugs. For 15 years it has been a necessary medicine in my house.

Caution. Don't be fooled into taking cheap worthless stuff. If the merchant tells you "it is just the same" as M. A. S. L. M., you may know that he is trying to sell you cheap stuff to make a big profit by palming off on you a wholly different article.

The YOUNG Plantation Cotton Seed HULLER AND SEPARATOR.

The result obtained from the use of our machine has been so very satisfactory that we enter upon our THIRD SEASON with a feeling of great confidence. Our machines are durable and thoroughly effective. The ground kernels are left in a fine condition for distributing as a fertilizer. The hulls are valuable food for cattle. Descriptive pamphlet with testimonials from prominent cotton planters throughout the Southern States, together with sample of product from our machine, will be forwarded on application.

Cotton States Machinery Co., SELMA, ALABAMA.

Mention this paper when you write.

"Success" Cotton Seed Huller and Separator.

Nearly doubles the Value of Seed to the Farmer.

All up-to-date Ginners use them because the Growers give their patronage to such gins. Huller is PRACTICAL, RELIABLE and GUARANTEED. For full information Address

"ALABAMA BRAND"
ROLLED OATS

are manufactured from specially selected White Oats. Unlike the cheap Western goods, they are Pan-Dried (by direct fire) more thoroughly than can be accomplished by steam heat, being slightly parched, keeping sweet longer, besides being the most perfectly cleaned from hulls and all impurities of any Rolled Oats in the markets of the world. We bring these goods on in Car Lots, making the boxes and packing the goods in Birmingham, using for this purpose deserving women and children. The goods are the best to be had. Ask for this brand and see that you get it. Do not allow yourself to be imposed upon by accepting inferior goods when you ask for

"ALABAMA BRAND." Remember every package guaranteed.

McMILLAN-LEE CO.,
BIRMINGHAM, ALA.

A SONG OF LIFE.

"Life is life, and heeds no warning—
Meets and greets the years;
Death is Night, and Love, Good Morning:
Tell me not of tears!

Soft the dewdrop seeks the blossom
Winnowed through the air;
Take the daisy to thy bosom
While the dewdrop's there.

Through the cold clouds secrets sunny,
Splendor-woven, fall;
With the gold bees seek the honey—
Leave to Time the gall.

Shall an angel bear thee higher
Than the stars above?
Trust, but let not heaven's desire
Martyr human love!

Thankful that Love's arms are clinging,
Cast with Love thy lot;
Heed life's airy minstrel singing
As if Death were not!

Time will lighten, or will darken—
Give thee gloom or gleam;
If at last no heaven shall harken—
Thou hast dreamed thy dream!

—Frank L. Stanton, in Atlanta Constitution.

EDDIE'S OPINION.

BY ANNA SHIELDS.

One of the most trying and unnatural positions in which a woman can ever be placed is certainly that of a young widow dependent upon the relatives of her late husband. If they are all that is tender and kind, cherishing her for the sake of the dead to whom they gave mutual love, it is still trying to eat the bread of those upon whom she has not the claim of kinship.

But Ella Talbot had not even the consolation of kindness given for her husband's sake.

The Talbots were an old family, rich and proud, holding their name far above any of the people who surrounded them. In the handsome family mansion at Ryegate, Mrs. Rudolph Talbot reigned over a family consisting of one son, two daughters, an unwelcome daughter-in-law, and a little grandson. When Edward, second son of the Talbots, announced his intention of marrying Henrietta Waring, daughter of an old friend, the Talbots, in solemn council, decided that the Warings were of good family, not quite so exalted, certainly, as the Talbots, but sufficiently so to compensate for the want of dowry with the bride, who was an orphan, losing her father just one year before her marriage.

It was unfortunate that Edward was not rich, the whole of his father's property having been left to his widow, until her death should cause a division for the benefit of the children. But Edward had studied law, as a strictly aristocratic profession, and would doubtless be a judge of the supreme court in time.

He took his pretty bride, only 17 years old, to New York, and after four years of happiness he died suddenly of heart disease.

Etta, crushed, heart broken, made no resistance when Rudolph Talbot took her home to Ryegate, broke up the New York establishment, and seemed to consider it a settled matter that henceforth she was one of the family. The poor little sensitive widow accepted it all in deepest gratitude, as kindness shown for Edward's sake, and humbly hoped to repay love with love.

But the first days of mourning were not over when she knew that it was pride, not love, that had governed the Talbots.

"It did not look well for Edward's wife to be in New York alone," Mrs. Talbot said, and when Etta timidly proposed seeking some employment a cry of horror greeted her.

"She was a Talbot now," she was told, "and no Talbot yet had ever disgraced the family name by teaching, or seeking work of any kind."

So, being a timid woman, and tenderly careful of Edward's name, simply because it was his, Etta accepted her position. Kate and Ellen, tall, handsome girls of 19 and 20, chose to consider Etta, as a widow, and mother of three-year-old Eddie, as of the same age as their mother, although her maternity and deep mourning did not take from the childlike beauty of her winning face, with its soft blue eyes and golden hair, to which her dress gave pathetic grace.

A year of quiet, uncomplaining martyrdom stole the roses from Etta's cheeks and made her step languid, but she was very lovely even then. Mrs. Talbot had discovered that her daughter-in-law had perfect taste, deft fingers, and what the lady called a "perfect genius" for dressmaking and millinery, and had Etta known it, her labors in these departments saved far more than her own expenses in the house.

But she only knew that she seemed never to please, was always taunted as a dependant, and yet prevented from earning her own living. Only for brown-eyed Eddie, his father in miniature, I think the poor little widow would have longed to know her young life ending, until she had been a year at Ryegate, and John Talbot came from China to visit his relatives. In that rich and select family, John was an acknowledged prince, heir to a vast fortune left by his father, who was, Mrs. Talbot said, "something in China," not meaning a teacup or platter, but thus vaguely glossing over the fact that he was a successful tea merchant.

But John, at 30, had not soiled his patrician hands in trade, but had traveled in Europe and Asia, Japan and South America, returning to Canton to receive his father's last blessing, wind up his affairs, and then visit his parents' native land, intending to reside there.

He purchased a house in New York, furnished in palatial style, installed a housekeeper, and then graciously accepted Mrs. Talbot's invitation to visit Ryegate.

And after the first visit, made a year after poor Edward's death, he seemed to find the place wonderfully attractive, for he came again and again, till his visits in six months would have summed up to a handsome total. It was in June, when the Talbots were talking of the customary month at the seaside, that a note from John, announcing his intention of making a week's visit, threw them all in a flutter.

"I think," Mrs. Talbot said, "he must certainly say something definite this time. But, really, I cannot tell whether it is Kate or Ellen he most admires."

"He says blue eyes are the softest in the world," simpered Ellen, who was blonde.

"But he admires Kate's voice!" said her mother; he always stands at the piano while she sings. By the way, Etta, practice those new accompaniments again. Kate's voice sounds far better when she stands to sing."

"And you need not come into the parlor until I send for you," said Kate, sharply; "the way you fling yourself at John's head is disgusting—at your age."

Etta's cheeks flamed.

"You are the first person," she said, with quiet dignity, "who ever accused me of forward conduct. I have no desire to be in the parlor."

And taking Eddie down from his high chair, she led him upstairs, knowing in her trembling little heart that she did desire to see John Talbot, but also that she had given no one reason to taunt her with the wish.

"Don't cry, mamma; oh, don't!" pleaded Eddie, seeing the tears dropping on the sewing. "When I'm a big man, I'll tell 'em all! Ev'y one 'cept uncle. He takes me to ride, and don't scold you."

And yet Etta thought Rudolph's contemptuous endurance of her presence was as hard to bear as active animosity. To Eddie he was kinder, as a "disappointment" had made him a bachelor, and Eddie was probably heir to his name and possessions.

"Suppose you run to the summer-house, Eddie," she said, "until mamma finishes this dress."

"Will you come?"

"Very soon, dear. Get me some buttercups."

The child sped away to find the golden-hued treasures, seeing his grandmother and aunts set out in the carriage upon a shopping expedition. He was arranging the buttercups upon the summer-house table, when, with a cry of ecstasy, he dropped them all and raced down the path to meet a tall, bearded man, who lifted him in his arms.

"Come into the summer-house, Cousin John. Eve'ybody is gone out but mamma, and she is coming presently when she gets Aunt Kate's d'ess done. I hate Aunt Kate!"

John Talbot smiled, and, having gained the summer-house, took Eddie on his knee and produced a wonderful mechanical monkey that, being wound up, danced and capered on the table in fine style.

"Oh!" sighed Eddie, in delight, when he understood the treasure was his own. "I wish you was my papa!"

"So do I," whispered John, in his ear. "But why do you wish so, Eddie?"

"'Cause papas is so lovely! Grandmas is d'edful, and so's aunties. They scold and scold, and make mamma c'y and c'y. I hate 'em! But papas is kind, and mammas—!" and the little fellow clasped his hands; "mammas is just splendid! Mammas is never c'oss or scoldin', only they c'y." R was a letter Eddie had not yet mastered.

"But why do they cry?" asked John.

"'Cause they is scolded when they ain't bad. Aunt Kate scolds if mamma don't sew all the time and—today Boh, Cousin John, how could mamma fling herself at your head? Wasn't it a book, or a pitcher, or something? I t'ied, when I came downstairs, to fling myself at the table, and I banged my head and tumbled down."

A heavy frown gathered between John Talbot's eyes.

"Who said that?" he asked.

"About mamma?"

"Yes. Who said it?"

"Aunt Kate, when she telled her not to come in the parlor till she sent for her."

"But how did she do it?"

"She never did it."

Quick, emphatic, almost fierce, were the spoken words, and John's eyes were full of wrath. "The little dove," he murmured, "when I can scarcely win her to lift her eyes to mine. My poor little darling!"

He never noticed that Eddie was winding the mechanical toy backward till a cry of delight roused him from a long reverie.

"Here comes mamma!"

And then he looked up to see Etta, standing in the doorway, very pale and weary looking, but with the mother smile for Eddie upon her eyes and lips.

"Oh, Cousin John, please wind it up for mamma to see the monkey dance! See, mamma? Look! And it is mine—my own! Cousin John says so. Oh, mamma, don't you wish Cousin John was my papa?"

Again the quick, sensitive color rushed to Etta's cheeks. She bent over the dancing monkey, trembling, and hoping John would not notice her confusion. But it was not lessened when a deep, rich voice said:

"Eddie does not wish it more than I do, Etta. Darling, is it too soon to speak. I have waited, fearing to wound you, but even the love you have lost could not have been deeper, stronger than mine. Etta, may I be Eddie's papa?"

"Oh, please, mamma, say yes!" pleaded the child, trembling with eagerness. And Etta, lifting the shy, sweet face, whispered the word John Talbot longed to hear.

The morning sped away only too quickly, and then, before the other ladies returned, John Talbot set his face cityward.

"Until tomorrow," he said, clasping Etta's hand, "when I come to claim you. You say you have a dress that will do to travel in. That must be your wedding dress, for my betrothed shall no longer be an unpaid seamstress for the Talbots."

"Will you tell them?" she said. "They will be so angry."

"Say nothing, then, till I come!"

And Etta obeyed. But at luncheon the next day, in arranging the programme for John's visit, Kate repeated her orders regarding Etta's absence from the parlor and Eddie flamed up.

"My mamma don't want to come in your old parlor," he said, "'cause, when Cousin John comes, he's going to be my papa!"

Had a bombshell fallen upon the well-ordered table the effect could scarcely have been greater. The whole family, Etta included, were literally struck dumb, and before speech returned, John Talbot appeared at the low, French window of the dining-room. One glance told him the situation, and he said, calmly: I see, Etta, you have told your cousins of the honor and happiness you have conferred upon me. I have a carriage at the gate, and Mr. Rogers is waiting for us at the church. Will you put on that traveling dress love, and get ready Eddie!"

Then, as Etta obeyed, he continued:

"We had intended to have a strictly private wedding, but I should be pleased to have you all present, if you will join our party."

And swallowing their wrath, the "family" consented to be at the church, rather relieved to have the excuse of dressing to escape a further conversation. So when Etta returned in a hat and dress a little out of date, but pretty and becoming, she found John alone, and, shyly returning his caress, said:

"But, John, I am afraid you will be disappointed when you know me better. We have seen so little of each other that it perplexes me to imagine why you love me."

"Does it?" he asked, laughing. "Well, dear, I have eyes, ears and a heart, and all these warmly indorse that most eloquent of all praise, Eddie's Opinion."—New York Ledger.

Electric Collection Boxes.

An inventive Connecticut man has patented an electric contribution box that will do away with the services of the deacons and forevermore end the "passing of the hat" in churches where the new device is in place. Along the back of each pew is to be a slender rail, from which a small basket hangs. When the proper time arrives for taking up the collection, the minister will press a button and all these cars will move along in front of the worshippers. As they pass slowly along the people can place their contributions in the baskets, which pass from one aisle to the other and then return and automatically dump their contents into small receptacles designed to hold the coins. After the congregation has been dismissed the deacons can open the boxes and remove the contents, much as the ushers in theatres take the dimes from the boxes in which opera glasses are placed. As there will be rails in front of all the pews, and all of them will move simultaneously when the button that releases them is pressed, the taking up of the collection will occupy much less time than under the system now generally in vogue.—New York Herald.

Accommodating.

Lady (sitting for her portrait)—And make my mouth small, will you—ever so small? I know it is large, really, but make it quite tiny, will you?

Artist (politely)—Certainly, madame. If you prefer it, I will leave it out altogether.—Boston Traveler.

PERSIAN SINKING ROOMS

ORIENTAL DEVICES FOR KEEPING COOL IN HOT WEATHER.

Palatial Quarters Built of Glass Which Lie on the Bottom of Lakes—An Indian Prince's Floating Palace—"Cooling Galleries" of Chinese Millionaires.

The question of how to keep cool during the hot months has been solved, not in New York, but in far away climes where heat and humidity are constantly battling with each other to see who can inflict the most punishment on a suffering people.

For centuries the denizens of these hot regions have been devising means to evade the intense heat, and have struck upon many ways to make life not only bearable but really a pleasure, on even the hottest days. In some countries in the torrid zone, such as Persia, China and India, great mechanical devices have been invented that afford comfort and infinite enjoyment to their rich and lucky owners. Not merely are they cooling inventions, but they are specimens of great mechanical skill as well, embodying many of the marvellous results achieved by modern science. Particularly is this the case with the "sinking rooms" of Persia, two of which are owned by Oriental millionaries and float lazily upon the transparent surface of Lake Niris, a beautiful sheet of water near the city of Klur, in the southwestern part of the empire. They are sunk by means of heavy weights and are connected by huge air pipes to the shore above. When the weather becomes unbearable on hot days these Persian princes repair to the submarine rooms and slowly and silently sink to the cool watery retreats at the bottom of the lake.

Equally ingenious in the scheme of the Prince of Agra, in India, which, instead of being a sinking room, is a floating palace of the most stupendous and magnificent proportions. Although of only two stories, its height is immense, the rooms being grand vaulted chambers, furnished in the most gorgeous Oriental manner. All the chairs have golden arms, and precious stones are set in the backs. The wall decorations are beautiful beyond description, while the ceilings are tinted to represent the sky, silver stars appearing here and there on the dark blue background. The palace is made of both wood and stone, but so constructed that it floats with ease. When not in use it is moored to the banks of the River Jumna. Here the Prince and his royal retinue betake themselves on sultry afternoons, and lazily the palace glides down the river to the soft sweet music of soothing harps. Up and down the tide it majestically floats like a huge white swan, while within the royal guests sip cooling beverages and idly dream away the sultry hours. While the sun revels in its fiery glory over the parched lands cooling breezes gently penetrate the open sides of this fairy castle and in playful little gusts rustle the delicate silk curtains that screen the openings.

In China a large part of the time is spent out of doors, and the Celestials have planned many houses with special "cooling galleries." Many of the great rich men of the yellow kingdom have their own private parks, in the centre of which are beautiful artificial lakes. Overhanging these are mammoth, gaudily decorated balconies, on the floors of which exquisite silken rugs and tapestries are spread. Lounging settees are scattered around, and here and there is a dainty little table, upon which rests a small pot containing the choicest of tea. To this charming retreat the Celestial millionaire retires and passes the heated portion of the day sipping his tea and enjoying the exquisite view that stretches out before his eyes. Richly colored fish disport themselves in the silvery waters beneath, while from the hillsides are wafted cooling breezes that gently sweep over these dreamland bowers. Little yachts glide gracefully by, and now and again the notes of a paradise bird floats upon the air. Numerous servants answer his every call, and in quiet revery the hours pass by until the evening shadows settle upon the beautiful scene.

In Borneo, where it is intensely hot, the natives have two separate villages, one for winter on the mainland and the other for summer, built out in the water. Every house stands on high poles and can be reached only by boat. But it is cool here, and whole villages regularly move from the land to the water settlements every season.—New York Herald.

Must Change Names.

Henceforth the names of monarchs and of princes who are now reigning or who have reigned in Prussia may not be used without permission as signs for cafes and restaurants in that country. This is the text of a recent cabinet decree, which, although it has been in force only a few days, has already been applied in Berlin. A public house which had "Kaiser Friedrich" for its sign has been obliged to change its name.

In the twenty-one years of its existence the American Library association has increased its membership from 104 to 800.

QUEER KENTUCKY FOWLS.

A Cross Between Minorcas and a Bird From the Falkland Islands.

R. L. Elkin, a prominent farmer near Lancaster, Ky., has devoted several years to raising domestic fowls of different breeds, and has now on hand a few fowls which are attracting the attention of the public on account of their unusual color, size, and form, and their aptitude to imitate, which makes a near approach to intelligence and bids fair to dispense with errand boys, shepherd dogs, and telephones. They are a cross between the Minorca and a fowl which was sent him by his friend, Colonel John Miller, now United States Consul at Falkland Islands, which in many respects resembles the parrot, though not so clumsy.

The fowls weigh about three pounds, have sharp claws, a long beak, slightly curved, large yellow eyes, a white crest, dark green plumage, and an intelligent expression. They fly rapidly, and although domesticated they have a tendency to roam for hours at a time. He calls them "minims" because of their size. From the time they come from the shell they are easily handled and are fond of human society, always manifesting a disposition to imitate human action and make articulate sounds approximating the language of the parrot. They are non-sitters, but their eggs will hatch in fourteen days. They will only roost in trees or on the roof of a house. On the approach of a stranger they make a shrill clatter like the guinea fowl, and when anything unnatural is about to occur they make a loud noise, which sounds like the words, "Look out!" Their timely warning is invaluable in many instances. If a dog or any other animal ventures into their inclosure he meets with such a reception as to insure a speedy departure, with no inclination to return. The sharp curved beak and sharp claws have inflicted many wounds on intruders.

Unerring instinct seems to give them an accurate idea of the time of day, and when the regular routine of farm work has been performed in sight of them they seem to realize any delay in the same work on a succeeding day. Mr. Elkin's bluegrass pasture in which his milch cows graze contains about fifty acres and extends up to the barnyard. He asserts positively that the cowboy, who always fed them after milking, was late coming from the field one evening, and he saw two of the fowls fly away in the direction of the cows, one of which was lying down. They lighted upon her and induced her to rise by a gentle touch with their claws. The same inducement was applied to the whole herd until they were marched to the milk pen. These acts are the result of observation and the fowls bid fair to become more valuable than the dog to herdsmen.

An incident occurred a few days since which endeared the birds to the owner, and caused him to assert that no price would purchase them. It was a bright afternoon, and his little golden-haired son, Dan, aged four, the pride of his life, had wandered into the avenue between the house and turnpike, to a point about fifty yards from the house, where he had stopped and was playing with a neighbor's dog, which became furiously angry, and, snapping at the innocent child, had torn a part of its dress from its body and was in the act of springing upon it in a manner that told too well that the body would have been fearfully mangled, and that death would have been the result. Three of these fowls were near the scene, and instantly flew into the dog's face, blinding him with the strokes of their wings, inserting their sharp claws into his body, and pecking him in a rapid manner, thus drawing his attention from the child until the father arrived and shot the dog.—Louisville Dispatch.

Heat Curled Up the Rails.

Santa Fe trainmen vouch for the statement that Friday's through California train was flagged by section men two miles this side of Lexington because the rails of the track had been curved by the heat into the appearance of sleigh runners, the heavy spikes having been pulled from the oak ties and thrown into the air by the strain of the bending rails.

The accident occurred but a few minutes before the train was due to pass, and had not the section men been at once attracted to the spot by the noise of the flying spikes the train would have dashed into the break and have been hurled from the track.

Passengers on the train stated that the heat at the point of the accident was terrific. While the repair of the track was going on the occupants of the train sought a wood at one side of the track and remained there until the work was completed. It was two hours before the track was in shape for the train to proceed.—Kansas City Journal.

Love's Young Dream.

Young Man (gazing dreamily at the candy case in a fancy grocery store)—I—I wish to get something real nice for a—a young lady, but I hardly know what to select.

Grocer (briskly)—Very young?

Young Man—'Bout seventeen—she's going to boarding-school.

Grocer—Yes, sir. John! show this gentleman to the pickle counter.—New York Weekly.

CHILTON COUNTY CALL.

SOUTHWARD THE STAR OF EMPIRE TAKES ITS WAY.

VOL. I. NO. 23. THORSBY, ALA., FRIDAY, SEPTEMBER 10, 1897. $1.00 PER YEAR.

EVERYBODY

GOING SOUTH!

The tide of immigration is rapidly turning towards the South. The West and the Northwest has had its day, and the antiquature advice of Horace Greely "go west young man; go west!" has been superseded by the more timely advice of Chauncey Depew and others, "go South young man, go South."

Shrewd investors have observed that the South is on the dawn of a new era of peace and prosperity, and are rapidly investing their wealth where sound judgment assures them that values are increasing. Every section in the South has taken on new life, and through the coming in of new capital a new impetus has been given to the developement of the rich resource so abundently lavished upon the South by a kind providence.

Especially is the case so with the state of Alabama and its centrally located fruit and agricultural lands. Say nothing about its immense mineral fields.

THORSBY, Chilton county, Alabama,

The Ideal Northern Colony,

Located on the famous Chilton plateau is an index to the largest and most prosperous settlements of its days and is a voucher for what capital and labor, combined, will accomplish.

The Concordia Land and Improvement Association, give the following advice to home seekers.

1st, locate on a main line with good shipping facilities.
2nd, locate on an altitude that will insure you good health.
3rd, locate where good water is obtainable.
4th, locate where a few acres of fruits and vegetables will bring you a good living.
5th, locate where you can raise corn, small grain and all kinds of grasses to the capacity of any other state in the Union.
6th, locate where you have a ready market for all products raised.
7th, locate where you will have the benefit of a settlement with churches, schools, and good society, so that your family will feel at home.

Please notice the following and see if Thorsby will do for you:

THORSBY

Is located on the main line of the great Louisville & Nashville Railroad, which directly combines the Gulf with the whole Northern Territory.

THORSBY

Is located on an altitude of 800 feet above sea level, and consequently has an excellent climate, not too hot in summer nor too cold in winter.

THORSBY

Is located where good, pure freestone water is obtainable at a depth from 25 to 40 feet, besides being well watered with springs and creeks.

THORSBY

Is located where farm land can be had in connection with fruit land, and a stranger will be surprised to see its corn and oat fields. If you doubt this, or any other statement, please write the undersigned and you will be referred to people living in nearly every state of the Union who have had the opportunity to see our crops.

THORSBY

Is located 48 miles each way, north and south, from the great mining and manufacturing center, Birmingham, with its 68,000 people, and the Capital City of Alabama, Montgomery, to which points daily shipments are now being made from here.

THORSBY

Is located where 140 Northern families have already cast their lot, and about one-half of them are now on the grounds. Two church organizations and the Thorsby School Society, besides other social circles, are the results of our seventeen months' faithful work towards making Thorsby a success.

For general information and printed matter please write us, and we will give it prompt attention.

TWELVE MEN KILLED.

TERRIBLE RESULTS OF A COAL DUST EXPLOSION.

Men Were Preparing to Leave the Mine When the Accident Occurred—Two Hours Required to Extricate the Bodies of the Dead.

A coal dust explosion in one of the chambers of the Sunshine coal mine, the property of the Colorado Fuel and Iron Company, at Sunshine, sixteen miles southeast of Glenwood Springs, Col., Friday night, killed eleven Italians and one American.

The men were preparing to leave the mine on the day shift when the accident occurred. A shot had been fired and instead of its being a direct explosion, it was what, in miner's parlance, is called a "blow-out"—that is the powder created a flame which shot backward and caught the dust that had accumulated in the chamber, instead of dislodging the seam of coal intended. At the time of the explosion there was a barrel of gunpowder in the chamber, which ignited and aided the disaster, which would have occurred through the coal dust explosion alone. The Sunshine, where the explosion occurred, is a peculiar coal, a combination of anthracite and bituminous, and there is a belief that the gathering of coal dust in the chamber of the mine was due to excessive explosion, caused by a desire to empty the chamber too quickly. In the whole property there are 50 to 55 men employed.

The single chamber where the men were killed was the only one damaged. Two hours after the explosion occurred, the bodies of the dead men were all brought to the surface.

A GOOD BARGAIN.

Secretary Pearce Thinks the Compromise Much Better.

Secretary Pearce, of the United Mine Workers, speaking at Columbus, O., Saturday of the proposed strike settlement, said that the agreement had come at a time when the miners had reached the highest success in the strike and if another week or ten days had passed they would not have been in the condition to demand and secure even a settlement at the 64c rate, much less 65c.

In Illinois and West Virginia quite a large number of miners have resumed work and the probability is that before another week had passed, if a settlement had not been reached, a great many more would have followed their example. The miners' officials knew this, perhaps better than the operator, and it is considered fortunate for the miners that they have secured even an advance of 11c per ton, and the officials should be congratulated by the members of the organization on having secured so material an advance in wages. Within another week, Secretary Pearce said, a settlement could not have been made at a 65c rate.

As a matter of fact, while the national officials have given out the information that they have no doubt that the miners will accept the proposition, there is considerable apprehension as to what action the miners may take regarding the matter. The conservative element will no doubt ratify the action of the officials in agreeing to the settlement, but the other element of the organization may prove rather hard to handle when it comes to a vote on the proposition.

If a majority of the delegates come instructed the result of the convention may be in doubt, but otherwise the action of the national board will doubtless be sanctioned.

No Treaty That Will Affect the Rio Grande

The Territorial Irrigating Commission of New Mexico have authorized one of their number, who is attorney for the Elephant Butte Dam Company, to prepare a protest to proper authorities at Washington against this government entering into any treaty with Mexico that would affect the waters of the Rio Grande.

President Andrade Re-Elected.

The election for president of the Republic was held in Caracas, Venezuela, Thursday. Owing to the great popularity of General Ignacio Andrade, the Liberal candidate, Dr. Rojas Paul and General Hernandez, who were running in the interests of the Conservative and progressive parties, respectively, retired from the contest.

QUEER KENTUCKY FOWLS.

A Cross Between Minorcas and a Bird From the Falkland Islands.

R. L. Elkin, a prominent farmer near Lancaster, Ky., has devoted several years to raising domestic fowls of different breeds, and has now on hand a few fowls which are attracting the attention of the public on account of their unusual color, size, and form, and their aptitude to imitate, which makes a near approach to intelligence and bids fair to dispense with errand boys, shepherd dogs, and telephones. They are a cross between the Minorca and a fowl which was sent him by his friend, Colonel John Miller, now United States Consul at Falkland Islands, which in many respects resembles the parrot, though not so clumsy.

The fowls weigh about three pounds, have sharp claws, a long beak, slightly curved, large yellow eyes, a white crest, dark green plumage, and an intelligent expression. They fly rapidly, and although domesticated they have a tendency to roam for hours at a time. He calls them "minims" because of their size. From the time they come from the shell they are easily handled and are fond of human society, always manifesting a disposition to imitate human action and make articulate sounds approximating the language of the parrot. They are non-sitters, but their eggs will hatch in fourteen days. They will only roost in trees or on the roof of a house. On the approach of a stranger they make a shrill clatter like the guinea fowl, and when anything unnatural is about to occur they make a loud noise, which sounds like the words, "Look out!" Their timely warning is invaluable in many instances. If a dog or any other animal ventures into their inclosure he meets with such a reception as to insure a speedy departure, with no inclination to return. The sharp curved beak and sharp claws have inflicted many wounds on intruders.

Unerring instinct seems to give them an accurate idea of the time of day, and when the regular routine of farm work has been performed in sight of them they seem to realize any delay in the same work on a succeeding day. Mr. Elkin's bluegrass pasture in which his milch cows graze contains about fifty acres and extends up to the barnyard. He asserts positively that the cowboy, who always fed them after milking, was late coming from the field one evening, and he saw two of the fowls fly away in the direction of the cows, one of which was lying down. They lighted upon her and induced her to rise by a gentle touch with their claws. The same inducement was applied to the whole herd until they were marched to the milk pen. These acts are the result of observation and the fowls bid fair to become more valuable than the dog to herdsmen.

An incident occurred a few days since which endeared the birds to the owner, and caused him to assert that no price would purchase them. It was a bright afternoon, and his little golden-haired son, Dan, aged four, the pride of his life, had wandered into the avenue between the house and turnpike, to a point about fifty yards from the house, where he had stopped and was playing with a neighbor's dog, which became furiously angry, and, snapping at the innocent child, had torn a part of its dress from its body and was in the act of springing upon it in a manner that told too well that the body would have been fearfully mangled, and that death would have been the result. Three of these fowls were near the scene, and instantly flew into the dog's face, blinding him with the strokes of their wings, inserting their sharp claws into his body, and pecking him in a rapid manner, thus drawing his attention from the child until the father arrived and shot the dog.—Louisville Dispatch.

Heat Curled Up the Rails.

Santa Fe trainmen vouch for the statement that Friday's through California train was flagged by section men two miles this side of Lexington because the rails of the track had been curved by the heat into the appearance of sleigh runners, the heavy spikes having been pulled from the oak ties and thrown into the air by the strain of the bending rails.

The accident occurred but a few minutes before the train was due to pass, and had not the section men been at once attracted to the spot by the noise of the flying spikes the train would have dashed into the break and have been hurled from the track.

Passengers on the train stated that the heat at the point of the accident was terrific. While the repair of the track was going on the occupants of the train sought a wood at one side of the track and remained there until the work was completed. It was two hours before the track was in shape for the train to proceed.—Kansas City Journal.

Love's Young Dream.

Young Man (gazing dreamily at the candy case in a fancy grocery store)—I—I wish to get something real nice for a—a young lady, but I hardly know what to select.

Grocer (briskly)—Very young?

Young Man—'Bout seventeen—still going to boarding-school.

Grocer—Yes, sir. John! show this gentleman to the pickle counter.—New York Weekly.

A SONG OF LIFE.

Life is life, and heeds no warning—
Meets and greets the years:
Death is Night, and Love, Good Morning:
Tell me not of tears!

Soft the dewdrop seeks the blossom
Winnowed through the air;
Take the daisy to thy bosom
While the dewdrop's there.

Through the cold clouds secrets sunny,
Splendor-woven, fall;
With the gold bees seek the honey—
Leave to Time the gall.

Shall an angel bear thee higher
Than the stars above?
Trust, but let not heaven's desire
Martyr human love!

Thankful that Love's arms are clinging,
Cast with Love thy lot;
Heed life's airy minstrel singing
As if Death were not!

Time will lighten, or will darken—
Give thee gloom or gleam;
If at last no heaven shall harken—
Thou hast dreamed thy dream!

—Frank L. Stanton, in Atlanta Constitution.

EDDIE'S OPINION.

BY ANNA SHEILDS.

One of the most trying and unnatural positions in which a woman can ever be placed is certainly that of a young widow dependent upon the relatives of her late husband. If they are all that is tender and kind, cherishing her for the sake of the dead to whom they gave mutual love, it is still trying to eat the bread of those upon whom she has not the claim of kinship.

But Ella Talbot had not even the consolation of kindness given for her husband's sake.

The Talbots were an old family, rich and proud, holding their name far above any of the people who surrounded them. In the handsome family mansion at Ryegate, Mrs. Rudolph Talbot reigned over a family consisting of one son, two daughters, an unwelcome daughter-in-law, and a little grandson. When Edward, second son of the Talbots, announced his intention of marrying Henrietta Waring, daughter of an old friend, the Talbots, in solemn council, decided that the Warings were of good family, not quite so exalted, certainly, as the Talbots, but sufficiently so to compensate for the want of dowry with the bride, who was an orphan, losing her father just one year before her marriage.

It was unfortunate that Edward was not rich, the whole of his father's property having been left to his widow, until her death should cause a division for the benefit of the children. But Edward had studied law, as a strictly aristocratic profession, and would doubtless be a judge of the supreme court in time.

He took his pretty bride, only 17 years old, to New York, and after four years of happiness he died suddenly of heart disease.

Etta, crushed, heart broken, made no resistance when Rudolph Talbot took her home to Ryegate, broke up the New York establishment, and seemed to consider it a settled matter that henceforth she was one of the family. The poor little sensitive widow accepted it all in deepest gratitude, as kindness shown for Edward's sake, and humbly hoped to repay love with love.

But the first days of mourning were not over when she knew that it was pride, not love, that had governed the Talbots.

"It did not look well for Edward's wife to be in New York alone," Mrs. Talbot said, and when Etta timidly proposed seeking some employment a cry of horror greeted her.

"She was a Talbot now," she was told, "and no Talbot yet had ever disgraced the family name by teaching, or seeking work of any kind."

So, being a timid woman, and tenderly careful of Edward's name, simply because it was his, Etta accepted her position. Kate and Ellen, tall, handsome girls of 19 and 20, chose to consider Etta, as a widow, and mother of three-year-old Eddie, as of the same age as their mother, although her maternity and deep mourning did not take from the childlike beauty of her winning face, with its soft blue eyes and golden hair, to which her dress gave pathetic grace.

A year of quiet, uncomplaining martyrdom stole the roses from Etta's cheeks and made her step languid, but she was very lovely even then. Mrs. Talbot had discovered that her daughter-in-law had perfect taste, deft fingers, and what the lady called a "perfect genius" for dressmaking and millinery, and had Etta known it, her labors in these departments saved far more than her own expenses in the house.

But she only knew that she seemed never to please, was always taunted as a dependant, and yet prevented from earning her own living. Only for brown-eyed Eddie, his father in miniature, I think the poor little widow would have longed to know her young life ending, until she had been a year at Ryegate, and John Talbot came from China to visit his relatives. In that rich and select family, John was an acknowledged prince, heir to a vast fortune left by his father, who was, Mrs. Talbot said, "something in China," not meaning a teacup or platter, but thus vaguely glossing over the fact that he was a successful tea merchant.

But John, at 30, had not soiled his patrician hands in trade, but had traveled in Europe and Asia, Japan and South America, returning to Canton to receive his father's last blessing, wind up his affairs, and then visit his parents' native land, intending to reside there.

He purchased a house in New York, furnished in palatial style, installed a housekeeper, and then gaily accepted Mrs. Talbot's invitation to visit Ryegate.

And after the first visit, made a year after poor Edward's death, he seemed to find the place wonderfully attractive, for he came again and again, till his visits in six months would have summed up to a handsome total. It was in June, when the Talbots were talking of the customary month at the seaside, that a note from John, announcing his intention of making a week's visit, threw them all in a flutter.

"I think," Mrs. Talbot said, "he must certainly say something definite this time. But, really, I cannot tell whether it is Kate or Ellen he most admires."

"He says blue eyes are the softest in the world," simpered Ellen, who was blonde.

"But he admires Kate's voice!" said her mother; he always stands at the piano while she sings. By the way, Etta, practice those new accompaniments again. Kate's voice sounds far better when she stands to sing."

"And you need not come into the parlor until I send for you," said Kate, sharply; "the way you fling yourself at John's head is disgusting—at your age."

Etta's cheeks flamed.

"You are the first person," she said, with quiet dignity, "who ever accused me of forward conduct. I have no desire to be in the parlor."

And taking Eddie down from his high chair, she led him upstairs, knowing in her trembling little heart that she did desire to see John Talbot, but also that she had given no one reason to taunt her with the wish.

"Don't cry, mamma; oh, don't!" pleaded Eddie, seeing the tears dropping on the sewing. "When I'm a big man, I'll tell 'em all! Ev'y one 'cept uncle. He takes me to ride, and don't scold you."

And yet Etta thought Rudolph's contemptuous endurance of her presence was as hard to bear as active animosity. To Eddie he was kinder, as a "disappointment" had made him a bachelor, and Eddie was probably heir to his name and possessions.

"Suppose you run to the summer-house, Eddie," she said, "until mamma finishes this dress."

"Will you come?"

"Very soon, dear. Get me some buttercups."

The child sped away to find the golden-hued treasures, seeing his grandmother and aunts set out in the carriage upon a shopping expedition. He was arranging the buttercups upon the summer-house table, when, with a cry of ecstasy, he dropped them all and raced down the path to meet a tall, bearded man, who lifted him in his arms.

"Come into the summer-house, Cousin John. Eve'ybody is gone out but mamma, and she is coming presently when she gets Aunt Kate's d'ess done. I hate Aunt Kate!"

John Talbot smiled, and, having gained the summer-house, took Eddie on his knee and produced a wonderful mechanical monkey that, being wound up, danced and capered on the table in fine style.

"Oh!" sighed Eddie, in delight, when he understood the treasure was his own. "I wish you was my papa!"

"So do I," whispered John, in his ear. "But why do you wish so, Eddie?"

"'Cause papas is so lovely! Grandmas is d'edful, and so's aunties. They scold and scold, and make mamma c'y and c'y. I hate 'em! But papas is kind, and mammas—!" and the little fellow clasped his hands; "mammas is just splendid! Mammas is never c'oss or scoldin', only they c'y." R was a letter Eddie had not yet mastered.

"But why do they cry?" asked John.

"'Cause they is scolded when they ain't bad. Aunt Kate scolds if mamma don't sew all the time and—today—oh, Cousin John, how could mamma fling herself at your head? Wasn't it a book, or a pitcher, or something? I t'ied, when I came downstairs, to fling myself at the table, and I banged my head and tumbled down."

A heavy frown gathered between John Talbot's eyes.

"Who said that?" he asked.

"About mamma?"

"Yes. Who said it?"

"Aunt Kate, when she telled her not to come in the parlor till she sent for her."

"But how did she do it?"

"She never did it."

Quick, emphatic, almost fierce, were the spoken words, and John's eyes were full of wrath. "The little dove," he murmured, "when I can scarcely win her to lift her eyes to mine. My poor little darling!"

He never noticed that Eddie was winding the mechanical toy backward till a cry of delight roused him from a long reverie.

"Here comes mamma!"

And then he looked up to see Etta, standing in the doorway, very pale and weary looking, but with the mother smile for Eddie upon her eyes and lips.

"Oh, Cousin John, please wind it up for mamma to see the monkey dance! See, mamma? Look! And it is mine—my own! Cousin John says so. Oh, mamma, don't you wish Cousin John was my papa?"

Again the quick, sensitive color rushed to Etta's cheeks. She bent over the dancing monkey, trembling, and hoping John would not notice her confusion. But it was not lessened when a deep, rich voice said:

"Eddie does not wish it more than I do, Etta. Darling, is it too soon to speak. I have waited, fearing to wound you, but even the love you have lost could not have been deeper, stronger than mine. Etta, may I be Eddie's papa?"

"Oh, please, mamma, say yes!" pleaded the child, trembling with eagerness. And Etta, lifting the shy, sweet face, whispered the word John Talbot longed to hear.

The morning sped away only too quickly, and then, before the other ladies returned, John Talbot set his face cityward.

"Until tomorrow," he said, clasping Etta's hand, "when I come to claim you. You say you have a dress that will do to travel in. That must be your wedding dress, for my betrothed shall no longer be an unpaid seamstress for the Talbots."

"Will you tell them?" she said. "They will be so angry."

"Say nothing, then, till I come!"

And Etta obeyed. But at luncheon the next day, in arranging the programme for John's visit, Kate repeated her orders regarding Etta's absence from the parlor and Eddie flamed up.

"My mamma don't want to come in your old parlor," he said, "'cause, when Cousin John comes, he's going to be my papa!"

Had a bombshell fallen upon the well-ordered table the effect could scarcely have been greater. The whole family, Etta included, were literally struck dumb, and before speech returned, John Talbot appeared at the low, French window of the dining-room. One glance told him the situation, and he said, calmly: I see, Etta, you have told your cousins of the honor and happiness you have conferred upon me. I have a carriage at the gate, and Mr. Rogers is waiting for us at the church. Will you put on that traveling dress love, and get ready Eddie!"

Then, as Etta obeyed, he continued:

"We had intended to have a strictly private wedding, but I should be pleased to have you all present, if you will join our party."

And swallowing their wrath, the "family" consented to be at the church, rather relieved to have the excuse of dressing to escape a further conversation. So when Etta returned in a hat and dress a little out of date, but pretty and becoming, she found John alone, and, shyly returning his caress, said:

"But, John, I am afraid you will be disappointed when you know me better. We have seen so little of each other that it perplexes me to imagine why you love me."

"Does it?" he asked, laughing. "Well, dear, I have eyes, ears and a heart, and all these warmly indorse that most eloquent of all praise, Eddie's Opinion."—New York Ledger.

Electric Collection Boxes.

An inventive Connecticut man has patented an electric contribution box that will do away with the services of the deacons and forevermore end the "passing of the hat" in churches where the new device is in place. Along the back of each pew is to be a slender rail, from which a small basket hangs. When the proper time arrives for taking up the collection, the minister will press a button and all these cars will move along in front of the worshippers. As they pass slowly along the people can place their contributions in the baskets, which pass from one aisle to the other and then return and automatically dump their contents into small receptacles designed to hold the coins. After the congregation has been dismissed the deacons can open the boxes and remove the contents, much as the ushers in theatres take the dimes from the boxes in which opera glasses are placed. As there will be rails in front of all the pews, and all of them will move simultaneously when the button that releases them is pressed, the taking up of the collection will occupy much less time than under the system now generally in vogue.—New York Herald.

Accommodating.

Lady (sitting for her portrait)—And make my mouth small, will you—ever so small? I know it is large, really, but make it quite tiny, will you?

Artist (politely) — Certainly, madame. If you prefer it, I will leave it out altogether.—Boston Traveler.

PERSIAN SINKING ROOMS

ORIENTAL DEVICES FOR KEEPING COOL IN HOT WEATHER.

Palatial Quarters Built of Glass Which Lie on the Bottom of Lakes—An Indian Prince's Floating Palace—"Cooling Galleries" of Chinese Millionaires.

The question of how to keep cool during the hot months has been solved, not in New York, but in far away climes where heat and humidity are constantly battling with each other to see who can inflict the most punishment on a suffering people.

For centuries the denizens of these hot regions have been devising means to evade the intense heat, and have struck upon many ways to make life not only bearable but really a pleasure, on even the hottest days. In some countries in the torrid zone, such as Persia, China and India, great mechanical devices have been invented that afford comfort and infinite enjoyment to their rich and lucky owners. Not merely are they cooling inventions, but they are specimens of great mechanical skill as well, embodying many of the marvellous results achieved by modern science. Particularly is this the case with the "sinking rooms" of Persia, two of which are owned by Oriental millionaries and float lazily upon the transparent surface of Lake Niris, a beautiful sheet of water near the city of Klur, in the southwestern part of the empire. They are sunk by means of heavy weights and are connected by huge air pipes to the shore above. When the weather becomes unbearable on hot days these Persian princes repair to the submarine rooms and slowly and silently sink to the cool watery retreats at the bottom of the lake.

Equally ingenious in the scheme of the Prince of Agra, in India, which, instead of being a sinking room, is a floating palace of the most stupendous and magnificent proportions. Although of only two stories, its height is immense, the rooms being grand vaulted chambers, furnished in the most gorgeous Oriental manner. All the chairs have golden arms, and precious stones are set in the backs. The wall decorations are beautiful beyond description, while the ceilings are tinted to represent the sky, silver stars appearing here and there on the dark blue background. The palace is made of both wood and stone, but so constructed that it floats with ease. When not in use it is moored to the banks of the River Jumna. Here the Prince and his royal retinue betake themselves on sultry afternoons, and lazily the palace glides down the river to the soft sweet music of soothing harps. Up and down the tide it majestically floats like a huge white swan, while within the royal guests sip cooling beverages and idly dream away the sultry hours. While the sun revels in its fiery glory over the parched lands cooling breezes gently penetrate the open sides of this fairy castle and in playful little gusts rustle the delicate silk curtains that screen the openings.

In China a large part of the time is spent out of doors, and the Celestials have planned many houses with special "cooling galleries." Many of the great rich men of the yellow kingdom have their own private parks, in the centre of which are beautiful artificial lakes. Overhanging these are mammoth, gaudily decorated balconies, on the floors of which exquisite silken rugs and tapestries are spread. Lounging settees are scattered around, and here and there is a dainty little table, upon which rests a small pot containing the choicest of tea. To this charming retreat the Celestial millionaire retires and passes the heated portion of the day sipping his tea and enjoying the exquisite view that stretches out before his eyes. Richly colored fish disport themselves in the silvery waters beneath, while from the hillsides are wafted cooling breezes that gently sweep over these dreamland bowers. Little yachts glide gracefully by, and now and again the notes of a paradise bird floats upon the air. Numerous servants answer his every call, and in quiet revery the hours pass by until the evening shadows settle upon the beautiful scene.

In Borneo, where it is intensely hot, the natives have two separate villages, one for winter on the mainland and the other for summer, built out in the water. Every house stands on high poles and can be reached only by boat. But it is cool here, and whole villages regularly move from the land to the water settlements every season.—New York Herald.

Must Change Names.

Henceforth the names of monarchs and of princes who are now reigning or who have reigned in Prussia may not be used without permission as signs for cafes and restaurants in that country. This is the text of a recent cabinet decree, which, although it has been in force only a few days, has already been applied in Berlin. A public house which had "Kaiser Friedrich" for its sign has been obliged to change its name.

In the twenty-one years of its existence the American Library association has increased its membership from 104 to 800

QUEER KENTUCKY FOWLS.

A Cross Between Minorcas and a Bird From the Falkland Islands.

R. L. Elkin, a prominent farmer near Lancaster, Ky., has devoted several years to raising domestic fowls of different breeds, and has now on hand a few fowls which are attracting the attention of the public on account of their unusual color, size, and form, and their aptitude to imitate, which makes a near approach to intelligence and bids fair to dispense with errand boys, shepherd dogs, and telephones. From the time they come from the shell they are easily handled and are fond of human society, always manifesting a disposition to imitate human action and make articulate sounds approximating the language of the parrot. They are non-sitters, but their eggs will hatch in fourteen days. They will only roost in trees or on the roof of a house. On the approach of a stranger they make a shrill clatter like the guinea fowl, and when anything unnatural is about to occur they make a loud noise, which sounds like the words, "Look out!" Their timely warning is invaluable in many instances. If a dog or any other animal ventures into their inclosure he meets with such a reception as to insure a speedy departure, with no inclination to return. The sharp curved beak and sharp claws have inflicted many wounds on intruders.

Unerring instinct seems to give them an accurate idea of the time of day, and when the regular routine of farm work has been performed in sight of them they seem to realize any delay in the same work on a succeeding day. Mr. Elkin's bluegrass pasture in which his milch cows graze contains about fifty acres and extends up to the barnyard. He asserts positively that the cowboy, who always fed them after milking, was late coming from the field one evening, and he saw two of the fowls fly away in the direction of the cows, one of which was lying down. They lighted upon her and induced her to rise by a gentle touch with their claws. The same inducement was applied to the whole herd until they were marched to the milk pen. These acts are the result of observation and the fowls bid fair to become more valuable than the dog to herdsmen.

An incident occurred a few days since which endeared the birds to the owner, and caused him to assert that no price would purchase them. It was a bright afternoon, and his little golden-haired son, Dan, aged four, the pride of his life, had wandered into the avenue between the house and turnpike, to a point about fifty yards from the house, where he had stopped and was playing with a neighbor's dog, which became furiously angry, and, snapping at the innocent child, had torn a part of its dress from its body and was in the act of springing upon it in a manner that told too well that the body would have been fearfully mangled, and that death would have been the result. Three of these fowls were near the scene, and instantly flew into the dog's face, blinding him with the strokes of their wings, inserting their sharp claws into his body, and pecking him in a rapid manner, thus drawing his attention from the child until the father arrived and shot the dog.—Louisville Dispatch.

Heat Curled Up the Rails.

Santa Fe trainmen vouch for the statement that Friday's through California train was flagged by section men two miles this side of Lexington because the rails of the track had been curved by the heat into the appearance of sleigh runners, the heavy spikes having been pulled from the oak ties and thrown into the air by the strain of the bending rails.

The accident occurred but a few minutes before the train was due to pass, and had not the section men been at once attracted to the spot by the noise of the flying spikes the train would have dashed into the break and have been hurled from the track.

Passengers on the train stated that the heat at the point of the accident was terrific. While the repair of the track was going on the occupants of the train sought a wood at one side of the track and remained there until the work was completed. It was two hours before the track was in shape for the train to proceed.—Kansas City Journal.

Love's Young Dream.

Young Man (gazing dreamily at the candy case in a fancy grocery store)—I—I wish to get something real nice for a—a young lady, but I hardly know what to select.

Grocer (briskly)—Very young?

Young Man—'Bout seventeen—still going to boarding-school.

GOING SOUTH!

The tide of immigration is rapidly turning towards the South. The West and the Northwest has had its day, and the antiquature advice of Horace Greely "go west young man; go west!" has been superseded by the more timely advice of Chauncey Depew and others, "go South young man, go South."

Shrewd investors have observed that the South is on the dawn of a new era of peace and prosperity, and are rapidly investing their wealth where sound judgment assures them that values are increasing. Every section in the South has taken on new life, and through the coming in of new capital a new impetus has been given to the developement of the rich resource so abundently lavished upon the South by a kind providence.

Especially is the case so with the state of Alabama and its centrally located fruit and agricultural lands. Say nothing about its immense mineral fields.

THORSBY, Chilton county, Alabama,

The Ideal Northern Colony,

Located on the famous Chilton plateau is an index to the largest and most prosperous settlements of its days and is a voucher for what capital and labor, combined, will accomplish.

The Concordia Land and Improvement Association, give the following advice to home seekers.

1st, locate on a main line with good shipping facilities.

2nd, locate on an altitude that will insure you good health.

3rd, locate where good water is obtainable.

4th, locate where a few acres of fruits and vegetables will bring you a good living.

5th, locate where you can raise corn, small grain and all kinds of grasses to the capacity of any other state in the Union.

6th, locate where you have a ready market for all products raised.

7th, locate where you will have the benefit of a settlement with churches, schools, and good society, so that your family will feel at home.

Please notice the following and see if Thorsby will do for you:

THORSBY

Is located on the main line of the great Louisville & Nashville Railroad, which directly combines the Gulf with the whole Northern Territory.

THORSBY

Is located on an altitude of 800 feet above sea level, and consequently has an excellent climate, not too hot in summer nor too cold in winter.

THORSBY

Is located where good, pure freestone water is obtainable at a depth from 25 to 40 feet, besides being well watered with springs and creeks.

THORSBY

Is located where farm land can be had in connection with fruit land, and a stranger will be surprised to see its corn and oat fields. If you doubt this, or any other statement, please write the undersigned and you will be referred to people living in nearly every state of the Union who have had the opportunity to see our crops.

THORSBY

Is located 48 miles each way, north and south, from the great mining and manufacturing center, Birmingham, with its 68,000 people, and the Capital City of Alabama, Montgomery, to which points daily shipments are now being made from here.

THORSBY

Is located where 140 Northern families have already cast their lot, and about one-half of them are now on the grounds. Two church organizations and the Thorsby School Society, besides other social circles, are the results of our seventeen months' faithful work towards making Thorsby a success.

For general information and printed matter please write us, and we will give it prompt attention.

TWELVE MEN KILLED.

TERRIBLE RESULTS OF A COAL DUST EXPLOSION.

Men Were Preparing to Leave the Mine When the Accident Occurred---Two Hours Required to Extricate the Bodies of the Dead.

A coal dust explosion in one of the chambers of the Sunshine coal mine, the property of the Colorado Fuel and Iron Company, at Sunshine, sixteen miles southeast of Glenwood Springs, Col., Friday night, killed eleven Italians and one American.

The men were preparing to leave the mine on the day shift when the accident occurred. A shot had been fired and instead of its being a direct explosion, it was what, in miner's parlance, is called a "blow-out"—that is the powder created a flame which shot backward and caught the dust that had accumulated in the chamber, instead of dislodging the seam of coal intended. At the time of the explosion there was a barrel of gunpowder in the chamber, which ignited and aided the disaster, which would have occurred through the coal dust explosion alone. The Sunshine, where the explosion occurred, is a peculiar coal, a combination of anthracite and bituminous, and there is a belief that the gathering of coal dust in the chamber of the mine was due to excessive explosion, caused by a desire to empty the chamber too quickly. In the whole property there are 50 to 55 men employed.

The single chamber where the men were killed was the only one damaged. Two hours after the explosion occurred, the bodies of the dead men were all brought to the surface.

A GOOD BARGAIN.

Secretary Pearce Thinks the Compromise Much Better.

Secretary Pearce, of the United Mine Workers, speaking at Columbus, O., Saturday of the proposed strike settlement, said that the agreement had come at a time when the miners had reached the highest success in the strike and if another week or ten days had passed they would not have been in the condition to demand and secure even a settlement at the 64c rate, much less 65c.

In Illinois and West Virginia quite a large number of miners have resumed work and the probability is that before another week had passed, if a settlement had not been reached, a great many more would have followed their example. The miners' officials knew this, perhaps better than the operator, and it is considered fortunate for the miners that they have secured even an advance of 11c per ton, and the officials should be congratulated by the members of the organization on having secured so material an advance in wages. Within another week, Secretary Pearce said, a settlement could not have been made at a 65c rate.

As a matter of fact, while the national officials have given out the information that they have no doubt that the miners will accept the proposition, there is considerable apprehension as to what action the miners may take regarding the matter. The conservative element will no doubt ratify the action of the officials in agreeing to the settlement, but the other element of the organization may prove rather hard to handle when it comes to a vote on the proposition.

If a majority of the delegates come instructed the result of the convention may be in doubt, but otherwise the action of the national board will doubtless be sanctioned.

No Treaty That Will Affect the Rio Grande

The Territorial Irrigating Commission of New Mexico have authorized one of their number, who is attorney for the Elephant Butte Dam Company, to prepare a protest to proper authorities at Washington against this government entering into any treaty with Mexico that would affect the waters of the Rio Grande.

President Andrade Re-Elected.

The election for president of the Republic was held in Caracas, Venezuela, Thursday. Owing to the great popularity of General Ignacio Andrade, the Liberal candidate, Dr. Rojas Paul and General Hernandez, who were running in the interests of the Conservative and progressive parties, respectively, retired from the contest.

QUEER KENTUCKY FOWLS.

A Cross Between Minorcas and a Hawk From the Falkland Islands.

R. L. Elkin, a prominent farmer near Lancaster, Ky., has devoted several years to raising domestic fowls of different breeds, and has now on hand a few fowls which are attracting the attention of the public on account of their unusual color, size, and form, and their aptitude to imitate, which makes a near approach to intelligence and bids fair to dispense with errand boys, shepherd dogs, and telephones. They are a cross between the Minorca and a fowl which was sent him by his friend, Colonel John Miller, now United States Consul at Falkland Islands, which in many respects resembles the parrot, though not so clumsy.

The fowls weigh about three pounds, have sharp claws, a long beak, slightly curved, large yellow eyes, a white crest, dark green plumage, and an intelligent expression. They fly rapidly, and although domesticated they have a tendency to roam for hours at a time. He calls them "minims" because of their size. From the time they come from the shell they are easily handled and are fond of human society, always manifesting a disposition to imitate human action and make articulate sounds approximating the language of the parrot. They are non-sitters, but their eggs will hatch in fourteen days. They will only roost in trees or on the roof of a house. On the approach of a stranger they make a shrill clatter like the guinea fowl, and when anything unnatural is about to occur they make a loud noise, which sounds like the words, "Look out!" Their timely warning is invaluable in many instances. If a dog or any other animal ventures into their inclosure he meets with such a reception as to insure a speedy departure, with no inclination to return. The sharp curved beak and sharp claws have inflicted many wounds on intruders.

Unerring instinct seems to give them an accurate idea of the time of day, and when the regular routine of farm work has been performed in sight of them they seem to realize any delay in the same work on a succeeding day. Mr. Elkin's bluegrass pasture in which his milch cows graze contains about fifty acres and extends up to the barnyard. He asserts positively that the cowboy, who always fed them after milking, was late coming from the field one evening, and he saw two of the fowls fly away in the direction of the cows, one of which was lying down. They lighted upon her and induced her to rise by a gentle touch with their claws. The same inducement was applied to the whole herd until they were marched to the milk pen. These acts are the result of observation and the fowls bid fair to become more valuable than the dog to herdsmen.

An incident occurred a few days since which endeared the birds to the owner, and caused him to assert that no price would purchase them. It was a bright afternoon, and his little golden-haired son, Dan, aged four, the pride of his life, had wandered into the avenue between the house and turnpike, to a point about fifty yards from the house, where he had stopped and was playing with a neighbor's dog, which became furiously angry, and, snapping at the innocent child, had torn a part of its dress from its body and was in the act of springing upon it in a manner that told too well that the body would have been fearfully mangled, and that death would have been the result. Three of these fowls were near the scene, and instantly flew into the dog's face, blinding him with the strokes of their wings, inserting their sharp claws into his body, and pecking him in a rapid manner, thus drawing his attention from the child until the father arrived and shot the dog.—Louisville Dispatch.

Heat Curled Up the Rails.

Santa Fe trainmen vouch for the statement that Friday's through California train was flagged by section men two miles this side of Lexington because the rails of the track had been curved by the heat into the appearance of sleigh runners, the heavy spikes having been pulled from the oak ties and thrown into the air by the strain of the bending rails.

The accident occurred but a few minutes before the train was due to pass, and had not the section men been at once attracted to the spot by the noise of the flying spikes the train would have dashed into the break and have been hurled from the track.

Passengers on the train stated that the heat at the point of the accident was terrific. While the repair of the track was going on the occupants of the train sought a wood at one side of the track and remained there until the work was completed. It was two hours before the track was in shape for the train to proceed.—Kansas City Journal.

A LOVE SONG.

Far away in a sunset town,
Are the flowers blooming fair;
And the world looks up and the sky bends down;
But the fairest rose in that sunset town
Is a girl with golden hair.

O rosebud sweet!
O flower fair!
O blue-eyed maid
With golden hair,
There's one to think of thee!

Far away in the crimson west,
Do the song-birds' voices rise;
And the world is glad and the people blest,
But the sweetest bird in that dreamland west,
Is a girl with deep-blue eyes.

O song-bird sweet!
O flower fair!
O blue-eyed maid
With golden hair,
The world shall sing of thee!

—JOSEPH W. HUMPHRIES, in Atlanta Constitution.

THE OLD UNIFORM.

BY FRANÇOIS COPPEE.

When I was a clerk in the War Department I had for an associate a man named Jean Vidal, a former non-commissioned officer. He had lost his left arm in the Italian campaign, but his right arm remained, and with it he could execute prodigious feats of penmanship, making a little bird in the flourish of his signature with a single stroke of his pen.

This Vidal was an excellent fellow; a soldier of the old type, upright and pure. Though he was only forty years old and had but few grey hairs in his light beard, cut after the old Zouave fashion, everyone called him "Father Vidal," more from respect than from familiarity, for we all knew what an honorable and self-sacrificing life he led in his little home on Grenelle street, where he supported a widowed sister, with several children. They all managed to live comfortably on his little pension and earnings from his writing. Three thousand francs for five persons.

For all that, Vidal's overcoats—those coats whose left sleeve was fastened to the third button—were as carefully brushed as if he were to be present at a review by the Inspector-General, and the worthy man attached so much importance to his red ribbon, always new, that he removed it from his button-hole when he carried a package in the streets.

As I, too, at that time, lived in the modest suburbs south of Paris, I often walked home with "Father Vidal," listening with pleasure to his war-stories, while we strolled along near the Military School, where we met at almost every step—it was in the last days of the Empire—the beautiful uniform of the Imperial Guard, White Lancers, and the magnificent somber coats of the officers of the artillery, all black and gold—uniforms within which it was worth while to be shot.

Sometimes, on warm summer evenings, I treated my companion to absinthe, a luxury which poor Vidal denied himself through economy, and on these occasions we sat for half an hour or so before the officers' cafe on the Avenue de la Mothe-Piquet. The old officer, who had forsaken all his convivial habits since he had become a family man, would rise from the table with his heroic memories all alive under the influence of the mild stimulant, and I was sure to hear some fine martial reminiscence.

One evening—I believe, God forgive me, I had given two glasses of absinthe to Vidal—as we were walking along the wretched street on which he lived he stopped abruptly before a shop where second-hand military clothing was hung out for sale, one of many such in this locality.

It was a dirty, uninviting place, having a window display of rusty pistols, bowls full of buttons, tarnished epaulettes, and, in front, among some filthy rags, were hung some old officers' uniforms, rotted and faded by the rain and sun. They still retained the shape of their wearers, and looked almost like suspended human figures.

Suddenly grasping my arm with his only hand, Vidal turned his half-dazed eyes toward me, and, with his stump, pointed to an old coat, an African officer's, with a full skirt and three rows of gold lace trimming the sleeves in the shape of a "8," Hussar-fashion.

"Look!" said he, "there is part of the uniform of my old regiment. A captain's coat!" Approaching to examine it more carefully he read the number engraved on the buttons, then said, excitedly:

"It is from my regiment! The First Zouaves!"

All at once Vidal's hand, which grasped the skirt of the coat, remained motionless, his face darkened, his lips trembled, and, lowering his eyes, he murmured in a frightened tone:

"My God! What if it were his!"

Then, with a quick movement, he whirled the coat around, and I saw in the middle of the back a little round hole in the cloth, encircled by a black ring—old blood doubtless— and I felt as if I were looking at a real wound.

"That was an ugly hole!" I said to Father Vidal who had dropped the coat, and briskly resumed his walk with down-cast head. Foreseeing a story, I added, by way of inciting him to relate it:

"Usually commanders of Zouaves do not get shot in the back."

He seemed not to hear me, but muttered to himself, biting his mustache.

"How could it have got here? It is a long distance from the battle-field of Melegnano to Grenelle Street Yes, I know thieves follow the army and rob the dead. But why should there be only a few steps between a Military School where his regiment is quartered and the other? And he must have passed by here and must have recognized it. Oh! it is like seeing a ghost!"

"See here Father Vidal," said I, really interested by this time, "you are not going to go on in this way, talking in riddles; you must tell me why the sight of that riddled coat affects you so."

I really believe that without the two drinks I should have learned nothing, after all, for Vidal looked at me suspiciously almost, then, regaining courage, he said, in a firm voice:

Well, yes. I will tell you. You are an honest, well-educated young man, I have confidence in you, and when I am through I want you to tell me with your hand upon your heart whether I did right in acting as I did. Let me think where to commence.

I can not tell you his name, for he is still living, but I will call him by the nickname we gave him in the regiment —La Soif (thirst). Yes, we called him La Soif, and he did not steal the name; it belonged to him, for he was not one of those to run away from the canteen, and he could drink twelve little glasses for the twelve strokes of noon. He was a sergeant in the second regiment, and he marched beside me. A good soldier, too; a very good soldier, and a drunkard, loving fights and all the bad practices of the soldier in Africa. He was as brave as a lion. His eyes were as blue and as cold as steel in his bronzed, red-bearded face, and looking into them one could see that he was hard to manage.

When I joined the battalion La Soif's time had just expired, he re-enlisted, took his bounty money, and went on a three days' debauch. With four or five boon companions in a carriage with him he rode about the lowest quarters of Algiers, carrying a tri-colored flag bearing the inscription, "Enjoy yourself while you may." He was brought back to the barracks with his head cut open by a sabre stroke. He had been in a drunken row, where one of the party had been killed.

He recovered, was put in the guard house for fifteen days, and lost his sergeant's stripes. It was the second time they had been taken away from him. If he had behaved himself he would have been an officer long before, for he came of a good family and was well educated. After this affair however, he lost his decorations, and did not get them back until eighteen months later, through the indulgence of our Captain, who was old in the African service, and had been an eye-witness of La Soif's bravery.

After a time our Captain was promoted to chief of battalion, and a new one was put over us, a Corsican, named Gentile. He was only twenty-eight years old, fresh from school, cold and ambitious, full of merit, it was said, but very exacting in matter of discipline, giving a man severe punishment for a rusty spot on his gun, or a missing button on his uniform. He knew nothing of service in Algiers, and he would not tolerate a particle of irregularity or lax discipline. At the very first, Captain Gentile and La Soif came into conflict. It could not be otherwise. The first time the sergeant failed to respond to evening roll-call, eight days in the guard-house; the first time he was tipsy, fifteen days. When the Captain, a swarthy fellow, with a mustache like an angry cat's, gave the sentence, adding, in a stern voice, "I know you, sir, and I will conquer you," La Soif said nothing, but walked quietly off beside the guard; but the captain would not have felt very comfortable, just the same, if he had seen the blood surge into the sergeant's face, as soon as his head was turned, and the lightning flash of his steely-blue eyes.

About this time the Emperor declared war with Austria, and we embarked for Italy. It is not necessary to speak of the campaign, so I will keep to my story. The night before the battle of Melegnano, where I lost my arm, you know, our battalion encamped in the heart of a little village, and, before breaking ranks, our captain gave us a little talk—and he was right—to remind us that we were in a friendly community, that it was our honorable duty to conduct ourselves well, and that if any soldier should in any way disturb the peaceful inhabitants around us he would be punished as an example. While he was talking La Soif, who could not stand straight without the aid of his gun, shrugged his shoulders; fortunately the captain did not see the gesture.

In the middle of the night I was awakened by a tumult. I sprang from the bundle of straw on which I was sleeping in a farm-yard, and saw in the moonlight a crowd of soldiers and peasants rescuing a young girl from the grasp of La Soif, who fought like an enraged lion. I ran out to lend my aid, but Captain Gentile was there before me. With one look he subdued the sergeant; then, reassuring the girl by some words spoken in Italian, he came and stood in front of the offender, pulled up his chin with fingers that trembled and said;

"Such a scoundrel as you ought to have his brains blown out! As soon as I see the colonel you will lose your straps, and for good this time. There will be a battle to-morrow. Try to get killed!"

We lay down to rest again, but the captain had told the truth, and at daybreak we were awakened by the cannonade. We rushed to arms, formed into line, and La Soif, whose cursed blue eyes had never looked so wicked, took his place beside me. The battalion moved to the attack. It was necessary to dislodge the white-coats, who were fortified with cannon in the village of Melegnano.

Forward, March! We had gone but a few paces when a volley of grape struck us on the flank, and cut down about fifteen men in our company. Then our officers, who were awaiting the command to charge, ordered us to crouch down in the cover, like sharp-shooters, while they remained standing, and I assure you that our captain was not the least erect. We kept up a fire on the fort that we were to carry. Suddenly I felt a hand on my shoulder, and turning I saw La Soif, who was looking at me with one corner of his mouth drawn up in a peculiar manner, as he loaded his gun.

"Do you see the captain!" said he, nodding his head in his direction.

"Yes; what of it?" I answered, glancing at the officer, who was standing not twenty steps from us.

"Well, he made a mistake talking to me as he did last night."

Then, with a rapid movement, he put his gun to his shoulder, fired, and I saw the captain bend backward, beat the air with his hands, drop his sword, and fall heavily to the ground.

"Assassin!" I cried, seizing the sergeant's arm.

Striking me a violent blow on the chest, he knocked me several feet from him.

"Fool! Prove that it was I that shot him."

I rose, furious; but all the sharp-shooters rose at the same time. Our colonel, bareheaded, on his steaming horse was there, pointing with his saber to the Austrian fort, and shouting at the top of his voice:

"Forward, Zouaves! Charge with the bayonet."

That was all I could do, wasn't it? Charge with the others! Ah, that charge has passed into history, that charge of the Zouaves at Melegnano! Have you ever seen the full sea beat against a rocky wall? Well, this was just the same. Each company beat up against the fort like the sea against the rock. Three times the battery was covered with blue jackets and white trousers, and three times we saw it reappear with its formidable embrasures, unshaken as the rock after the beating of the waves.

The fourth company, ours, must surely take the fort. In twenty bounds I reached the redoubt; helping myself with the barrel of my gun, I clambered up the steep side; but I had just time to see a yellow mustache, a blue cap, and the muzzle of a carbine, which almost touched me. Then I felt such a blow in my left shoulder that I thought my arm was torn out. I dropped my gun; everything swam before my eyes; I fell on my side near a caisson-wheel and fainted away.

When I came to my senses only a distant sound of musketry was to be heard. The Zouaves were standing around in a semi-circle, brandishing their guns and shouting: "Long live the Emperor!"

An old general, followed by his staff, came up at a gallop. He checked his horse, took off his helmet, waved it joyously, and cried: "Bravo! Zouaves! You are the bravest of the brave!"

I was sitting on the ground, near the caisson-wheel, supporting my broken arm with my right hand, thinking of La Soif's frightful crime. All at once I saw him leave the ranks and approach the general. Yes, it was La Soif, the captain's murderer. In the engagement he had lost his fez, and his head was exposed, showing the track made by a bullet which had just grazed his skull, and the blood was running down over his forehead and cheek. In one hand he carried his gun; with the other he presented an Austrian flag, riddled with shot and stained with blood, a flag which he had captured. The general looked at him with admiration.

"Look there, Bricourt," said he to his orderly, "what men!"

Then La Soif said:

"You are right, general. These are the First Zouaves. There are enough left to fight once more."

"I am glad of that," replied the general, "and you shall be decorated for your bravery." Still repeating, "what men! what men!" he addressed a remark to his side which I did not understand—you know I am not learned—but which I remember.

"Heroes for Plutarch, hey, Bricourt?"

At this moment the pain from my wound overcame me; I fainted, and saw and heard nothing more.

You know the rest. I have often told you how they cut off my arm, and how I passed two months in the hospital, delirious with fever most of the time. In my rational hours I asked myself what I ought to do about La Soif. Expose him? That was clearly my duty, but how could I prove his crime? Then I said to myself: "He is a villain, but he is brave; he killed Captain Gentile, but he took a flag from the enemy." I did not know what to do.

Finally, when I was convalescent, I heard that in recompense for his brave deed he had been promoted to the ranks of the Guards, and had been decorated. Ah, that news made me disgusted with the cross which our colonel had fastened on my hospital coat. Still, La Soif deserved his, too, but his Legion of Honor should have served as a target for the platoon ordered to shoot him.

It is all past and gone now. I have never seen the sergeant since my return to civil life. But at sight of that coat a moment ago—God knows how it came there—hung out only a few rods from the garrison where the assassin is quartered. I thought of the unpunished crime, and it seemed as if the captain's blood was crying out for justice.

I quieted Father Vidal as well as I could, for the recital of his story had greatly excited him. I assured him that he had acted for the best, and that the sergeant's heroism offset his crime.

A few days afterward, on arriving at my office, I found Vidal there, and he handed me a paper so folded that one item only was visible, murmuring gravely: "What did I tell you?" I took the paper and read the following:

ANOTHER VICTIM OF INTEMPERANCE.

Yesterday afternoon a man named Mallet, called La Soif, a sergeant of the Imperial Guards, after having drank freely at a wine shop on Grenelle street, was suddenly attacked with a fit of delirium while looking at some old uniforms exposed for sale at a second-hand store.

Becoming frantic, he flourished his saber, and rushed about causing a panic. His two comrades with great difficulty succeeded in overpowering him, but he kept on shrieking: "I am not a murderer, I tell you! I captured an Austrian flag at Melegnano!" We learn that Mallet had been decorated, for his brave deed, and that his intemperance alone prevented him from becoming an officer.

Mallet was taken to the military hospital at Gros-Caillou, from which he will be transported to the lunatic asylum at Charenton, in Corsica, as he will probably never regain his reason.

As I returned the paper to Vidal he gave me a knowing look and said:

"Captain Gentile was a Corsican, He is avenged."—From the French, in Short Stories.

TWENTY-FOUR O'CLOCK.

New System of Noting the Day's Time Is Gaining Ground.

The new system of noting the time of the day is gaining ground. Under this system the day, as at present, begins at midnight, and the hours are numbered to the end without prefix or suffix of any kind. Just a clean, clear enumeration. Noon will still be noon, and morning, afternoon and evening will, of course, abide with us. An hour after noon will, it is true, be 13 o'clock, but the use of the word thirteen would not be compulsory, especially in the trying first month of the new notation.

The Canadian railroads have adopted the system tentatively. Astronomers of all lands have long discarded the confusing notation that calls for a. m. and p. m. as a key to elucidation. The Italian railroads have used the 24 hour system several years, and no one in that populous country desires a railway time-table of the old sort. The Belgian railways came into line a month or two ago. It is surprising that the Germans, who delight in helpful innovations, have not adopted the plainer, simpler method of time-keeping. Switzerland is now considering the subject.

The change, if it comes at all in this broad country, will doubtless be inaugurated by the railroads—the same railroads that instituted the orderly notations of standard time by employing even hours at given meridians—a blessing in itself. Trains are now sent the length and breadth of the land on telegraphic orders. The new notation would be an additional safeguard against error in such orders. But its advantages need not be enumerated. Its simplicity and orderly sequence will commend it, and at some not very distant day, without much ado, we will find ourselves going to dinner at 19 o'clock, to bed at 22 o'clock, and to search for the time-honored man under the bed or the prompt burglar at 24 o'clock. But we will rise at the usual hour of the clock, and the cocks will crow as they have crowed time out of mind, for the multitudinous strokes of the town clock will not be heard in the morning hours.—Atlanta Journal.

A Baptist Church in Waterbury, Conn., is by no means opposed to the use of bicycles on Sunday. Bicycle racks have been placed in the basement, with a person in charge, and cyclists of both sexes are specially invited to attend the services.

Suicides Among Chinese.

Coroner Berz says that there is one element of Chicago's population by whom the suicidal inclination is resisted. That element is the Chinese. "Why is it that the Chinese of this city do not commit suicide I cannot explain," Mr. Berz said. "In China we read of their committing suicide in great numbers. The fact remains, though, that the only record of a Chinese suicide in Cook county in the last ten years is of one who was confined at Dunning, demented.

"There is one thing though about the Chicago Chinese abstinence from suicide that is quite clear. That is the reason why neither he nor any of his race will die by drowning if they can help it. The bodies of their dead are taken to China for burial in sacred ground. Failure to carry out this custom is an infraction of their religion. The body of a drowned man, of course, stands a good chance of not being found. In that case, a Chinese would consider that the soul of the deceased had a poor show for a pleasant eternity."—Chicago Tribune.

Attempt to Bribe the Supreme Court.

Justice Brewer of the Supreme Court, who was in Kansas City yesterday, told this: "Several years ago a cigarmaker in Washington named Scott got up a brand of cigars which he called the 'Supreme Court.' The labels on the inside of the boxes were pictures of the entire court, and the cigar was a good one. I know this, because one day each of the justices received two boxes of them with the compliments of Mr. Scott. Nothing was thought of the fact at the time, and it was taken as a slight courtesy in return for the use of our pictures. But several weeks later we learned that the cigars had been sent to soothe our anger. One of the clerks had gone to Scott and told him that the members of the court were very much provoked at him and intended prosecuting him for taking such liberties with their pictures. Scott was frightened, and he hit upon the idea of bribing the justices, and I suppose he thought he had succeeded, for he was never prosecuted, nor had such a thing been thought of."—Topeka State Capital.

"High Water Bill" Moorhead.

William H. Moorhead, better known during later years as "High Water Bill," has just died at his home in Pembina, North Dakota, after an illness of six months. This sobriquet he gained by his numerous prophecies as to just how high the water in the Red River would rise each year, and, be it said, his predictions were usually not far astray. As an incident in this line it is said that this spring, before the snow melted, as he was lying in his bed on the lower floor of his house, talking "high water" to a visitor, he reached down about half way on one of his bed posts and said: "You'll see the water up to this spot when the snow melts," and his prediction was verified. He refused to be carried up stairs until the water came in on the floor.

Mr. Moorhead was a typical frontiersman and a general favorite. The history of the Red River valley would be far from complete without an interesting reference to a man who was known far and wide for his genial good nature and interesting stories of the pioneer life in the northwest.—St. Paul Pioneer Press.

"Empress of India."

The title "Empress of India" was conferred upon Queen Victoria by Parliament. The assumption of this title had been suggested to the Queen by the Governor-General of India, Lord Ellenborough, as early as 1843, as a means of removing practical difficulties in the relations of the Indian local government with the native rulers. The word for "Queen" in Persian and Hindustani signifies "inmate of a royal harem," and was therefore not the requisite title for effective administration. But it was not until 1876, and then only by a majority of seventy-five in the House of Commons, that the assumption of the title was authorized by Act of Parliament On January 1, 1877, Victoria was proclaimed Empress of India by the Governor-General at the durbar in Delhi. This at once placed her, in the matter of titles, on an equality with the Emperor of Russia.—San Francisco Examiner.

Pigeon Post to Alaska.

Milwaukee capitalists are greatly interested in a scheme whereby communication with the Klondike regions can be had by carrier pigeons.

At present it takes from forty to fifty days under the most favorable conditions to get news from us to that region, and it is thought that investors will not care to wait that long for news of great strikes.

The company proposes to establish pigeon stations at Dawson City, Juneau and Victoria. The distance between the two former points is about 650 miles in a bee line, and it would take a pigeon about twenty-four hours to make the trip.

The birds, whose home is in Victoria, could reach the place in about thirty hours after starting, so that the entire trip would take as many hours as it now takes days.

KLONDIKE GOLD FIELDS.

Accurate Account of the Great Discoveries in Alaska.

Story of the Immense Riches of the Region Told By One on the Ground—A Tale That Rivals Fiction.

A lady in Seattle has received the following letter from Dawson City which contains the fullest, most succinct and accurate account of the great gold discoveries which has yet been in print. The writer is well-known in Seattle.

"The first discovery of gold on the Klondike was made the middle of August, 1896, by George Cormack, on a creek emptying into the Klondike on the south, called by the Indians Bonanza. He found $1.60 to the pan on a high rim, and after making the find known at Forty Mile, went back with two Indians and took out $1,400 in three weeks, with three sluiceboxes. The creek was soon staked from one end to the other, and all the small gulches were also staked and recorded.

"About September the 10th a man by the name of Whipple prospected a creek emptying into the Bonanza on No. 7, above Discovery, and named it Whipple creek. He shortly afterward sold out and the miners renamed it El Dorado. Prospects as high as $4 to the pan were found early in the fall. Many of the old miners from Forty Mile went there and would not stake, saying the willows did not lean the right way and the water did not taste right, that it was a moose pasture, it being wide and flat. Both creeks were staked principally by 'Chee Chacoes' (new men in the country), and as early as they could get provisions 250 men went there and commenced prospecting by sinking holes to the depth of from nine to twenty feet, doing so by burning down, as the ground was frozen solid to bedrock.

"On November 23d a man by the name of Louis Rhodes, located on No. 12, above Bonanza, got as high as $65.30 to the pan. This was the first big pan of any importance, and the news spread up and down the creek like wildfire. This news reached Circle City, 300 miles further down the Yukon river, but nobody would believe it. Soon after large pans were found on both Bonanza and El Dorado, and each creek was trying to outrival the other until a man by the name of Clarence Berry got $100 to the pan.

"From that time on El Dorado held a high position. Many claims from the mouth up for a distance of three miles got large pans, until they reached as high as $280. About March 15th, 1897, I reached the diggings from Circle City having hauled my sled the whole distance without a dog. The importance of the new strike had become too significant to be overlooked, and about 300 men from Circle City undertook the journey in midwinter, Such an exodus was never known before in the history of the Yukon, but not a man lost his life, although several had their faces and toes nipped at times. Even some of the most resolute and dissolute women made the journey in safety. Fancy prices were paid for dogs by those able to purchase and as high as $175 and even $200 were paid for good dogs. Almost any kind of a dog was worth $50 to $75 each.

"When I reached the new camp I was invited by the Butcher boys of Juneau and George Stewart from Stuck Valley, Wash., to go down in their shaft and pick a pan of dirt, as they had just struck a rich steak. To my surprise it was $238.50. In fourteen pans of dirt they took out $1,565 right in the bottom of the shaft, which was 4x8 feet.

"March 20th Clarence Berry took out over $300 to the pan; Jimmie McLaine took out over $200 to the pan; Frank Phiscater took out $135 to the pan. Four boys from Nanaimo took as high as $125 to the pan. They were the first men to get a hole down to bedrock on El Dorado and got good pay. They had No. 14 and 15.

"In fact, big pans were being taken out of nearly every claim on the creek until $100 and $200 pans were common. On April 13th Clarence Berry took in one pan thirty-nine ounce—$495—and in two days panned out over $1,200. On April 14th we heard that some boys on No. 30 El Dorado had struck it rich and taken $800 in one pan. This was the banner pan of the creek and Charles Meyers, who had the ground on a lay, told me if he had wanted to pick the dirt he could have taken 100 ounces just as easy.

"Jimmy McLaine took out $11,000 during the winter just in prospecting the dirt. Clarence Berry and his partner, Anton Strander panned out about the same in the same manner. Mrs. Berry used to go down to the dumps every day to get dirt and carry to the shanty and pan it herself. She has over $6,000 taken out in that manner.

"Mr. Lippy from Seattle has a rich claim and his wife has a sack of nuggets alone of $6,000 that she has picked on the dumps.

"When the dumps were washed in the spring the dirt paid better than was expected. Four boys on a lay in El Dorado took out $49,000 in four months.

Suicides Among Chinese.

Coroner Berz says that there is one element of Chicago's population by whom the suicidal inclination is resisted. That element is the Chinese. "Why is it that the Chinese of this city do not commit suicide I cannot explain," Mr. Berz said. "In China we read of their committing suicide in great numbers. The fact remains, though, that the only record of a Chinese suicide in Cook county in the last ten years is of one who was confined at Dunning, demented.

On April 13th Clarence Berry took in one pan thirty-nine ounces—$495—and in two days panned out over $1,200. On April 14th we heard that some boys on No. 30 El Dorado had struck it rich and taken $800 in one pan. This was the banner pan of the creek and Charles Meyers, who had the ground on a lay, told me if he had wanted to pick the dirt he could have taken 100 ounces just as easy.

"Jimmy McLaine took out $11,000 during the winter just in prospecting the dirt. Clarence Berry and his partner, Anton Strander panned out about the same in the same manner. Mrs. Berry used to go down to the dumps every day to get dirt and carry to the shanty and pan it herself. She has over $6,000 taken out in that manner.

"Mr. Lippy from Seattle has a rich claim and his wife has a sack of nuggets alone of $6,000 that she has picked on the dumps.

"When the dumps were washed in the spring the dirt paid better than was expected. Four boys on a lay in El Dorado took out $49,000 in four months.

"Frank Phiscater, who owned the ground and had some men hired, cleared up $4,000 for the winter. Mr. Lippie, so I am told, has cleared up $54,000. Louis Rhodes, No. 21 Bonanza, has cleared up $40,00. Clarence Berry and Antone Strander have cleaned up $130,000 for the winter.

"This is probably the richest placer ever known in the world. They took it out so fast, and so much of it, that they did not have time to weigh it with gold scales. They took steel-yards and all the syrup cans were filled.

"It looks as if my time would come about the time I am ready to die. One man received word that his wife and little girl had died since he came here, and he is now going out with $25,000. Another man was waiting for the boat to go home and die of heart disease, having in his possession $17,000. Things stranger than fiction happen here every day.

Yours truly,
"ARTHUR PERRY."

An African Poison Story.

Charles M. Stern, of Chicago, who has just returned from a journey through northeast Africa, told a New York Mail and Express reporter of a curious meteorological phenomenon which he observed in a district called Gwallah. "The vegetation in that region is very luxuriant," said he, "and the plant life must give off an unusually large quantity of carbonic acid gas. At least that was the conclusion I reached after seeing three natives die and four or five dogs.

"The moment the animals put their noses close to the ground they would fall over and gasp, and die in about five minutes. The natives who died slept on the ground instead of in hammocks, as others did. I saw hundreds of dead birds. My theory is that a strata of the deadly gas covered the ground for a depth of three or four inches, and any living thing breathing in that area was asphyxiated.

"I could not understand, however, how the gas was not distributed in a thinner layer, and what kept it in one place for a whole day. Nothing like it had ever been known there before. The deaths of the men and the dogs all occurred within twenty-four hours. Then the gas, if it was really gas, seemed to be dissipated. It was a very strange occurrence, and I might have been induced to make a more exhaustive investigation if my presence had not excited distrust. I got away as quickly as possible, rather than be accused of being the cause of the sudden deaths. The natives are superstitious, and attribute most of their misfortunes to witchcraft, so I thought it the part of wisdom to get away."

Where Mayors Are Robbers.

A traveler through Spain says that the morals of the people are at the lowest ebb. Robberies are unblushingly committed in the very streets. The magistrates are as corrupt as those they are appointed to punish. A striking instance came under his notice. A rich miller in the country was fixed upon by three scoundrels as a fit object to be plucked. It so happened that shortly before the time appointed for the attack on his house a party of traveling soldiers had requested lodging of him for the night. He took them in, and they were sleeping up stairs when the robbers arrived and demanded his money. The miller told them he would go up and fetch it. He awoke the soldiers, and, with their assistance, overpowered and bound the thieves and left them lying in a corner. The next day, as it was proper the authorities should be made acquainted with the circumstances, he went to the Mayor of his village to call him to make his inquiries. The Mayor was not at home; he, therefore, went to his assistant, who was not at home either. He then applied to the third official, but neither was he to be found, nor did anybody seem to know where the three had gone to. At last, therefore, he returned home and prepared to deal with them himself. What was his surprise, on removing the masks that had concealed their features, to find himself face to face with the Mayor and his two assistants.

A Question of Brains.

An Irishman was once at work on a stone quarry, pulling up loads of broken rock out of a shaft with a windlass. The windlass was exposed to the sun and the labor was very hard; but the man had on his head a straw hat, from which the crown had been torn.

"Look here," said a visitor to the Irishman, "aren't you afraid the sun will injure your brain."

Pat paused in his work and looked steadily and wonderingly at his questioner.

"Brain!" said he. "Me brains, is it? An' do you think that af I had any brains I'd be turning this windlass?"

Sport.

A sportsman narrating to Lord Nosbury some extravagant feat in sporting, mentioned that he had lately shot thirty-three hares before breakfast.

"Thirty-three hairs!" exclaimed his lordship; "zounds, sir! then you must have been firing at a wig."—Short Stories.

GOSSIP FOR THE FAIR SEX.

Items of Interest on Feminine Topics.

From Her Remark Grew the Poem—Hints for the Fall—A Novel Fabric—Costliest Cloak in the World—Etc., Etc.

Mrs. Amelia Koehler, who died at Mount Vernon, N. Y., recently, is said to have inspired one of the few ballads that will probably live forever, "The Last Rose of Summer." She was ninety-two years old, and had met the great Napoleon. While living in London she became an intimate friend of Thomas Moore's sister, and frequently met the poet at her house. One night as Mrs. Koehler was walking in the garden with him she plucked a rose and gave it to him, remarking, "Look, isn't it beautiful? This is the last rose of summer." From her remark grew the poem.—New England Homestead.

HINTS FOR FALL.

The first indication of fall styles has reached us in the shape of the French color card, which clearly indicates continuance of favor for the violets, reds and grays, while we are promised bewitching yellows and browns. The last-named are predicted as fine favorites, for the wool gowns of street wear, soft, tender chinchilla, gray being, in all probability, their most formidable rival.

Bright vivid hues will be largely used in bits, and will serve to brighten many a costume, but the delightful quiet colors are promised for body tone, the whole host of lovely lighter tints being reserved for house and evening wear.

A wise and astute exponent of art in dress once said that the hair and eyes were unfailing guides as to color, and that gowns selected either of the same or harmonizing color could not fail to be becoming. When we reflect upon the vast number of brown-eyed and gray-eyed among womankind and contemplate the fact that these two colors are to have first place, there is indeed cause of rejoicing.—Chicago Record.

A NOVEL FABRIC.

One thin fabric never shown till this season is a clever French counterfeit of the rare and beautiful pineapple muslin which our grandmothers imported from India. The ground is the same dull cream color as in the original, thin as a cobweb and transparent as glass. It is barred by distinct stripes, satiny effect and uniform in color, whether the shade be red, blue or green or even a clear milk-white, which latter is very effective upon the creamy ground. Yards and yards go to the composition of a dress, but the effect of the confection when finished is marvellously dainty, and the price per yard of the material, instead of being $4, as was that of the Indian fabric, is generally from seventy-five cents to $1.

COSTLIEST CLOAK IN THE WORLD.

The barbaric queens of the Hawaiian Islands once wore what is thought to be the costliest cloak in the world. The cloak is now in the National Museum, and the foundation is of olona, or native hemp. Stitched to the foundation with hempen threads are the feathers of the native birds of the islands, the feathers overlapping and making a soft, beautiful and perfectly smooth surface. The feathers are put on in the form of crescents, in yellow, red and black. The black and yellow feathers are from the Moho nobilis, and the bird is extremely shy and hard to capture, making its feathers of great value. It took nearly one hundred years to make the cloak, and it is estimated to be worth nearly $1,000,000.

TRAINED COLORED NURSES.

The Secretary of State, of North Carolina, has just issued articles of incorporation to the Charleston Hospital and Training School for Nurses. The main object of the institution is to train colored girls and young women to be expert nurses of the sick, an occupation now confined to white women. It commands better pay, perhaps, than any other at which women are employed in the South, and some of the female members of the better families have adopted it as their life work. Some of them command $3 per day for brief periods of service in private families and receive from $25 to $75 per month when engaged for so long a time.

All the public hospitals have departments for colored patients, and for some time the graduates of this new institution will see openings for employment as nurses in these departments, as the white nurses now complain of having to serve in the colored wards.—New York Commercial Advertiser.

"YES OR NO?"

A pretty story of how Henry M. Stanley wooed and won Miss Dorothy Tennant, though coming to us from private sources, has been made sufficiently public to avert the charge of undue personality. Miss Tennant, it is well known, was the original of Sir John Millais's famous picture, "Yes or No?" It seems that Stanley had asked the question and the reply was "No."

The great explorer went to Africa again, and after several years returned to London to find himself the most talked of man of the day.

The thought of Miss Tennant was still uppermost in his mind, and he resolved that his first visit should be to her home. In his impatience for the morrow he turned over the cards and notes with which the table was strewn and, selecting one haphazard, decided to while away the time by attending a certain reception.

The first person he met there was Miss Tennant. They greeted each other formally, but later in the evening Stanley retired to a small anteroom, to find that Miss Tennant had likewise sought solitude. A somewhat embarrassing silence ensued, broken at last by the woman saying, with the manner of one "making conversation":

"Do you find London much changed, Mr. Stanley?"

"No, I haven't found London changed, and I've not changed, either," returned the explorer with his usual intrepidity. "Have you?"

"Yes, I've changed," answered Miss Tennant, softly.

A few days later Millais received a note from his former subject, beginning:

"My Dear Sir John: The momentous question has been at last decided. It is a joyful and triumphant 'yes!'"—Youth's Companion.

FASHION NOTES.

White veils are almost universally worn.

Checked taffeta seems to be a favorite fabric in Paris.

With tan shoes the tan stocking has given away to blue of a peculiar shade.

Most of the sailor gowns are lined, but the blouses are large enough to permit of wearing a silk shirt if desired.

Serpent skin is a new trimming for tailor-made gowns, and is employed for revers and tiny bands on the cloth revers.

Turn over collars cut in square turret shaped pieces and made of lace-edged Swiss or the material of the dress are fashionable.

None of the especially made wheeling or cycling gloves are half as smart and comfortable as a pair of loose-fitting dogskin gloves.

Curious and pretty little novelties for this season, which are certainly appropriate, are the tiny green enameled grasshopper brooches.

One of the fads of the season is to have a hatband and tie to match. This is seen only on straw hats, and the material is Madras. The colors are bright and the figure usually a plaid.

The demand for white shirt waists is also great. Victoria lawn, French nainsook and linen lawn form the most serviceable ones, while fine dotted muslin and satin striped grenadine make the elaborate ones.

Linen duck is also preferred to cotton, for although it is more expensive, it does not shrink so badly; but both cotton and linen must be shrunk before the gown is made, and it is best to shrink them in the piece.

Sashes in contrast with dresses made their first appearance at the early summer fetes and have been most favorably received. These are now seen on many of the fashionable midsummer gowns, and various materials are utilized for the purpose. The ends are broad and flowing, reaching almost to the foot of the skirt.

Sleeves fit arm closely from wrist to arm's eye, and are generally surmounted by a puff or epaulet of some kind. This triple row of lace-edged ruffles over a tight-fitting foundation is a variety which has been much in vogue all summer. Ruffles of lace, chiffon or plaited silk are worn at the wrists, falling over the hand, the sleeves being extended in a long point.

A thin white gown, trimmed with black Chantilly, makes one of the prettiest gowns this season of pretty gowns can show. An elaborate frock of this sort, thin white, over a rose slip, is of silk mull, with panels on the skirt and a deep V yoke in the blouse, embroidered with the most beautiful lace figures. A sash is of black and rose gauze, and double ruffles of gauze trim the neck and sleeves.

A pretty blouse of silk and mousseline is trimmed elaborately with vandyke frills which edge the bolero jacket fronts, the collar, sleeve epaulettes and cuffs, and form a basque below the belt. Lace applique further decorates the bodice, appearing as it does on the jacket, epaulettes, cuffs and belt. The full vest is of mousseline over foundation of silk, and the sleeves, back of bodice and jacket fronts are of silk.

THE JOKER'S BUDGET.

Jests and Yarns Made and Told by the Funny Men of the Press.

THEIR ENGAGING QUALITIES.

She—Why is it, I wonder, that little men so often marry large women?

He—I don't know, unless it is that the little fellows are afraid to back out of engagements.

THE PITY OF IT.

She—I didn't expect to see you. Somebody told me you had met with an accident the other day.

He—Oh, no; that was my brother.

She—I'm so sorry.

AN AUTOCRAT.

"The German Emperor is all-powerful in his own dominions."

"He must be, to exhibit his pictures without protest."

VENOMOUS, INDEED.

Professor—One drop of this poison placed on the tongue of a cat is sufficient to kill the strongest man.

AMEN!

"Do you really think one commits a sin to ride a bicycle?"

"Well, I've seen bicycle riders who were far from upright."

VINDICATION WANTED.

"The Klondike stories seem to have made you pretty glum," said the baseball editor. "Getting the fever?"

"No," said the funny man, "but after all the jokes I have written about the frigidity of Boston, it seems queer that I can't find any accounts of expeditions starting from that place for Alaska.

FEW AND FAR BETWEEN.

Browne—Who wrote "Birds of a Feather Flock Together?"

Towne—Some idiot who had never been out shooting.

HORSE AND HORSE.

Doctor—You're a long time paying my account, sir.

Hardup—Well, you were a long time curing me.

HE HAD A GOOD TIME.

"Did you meet many people while you were in New York?"

"Well, I met two policemen, a desk sergeant, a lock-up-keeper and a judge.—Chicago Post.

GOT IT ALL THE SAME.

"So you went in search of the golden fleece," said the man with lingering fondness for the classics.

"No," replied the returned Klondiker, who had been swindled on a claim, "we didn't go after any fleece. But that's what we got."

THE SIMILARITY.

"You speak of your colleague as having a mercurial temperament," said one statesman.

"Yes," replied the other, as he wiped his perspiring brow, "the great trouble about him is that you can't keep him down."

EXTREME VIGILANCE.

"Tell you what it is," said the returned tourist, "you can't be too careful in Europe."

"Why?"

"In St. Petersburg my wife remarked to a friend that she'd give me a good blowing up when she met me, and they arrested her for a Nihilist."

SAWED OFF.

He was not long for this world.

It was evident to his wife, but she did not grieve, though she loved him well.

She had got accustomed to his short stature.

POOR FELLOW!

Reporter—What shall I say of this man who was found shut up in a folding-bed?

City Editor—Say that he was gathered into the fold.

NOT A WALKING-MATCH.

Mr. Goodthing (indignantly)—"See here, you rascal! You told me Tornado would win in a walk."

Tout (coolly)—"An' so he would: but dis wuz a runnin'- race."—Judge.

QUICK TIME.

"How time flies, to be sure. It seems only a minute since it struck 10 and now there goes 11."

"Oh! that's only father trying to regulate the clock, which is out of order. It was only a minute ago since it struck 10.

NO PITY FOR THE POZZ.

"Don't you think young Porticus is a budding genius?"

"No, I think he is more of a blooming idiot."

Currents of the Atlantic.

Monthly current charts of the Atlantic ocean for six months of the year have been prepared by the British Meteorological Office from about 18,000 mariners' logs, extending back to 1830. Among the interesting facts brought to light is the velocity of the Gulf stream varies with the season, being about 100 miles a day in June, not more than seventy miles in October and November, and at times not over twenty miles. The Guinea and equatorial currents also undergo considerable ventelations with the time of the year.

IF the negro could be made a dead political possibility it would be the greatest boon ever conferred upon this country.

WHAT has become of the Thorsby infant? Has it been abducted?—Sheffield Reaper.

Naw. But was the Reaper thinking that "the good die young, while the wicked burn down to the socket?"

MR. SOVEREIGN says he wants to "re-organize the government." If he and Debs would re-organize their mouths the country would be better off.—Montgomery Advertiser.

There is no cure for rotten eggs.

THE Clanton Banner "jokes with difficulty," as the old Scotchman said, and in its jokes displays its ignorance of business law—Oh, beg pardon, we forgot that the Banner is a reform paper. By the way, what became of the great and influential Mid-Ala.-Daily, fathered by the Banner?

THE Thorsby Call has changed hands, and Mr. H. W. Ryding is now the editor and publisher. We welcome him into the fold, but warn him he will find it pretty rough Ryding.—Waterloo Tribune.

And we'll be Allen a quiver until we find out how rough it is.

IT is giving the gold people an immense amount of pleasure to contemplate the misery, hunger and starvation in India, where, because of no crops of wheat, there prevails the worst famine in years.—Age-Herald.

And the silver people are having the cramps because silver and wheat have been divorced against their most earnest protests.

IF McKinley thinks of annexing Hawaii let him do it double quick and before other interested governments have time to thrust in their protests and kick up a fuss. Should England or Japan annex the islands, some nice day Uncle Sam will get it right in the neck. Nor should Russia be allowed to annex the islands. She is friendly to us now, but the day is not far distant when Russia and the United States will control the world between them—and still a little later on fight each other for the supremacy of the world.

IF political power is a damnable thing and boodleism and corruption a concouritant, why do political parties fuse? What is the motive and principle underlying fusion? Power and spoils. What becomes of party principles in fusion? They are thrown to the winds, and given to the dogs. What are the objects to be obtained by fusion? Power, offices, and spoils. Who reaps the profit? The political manipulators and wire pullers and the politician without a job. What becomes of the public? "D—n the public." This is the body, soul, and spirit of party fusion. The great Sphynx finally broke his death-like silence and acknowledged the corn.

The Woodmen's Case.

An injunction issued by Judge Gest, of Rock Island, at the request of attorneys for the Modern Woodmen of America, enjoining Fulton people from interferion with the removal of Head Clerk Hawe' office from Fulton, has just been served. After citing by name Master in Chancery McPheran and many prominent Fultonites, it goes on to enjoin all other residents of Fulton, Ill., and Lyons and Clinton, Iowa. The documents is voluminous. Meanwhile a hearing is pending before Judge Gest on the injunction against the removal of the office from Fulton.

The Denver Gas War.

Mayor McMurray, of Denver, Colo., has vetoed the ordinance granting a franchise to a new gas company which agreed to furnish gas to customers at a greatly reduced rate. Accompanying the message was a proposition from the Denver Consolidated Gas Company to lease the plant to the city at a yearly rental of 6 per cent on a valuation to be fixed by a committee of experts. The mayor is a strong advocate of municipal ownership of gas, water and similar plants.

THORSBY IS THE CENTER OF ANOTHER SUCCESSFUL SETTLEMENT.

Thrifty Farmers and Artisans from the North Are Developing a Rich Country.

Below is a letter written by Mr. W. H. Skaggs to the Chicago Inter Ocean of August 20, 1897, which speaks for itself. Mr. Skaggs is commissioned by the Southern and Northwestern Industrial Association, of Chicago, to put before the people of the North and West the advantages the South offers the homeseeker and the capitalist. These people can be relied upon to recommend nothing but strictly legitimate enterprises.

THORSBY, Ala., August 16.—Special Correspondence.—Fifty miles south of Birmingham, on the main line of the Louisville & Nashville railroad, is a colony, which has been established largely through the liberal and progressive policy of the Louisville & Nashville railroad company. The name of this place is Thorsby. It is in Chilton county, and this county is in Central Alabama.

Chilton county is on the divide between the mineral belt of North Alabama and the cotton belt of South Alabama. Latitude 33 degrees is about the dividing line between the two geographical, geological, and, I may say, political and industrial divisions of this state. North of this line the county is mountainous, well watered, and in general elevation is about 750 feet. There are fertile valleys and plateaus; most of the lands are red clay; there are extensive deposits of coal, iron, and other minerals, and many new manufacturing towns have been built within the past fifteen years. Cotton is raised in North Alabama but more attention is given to grain, fruits, and vegetables. The white people are in the majority in North Alabama, and there is greater progress in industrial lines and greater independence in politics than in South Alabama.

The country south of Chilton county is known, in a general way, as the Black Belt, so called from the color of the soil and the number of negroes who live in that section. The Black Belt is a prairie country, agriculture is the prevailing industry, and cotton is the principal product. There are no minerals which have been developed in South Alabama and manufacturing has not been developed to any great extent. Immigration has not made such progress in South Alabama as it has in North Alabama, and there is less political independence in the southern than in the northern section of the state.

Extensive pine forests are found in Chilton county and the lumber business is one of the leading industries. Only a small portion of the land is under cultivation. The soils vary from the fertile brown and red loam lands to the sterile. The products are cotton, corn, oats, rye, and tobacco. Latterly some attention has been given to the cultivation of rice, and fruits and vegetables are given special attention by new settlers from the Northwest. The white people are largely in the majority, notwithstanding the county is adjacent to the Black Belt.

The Concordia Land and Improvement association is the name of the company which has undertaken to establish a colony at Thorsby. T. T. Thorson is at the head of this enterprise and the results so far attained are due largely to his efforts. Mr. Thorson and his associates in this enterprise are from Minnesota, where formerly engaged in farming and stock raising. With their families, they have moved to the new colony and are active in all legitimate efforts toward the advancement of the enterprise and aiding the newcomers.

Thorsby is situated on a plateau of about 790 feet altitude. The island is rolling and there are no swamps or malaria. There is water in abundance and of good quality. Building material is very cheap. Forests of long-leaf yellow pine are near by, and saw mills in the immediate vicinity furnish lumber at low figures.

This colony was established hardly two years ago, when there was not a house on the land, and the whole tract was in pine, oak, and hickory timber. Today there are upward of 150 buildings and others are in course of construction. The houses are substantial structures and above the average of the county. A substantial hotel has been completed and a two story school house is one of the attractive features. The school has been well organized and a capable educator is in charge.

The new settlers are Americans and Scandinavians from the Northwestern states. They are industrious and thrifty. I did not see an idle man about the place. Everybody is at work, and no one seems to be waiting for something to turn up. The newcomers object to the thriftless habits of the negroes, and there is not a "colored person" living or employed in the settlement.

It has been the policy of Mr. Thorson and his associates to find employment for every newcomer. I conferred with a number of intelligent people during the past eighteen months. I am of the opinion that many readers of the Inter Ocean will be interested in the voluntary declarations of these settlers.

Gus Rosenberg, of Eau Claire, Wis., located at Thorsby in April, 1896. He is a carpenter, and states that he has found steady work since he came here. He claims to make $2 per day, and, on account of the low cost of living, he has been able to save from his wages sufficient to buy a ten-acre tract of land and build a house. His health is greatly improved, and he is delighted with the climate and the land.

Charles A. Peterson, of La Crosse, Wis., is a painter and a very intelligent man. He has not found expensive work at Thorsby, but has been able to make a living and is well pleased.

L. M. Pearson of Minnesota, A. M. Johnson of Waseca, Minn., and R. H. Rierson of Emmet county, Iowa, are among the number who make favorable reports of this locality and are well pleased.

A. Malmgren, of Estherville, Iowa, came here last May. He bought a ten-acre tract of land, on which he has just completed a nice two-story dwelling and a substantial barn. He has also acquired another tract, of forty acres, and thinks this is a very desirable section of the country.

E. F. Mead, of Mankato, Minn., said he had been building a home during the winter months—a time when he could do nothing for himself in the North. Mr. Mead is a carpenter by trade.

I talked with many more new settlers, and heard only good reports. Every one is pleased with the soil and the climate, and I did not find a man who is without work and who has not been able to build a home.

There are other locations in Alabama with quite as many natural advantages as Thorsby. Indeed, there are sections which perhaps have greater advantages, but I doubt if any colonization scheme meets with greater success than this. The absence of speculation and the manifest disposition to deal frankly, coupled with the character of the settlers, the energy, thrift, intelligence, and integrity of the whole population, warrant the opinion that this will soon be one of the most successful colonies of the South.

Capt. P. Sid Jones, who is in charge of the immigration department of the Louisville and Nashville railroad company, was active in promoting the Thorsby settlement. Captain Jones came South several years ago, and has been influential in attracting attention to the advantages of the South. His office is in Birmingham, Ala., but he is now in charge of the Louisville and Nashville exhibit at the Tennessee Centennial.

The Louisville and Nashville railroad is very popular in the South. It is an extensive system, under liberal and progressive management. Its policy has been to build up every section traversed by its system. The encouragement of thrifty home-seekers looking for new locations in the South is part of the broad policy of the Louisville and Nashville railroad.

"Garden Spots of the South" is the name of an interesting publication by the Louisville and Nashville Railroad company. It contains a large map and a great of valuable information. Every person who expects to locate in the South or desires information about this section, would do well to write to C. P. Atmore, general passenger agent, Louisville, Ky., or Sid Jones, Birmingham, Ala.

WILLIAM H. SKAGGS.

The diagram below represents ten different varieties of grapes planted last spring. Each dot represents a vine and the number the aggregate growth in fact of each vine. No other state in the union will show a like result.

VARIETIES										
Champion	8	16	5	10	6	6	10	9	10	7

Mammoth Furniture House, 2115 to 2119 2nd Ave.
BIRMINGHAM, - ALABAMA.

HOTEL CONCORDIA,

JOHN STEVENS, PROP'R.

THORSBY, ALABAMA.

RATES, by the day, $1.00.
by the week, $4.00.

AT HOME.

Oscar Swensson is busy building a cottage.

T. T. Thorson was in Birmingham last Saturday.

Our neighbor, Dr. Gihvan, raised eighty bushels of oats on one acre last summer and now has a fine crop of corn on the same ground promising to give a good yield.

A neighbor of ours brought in an ear of corn having twenty-two rows. Who says corn won't grow in Alabama.

A. M. Johnson was in Jemison last Sunday.

Ada Hedberg and Dora Thorson, Anton Thorson and John Stevens, the beau ideal of Thorsby, took in the classic town of Clanton last Sunday.

Don't forget to read Mr. Skagg's letter to the Inter Ocean, It is republished in this issue of the Call.

Thorsby's public school opens Monday, September 20, at 9 o'clock a. m. Let your children come the first day. The term will continue eight months.

Ellen Forsman left for Meridian, Miss., last Friday.

We should like to hear from our friend Oscar Johnson, formerly of Chicago.

It's a funny day when peas are beans and beans are peas.

Services next Sunday at 10:30 a. m. Prof. H. W. Ryding. Text, Mathew 11:25-30. At 7:30 p. m. Rev J. E. Hedberg. Text, 1 Timothy, 1:5 -17. A cordial invitation is extended to all.

Now is the time to prepare your strawberry beds.

A large force of men was put to work last Monday building Thorsby's new depot. The materials were on the ground a week before.

S. A. Thorson is busy improving his lot. He intends to go into the poultry business and says that Plymouth Rock hens will be his choice as to breed.

Sunflower seed is an ideal poultry feed. Besides this, it is a great deal cheaper than corn.

E. F. Mead, Iver Husby, Gust Rosenberg and N. L. Pearson are working on the new depot.

T. T. Thorson has been a little too rapid in his movements causing him to wear out a pair of shoes in two weeks. Last Saturday, however, he bought a pair of shoes that will without the shadow of a doubt decidedly counteract this tendency.

E. F. Mead and A. Malmgren will go into the strawberry culture, which gives the most splendid returns.

E. F. Mead has been busy grubbing and clearing on his land, but since he began work on the depot he followed Cleveland's example and hired a substitute.

Foresight, thrift and diligence always win the day.

Ten acres planted in grapes and other fruits is worth more than fifty thousand dollars in Klondike gold. That you can get ten acres of land is a certainty; that you will ever get any Klondike gold belongs to the category of impossibilities.

Miss Clara Bergh left last Tuesday for her home in Estherville, Iowa.

Don't come South with the idea of becoming a day laborer. Be ambitious enough to come to make yourself a home and in no other place can you make yourself such a delightful home as here.

A vineyard in Thorsby is a better provision for your family than a life insurance policy.

Passenger Train Derailed.

A St. Louis and San Francisco limited express for Galveston and other points in Texas, which left St. Louis at 8:20 o'clock Friday night, was passing Valley park station, about twenty miles west of St. Louis at a high rate of speed, when it was derailed and the baggage car, smoker and two day coaches were thrown in various directions from the track. None of the passengers are reported hurt beyond bruises and a good shaking up, but three tramps, stealing a ride on the baggage car, were seriously injured, one having his skull fractured and will die, and the other two having their legs broken. The accident seems to have been caused by a wheel of the baggage car throwing the switch while passing over it, thus letting the other cars to the ground. The sleeper, however, remained on the track.

Startling Result of a Decision.

The recent decision of the upreme court of Idaho, nullifying a majority of Idaho's laws, may result in liberating a large number of convicts now incarcerated in the State penitentiary, who were convicted on information of the district attorney without grand jury indictment. The act providing for information is said to be unconstitutional under the supreme court decision.

The President at Akron.

The train bearing the president from Columbus, O., arrived at Akron Saturday at 2:30 o'clock. He received an ovation at the station. The president made a brief speech at Grace park, after which, at 5:20 o'clock, with Mrs. McKinley, he started for Canton.

LATE TELEGRAPH ITEMS.

HAPPENINGS OF INTEREST BOILED DOWN FOR THE BUSY READER.

Accidentally Drowned—A German Woman Commits Suicide—Noted Moonshiner Captured—Death in a Cotton Gin.

Died of

Thomas Curr, engineer at White's cotton gin, near Lancaster, Texas, was seriously injured by a runaway team, and died Thursday night as a result of his injuries.

Received by the Sultan.

Dr. James B. Angell, the United States minister to Turkey, with the members of the American legation, was granted an audience by the sultan at Constantinople Friday and presented his credentials.

Hanged Herself.

Mrs. Terch, a German farmer's wife, living some miles from Richmond, Va., hanged herself, Thursday, with her apron strings in the attic of her home She had been in bad health for some time.

Accidentally Drowned.

John B. Baird, formerly a well known citizen of Atlanta, Ga., and at one time adjutant-general of the State, was accidentally drowned in the Chesapeake & Ohio canal, near Washington, Thursday night.

Hanged for Murder

Robert Henry, colored, was hanged Thursday for the murder of his wife in February, 1896, in Jacksonville, Florida. Enoch Doyle was also to have been hanged for assault, but a respite was granted for ten days.

Noted Moonshiner Captured.

Jon. Church, a noted moonshiner, was captured in the mountains near Little Rock, Ark., Thursday. He made a full confession and promised to aid in the capture of othert implicated in the murder of Capt. Taylor and party.

Sending Sick Soldiers Home.

The last two steamers which have sailed from Havana for Spain carried 1,600 sick and disabled soldiers. Captain-General Weyler received, Thursday, from Spain, $2,000,000 in silver, to be used in defraying the expenses of the war in Cuba.

Seventy Per Cent Cotton Estimate.

Reports received at the office of Commissioner of Agriculture Culver, at Montgomery, Ala., from 54 out of the 56 counties of Alabama as to the condition of the cotton crop show that the output will not exceed 70 per cent of last year's crop.

Blue Ribbon Derby.

In the field trial of the Continental Club of American Organizations, at Morris, Man., Thursday, the blue ribbon derby was won by Pearl R., owned by Dr. F. M. Rogers, of New Albany, Miss. Sport McA., owned by J. J. Odum, of Birmingham, Ala., was second.

Made Homeless by Fire.

Twenty-five families were rendered homeless Thursday night by a fire on the Kaw river bottoms, just across the Kansas City line. An entire block of frame building were destroyed, entailing a loss of $60,000. Many poor families lost all their household effects. Armour's packing plant was threatened.

England's Wheat Deficit.

The London Daily Graphic published, Friday, a table comparing the prospective English wheat supply at the present time with that of September, 1896, showing a deficiency of nearly two million quarters. It is inevitable, the Daily Graphic says, that the rise in the price of bread will be maintained.

Killed by a Boiler Explosion.

Howell Cobb, son of Capt. John A. Cobb, of Americus, Ga., and a grandson of Gen. Howell Cobb, one time speaker of the house of representatives and secretary of the treasury in Buchanan's cabinet, was instantly killed Thursday morning by the explosion of an engine on his plantation, near Americus, Ga. He was 27 years old and leaves a wife and two little children.

A Canal Across Florida.

Articles have been filed with County Clerk Purrov, of New York City, for the incorporation of the Florida Trans-Peninsular Ship Canal Company. The chief incorporat rs are Robert May Caffall, Freeman H. Baldwin, H. Boslet Peraza, consul general for the Greater Republic of Central America in New York; Benj. F. Cromwell and Francis P. Fleming. The capital is $75,000,000. The project is to build a ship canal and railway to connect the Atlantic with the gulf, with capacity for the passage of ocean-going vessels.

Cotton Growers Clamor for Paris Green.

There is an enormous demand for paris green just manifested in the last few days at Houston, Texas. The crop report, issued on the 31st, gave notice that worms were very numerous in the cotton, but no such damage as they have begun to inflict was thought probable at the time. Farmers are evidently hard at work trying to prevent the spread of the pest, but the demand comes from nearly all the territary tributory to Houston, which comprises largely more than half the crop, and this would seem to indicate that the worms have appeared in greater numbers than for many years.

Will Die Game If It Takes His Last Breath

The condemned murderer, Perry, of Atlanta, Ga., made another pass at Governor Atkinson Thursday, by inviting him to call at his cell and help him to pray. "The governor," said Perry, "might spare a little time and help me to pray. Since he has condemned me to death for having avenged the ravishment of my wife, he might come here and join in my prayer; he would seek a light which would make a better man of him for the future. They do not allow my wife to come close enough to shake hands with me, and a man of God, who came to pray with me to-day, could not be heard because of the noise made by the other prisoners." The attorneys of Perry made another strong play for sympathy Thursday by having printed in Hoke Smith's paper a group of Perry's five children, with flaming headlines, stating that the State is about to make orphans of these little ones. "Do not fear for me," said Perry, this evening. "I intend to die game, if it takes my last breath to do it."

Horrible Death in a Cotton Gin.

Wednesday evening about 6 o'clock, at Tom Rogers' gin, five miles southwest of Bonham, Tex., Dick McCullough was caught in a gin stand and instantly killed. McCullough was working around the gin and went into the room just as the ginner had finished ginning a bale of cotton. The breast of the gin had been raised and McCullough picked up a handful of cotton and threw it on the gin stand. His right hand was caught by the saws, and in an instant he was drawn upon them and their sharp teeth cut into the flesh. His right arm and side were literally cut to pieces. His breast and side were cut until his lungs were exposed, and his neck was broken. He groaned, gasped and was dead.

Only Partially True.

Senator C. K. Davis, chairman of the foreign relations committe of the United States senate at St. Paul, Minn., Friday was asked for an expression regarding the Hawaiian advices to the Associated Press in regard to the annexation treaty. He dismissied the matter briefly, saying: "There is no question in my mind about the truth of the first statement, that Hawaii may at once ratify the treaty. Why not? Their senate can get together easily, and they can readily dispose of the treaty. As to the statement that the United States congress would be called to meet two months in advance of the usual date, I have reason to know that there is no truth in it. The treaty will be finally ratified by our senate when taken up by the body."

Killed for Five Dollars.

Edward Register, a young farmer living near Jacksonville, Fla., was shot and killed by his fourteen-year-old adopted son, Robert, Wednesday night. The boy and a man named Henry M. Tyre were arrested, and Thursday the lad confessed that he committed the murder. It developed that Tyre and Mrs. Register had been clandestinely meeting. The husband caught them together on several occasions, and Wednesday Tyre and the woman offered the boy $5 to put his father out of the way. After supper the boy slipped up behind Register and emptied a load of birdshot into his head. Then Tyre, according to the boy's statement, finished the job by knocking Register in the head with an ax. All three are now in jail, pending a hearing.

State Normal College, Troy, Alabama.

Governor Johnston has recently appointed six new Directors for the State Normal College, at Troy, Alabama, in place of six whose times have expired. The new members are as follows, to-wit: Hon. C. A. Scott (ex-M. C. from California), Mt. Pleasant, Monroe Co.; Hon. A. A. Evans, Clayton, Barbour Co.; Senator D. C. Bethune, Union Springs, Bullock Co.; Hon. C. P. Rogers, Representative from (Letohatchie) Lowndes Co.; Hon. J. E. Cobb (ex-M. C. 5th Ala. Dist.), Tuskegee, Macon, Co.; and Hon. A. O. Lane, Birmingham, Jefferson Co.

These, with Hons. Chas. Henderson, O. C. Wiley and J. B. Knox, and Governor Johnston, State Supt. of Ed. Dr. J. O. Turner, and President E. R. Eldridge of the College, ex-officio members, constitute the Board. A called meeting for Sept. 10, to take action on important measures to be submitted by the Executive Committee and Faculty, looking toward the College's extension in various ways, will be held, and everything done that can be to make the session to open Sept. 21st, for forty weeks, better than all preceding it.

Some great advances are hoped for along several lines, of which due announcement will be made. Miss Willie McMillan, sister to Congressman Benton McMillan, of Tennessee, has been selected, recently, as Art Teacher, and she comes from the best masters, according to her testimonials.

Many school officers are receiving aid in the selection of teachers for common and high schools.

GROCERIES

We can give you a good bargain in anything you may need in the line of groceries. If you are not satisfied with your grocer give us a trial. We have a fine line of

GENERAL MERCHANDISE.

ROLISON & ROLISON.

Postoffice Building.

What do you want?
What Can we do for you?

MONEY WE CANNOT GIVE YOU YOU BUT MONEY WE CAN SAVE YOU.

We do not ask you to take our word for it. All we ask is to give us a trial.

We Sell our goods so fast they are always fresh.

WE SELL FOR CASH and that is how we can save you money.

LABOR IS SCARCE.

Birmingham Iron Mills Send to Other Sections for Puddlers.

The Birmingham Rolling Mill Company has been compelled to send an agent to Youngstown, O., and other northern mill points, to get additional men to work in their old puddling mill, which has not been in operation for four years. They now find it necessary to run at their greatest capacity in order to supply the increasing demand for finished iron. Their agents want 200 to 300 men, mostly puddlers. The Birmingham Rolling Mill is operating its sixty-ton steel plant at full capacity and using all the product in the rolling department.

Birmingham furnace operators reported Saturday that they were selling iron more actively than for several months. They are getting a 25-cent advance on all grades, and buyers are forging to the front expecting a further advance. The total sales for the week were over 1,000,000 tons with No. 1 foundry and No. 1 soft, bringing $7.50 per ton. The export trade has fallen off a little, owing to the activity in the domestic market. The operators report the advance as substantial, and the prospect of a steady upward pull very bright indeed. The activity is especially notable in mill iron.

THE UNIVERSITY OF ALABAMA.

Foot Ball and Base Ball on the Campus Only.

The ruling to this effect made by the Board of Trustees lat year is still in force. Hence students will not travel over the state and country playing ball.

Some young men would prefer to have it otherwise. But it is thought that this course will meet the approbation of parents for many reasons. They believe that it will be more conducive to study, the real purpose for which they send their boys to college. Furthermore, College Athletics cost money. It is believed that confining the young men to their own campus will be in the interest of economy. These reasons will commend themselves to persons who do not object on the grounds of abuses that are likely to follow in the train.

Currency Shipments.

The United States sub-treasury at New York City transferred $100,000 in small bills to Kansas City Friday, for which it received gold in exchange and $15,000 in silver dollars to Texas and Alabama. Bankers also report heavy shipments of currency direct to the West and Southwest by registered mail and otherwise, but not much to the South.

HOUSE BUILDING

Is the order of the day in Thorsby. We are now prepared to keep up with the procession. Our new planing mill, which has recently been put in, and is now run in connection with our saw mill, enables us to furnish all kinds of lumber for building purposes. Our prices are more reasonable than those of others, and, being prepared to turn out an order on short notice, we can save the builder a large amount of inconvenience and expenses. By buying at home you have no freight to pay and you are helping aglong home industries. We also are prepared to ship lumber by the car load or in small quantities.

THORSBY LUMBER CO.

Little Boy Killed by an Enraged Hog.

A most horrible tragedy was enacted at Williston, Fla., Friday, in which a little 5-year-old lad was killed by a boar, the enraged animal literally disemboweling the child. The boy's cry for aid were heard by some women near, and they ran out with the broom sticks and clubs, but the now mad boar chased them into the houses. Finally men came up with Winchesters and a volley brought the boar down.

THE UNIVERSITY OF ALABAMA

Will Open Wednesday, October 6th.

Students are urged to be on hand promptly, as work will begin the first day. The Mess Hall and Dormitories will be ready for the reception of students on the 5th, and parents should instruct their sons to report to the President at the University as soon as they arrive in Tuscaloosa.

Jas. K. Powers, President.

FOR THE YOUNG FOLKS.

THEY'RE HIS.

When I go to bed at night,
You'd wonder that I dare
To go into the room at all—
If I told you what was there.

There's an elephant and a tiger,
And a monkey and a bear;
A lion with a shaggy mane
And most ferocious air.

But I think perhaps my bravery
Will not excite surprise
When I tell you that their master
In a crib beside them lies.

—[A. L. Bunner.

WHERE THE SPARROWS GET BREAKFAST.

The sparrows in Washington park have discovered a great source of supplies for themselves and their families. During the evening while the electric lights are burning thousands of insects, hovering near the glare, fall into the white globes and lose their lives in the heat of the carbons. The sparrows have found this out, and first thing in the morning hundreds of them may be seen hopping into the globes, remaining a moment, and then hopping out again with a good, fat beetle or a bug in their bills. They will fly away with their treasure to their nests, and a little later, back they will come for a new supply—for there are plenty of little sparrows at home to feed. In this way the whole sparrow community fares sumptuously every day, while the other park birds do not seem to have discovered the arc-light storehouses.

FROM AN OLD ARITHMETIC.

Speaking of old-fashioned problems, one of our friends of Springfield, Ill., sends three queer "examples" which appeared in Adams' arithmetic more than eighty years ago. No doubt the boys and girls of those days puzzled long and tediously over the kits, cats, sacks and wives, and never stopped to think whether or not a frog could climb a well curb. Read over the problems and see if you can answer them:

"If a herring and a half cost a penny and a half, what will 11 pence buy?"

"If a frog at the bottom of a well thirty feet deep climbs up three feet every day and falls back two feet every night, how many days will it take to climb out of the well?"

"As I was going to St. Ives I met seven wives; each wife had seven sacks; in each sack were seven cats, and each cat had seven kits; kits, cats, sacks and wives, how many were going to St. Ives?"

ROBIN RED BREAST.

The Redbreast, or Robin Redbreast, as it is affectionately termed, has, by its fearless conduct, earned itself golden opinions from all kinds of men. Every nation seems to protect it.

In the winter, when the berries are gone, insects dead, and the worms hidden under the hard frozen soil, then the robin flies for refuge to the habitations of man for shelter and food. It is very amusing to see the half trusting, half fearful look with which it hops to the window-sill for the first time. After a while, it becomes bold, and taps at the window, if the expected crumbs are not thrown out. Before very long it ventures to enter the room, hops about on the table, and quite seems to consider as a right what was first merely a favor. When once established, it is very jealous, and will not suffer a friend to be a partaker of the same comforts, but attacks him with the greatest fury, so the unfortunate second comer has to wait shivering outside the window, with his feathers puffed up, and his little bright eye glancing from the depths of the plumage.

UNINVITED GUESTS.

In St. Nicholas there is an article on "Some Common Bees and How They Live," by A. Hyatt Verrill. Mr. Verrill says:

Unlike the Honey-bees, the Bumblebee queens, to their credit be it said, are not of a jealous disposition, but live peacefully together in one nest until in the autumn the family breaks up, the old queens, workers, and drones perishing, while the young queens, forsaken and alone, crawl away to some protected spot, wherein to pass the winter and reappear in the spring and found another colony.

If you should examine a Bumblebee's nest, you would probably find among our busy, hardworking friends a number of individuals who never labor for their living and although they come and go with perfect freedom, never bring pollen or honey, nor aid in making wax. These are the "Guest-bees," or Inquilines, a species which depend on their host the Bumblebee to furnish them board and rooms rent free.

The Inquilines, like the European cuckoo or the American cow-bunting among birds, lay their eggs by stealth in the Bumblebees' nests. The young, when hatched, are cared for by their foster-parents, and when fullgrown are treated with as much consideration as though they were guests of honor. Why the Bumblebees should permit their uninvited visitors to remain with them is a mystery; for although some species closely resemble their hosts in size and color, others are quite different. It can hardly be supposed, therefore, that they are mistaken for rightful members of the colony. On this account many naturalists have thought that they perform some important service in return for their hospitable reception; but of what this duty, if any, consists has never been discovered.

FISH WITH WINGS.

The flying-fish loves deep water, and is found throughout the length and breadth of tropical seas. He is fond of feeding near the gulf-weed of the Sargasso, and deposits his stringy, glutinous spawn on its yellow branches. Vessels bound from New York to the Caribbee Islands, says Forest and Stream, upon reaching the "horse latitudes," sometimes encounter vast quantities of drifting weed, strung out into long ribbon-like patches about an eighth of a mile apart. Among the golden weed, with its delicate leaves and globular seeds, exists a curious family of cuttle-fish, crabs, mollusks, and small fishes. Upon these the flying-fish preys, and they in turn devour its spawn. Every plunge of the steamer as she ploughs through the blue tropical waters frightens dozens of flying-fish into the air, where they scatter in all directions, with the sunlight glistening on their gauzy wings.

The flying-fish of the Atlantic attains a length of nearly one foot, and a breadth between wing tips of eleven inches. He has a round, compact body, about one inch in diameter near the pectoral fins or wings. There is also an auxiliary pair of ventral fins or wings, not nearly so large as the pectoral pair. The wings are formed by a thin, transparent membrane stretched over a delicate bony framework, and are either black, white, or mottled with both. The upper half of the entire fish is a metallic blue in color, while the lower portion is a nacreous white. Black, prominent eyes; a small, prehensile mouth; forked tail, dorsal and anal fins complete the picture of one of the most interesting little fishes in all nature's vast aquarium.

In flights he darts from the water to a height of twenty feet, and goes scudding rapidly with both wings and tail. He sails straight away for 1000 feet, or even more, occasionally touching the crest of a wave, and seeming to gain a new impetus by the contact.

HOW BOBBY WENT TO THE GROCERY.

Bobby had started down town with a grocery list; and it was the first time he had gone alone, so he felt very proud over it. But by-and-by he stepped under a lamp-post to rest.

"It's purty hard work to walk all alone to the grocery man's," he thought. Just then a girl came and stopped to mail a letter in the iron box on the lamp-post.

Bobby watched her with much interest.

"Where does it go to?" he asked.

"The letter?" answered the girl. "O, down to the post-office. Didn't you ever see a post-office box before?"

"No, ma'am," said Bobby. "'Cause we've just moved here from the country."

Then, as the girl went on, Bobby stood still, looking at the box.

"I wonder if it wouldn't take my grocery list down," he thought. "'Cause, if it's smart enough to take letters, I should think it would be able to take a grocery list."

So he tucked his paper in, and sat down to see what would happen, though his conscience pricked him a little.

"My mother might not like it," he thought. "I wish I had thought to tell her about it first."

Presently a man dressed in gray drove up, and jumping out of his buggy, unlocked the box and took out the letters.

Bobby stood upon tiptoe and tried to see in.

"I thought," he explained to the man, "may be I'd have some groceries there I put a list in."

"No," said the man, laughing, "this doesn't deliver groceries. But you climb in and I'll take you down to the grocery. Here's your list."

The grocery man let Bobby drive back with him; and when Bobby saw his mother looking anxiously out of the door, he at once began to explain. "I tried to ex—ex-peppermint with a box, mother," he said. "But I was sorry; thought it was a tormentous long ways to the grocery man's, and—if they hadn't let me ride, I don't know how I'd managed. But I won't do it again, mother, truly."

"No, Bobby," said his mother, "experiments don't always turn out right; and it's better to go along the way your mother expects you."

"Yes, that's so," said Bobby. "I won't forget that."

On the Orinoco.

Scrambling through a creek choked with bulrushes many times higher than our heads, writes a South American traveler, we climbed up the clay bank and attempted to push through the dense undergrowth in the direction of the turmoil. More easily said than done.

The profound density of that tropical forest is indescribable; thorns, palms, lianas and other creepers wound together in an elastic but impenetrable mass, and it was only by crawling on all fours that any progress was possible. Fearsome creatures, but half seen in the sombre forest shade, wiggled away through the ooze at our approach; and at each step swarms of mosquitoes rose from the decaying vegetation, settling with determined ferocity on every available bare spot of skin. Once we ran our heads against what seemed a thick liana, but which, twisting rapidly away, proved to be a large anaconda. Unfortunately he was out of sight before a rifle could be disentangled.

Suddenly a deep-throated roar resounded in a tree just over our heads, and, looking up with tingling nerves, we found it had been smitted by nothing more formidable than a large gibbon, which, not being worthy of powder and lead, was left unmolested; and torn, bleeding, dripping with perspiration, and half frantic from mosquito poison, we returned, a sorry spectacle, to the launch.—Chambers's Journal.

Matter's Triumph Over Mind.

A hypnotist gave an exhibition of his powers on the streets recently and was meeting with great success until a wagon load of catfish was driven by, which hopnotized the entire audience.—(Ga.) Times Recorder.

NOTES AND COMMENTS.

Dr. David Starr Jordan computes that the child of to-day must have had at the time of Alfred the Great 870,-372,000,000 ancestors, and at that of William the Conqueror 8,596,094,592.

A doctor who has been experimenting with coffee as a remedy for anaemia says he has brought about some remarkable cures. He requires his patients to drink weak coffee exclusively, also ordering them to take baths in a decoction of coffee.

It is now asserted that a Frenchman has discovered a method of making silk of a fine quality from the webs of ordinary spiders. His name is M. Cachot, and it is probable that he will claim the reward of $10,000 offered by manufacturers of Great Britain to any one who could accomplish this feat.

The retiring president of the Detroit Board of Education, in his annual report, makes the novel suggestion that courses be established for parents as well as for children in the public schools. His idea is to give some of the advantages of schooling to grown people who come to America from foreign countries where they have not had the advantage of free tuition.

There is a certain minister in Kansas who has an eye to the physical as well as the spiritual welfare of his congregation. He brought one of his recent Sunday sermons to a sudden close with the following words: "Brethren, I will now close, for I see that we are going to have a thunderstorm. The congregation will please follow me to Brother Soandso's field and help him stack his wheat."

The postal service of the United States costs $9,000,000 a year above receipts, while that of Great Britain yields a profit of over $14,000,000, that of France nearly $10,000,000, that of Germany $6,000,000, that of Russia $8,000,000, and that of even India and Japan $1,500,000. About the only other nations whose postal service does not pay expenses are Canada, Norway, Siam, Chili, Peru, Bulgaria and Bolivia.

Horse dealers of France are apparently no longer able to supply the demand for the flesh of that animal in Paris. An order from the French capital for five thousand barrels of horse meat has been received by a company of Portland, Ore. The animals used are the half-wild cayuse of Oregon, which are bought for about $2 50 each. As the use of horseflesh for food seems to be growing in several foreign countries, it may become a profitable article for export.

The legislature's revision of the laws in Iowa has included some notable changes in that State's school law. Hereafter teachers there may be examined for either of two county certificates, a one year and a two year certificate, the latter depending upon some higher studies. The superintendent may revoke the certificate of any teacher who fails to teach physiology and hygiene as required by law. The power to suspend students is placed in the hands of the teacher. The school treasurer is to be elected annually. A teacher may not also be secretary of the school board.

In Finland there is a decided surplus of women, the female population of that country being 1,208,599, while the male is 1,171,541. Out of a total population of some two and one-half millions, therefore there are 37,000 more women than men. This means that women have to work hard for their support. In a just published book, "Through Finland in Carts," by an Englishwoman, one learns some of the ways in which the Finnish women do this. "She soon comes to think that there is nothing she cannot do. On looking over the statistics of women employed in trades one is pleased to see seventeen women carpenters and twenty-two paperhangers, as these trades are eminently fitted for women; but we sigh to find 765 are employed 'loading ships,' which manual labor is very hard. One is surprised to notice that twenty-one women are slaughterers!"

Gold exists in larger or smaller quantities in every portion of the world. It has been found in almost every State in the Union; in Devonshire, Cornwall, Wales and Scotland, in Great Britain; on the sands of the Rhine, the Reuss, the Rhone and the Aar; at Salzburg, in the Tyrol, and at Zell; in the valleys of Toppa, Sesia and Novard, in Piedmont; at Percheria, in Lombardy; on the Tagus, in Spain; in the rivers of Provence; in Southern and Eastern Siberia; in fourteen of the nineteen provinces of China; in the island of Yesso, in Japan; in odd spots in India; Thibet, and the islands of Ceylon and Borneo; in Abyssinia, Kordofan, and the Soudan generally; in North Africa and the region watered by the Zambesi and Limpopo, in South Africa; in Australia, New Zealand and Canada. But, as a general rule, the precious metal is found in such small quantities that it will not pay to work the mines or placers. It is only now and then that it occurs in isolated localities in abundance.

"Miss Gertrude Josephine Dwyer, of San Antonio," says Leslie's Weekly, "was crowned Queen of Texas at the Wako Karnival, held at Wako in May last. One of the features of the carnival was a contest among the different 'queens,' sent from the various cities of Texas, as to who should be crowned queen of queens, and on behalf of the Lone Star State carry greetings to President Diaz of the Republic of Mexico on his birthday. The distiction included for the queen a Mexican holiday and her escort through the Republic of Mexico and entertainment by the various Governors and the President. The award was made by fifteen judges selected from cities other than those that sent queens. About forty cities were represented, and the beauty of Texas congregated. The prize was to go to the most beautiful and most royally attired woman. The fifteen judges unanimously selected Miss Gertrude Josephine Dwyer and crowned her queen of queens. On July 2 the royal party started on the trip, and they have been receiving a splendid welcome in the land of the Montezumas. Miss Dwyer was born in San Antonia and is the youngest child of the late Joseph E. Dwyer, a descendent of one of the oldest families of Texas. Her mother, Mrs. Annette Dwyer, was a belle in Kentucky. Her uncle, Beriah Magoffin, was Governor of Kentucky, and her father was General James W. Magoffin. Miss Gertrude is a brunette, with perfect figure and stately bearing."

"The hospitality of Americans is quite overwhelming," said N. Jacobson, an English writer on political economy, in the New York Tribune. "The only objection to it is that it is entirely too generous. I landed in New York Friday an utter stranger, having crossed over to attend the Scientific Convention at Toronto. I expected to meet some Canadian friends in New York, but was disappointed, so I started out the next day in rather lonely mood to see a little of the town. Coming back from a visit to General Grant's tomb I fell in with two gentlemen, one elderly, the other young, who, seeing that I was a stranger, kindly began to point out objects of interest. Before we got back to the city the senior of the two asked me if I would not accompany him to his club to luncheon, naming a club which every man of any consequence in London ought to know stands about at the head of the list. Although I had never met him before, and our acquaintance was not of an hour's duration, he was so cordial and so evidently sincere in wanting to take me with him that I accepted the invitation. We went to the club and enjoyed a delightful repast, following which he ordered a carriage, and pretty soon I found myself being taken all over New York City behind a splendid pair of thoroughbreds. The drive was intensely agreeable. Wishing to return some of my escort's kindness, I asked him later if he would join me at dinner. We went to a noted place, had as fine a dinner as could be wanted by an epicure, and over it we lingered long, chatting about many topics of international interest. The gentleman was highly educated and informed on many subjects. But the time to part came at last. I called for the bill, and you can judge of my surprise when the water said: 'It is all settled, sir.' Protests were unavailing. My entertainer laughingly remarked that my money was counterfeit, which I found out was an American bit of humor when one man will not let another pay for anything. I fear it is too subtle a joke, however, for the average Briton, and I shall not employ it when I get back to London. But the moral of my story, if there is one, explains the wonderful differences in the make-up of the Yankee and his British cousin. Not in a thousand years would a stranger have been shown that attention and kindness in England. When I tell that incident at home my own family will want me to make an affidavit before a magistrate.

To Make the Blind See.

A very important discovery made by Dr. R. Deutschmann of Hamburg is just now much spoken of by physicians, particularly by specialists on the eye. It deals with the successful cure of a disease of the eye, which but a short time ago was considered absolutely incurable, the so-called detaching or peeling of the retina, which sometimes follows a case of retinitis. This disease consists in the shrinking of the aqueous humor, a watery, slightly salty fluid which lies between the cornea and the crystalline lens with the greater part of its substance in front of the iris. If the quantity of this fluid is lessened to a certain extent the eyesight is absolutely destroyed and the physician can do nothing but pronounce the disease incurable. Now Professor Deutschmann has succeeded in introducing into the diseased eye a sufficient amount of the aqueous humor taken from a live rabbit's eye to restore the lost sight. Several cases where this most delicate operation was performed are on record, the one of a purser on one of the steamers of the Hamburg-American line being most interesting. This man, totally blind three years ago, was able to resume his former occupation after undergoing the operation just described, and, the Philadelphia Record says, his sight is just as good as it was at any time in his life.

Mosquito Blessings.

The Boston Transcript is responsible for a new view of the mosquito, and while we slap and rub this summer we may keep in mind these four truths which it is declared science has established:

First. A mosquito cannot live in air free from malarial poison. Untainted air has the same effect on him as a healthy community on a doctor. It deprives him of patients and he must go to less favored localities to practice.

Second. The lymph, which flows through an automatic valve when it inserts its proboscis, contains a modified germ of the malarial fever, and, according to the well-settled law of innoculation, the introduction of the weak germ renders harmless an attack by the strong germ.

Third. The mosquito never swallows human blood. It cannot. The fact that its body becomes discolored and swells, while probing, is caused by the discoloration of the lymph in contact with the blood and the muscular efforts of inserting the probe.

Fourth. A mosquito will never insert its lancet in a person not susceptible to malaria. In this respect its sense is more accurate than the most skilled and experienced pathologist. This also proves, not only its unerring instinct, but that it never wounds unnecessarily. Its thrusts are those of a skilled and humane surgeon, and even more unselfish, for hope of a fee never quickens him, nor does the malediction of his patient deter him in fulfilment of his duty.

Dugout Schools in the West.

Colorado, as one of the most progressive few Western States, has now some of the finest public schools. Its educational property is valued at $7,000,000. The Agricultural College has eight fine buildings, the Normal, an imposing structure of brick and red sandstone trimmings, and High Schools with which New York cannot compare are seen in many of its growing towns. Free text books, kindergartens and manual training are being largely introduced.

In the southern school districts there still remain log school houses with palisades to protect them from Indian raids. The children ride to school on horseback and drive the horses within the stockade when Indians are seen lurking about to steal them.

On the plains, where there are few trees, dugouts, such as are used by settlers for their homes, serve as schools. They are usually in the midst of a settlement near a stream. An excavation of six feet is made in the hard soil. A few branches thatched with sods and grass form the roof. The stove pipe projects from the ground, and the light is admitted to the class room by the door. As the climate is dry and mild, the door can remain open, except during the cyclones in spring and the blizzards of winter, against which they are perfectly secure.—New York Telegram.

Queer Names.

A traveler who spent some time in the wilds of Texas says that he found families who named the children to indorse a sentiment after this peculiar fashion, "One Too Many Harry," or "Not Wanted James." It is to be hoped that the names did not embarrass their owners with more than one sense of superfluity. The negroes of the south, when left to their own methods of naming their progeny, strive for the most romantic and poetic or historic names they can find, and a good long string of them, too. A colored girl in Laurena county, South Carolina, is named "Fair Rose Beauty Spot Temptation Touch Me Not." The youths struggling under the patronymics of "George Washington Henry Clay Benjamin Franklin Andrew Jackson" are so numerous as to excite no comment.

Separable Tandem.

A Western manufacturer has placed on the market a novel separable tandem of exceedingly ingenious construction. In changing from a tandem to a single machine, by unscrewing four lock nuts, one in front of both saddles at the tube joints of the upper frame and one in front of both hangers on the lower frame, the middle section of the tandem is taken out. The front and rear sections are then joined, the lock nuts tightened, and a single machine is the result. It is claimed that this unique wheel, whether used as a tandem or a single, is rigid enough to satisfy a racing man.

Wear Makes Rugs Valuable.

The most costly rugs in the world come from Persia. The beautiful softness, and peculiar sheen of these rugs are due to the constant treading of bare feet. The rugs are made of goats' hair and wool combined. All Oriental rugs are hand made, and each piece of wool inserted is tied twice. Years of labor are involved in making some of the largest of these floor coverings, but they never wear out.

When a rug is made it has to be subjected to years of footwear before it becomes at all valuable. Many of the Persian rugs now in use have been walked on more than 100 years and are still as new as ever.

Mosquito Blessings.

The Boston Transcript is responsible for a new view of the mosquito, and while we slap and rub this summer we may keep in mind these four truths which it is declared science has established:

First. A mosquito cannot live in air free from malarial poison. Untainted air has the same effect on him as a healthy community on a doctor. It deprives him of patients and he must go to less favored localities to practice.

Second. The lymph, which flows through an automatic valve when it inserts its proboscis, contains a modified germ of the malarial fever, and, according to the well-settled law of innoculation, the introduction of the weak germ renders harmless an attack by the strong germ.

Third. The mosquito never swallows human blood. It cannot. The fact that its body becomes discolored and swells, while probing, is caused by the discoloration of the lymph in contact with the blood and the muscular efforts of inserting the probe.

Fourth. A mosquito will never insert its lancet in a person not susceptible to malaria. In this respect its sense is more accurate than the most skilled and experienced pathologist. This also proves, not only its unerring instinct, but that it never wounds unnecessarily. Its thrusts are those of a skilled and humane surgeon, and even more unselfish, for hope of a fee never quickens him, nor does the malediction of his patient deter him in fulfillment of his duty.

Dugout Schools in the West.

Colorado, as one of the most progressive few Western States, has now some of the finest public schools. Its educational property is valued at $7,000,000. The Agricultural College has eight fine buildings, the Normal, an imposing structure of brick and red sandstone trimmings, and High Schools with which New York cannot compare are seen in many of its growing towns. Free text books, kindergartens and manual training are being largely introduced.

In the southern school districts there still remain log school houses with palisades to protect them from Indian raids. The children ride to school on horseback and drive the horses within the stockade when Indians are seen lurking about to steal them.

On the plains, where there are few trees, dugouts, such as are used by settlers for their homes, serve as schools. They are usually in the midst of a settlement near a stream. An excavation of six feet is made in the hard soil. A few branches thatched with sods and grass form the roof. The stove pipe projects from the ground, and the light is admitted to the class room by the door. As the climate is dry and mild, the door can remain open, except during the cyclones in spring and the blizzards of winter, against which they are perfectly secure.—New York Telegram.

Queer Names.

A traveler who spent some time in the wilds of Texas says that he found families who named the children to indorse a sentiment after this peculiar fashion, "One Too Many Harry," or "Not Wanted James." It is to be hoped that the names did not embarrass their owners with more than one sense of superfluity. The negroes of the south, when left to their own methods of naming their progeny, strive for the most romantic and poetic or historic names they can find, and a good long string of them, too. A colored girl in Laurens county, South Carolina, is named "Fair Rose Beauty Spot Temptation Touch Me Not." The youths struggling under the patronymics of "George Washington Henry Clay Benjamin Franklin Andrew Jackson" are so numerous as to excite no comment.

Separable Tandem.

A Western manufacturer has placed on the market a novel separable tandem of exceedingly ingenious construction. In changing from a tandem to a single machine, by unscrewing four lock nuts, one in front of both saddles at the tube joints of the upper frame and one in front of both hangers on the lower frame, the middle section of the tandem is taken out. The front and rear sections are then joined, the lock nuts tightened, and a single machine is the result. It is claimed that this unique wheel, whether used as a tandem or a single, is rigid enough to satisfy a racing man.

Where All the Trouble Started.

She—Do you think, at the rate woman is progressing, that the time will ever come when she will treat the man, instead of the man treating her?

He—I hope not. That was what got the whole human race into trouble; Eve's setting up the apples to Adam.—Cincinnati Enquirer.

Lafayette's Grant of Land.

No man was ever more highly honored in this country than Lafayette during his second visit. In 1825 he came as the guest of the nation, remained over a year, and during that time visited every one of the twenty-four States which then composed the Union, and was everywhere received with popular enthusiasm. In consideration of his services during the revolutionary war Congress voted him a grant of $200,000, and in addition to that 24,000 acres of land, to be located by him anywhere among the unappropriated lands belonging to the national government. His 68th birthday was spent at the White House. After his visit he sailed for France in the Brandywine, and in 1834 died in Paris.

Miss Sibyl Sanderson.

This is the singer whom Antonio Terry, the wealthy Cuban, has frequently announced his intention to marry as soon as the divorce court released him from Mrs. Terry. As this event has come to pass in the shape of a decree issued by the French courts no legal barrier now stands in the way. Miss Sanderson has won distinction on the operatic stage, and is at present singing in St. Petersburg, where rumor says she is receiving much attention from the Czar. When she becomes Mrs. Terry she will not need to sing, as her husband to be is reputed to be worth between $4,000,000 and $5,000,000.

Unnecessary Generosity.

Jose Maria, a Spanish brigand who had received pardon of the government on condition that he renounced his exciting and unlawful profession, used to tell most entertaining stories of his past. On one occasion he said he had robbed an English gentleman and his servant of their horses and everything they possessed, save their clothes.

The Englishman was a pleasant, attractive youth, and submitted to the robbery with great good humor. This appealed to Jose Maria, and as they were forty miles from Seville, whither the traveler was going, he determined that he should not walk that distance, and gave him back his servant's horse and a doubloon—sixteen dollars—out of the two hundred he had taken.

The youth thanked the robber warmly, and added that he had still a great favor to ask.

"Will you not return me my watch?" he said. "It was the parting gift of my dear father."

"Is your father alive," asked Jose Maria, "and does he love you very much?"

"Oh yes," said the youth, "he lives and loves me."

"Then," said Jose Maria, "I shall keep the watch, for if your father loves you so dearly, he is sure to give you another."

The Ocean Can Work.

Argostoli, the capital of Cephalonia, the largest of the Ionian Islands, has two unique mills—water mills—which derive their power from the ocean. The city is located on a deep bay, entrance to which from the sea is made through a narrow strait between two capes. The current in this narrow passage is very strong, and this fact is being made use of by placing the two water mills on its bank.

Curiously enough, the current always flows in one direction, and not to and fro, as one would expect. The water which flows into the bay disappears in the crevices of the promitories, cleft in twain by frequent earthquakes. Where the current goes, however, it has been impossible to discover, although many geologists have busied themselves with the problem.

Repeated earthquakes have torn the rocks in many places, and that of February 4, 1867, destroyed two towns and more than forty villages by its exceptional severity. The theory that the current is simply filling up these crevices must be wrong, for no matter how large the crevices they would have been filled up long before this in the course of the decades and centuries.

Quite recently two English scientists examined the current, and gave as their opinion that the continuous current in one direction can be explained by the fact that the waters rush through subterranean caves, passing over hot channels, and that the heated water forms the hot salt-water springs found a little further away outside of the bay on the coast of the island. The existance of such a subterranean current is believed possible, and might be explained by the peculiar formation of the coast, but no positive proof of this theory has been presented.—Philadelphia Record.

Production of Diamonds.

Professor (Sir William) Crookes, in a recent lecture, expressed his opinion that Moissan, in his experiments in diamond making, has thrown much light on the way in which nature has formed these gems. In the artificial process pure iron was packed in a crucible with pure charcoal from sugar. In the electric current the iron melts rapidly and saturates itself with carbon. When heated above 4,000 degrees, the current is stopped and the crucible plunged in cold water and held until it diminishes to a dull red heat. The sudden cooling solidifies the outer layer of iron. The expansion of the inner liquid in solidifying produces an enormous pressure, and the dissolved carbon separates in a crystalline form—diamond. The metallic mass is then attacked with solvents to liberate the grains within. Professor Crookes pointed out that the diamond of the chemist and that of the mine are akin as to origin, and that the diamond genesis must have taken place at great depths, under enormous pressure. It has been proved that iron at high temperature and under heavy pressure, conditions existing at great depths below the earth's surface, is the long-sought solvent for carbon.—Chicago Inter-Ocean.

Many Bison Still Live.

After all that has been said the American bison isn't so nearly extinct as had been supposed. Forest and Stream has just completed an investigation which shows that at present there are at least 600 bison or buffalo in captivity, mostly in game parks, where they have free ranges and natural surroundings, which make it likely that they will breed and multiply. The largest captive herd is owned by Charles and Joseph Allard in Missouri county, Montana. It consists of 250 fine, healthy and fairly young animals. Austin Corbin's herd comes next with 82 head; Charles Goodnight, in the Texas Panhandle, near Petty, in that State, has 50; J. G. McNair has 10 in St. Elmo, Oregon county, Me.; D. F. Carlin has 30 in Leslie, N. D.; Buffalo Bill has 24; Sir Donald A. Smith owns 15 in Winnipeg, and William C. Whitney holds 13 in his preserves. There are scattering specimens and even small herds in various zoological gardens and in the hands of private individuals, many of whom hold them for show purposes. Among these is the father-in-law of a famous military man, who owns seven bison.

Franklin's Famous Toast.

John Bacon, of Easton, Penn., has in his possession a copy of the Weekly Museum of March 4, 1797, in which is related the following anecdote: "At the conclusion of the war Dr. Franklin, the English Ambassador, and the French Minister, Vergenis, dining together at Versailles, a toast from each was called for and agreed to. The British Minister began with 'George III., who, like the sun in its meridian, spreads a luster throughout and enlightens the globe.' Our American Franklin then gave, 'George Washington, commander of the armies, who like Joshua of old, commanded the sun and the moon to stand still, and they stood still.'"

The Blue and the Gray.

Both men and women are apt to feel a little blue, when the gray hairs begin to show. It's a very natural feeling. In the normal condition of things gray hairs belong to advanced age. They have no business whitening the head of man or woman, who has not begun to go down the slope of life. As a matter of fact, the hair turns gray regardless of age, or of life's seasons; sometimes it is whitened by sickness, but more often from lack of care. When the hair fades or turns gray there's no need to resort to hair dyes. The normal color of the hair is restored and retained by the use of

INCURABLE DISEASES.

THE LIST DECREASES AS THE KNOWLEDGE OF SCIENCE INCREASES.

Story of a Man Who Was Given Up to Die by Seven Physicians—He Follows the Advice of a Friend and is Now a Well Man —A Wonderful Story.

From the Leader, Morrisville, N. Y.

"Yonder is a man," said the farmer to a reporter, "who is the talk of this community."

"He is Mr. William Woodman, of South Hamilton, Madison Co., N. Y.," a well-to-do farmer, who is well known and stands high for honesty and thrift in this neighborhood.

On the following day the newspaper man called on Mr. Woodman in his comfortable, old-fashioned farm house.

"I have had serious thoughts of writing an account for the newspapers myself," said Mr. Woodman, "but as I am not accustomed to such work, I have never attempted it. Sit down and I will tell you all about it.

"I am fifty-nine years old. I contracted rheumatism when only fourteen years of age, then a severe cold from over exertion and from becoming over heated. My father was a farmer and insisted that the only way to make me strong was to do plenty of hard work. When, however, he saw me helpless in bed for six long months without being able to move except with help, he changed his mind, and forever after believed that children should not be made to do men's work. My growth was stopped by suffering, and I do not think I am an inch taller than that day, forty-five years ago. During the forty years ensuing after my misfortune, I was attended by seven doctors. I received temporary relief at times, from new forms of treatment, but always relapsed into a worse and more aggravated condition. The conclusion of all these gentlemen was that I was incurable, and all they could do was to ease my condition. After I grew to manhood I married and have been blessed with a family. My dear wife has had all the drudgery of nursing and waiting upon me, and the burden has been indeed hard to bear.

"Without hope from physicians I began to take Dr. Williams' Pink Pills, which was highly recommended by my friends. I took them and within one week began to feel better than I had since I was first afflicted. I took these pills according to directions, and when the box was nearly gone I went over to Brookfield to an old friend who was in the drug business, named Dr. Aurelius Fitch, who likewise was a great sufferer from rheumatism. The doctor and I ordered several boxes of Pink Pills in partnership, he from that time keeping them on sale. Well, I continued to take them according to directions for the next three years and steadily improved, gaining flesh and strength, until two years ago I was able to discontinue them, and now am as able bodied a man of my years as you will find. I ought to tell you that after I ordered the first box of pills the physician who was then attending me came in and I told him what I was doing. He said I was very foolish, that they would surely injure me, and it was his duty to tell me so. I told the doctor that I might as well die as to drag out a miserable existence, and so, notwithstanding his warnings, continued to take the pills. Thank God the doctor was not able to dissuade me, for to them I now ascribe all the comfort and happiness I have in this world. I have recommended them to hundreds of people since I was cured, and in every case they have been effective, not only in rheumatism but in numerous other disorders, especially impoverishment of the blood, heart trouble and kidney disease.

"I certify the above statement to be true, and if necessary will swear to the same before a Notary Public."

WILLIAM WOODMAN.

When Mr. Woodman had signed and delivered the above paper to the reporter, he said: "If I were you I would go and call on Mr. Amos Jaquays, at Columbus Centre, to whom I recommended Dr. Williams' Pink Pills for aggravated kidney disease. He is now in perfect health. I have no doubt he will be glad to testify to the efficacy of the remedy that cured him."

Dr. Williams' Pink Pills contain all the elements necessary to give new life and richness to the blood and restore shattered nerves. They are for sale by all druggists, or may be had by mail from Dr. Williams' Medicine Company, Schenectady, N. Y., for 50c. per box, or six boxes for $2.50.

CANCER CURED AT HOME; send stamp for book. Dr. J. B. HARRIS & CO., Pike Building, Cincinnati, Ohio.

Some idea of what it costs Great Britain to keep up some of its colonies may be had from the report on Bermuda. Bermuda contains only about 10,000 acres, and but one-quarter of this is under cultivation. It is used principally as a coaling and naval station. It has a public debt of $230,000. Its revenue was in 1896 but $150,000 and the expenses exceeded this by several thousand dollars. This was not counting the naval appropriation, amounting to $500,000. This is paying pretty dear for the honor of ruling the wave.

GROVES

TASTELESS CHILL TONIC

IS JUST AS GOOD FOR ADULTS. WARRANTED. PRICE 50 cts.

Report of Decree—The Famous $50,000 Trade-mark Case Decided—C. F. Simmons Medicine Company, St. Louis, Defeats J. H. Zeilin & Co., Philadelphia.

(From St. Louis Republic, July 4, 1897.)

"The Supreme Court of Tennessee on June 30 decided the most important trade-mark case that has ever been tried in that State and one of the largest ever tried in the Union, affirming and enlarging the opinion of the court below. The court held:

1. That Dr. M. A. Simmons, the predecessor of complainant, by extensive advertising of his celebrated remedy known as "Simmons Liver Medicine," made it a standard remedy for liver diseases long prior to the acquisition by J. H. Zeilin & Co. of any rights.

2. That the assignor of J. H. Zeilin & Co., through whom they claimed the right to make the fraudulent packages enjoined, never derived any title from A. Q. Simmons to make the medicine nor to use his name or picture, and that such use by Zeilin & Co. is a fraud upon the public, and is therefore enjoined.

3. That Zeilin & Co. purposely, fraudulently label their medicine in imitation of complainant's medicine to unfairly appropriate the trade of the Simmons Medicine Company, and the execution of this fraudulent purpose and act is enjoined.

4. Enjoined Zeilin & Co. from using their competitor's trade-name, trade-marks, or symbols, or imitations thereof, to deceive the public and unfairly appropriate to themselves the trade of the C. F. Simmons Medicine Co.

5. Enjoined Zeilin & Co., from deceiving and practicing a fraud upon the public by labeling their packages in imitation of the wrappers and trade-marks of the complainant.

6. Enjoined Zeilin & Co. from the manufacture and sale of the medicine under the name of "Simmons Liver Medicine," or "Dr. Simmons Liver Medicine," or "Liver Medicine by A. Q. Simmons," and from using the picture of A. Q. Simmons in connection therewith.

7. Enjoined Zeilin & Co., their assignees, agents and employes from deceiving and practicing a fraud upon the public by the sale of packages thus falsely labeled, either upon orders or calls for the genuine "Simmons Liver Medicine" of complainant, or in any package thus falsely labeled.

8. The court stated that it was the purpose of the court to entirely destroy the fraudulently labeled packages above described, and cause their removal from the market, and ordered Zeilin & Co. to deliver to the clerk to be destroyed, all cuts, dies, electrotypes, engravings and other paraphernalia used in impressing either of the above names or the picture of A. Q. Simmons.

9. Decreed that Zeilin & Co. pay all the damages which have accrued to complainant by the sale of these fraudulently labeled packages. The damages claimed by complainant were $50,000.

10. Decreed that Zeilin & Co. pay all the costs, which amount to several thousand dollars, the record being one of the largest ever filed in the Supreme Court."

Cheap Medicine.

As a rule, "cheap medicine" is inert, worthless, or dangerous. In Zeilin & Co.'s answer to our bill they said the packages enjoined were designed as "cheap negro medicine for the negroes of the Mississippi Valley." Now, as Zeilin & Co.'s advertisements say, and their manager swore, that all the liver medicine which they make is made by the same formula, is it not conclusive evidence from their sworn testimony and advertisements, that all the liver medicine they are selling from them is "Cheap Negro Medicine?" Question: Do the sick of America desire "Cheap Negro Medicine?" Let the afflicted answer by their future purchases. Dr. M. A. Simmons' Liver Medicine, established in 1840, is not "cheap medicine." It is "no cure all," and is only recommended for those indispositions caused by inactivity of the liver.

"Success" Cotton Seed Huller and Separator.

Nearly double the Value of Seed to the Farmer.

All up-to-date Ginners use them because the Growers give their patronage to such gins. Huller is PRACTICAL, RELIABLE and GUARANTEED. For full information Address

SOULE STEAM FEED WORKS, Meridian, Miss.

"ALABAMA BRAND" ROLLED OATS

are manufactured from specially selected White Oats. Unlike the cheap Western goods, they are Pan-Dried (by direct fire) more thoroughly than can be accomplished by steam heat, being slightly parched, keeping sweet longer, besides being the most perfectly cleaned from hulls and all impurities of any Rolled Oats in the markets of the world. We bring these goods on in Car Lots, making the boxes and packing the goods in Birmingham, using for this purpose deserving women and children. The goods are the best to be had. Ask for this brand and see that you get it. Do not allow yourself to be imposed upon by accepting inferior goods when you ask for "ALABAMA BRAND." Remember, every package is guaranteed.

McMILLAN-LEE CO., BIRMINGHAM, ALABAMA.

WHAT THE END SHALL BE.

When another life is added
To the heaving turbid mass;
When another breath of being
Stains creation's tarnished glass;
When the first cry, weak and piteous,
Herald's long-enduring pain,
And a soul from non-existence
Springs, that ne'er can die again;
When the mother's passionate welcome
Sorrow-like, bursts forth in tears,
And the sire's self-gratulation
Prophesies of future years—
It is well we cannot see
What the end shall be.

When across the infant features
Trembles the faint dawn of mind;
When the heart looks from the windows
Of the eyes that were so blind;
When the incoherent murmurs
Syllable each swaddled thought,
To the fond ear of affection
With a boundless promise fraught,
Kindling great hopes for tomorrow,
From the dull, uncertain ray,
As by glimmering of the twilight
Is foreshown the perfect day—
It is well we cannot see
What the end shall be.

When the boy upon the threshold
Of his all-comprising home,
Puts aside the arm maternal
That unlocks him ere he roam;
When the canvas of his vessel
Flutters to the favoring gales,
Years of solitary exile
Hid behind its sunny sails;
When his pulses beat with with ardor,
And his sinews stretch for toil,
And a hundred bold emprises
Lure him to that Eastern soil—
It is well we cannot see
What the end shall be.

When the youth beside the maiden
Looks into her credulous eyes;
When the heart upon the surface
Shines, too happy to be wise;
When by speeches less than gestures
Hintath what her hopes expound,
Laying out the waste foundation
Like enchanted garden-ground;
He may falter—so do many;
She may suffer—so must all
Both may yet, would disappointed,
This last hour recall—
It is well we cannot see
What the end shall be.

When the altar of religion
Greets the expectant bridal pair;
When the vow that lasts till dying
Vibrates on the sacred air;
When man's lavish protestations
Doubt of after change defy,
Comforting the frailer spirit
Bound his servitor for aye;
When beneath love's silvery moonbeams
Many rocks in shadow steep,
Undiscovered till possession
Show the dangers of the deep—
It is well we cannot see
What the end shall be.

Whatsoever is beginning
That is wrought by human skill,
Every daring emanation
Of the mind's ambitious will,
Every first impulse of passion,
Gush of love or twinge of hate;
Every launch upon the waters,
Wide horizoned by our fate;
Every venture in the chances
Of life's sad, oft desperate, game,
Whatsoever be our motive,
Whatsoever be our aim—
It is well we cannot see
What the end shall be.

—Boston Transcript.

At Odds With the World.

Bixler sat in the park and railed at the world. Like the pipe he smoked, Bixler was short and black; his railings, though they were black enough and bitter enough, were far from short, for they lasted from luncheon time until dinner time, and the afternoon was that of a long, hot July day. The world at which he railed had demanded very little of Bixler. Perhaps that was the trouble. That he pay his debts, with the money his mother left him, that he wear a spike-tail coat at dinner; that he wash his linen in private—that was all the world asked, and the first and last were expectations rather than demands; the world did not always insist upon them.

And yet Bixler was not happy. He felt it hard to have been born into a world peopled with fools and dolts. It's an unsatisfactory sort of existence, even if it does give one something to rail at.

He watched a young couple meet at the fountain. Bixler had seen them there before. She was a shop girl evidently, tired with ten or twelve hours' standing in a hot and crowded shop. Bixler pitied and envied and hated her as the light flashed into her eyes when the man came up, trying to conceal his eager hurry. He was a factory hand, with only part of the factory grime washed off.

"Come near being late, Liz," the fellow was saying. "Don't suppose you'd 'a' cared, would you?"

"Wouldn't I?" exclaimed the girl, looking unutterable things as she took his arm.

Bixler looked and listened and felt no sense of being an eavesdropper. He saw the little squeeze the girl gave the fellow's arm, and he saw the glad, happy look in the boy's face, and Bixler smiled with contempt.

"Young idiots," he said, half aloud. "He'll be beating her, or what's worse, stamping on her heart in a year—if she has any heart left by that time. And in five years—Lord! here comes the picture of what they'll be in five years."

A man with his hands in his pockets and a week's stubble on his face, slouched down the path.

"Don't go so fast, Bill," a woman was snarling at him. "These kids are draggin' the life out of me."

But Bill gave no heed. He, too, was smoking a short black pipe. The woman gave the child she was leading a vicious jerk, saying: "Come on, why don't you," at which the child began to howl and the baby in the woman's arms took up the wail.

"Can't ye keep them brats still?" growled Bill, as they passed from sight.

The lovers had seated themselves on the bench nearest the fountain. The girl looked up at the sound of the children's cries, and laughed, a laugh in which the fellow at her side joined.

"There's love's for you," said Bixler, knocking the ashes out of his pipe and immediately re-filling it. "That's love with its clothes off, and those two blooming idiots don't know it. Yet if I'd go over and try to point it out to them, the fellow probably would thrash me."

The lovers moved away while Bixler was relighting his pipe, and he plunged into deeper bitterness. In such gloom he did not notice the healthy young fellow who came swinging toward him.

"Well, for heaven's sake," cried the newcomer. "You look like you had lost both friends and fortune."

"Never had either," said Bixler.

"Look here, Bixler," said the friend. "You want to throw away that odious pipe, take a few grains of pepsin and then come with me up to the house—sort of an informal garden party, you know. Miss DeVere will be there, and—"

"What!" cried Bixler, springing to his feet.

"Why, yes," said the friend. "She's back. In fact, she sent me out to look for you."

They were already moving toward Bixler's apartments "to get into some clothes." As they left the park, they almost ran into the shop girl and the factory hand. Bixler smiled kindly as he recognized them.

"A pair of spoons," said the friend.

"Don't say that," said Bixler. "They are probably very much in love, and when it's the real thing, it's a thing to respect."

The friend looked at Bixler out of a very small corner of his eye, but he understoood it all and was glad he had found Bixler.

A Feathered Queen.

Corn is king in Kansas. The people all accept that as an undebatable truth. Now the Topeka Mail and Breeze comes forward and declares that if corn is king, the good old domestic cackling Kansas hen is queen. Some very clever rhymes by that paper, in support of their declaration, are published. Following is a sample: "We have read of Maud on a summer day, who raked, bare-footed, the new mown hay; we have read of the maid in the early morn, who milked the cow with the crumpled horn; and we've read the lays that the poets sing, of the rustling corn and the flowers of spring, but of all the lays of tongue or pen, there's nought like the lay of the Kansas hen. Long, long before Maud raked her hay, the Kansas hen had begun to lay, and ere the milk-maid stirs a peg, the hen is up and has dropped her egg; the corn must rustle, the flowers spring, if they hold their own with the barnyard ring. If Maud is needing a hat and gown, she doesn't hustle her hay to town; she goes to the store and obtains her suit, with a basketful of fresh hen fruit. If the milk maid's beau makes a Sunday call, she doesn't feed him on milk at all, but works up eggs in a custard pie, and stuffs him full of chicken fry; and when the old man wants a horn, does he take the druggist a load of corn? Not much! he simply robs a nest and to town he goes—you know the rest. He lingers there and talks perchance, of true reform and correct fee-nance, while his poor wife stays at home and scowls, but is saved from want by those self-same fowls, for while her husband lingers there, she watches the cackling hens with care, and gathers eggs, and the eggs she'll hide till she saves enough to stem the tide. Then hail, all hail to the Kansas hen, the greatest blessing of all to men! Throw up your hats and make Rome howl for the persevering barnyard fowl!"

New Use for Dogs of War.

A new use has been found by the military authorities in Germany for the dogs of war, and Great Danes are now being trained in the various garrisons to attack military cyclists. Wheelmen clad in various uniforms, and so protected by padding that they are safe against bites, ride past the dogs, who instantly rush at the men, if costumed as French or Russians, and throw them to the ground. If by any chance the dog should attack a representative of the Triple Alliance he is severely whipped, while a reward is given to him when he assails the man who personates an enemy.

Fatal to Paternal Authority.

"Mr. Chubbs, your little boy doesn't obey you very well."

"No, he has never respected me since I tried to show him how to fly a kite."—Chicago Record.

COSTLY CATERPILLARS.

How Massachusetts Has Spent $250,000 in Its War on the Gipsy Moth.

Professor L. O. Howard, the government entomologist, has just returned from Massachusetts, where he has been investigating the work of extermination carried on by that state against the gypsy moth. At the suggestion of Senator Lodge of Massachusetts a clause was inserted in the last appropriation for the entomological division of the agricultural department for this investigation, a report to be made to Congress.

The caterpillars are at work now, and Dr. Howard witnessed their depredations and also the operations against them by the state board of agriculture. Dr. Howard says the work in Massachusetts is the most interesting experiment in the entomological line which has ever been attempted in this country and is without doubt one of the most expensive. Since 1890 $650,000 has been appropriated for destroying the moth in Massachusetts, $150,000 of this being used this year.

The gypsy moth (porthetria dispar) is from Europe and is supposed to have been imported to this country about twenty years ago by Leopold Tionvelt, a French entomologist. He brought some of the eggs to experiment with silk worms in some direction, and it is supposed these blew out of his window. Since then they have increased in such large numbers and their depredations have been so great on all sorts of vegetation that steps were taken in 1889 to destroy them. When first noticed the moth began to work in an area of about 200 square miles in the vicinity of Boston. Since the state board has begun a crusade against them the territory has been very largely reduced.

The caterpillars are now full grown and are feeding on the vegetation. They appear in large numbers and when they have visited trees and shrubs no foliage remains. The caterpillar is about two inches and a half long. It devolves into a chyrsalis state from which the moth emerges. They are distributed over the territory by clinging to the garments of persons, street cars and other moving objects.

In winter the eggs are found on trees, houses, fences and such other stationary objects in large white patches containing from 500 to 700. They are sprayed with an oily preparation which kills them. In May and June the larvæ are sprayed with a mixture containing arsenic. The trees on which they are found are bound with a burlap band. The larvæ collect under these bands and are killed there. They are also exterminated in large numbers by clearing up the woodland. Persons engaged in the work go through the forests, cut out the underbrush, and burn it. Only the trees are left standing. In this manner millions of the larvæ are killed. The female moth cannot fly, owing to her heavy body, and is easily killed on this account. The caterpillars have not appeared in any other state but Massachusetts. —Washington Pathfinder.

Some Queer Currency.

People sometimes think money a scarce article, but they really know very little about it compared with what some of their cousins from the Far West could tell them. There one often goes for days without sight of even so much as a nickel, and then the people resort to all sorts of queer devices to make change.

An Eastern man who had occasion to spend many months in Montana tells of having seen a man buy a box of matches with a watermelon and receive as change two muskmellons. Another paid for suspenders in turnips and got a carrot or two back with his purchase.

"But of all the queer financial transactions that I have ever known," said he, "the oddest came under the head of 'paying the fiddler.' It had been noised abroad that a dance was to be given a little way up the mountain, and I agreed to go along with one of the boys and see the fun. After going through the elaborate preparations of blacking his boots and putting on a collar, I saw my companion go to the potato bin and carefully select a dozen nice potatoes and put them in his pocket. No sooner had we arrived at the 'music hall' than he gracefully surrendered his vegetables for an entrance ticket. But what puzzled me the most was that upon coming out after dancing all night, he was given two onions as 'change.' I have been trying to make up my mind ever since just what that dance was worth in the 'currency of the realm.'"

Forced to Be Brave.

VOL. I. NO. 24. THORSBY, ALA., FRIDAY, SEPTEMBER 17, 1897. $1.00 PER YEAR.

EVERYBODY

GOING SOUTH!

The tide of immigration is rapidly turning towards the South. The West and the Northwest has had its day, and the antiquature advice of Horace Greely "go west young man; go west!" has been superseded by the more timely advice of Chauncey Depew and others, "go South young man, go South."

Shrewd investors have observed that the South is on the dawn of a new era of peace and prosperity, and are rapidly investing their wealth where sound judgment assures them that values are increasing. Every section in the South has taken on new life, and through the coming in of new capital a new impetus has been given to the developement of the rich resource so abundently lavished upon the South by a kind providence.

Especially is the case so with the state of Alabama and its centrally located fruit and agricultural lands. Say nothing about its immense mineral fields.

THORSBY, Chilton county, Alabama,

The Ideal Northern Colony,

Located on the famous Chilton plateau is an index to the largest and most prosperous settlements of its days and is a voucher for what capital and labor, combined, will accomplish.

The Concordia Land and Improvement Association, give the following advice to home seekers.

1st, locate on a main line with good shipping facilities.
2nd, locate on an altitude that will insure you good health.
3rd, locate where good water is obtainable.
4th, locate where a few acres of fruits and vegetables will bring you a good living.
5th, locate where you can raise corn, small grain and all kinds of grasses to the capacity of any other state in the Union.
6th, locate where you have a ready market for all products raised.
7th, locate where you will have the benefit of a settlement with churches, schools, and good society, so that your family will feel at home.

Please notice the following and see if Thorsby will do for you:

THORSBY

Is located on the main line of the great Louisville & Nashville Railroad, which directly combines the Gulf with the whole Northern Territory.

THORSBY

Is located on an altitude of 800 feet above sea level, and consequently has an excellent climate, not too hot in summer nor too cold in winter.

THORSBY

Is located where good, pure freestone water is obtainable at a depth from 25 to 40 feet, besides being well watered with springs and creeks.

THORSBY

Is located where farm land can be had in connection with fruit land, and a stranger will be surprised to see its corn and oat fields. If you doubt this, or any other statement, please write the undersigned and you will be referred to people living in nearly every state of the Union who have had the opportunity to see our crops.

THORSBY

Is located 48 miles each way, north and south, from the great mining and manufacturing center, Birmingham, with its 68,000 people, and the Capital City of Alabama, Montgomery, to which points daily shipments are now being made from here.

THORSBY

Is located where 140 Northern families have already cast their lot, and about one-half of them are now on the grounds. Two church organizations and the Thorsby School Society, besides other social circles, are the results of our seventeen months' faithful work towards making Thorsby a success.

For general information and printed matter please write us, and we will give it prompt attention.

THE CONCORDIA LAND & IMPROVEMENT ASS'N,

Thorsby, Chilton County, Ala.

DUN'S WEEKLY REVIEW.

A CONTINUAL GROWTH IN THE COUNTRY'S BUSINESS.

Work Soon to be Resumed Among Coal Miners--Wheat Has Risen 5 Cents the Present Week--Cotton Collapsed to 7 1-2 Cents--Advance in Sureties.

R. G. Dun & Co's. weekly review issued Saturday says: There is no halting in the advance. Business grows better in all ways, for while its speculative and breaks conspicuous gamblers for a decline, a steady increase in production, in working force and in the power of the people to purchase is the feature which overshadows all others. Reports of New York trade unions show an increase since one year ago, of 34 per cent. in the number of men at work and a similar increase among men in like position throughout the country would exceed 340,000, while every week adds many establishments to the active list.

Among coal mines work will probably be very soon resumed by a large share of the men. Among the farmers, while western receipts do not show that they have marketed a tenth of their crops, assurance of a handsome profit to come prepares them to buy liberally hereafter. Because of this and the increase of hands at work, dealers throughout the country have started to replenish stocks, which is the greatest force at present operating in manufactures and trade, though distribution by retail trade has greatly increased. A gain of 12 per cent. in the monthly output of pig iron, from 185,378 tons, August 1st to 185,506 September 1st, with the knowledge that half a dozen other furnaces are preparing to resume and that unsold stocks have been reduced 14,400 tons weekly in August, indicating a consumption of about 190,000 tons, more than explains the month's advance of prices of finished products, averaging but six per cent. since the lowest point August 12.

Wheat has risen 5c the past week, not in a flurry, but in answer to the daily increasing foreign demand. Though the yield was never surpassed but once, it is believed the deficiency abroad will be about 100,000,000 bushels more than usual.

The price of corn has risen about 4c and the foreign demand is apparently unlimited, except only by ship room.

Since the small corner in August, cotton has collapsed to 7¼, there are no rumors affecting prices much. Northern mills are consuming very largely, with a continuing demand for goods which has advanced the prices of many. With enormous speculative sales of wool at Boston there is also more buying there and elsewhere by the woolen mills, which are enjoying an extraordinary demand for goods, at prices averaging not 10 per cent. higher than was paid early in the year. The average advance for the week in sureties has been $1.12 per share for railroads and 79c for trusts.

Failures for the week have been 215 in the United States, against 315 last year and 35 in Canada, against 43 last year.

Murderer Surrenders.

Robert Preston was killed at Plevena, Ala., last Monday night by Perry Simpson. Both are farmers and have families. Preston and Simpson were life-long friends and were out on a spree together. At Plevena they bought a can of cove oysters. This caused the trouble. One wanted to put vinegar in the oysters and the other did not. Preston got some rocks and began to disfigure Simpson, who drew his knife and began to cut him. Preston was disemboweled. Simpson went to Huntsville Saturday and surrendered to the authorities. He is in jail.

The Old Howard to the Front.

The new department of Civil and Mining Engineering added to the course of Howard College, at East Lake, Ala., completes one of the most desirable courses of study offered by any college in the country. The college curriculum now includes all regular collegiate courses, a professional course in Philosophy and Pedagogy, and a professional course in Civil and Mining Engineering.

The desirability of the course is attracting students from all sections, and the opening on Sept. 21 promises to be very large.

In Autumn.

Let us sing of the sheaves, when the summer is done,
And the garners are stored with the gifts of the sun.
Shouting home from the fields, like the voice of the sea,
Let us join with the reapers in glad jubilee—
Harvest home!

For the smile of the sunshine, again and again,
For the dew on the garden, the showers on the plain,
For the year, with its hope and its promise that ends,
Crowned with plenty and peace, let thanksgiving ascend,
Harvest home!

We shall gather a harvest of glory we know,
From the furrows of life where in patience we sow.
Buried love in the field of the heart never dies,
And its seed scattered here will be sheaves in the skies.
Harvest home!

—Rev. Theron Brown, in The Watchman.

The Lie Joe Told.

Down in the southern part of Baylor County, Texas, you may still hear old settlers make occasional references to the Savages, or the Savage brothers, as they sometimes call them. This does not refer to the time when the Indians were in the country, although that time is by no means so far distant as to be beyond the memory of living man; nor does it imply anything especially wild and ferocious about the character of the men in question. It merely goes back to the first half of the '80s, when two brothers of that name were among the prominent inhabitants of that sparsely settled district. In some countries events of that period would be considered comparatively modern, but in Western Texas they are ranked as strictly ancient history.

It seems, from a careful survey of the facts in the case, that neither of the brothers was really a bad man at heart, notwithstanding the fact that a great many people who ought to know are strongly inclined to think otherwise. It is certain that one of them was as true a man as ever trod the soil of Texas, or any other state for that matter. All who knew him agree that the final year of his life, at any rate, was a year of such courage and self-sacrificing heroism as one reads of in books but seldom looks for in real life. The people of West Texas are not much prone to hero worship, and whenever they agree that a man of their acquaintance is above the average of mortality there is very likely to be some basis for the belief. Judging merely from physical appearance one would have had little trouble in deciding which of the two men would have been more likely to prove of heroic mold. Bill, the younger, was a man of magnificent physique, not unduly large, but with muscles of such herculean strength as perfect health and the free life of a Western cowboy are apt to impart. He was light-complexioned, and is said to have possessed a vigorous, manly countenance, such as ought to have made him more successful in his love affairs than he really was. Joe, on the other hand, was as much a picture of weakness and deformity as his brother was of health and strength. He was not only a peaked-faced, slender slip of a man, but he was a cripple as well. When he was 5 years old and Bill only 3, a cyclone had struck the log house in which the boys and their parents were living.

The mother and father were killed, but when the neighbors came to look through the ruins of the cabin they found Joe crouched on the bed with his limbs spread out in such a manner as to protect his baby brother. A heavy log had fallen across his right foot and right wrist, crushing them both very badly, but Bill was still sleeping in absolute unconsciousness of the existence of any such disturbing affairs as cyclones. As a result of his injuries at the time Joe was club-footed through the whole of his life, and his right forearm had a big knot on it, and a crook that made his right hand turn out when it should have turned in. It is said that Joe was proud of his deformities rather than otherwise, presumably because they had been incurred in the defence of his baby brother, and that Bill was, for the most part, tenderly regardful of the brother who had sacrificed health and almost life for him.

Naturally enough, Bill was the more prosperous of the two. Before he was 30 he owned a considerable "bunch" of cattle, and leased quite a body of land in the eastern part of Baylor county as a ranch. Joe was his line rider, and in that capacity was enabled to do a great deal of such work as did not require any great amount of mere muscular strength. Everything worked smoothly with them until May Conley came to live with a married brother of hers who lived only a few miles from the Savage ranch. She was not a highly educated girl, by any means, and it is doubtful if she was more than fairly intelligent, but she was pretty, and she was fickle—and that tells the whole story. In this case Joe was the first victim. He met May at one of the big camp meetings that are common in that country in the fall of the year, and after that he was very pronounced in his attentions to her for several months. Then his attentions ceased as suddenly and abruptly as they had begun. People noticed this, and they also noticed that just about that time Bill began going to see her.

"Bill took it up just where Joe laid in down," remarked one cowboy to another during one of the intervals in a dance on one occasion.

"Naw, that ain't it," responded his friend. "I think Joe laid it down just where Bill took it up."

One day as the two brothers and one or two others were engaged in branding some of Bill's yearlings the subject was brought up.

"Sure enough, Joe, whatever made you quit goin' to see that Conley gal so suddent?" asked Jim Smith, one of the helpers, in a jocular way.

"I stopped so's to give Bill a chance," said Joe, with what was evidently a forced attempt at gayety.

"Shucks!" ejaculated his brother. "You needn't a stopped for that. If I couldn't beat you I'd better quit."

There was just the least bit of contemptuous emphasis on that word "you," and Joe noticed it. A slightly shamed, pained look came over his poor, thin face as he faltered

"W—well, I didn't keer much for her, no way. I was just a foolin' from the first."

My deliberate opinion is that this statement was a lie. It is my opinion, furthermore, that in this single, ungrammatical, mispronounced, mutilated lie there was a loftiness of thought and purity of purpose such as an angel in heaven might well aspire to. Bill did not take any such view of the matter, though, for he only looked up and retorted angrily:

"My opinion of anybody that would go foolin' 'round a woman when he didn't care nothing for her is that he ain't much of a man."

"He's pretty small potatoes—he shore is," put in Tom Jackson, the fourth man at the branding. Nobody noticed the remark particularly at the time, but subsequent events caused them to think a great deal about it later on.

"I'm surprised at you, Joe," said Bill.

The ghost of a forced smile hovered piteously on Joe's lips for a moment, but he merely rubbed his forehead with the knot on his wrist in the nervous way peculiar to him on such occasions, and said nothing.

Aside from one or two little incidents like this—which are hardly worth counting as exceptions—Bill's courtship was an illustration of the fact that, notwithstanding a certain very eminent authority to the contrary, the course of true love does occasionally run smooth—for a while. In this case it ran smooth down to the very day set for the wedding. The ceremony was to be performod at what was known as Plum Creek school house, and early in the morning Bill went with a number of his friends to get ready for the festivities.

The ceremony was to take place at 10 o'clock. Perhaps a half an hour before that time Joe and his friend, Jim Smith, were riding through the timber which always abounds around creek bottoms in Texas, and were much astonished when, at a sudden bend in the trail, they came across the supposed prospective bride. She was on horseback and unaccompanied.

"Hello!" exclaimed Joe in supprise. "Are you lost?"

"Yes," answered May with a nervous laugh. "I never was as glad to see anybody in my life. This here creek bottom timber's so thick a wild cat would mighty nigh get lost in it, let alone a woman."

"I should think that you and Bill had been to Plumb Creek school-house often enough to know the way by this time?"

"I ain't a going' to Plum Crick," said May, with a foolish giggle.

"What! ain't you goin' to get married?"

"Yes."

"Well, Bill's at the school house now, waitin' for ye."

May tossed her head and then giggled again.

"I ain't a waitin' for him none," she said. "I might as well tell you now as any time. I'm goin' to be married to Tom Jackson this morning at Round Timber. I've lost my way there, and I want you to tell me how to go."

At the mention of Jackson's name Joe's face hardened for a moment. He was the man who had been so quick to take Bill's part in the quarrel with his brother. Then Joe began to reason with May as to her conduct, but a very few moments sufficed to show him the futility of the attempt. Promptly changing his plans he gave her a detailed account of the way to Round Timbers.

"Say!" interrupted Jim Smith, who had listened in profound astonishment to the whole conversation, "you're mistaken about—"

"No, I ain't," retorted Joe. "The trail's been changed lately. That's all right, May. Come on Jim."

"I still think you were mistaken about that trail," said Jim, as the two men rode on together.

"No, I wasn't mistaken," said Joe. "I just lied—that was all. I did it for Bill's sake. If May goes the way I sent her she'll not get to Round Timbers this morning."

After they had ridden a few moments in silence Joe began again.

"Jim, old fellow, for God's sake don't let on that you've seen nor heard nothing this morning. It'll be plenty tough on Bill, anyway."

"I shore won't," said Jim.

There was quite a crowd assembled around the door of the little log school house when these two men rode up. The groom was there, and so was the preacher; so also were the people. The house was decorated within and without with flowers and leaves and other ornaments more or less appropriate to the occasion. However, there was one ornament generally considered necessary on wedding occasions which was still missing—namely, the bride.

"Seen anything of May lately?" asked Bill, stepping to the front as the new comers rode up. There was just a trace of anxiety in his voice.

"Naw," answered Joe promptly. His face looked perfectly unconcerned as he spoke, but in a very few moments a cloud began to rest upon it. I suspect, though, that instead of grieving over the lie he had told—as of course he should have been—he was merely wondering how he might spare Bill the mortification which a public discovery of the real facts in regard to May might occasion. He was now sitting with one leg thrown over the horn of his saddle. Suddenly his face lighted up with its old sickly smile, and in a voice that trembled a little in spite of the bravado he tried to throw into it, he began:

"Say, Bill, that was a lie I told you about May just now. I saw her not half an hour ago."

"You did, did you? When will she be here?"

"She won't be here at all."

Bill's face grew stern and white.

"Why won't she?" he demanded.

"Because I directed her in the wrong road. Jim tried to tell her right and I wouldn't let him. Ain't that so, Jim?".

Jim nodded grimly. With faces that now began to grow drawn and anxious, the spectators glanced from one speaker to the other in turn. Bill's face was fairly livid with rage, and his voice trembled with the awfulness of repressed fury as he asked the next question:

"What did you do it for?"

The expectant silence that followed was deathlike, but even then Joe's voice was hardly audible as he answered with the same sickly smile hovering about his lips:

"Because I uster court her myself and you cut me out!"

Before the words were fairly out of his month Bill sprang at him with the fury of a wild beast. With all the force of his mighty arm he struck and the blow descended upon the arm—the crippled, knotted arm—which Joe had interposed to ward it off. Some say it fell upon the very knot itself. He fell from his pony as if he had been shot, and lay for several moments on the turf where he had fallen.

"Which way did you send her?" asked Bill, in the same awful tones he had used before.

"I won't tell," gasped Joe.

"Then get up off that ground."

Joe meekly obeyed.

"Get on your pony—I see it's got away from you. Then saddle up mine yonder and go after May and bring her back at once, sir! Do you hear?"

Joe meekly took the huge Texas saddle in his left hand and carried it to where the pony stood grazing, tied by a long rope to a tree. His right arm hung limp by his side. After some ineffectual efforts to throw the saddle on with his left arm, he gave up the attempt.

"I can't get the thing on," he said.

"Use your right arm, sir!" called his brother.

"I think you've broke his lame arm, Bill," said Jim Smith.

"It's a lie!" shouted Joe, "that arm 's as good as ever it was."

To prove the truth of this assertion, he made a mighty effort and managed to lift his arm to his shoulder, though the wrist still dangled loosely from his elbow. Even then he could not restrain his face from wincing and his teeth from clinching with the pain. Dropping the saddle, he turned abruptly and limped off into the woods without a word.

Jim Smith afterward said that only his solemn promise to Joe kept him from telling the whole truth at this juncture just as he knew it to be, and that he had to grit his teeth hard and say cuss words under his breath to do it then. As to the rest of the crowd, it must be remembered that they knew nothing but Joe's own statement about the matter, and that consequently they all sympathized with Bill. After some moments of condolence and consultation with the crowd, Bill, with some four or five others, started out to find Joe.

"Get that rope off your saddle there and bring it along," said he to one of them.

"You ain't goin' to string him up, are you, Bill?" was the rather anxious reply.

"No; just want to skeer him a little. Come on."

In a very short time they found the man they were looking for.

"Are you ready to tell where May is or to go after her?" Bill demanded.

"N-no," faltered Joe, with a distrustful glance at the little group of attendants.

Again his brother sprang at him. This time he threw him to the ground and held him there with his grasp firm upon his throat.

"Don't Bill, old fellow, for God's sake," gasped Joe, as his brother somewhat relaxed the grip on his throat, "I didn't mean to harm by it—honest I didn't. I won't do it no more. What are you going to do with that rope, Bill? You're not going to kill your poor, no-account brother, are you, old boy?"

Without a word Bill and his attendants continued wrapping the rope around Joe. Then they stood him up beside a tree and tied him to it so that his club foot touched the ground, while the other, the strong one, was doubled back in the coil of rope.

"Now, you ungrateful whelp," said Bill, as he started to leave, "I'll be back in thirty minutes to see if you're ready to tell me."

"Didn't he kiss your hand while you was tying him?" asked some one as they walked away.

"Dogged if I know," said Bill. "Did he?"

Hardly had they left when Jim Smith came up and at once began to untie the ropes.

"Don't!" said Joe. "Bill will be back in a few minutes. Just unslip this loop here. Thank you! The strain was on my right arm and it hurt because it was sore. Jim, this is hard—but I guess I can stand it, for Bill's sake. I ain't hurtin' so much now, though, as I was. It's mostly all a joke. Bill was allers a powerful fellow to joke. I wisht you'd go tell him when he comes back I say please not to bring anybody else with him."

At the appointed time Bill saddled his pony and rode off to where Joe was.

"I'll take the hoss, so that if Joe's ready by now he can start out after May and bring her back. I rather guess he's ready by now, too. Maybe we'll get to eat a wedding dinner to-day yet—only a little late, of course."

After some time had elapsed and neither brother had "showed up," as the phrase goes in Texas, Jim Smith walked to the place where he had left Joe. There the poor fellow was, still tied to the tree—but dead! The thirty minutes' strain had been too much for his crippled leg to bear and it had gradually given way, and this had allowed the poor fellow to choke to death. Of course, Jim lost no time in rousing the quasi wedding guests and in telling the real facts about May. It is not the first instance in the history of the world when a man has had the truth told about him too late to do him any good. A pursuing party was out after Bill at once, but all to no avail. Some say he committed suicide shortly afterward in San Antonio; others, that he is still alive in New Mexico; still others, that he is to-day in the insane asylum at Terrell. I do not know what the truth about it is. Mr. and Mrs. Tom Jackson still live in Cattle County, Texas. Jim Smith is the man who first told me this story. Joe Savage is buried on the banks of Plum Creek, and on his wooden headboard you can still decipher the inscription: "He Loved Mutch."—St. Louis Globe-Democrat.

Earache.

Earache is such a common symptom, especially in children, that domestic remedies are often used until the disease demands the advice of a specialist. By that time, often great harm has been done, and perhaps serious consequences have resulted.

Dr. F. W. Hinkel calls attention to the grave significance of earache, and the importance of early treatment. Earache in children may be the first indication of an approaching meningitis.

An earache should not be passed over with a superficial examination, but the child should be given hot foot baths and put to bed. The bowels should be freely acted on. Hot, dry applications are better than moist ones. It is better not to instill solutions of landanum, morphia, or cocaine into the ear. Opiates, too, often mask the pain and conceal the real trouble. Delays are dangerous, and in case of approaching rupture, the tympanum should be freely incised. No physician should ever hesitate to call in an aurist when in doubt.—New York Ledger.

Cast Iron Dogs and Bogus Statues.

For us, in America, it would perhaps have been better if the gardens of Italy did not exist to enthrall the traveler with their sensuous charms, for to them we owe the unhappy attempts at imitations which find expression in the cheap substitutes for real magnificence—the zinc statutes, the fountains in which the feeble stream seems glad to hide itself in the cast iron basins, the stags and ferocious mastiffs in bronzed iron, the century plants in cheap vases, the bogus statues, ugly pavilions, and summer houses which seem a necessary adjunct to our private gardens and public parks.—Architectural Review.

NEW WORDS DEFINED.

Items in the Dingley Tariff Bill Not Familiarly Known.

The principal of one of the public schools of Rochester gave the new Tariff act as published in the Post-Express a thorough reading, and addressed a communication to the editor, in which he says:

Can you throw any light upon the meaning of the following words which I found in the new tariff act:

Lame or Lahn, Section 179.
Brislings, Section 258.
Revered, Sections 312, 345, 388.
Vitrages, Section 339.
Skirted, Section 356.
Garnetted, Section 361.
One-line, Section 402.
Dianisidin, Section 524.

I have consulted the latest editions of the three leading dictionaries and fail to find these words. What do they mean?

It is singular so many new words in the Tariff act are not to be found in the dictionaries. We are able, however, to throw some light on the meanings of them.

Lame or Lahn. These are adjectives applied to wire, meaning wire that has been lengthened by pounding by heavy hammers.

Brislings. The name of a small fish similar to sardines, caught in the Mediterranean and in the Bay of Biscay, packed in oil and shipped to this country.

Revered. An adjective describing the manner of ornamenting handkerchiefs, lace, and linen goods. Little square holes are cut around the edges of the goods.

Vitrages. A kind of lace. We are unable to give a particular descripition. The lace buyers of our largest dry-goods houses do not exactly know what kind of lace it is.

Skirted. An adjective applied to wool. The skirt of the fleece is the outer part about the hind quarters. Skirted wool is wool from the skirt of the fleece.

Garnetted. Waste is said to be garnetted when it has been run through a machine provided with attachments like rows of pins, by means of which foreign substances are removed.

One-line. Words descriptive of a peculiar kind of paper used in making Jacquard designs in weaving. In this country cardboard is generally used.

Dianisdin. The name of a drug used in the arts. It is similar to benzine. We cannot give a more particular description.

A Buck and Bear Fight.

Frank Lane, who lives on the Panther Hill, near the foot of Panther mountain, in the southern Catskills, witnessed an interesting tussel between a big buck deer and an old bear one day last week. Lane was eating his morning meal when he heard a tremendous rumpus outside the cabin. He grabbed his gun, whistled to his dogs and ran out.

The battle was a royal one, but the advantage was with the buck, which was more agile than bruin, and as the bear rose time and again to seize the buck in his claws the deer gored him with his terrible forked antlers.

Lane held his dogs, as he was afraid they would attack the deer, which would have brought him in conflict with the law. He watched the battle until the buck, with a bound, jumped clean over the bear and, before his antagonist could meet his new move, impaled him upon his antlers and tossed him into the air a dozen feet.

The bear fell to the ground, and as he struck the buck was upon him with his four sharp hoofs, stamping him like a battering ram. This, it appeared, was too much for the bear, and, picking himself up, he beat a hasty retreat. The deer gave a snort of triumph, and, seeing the dogs, which were tugging at their leash, bounded away and was soon lost in the forest.—Atlanta Constitution.

Charles Dickens' Clock.

Among his customers the late Sir John Bennett could number Charles Dickens. On one occasion the clock at Gadshill went wrong, and the novelist sent the following letter to Sir John:

"My Dear Sir: Since my hall clock was sent to your establishment to be cleaned it has gone (as indeed it always has) perfectly, but has struck the hours with great reluctance, and after enduring internal agonies of a most distressing nature it has now ceased striking altogether. Though a happy release for the clock, this is not convenient for the household. If you can send down any confidential person with whom the clock can confer, I think it may have something on its works that it would be glad to make a clean breast of. Faithfully yours,

CHARLES DICKENS.

"Higham by Rochester, Kent, Monday Night, Sept. 14, 1863."

This Gadshill clock was, by the way, sold in London not very long ago.—Westminster Gazette.

PRECIPITATE HASTE.

"Light out down there?" yelled the old gentleman from the top of the stairs.

The young man below did not catch the rising inflection, and "lit" without taking hat or stick.

THE YOUNG FOLKS.

A PAIR OF RUNAWAYS.

Way down in the wood—in the deep, dark wood—
In a quiet, safe retreat,
There dwelt a growlery grizzly bear
And her dear cub, Nimblefeet,
And often she told her baby bear
Of the dangers of the wood,
And warned him ever to stay at home,
Just as a little bear should.

In a cottage small, beyond the wood,
With his mother, kind and true,
There lived a frolicsome, laughing boy,
Just about as big as you.
And often this mother told her child
Of the dangers of the wood,
And warned him ever to stay at home,
Just as a little boy should.

But it chanced one day, when from her home
Mrs. Bear was forced to go,
That the baby bear crept slyly out
For a little walk, you know;
But the sights were all so strange and rare
That, before he hardly knew,
He had wandered far into the wood,
And his home was lost to view.

Now it also chanced that afternoon
That another runaway—
The little boy, from his cottage home—
Came into the wood to play;
And just when the shadows longer grew,
In a dark and gloomy place,
The timid bear and the frightened boy
Came together, face to face.

With a snort and squeal and whine of fear
The little bear turned and fled,
While with screams and cries, with equal haste.
The little boy homeward sped.
And now, it is said, the little bear
Stays at home, just as he should,
And the boy no more desires to play
In the shadow haunted wood.

HOW NATURE COVERS UP UGLY SPOTS.

Nature doesn't like bald spots. Up in Michigan there is an old railroad grade which was made of cinders so that weeds would not grow up between the ties and reach out over the rails. While the trains ran over it daily it remained black and barren, but as soon as it was deserted nature began to take measures to hide the ugly ridge. First, the wind brought sand and earth and small bits of rubbish and sprinkled them over the cinders, where they gradually worked down and filled up many of the little holes. Then the ants came and dug tunnels deep down into the ground and brought up mounds of good soil from below. After that some white clover plants, crowded out of the neighboring pasture, sent their arms out over the cinders a few inches, and put down new roots. For a time the cinders were very hot, and it was hard for the clover to get rooted, but it worked bravely, and if one plant failed others pushed forward in its place. Then some seeds of the shepherd's purse and other tough little weeds were blown out on the cinders, and presently they came up, and their stems and leaves furnished lodging places for more sand and soil brought by the wind. So it continued for three summers, until now you would hardly know that there ever was a railroad grade stretching across the country. It is so smoothly and softly covered with green, and it matches so well with the surrounding woodland.

In case Chicago was suddenly deserted no doubt its paved streets would all be green within a few years.

THE BOYHOOD OF SOME NOTABLE MEN.

Kant, the philosopher, spent his youth in a saddler's shop.

Keats, the poet, it is said, was born in a livery stable.

Powers, the sculptor, spent his youth on a farm.

John Calvin, the preacher, was an apprentice at the cooper's trade.

Turner, the painter, spent his boyhood in a barber shop.

Washington's boyhood and youth were passed in the country.

Lincoln's boyhood was spent in the roughest and coarsest description of farm work.

Schumann, the composer, was raised in a book store, and to the end of his life retained a fondness for the business.

Luther's father was a miner, and the future reformer often earned a support by singing in the streets.

Chaucer's boyhood was passed in a wine vault, where he was required to wash barrels and clean wine casks.

Wagner, the composer, spent no small share of his time when a boy in the police court where his father was the clerk.

Napoleon's first plaything was a toy cannon. Late in life he said: "The whole course of my life was determined by that cannon."

As a boy Thomas Jefferson was fond of hunting, athletic sports and music. He was a good shot and played well on the violin.

Oliver Cromwell was the son of a country gentleman, who was also a brewer, and the little boy was always greatly interested in the operation of the brew house.

Sir Isaac Newton spent his boyhood on a farm. He was thoroughly famil-

In the shadow haunted wood.

HOW NATURE COVERS UP UGLY SPOTS.

Nature doesn't like bald spots. Up in Michigan there is an old railroad grade which was made of cinders so that weeds would not grow up between the ties and reach out over the rails. While the trains ran over it daily it remained black and barren, but as soon as it was deserted nature began to take measures to hide the ugly ridge. First, the wind brought sand and earth and small bits of rubbish and sprinkled them over the cinders, where they gradually worked down and filled up many of the little holes. Then the ants came and dug tunnels deep down into the ground and brought up mounds of good soil from below. After that some white clover plants, crowded out of the neighboring pasture, sent their arms out over the cinders a few inches, and put down new roots. For a time the cinders were very hot, and it was hard for the clover to get rooted, but it worked bravely, and if one plant failed others pushed forward in its place. Then some seeds of the shepherd's purse and other tough little weeds were blown out on the cinders, and presently they came up, and their stems and leaves furnished lodging places for more sand and soil brought by the wind. So it continued for three summers, until now you would hardly know that there ever was a railroad grade stretching across the country. It is so smoothly and softly covered with green, and it matches so well with the surrounding woodland.

In case Chicago was suddenly deserted no doubt its paved streets would all be green within a few years.

THE BOYHOOD OF SOME NOTABLE MEN.

Kant, the philosopher, spent his youth in a saddler's shop.

Keats, the poet, it is said, was born in a livery stable.

Powers, the sculptor, spent his youth on a farm.

John Calvin, the preacher, was an apprentice at the cooper's trade.

Turner, the painter, spent his boyhood in a barber shop.

Washington's boyhood and youth were passed in the country.

Lincoln's boyhood was spent in the roughest and coarsest description of farm work.

Schumann, the composer, was raised in a book store, and to the end of his life retained a fondness for the business.

Luther's father was a miner, and the future reformer often earned a support by singing in the streets.

Chaucer's boyhood was passed in a wine vault, where he was required to wash barrels and clean wine casks.

Wagner, the composer, spent no small share of his time when a boy in the police court where his father was the clerk.

Napoleon's first plaything was a toy cannon. Late in life he said: "The whole course of my life was determined by that cannon."

As a boy Thomas Jefferson was fond of hunting, athletic sports and music. He was a good shot and played well on the violin.

Oliver Cromwell was the son of a country gentleman, who was also a brewer, and the little boy was always greatly interested in the operation of the brew house.

Sir Isaac Newton spent his boyhood on a farm. He was thoroughly familiar with every kind of farm work, and in later life often related incidents of his early days on the old home place.

A CHILD'S AFFECTION FOR A PLAYTHING.

Chief Steward Bucher of the Receiving Hospital yesterday performed a remarkable surgical operation. He restored to its place the accidentally amputated left foot of Tootsy, the four-year-old doll of Edna Newman, a little girl who resides at 1231 Market street. And herein lies an illustration of the real affection that a child can bear toward a plaything.

Edna is nine years of age. Yesterday morning she was playing with Tootsy, her doll, and chanced to let it fall. When she picked it up it was minus a foot. Not knowing how to repair the injury, she determined to take Tootsy to the Receiving Hospital, for the reason, as she told Steward Bucher when he asked her how she knew that dolls were treated at that institution, that the hospital was the place where everybody got patched up.

When Edna reached the hospital with her pet plaything she was very down-hearted. With a remarkably long face she approached Bucher and told him that her doll had broken its foot and asked him if he would fix it for her. The idea of the Receiving Hospital being transformed into an institution for the care of injured dolls forcibly appealed to Bucher's sense of humor. But in the face of the steward's laughter the little girl maintained her sad composure and insisted that Tootsy was seriously injured. "I don't care how much you patch her," she said, "only I don't want her to die."

The child's apparent sincerity won Bucher's heart and he set about to restore Tootsy's lost foot. Edna intently watched the operation, and the look of sorrow never once left her face until, the work of repair finished. Bucher handed her the doll and told her that her Tootsy was as good as new. Then she became all smiles and was profuse in thanking Bucher for having saved Tootsy's life. She pressed her plaything close to her breast, gave it a big kiss and then started for home, after having told the kind-hearted steward that Tootsy would be five years old on the sixth day of next November.

BOYS IN WALL STREET.

Every wide-awake American boy has heard of Wall street, in New York City. In a more or less hazy way he understands that it is the great money market of this country, the heart of our commercial body, a place of large transactions, where the sums that change hands every day amount to the biggest kind of a fortune. But there is one thing about this famous street very interesting to the young American which he probably does not know. This is the fact that it is the greatest place in the country for boys. Boys' work is an important part of the work that goes on in Wall street and there are more boys to the square yard there than in any other part of the metropolis with its 700,000 boy population.

It may be said in explanation that when a broker refers to Wall street, or "the street," as he is apt to call it, he includes not only the narrow thoroughfare in which General Washington stood when he took the oath as first President of the United States, but also Broad street, New street and the lower part of Nassau street, which branches off from Wall on either side. This district is occupied almost entirely by the offices of brokers and speculators who deal in money, stocks and securities, and it is all known as Wall street. It doesn't cover very much ground, not more than a three-acre lot altogether. I haven't taken an exact census of the boys who work here, but it is a safe guess that there are between 1,500 and 2,000 of them employed in the offices within this narrow space. "What do they all find to do?" A young man who is now the cashier in one of the most prominent firms in the stock exchange, but who began his work as an errand boy in this same office ten years ago, shall answer.

"Most boys start in when they are 15 or 16," said this young man, "and they usually begin as stock runners. A runner in Wall street parlance is a boy who delivers stock. In ordinary business, unless there is a special agreement to the contrary, the stock sold on a certain day is delivered on the day following. The time for these deliveries ends each day at 2:15. Fifteen seconds before the quarter the tickers which announce the quotations of the exchange in ali the offices stop. Then they go 'Tick-tock, tick-tock, until they have told off the fifteen seconds. After the final 'tock,' a buyer is not bound to receive stock which he has contracted for until the following day, and if it is offered to him he will usually refuse it. That means that the firm holding the stock must keep it over until the following day. They are then compelled to hypothecate the stock, that is, they borrow money on it, and it costs them one day's interest. As the amount involved is frequently large, the sales often being in thousand share lots, this interest charge may easily amount to $5 or $100, or even more, and becomes a considerable item.

"We'll say that the broker whose runner I saw yesterday said to another firm 1,000 shares of a certain stock. Of course he didn't have the stock in his immediate possession at the time, but he has until 2:15 to-day to deliver it. Very likely the stock does not reach our office until 2 o'clock or a little after. Then a boy, a runner for some other firm, dashes in with the shares. They are thrown on the desk and the book-keeper runs rapidly over them, jotting down the numbers on a memorandum slip. The shares are thrust into my hands and away I go to the buyer's office, well knowing that if I don't get there by the time that last tick-tack is struck off on the ticker it may cost my employer $50. You see the possibilities for quick work in such a situation, and it often happens that for the few minutes around 2:15 p. m. the runner becomes the most important figure in the office, one after another of the clerks leaving their tasks as the seconds grow fewer and fewer to watch the boy dash away and perhaps to lay a small wager as to whether he will be on time.

"But running is not all of a stock boy's work. Between 2:15 and 3 o'clock he will perhaps be busy certifying checks. All transactions between the brokers are settled by checks, and each broker before he deposits the checks in his own bank at the close of the day's business, sends them around to the banks on which they are drawn, to be certified. Checks amounting to thousands of dollars are placed in the boy's hands and he must go to half a dozen different banks with them. Frequently this demands quick work, too, for there is a long line of waiting boys at each bank. The boys often work an interesting labor-saving scheme in doing this work. No. 1 goes to the Fourth National bank, we'll say, with several checks. He finds his friend, No. 2, from a neighboring office, already in line. He don't want to wait, so he says to No. 2: 'Here, take my Fourth National and give me your Hanover.' The exchange is made and afterward the boys meet and each takes back his own checks. Yet, with all this promiscuous trading, it is very seldom that a check is lost or goes astray."

FAST TRAINS THE SAFER.

Reasons Why They Kill Fewer Persons Than the Slower Trains.

"There seems to be an impression," said a railway superintendent, speaking of the fast service the railways are now giving, "that the fast trains are the most dangerous for people to ride on, and that more persons are killed in crossing tracks, &c., than by the trains which are slower. This is a mistake.

"The Pennsylvania Railroad Company has given the matter special attention, and has statistics to show that, in proportion to the fast and slow trains run, more accidents have occurred to the slow trains and more persons not in the employ of the company killed by the slower trains. Men in charge of fast passenger or freight trains are constantly on the watch for danger. The engineer feels that there is more at stake, and one will notice that the blasts of his whistle are more frequent and sharper; that the fireman is more particular to ring the bell when passing through a town or a city near a highway crossing. It would be difficult to find people living on the lines of the roads which run fast trains that have not heard of the Chicago limited on the Pennsylvania lines, the fast express No. 2, between St. Louis and New York, over the Vandalia and Pennsylvania lines; the Empire State Express, the Knickerbocker on the Big Four, and the hundreds of other fast trains. Fast trains are run nearer on time, and people know their time and keep out of the way. The equipment of the fast trains is kept at the best standard, and everything conduces to make them safer to ride on and less liable to injure people at highway crossings and in passing through towns and cities. The Pennsylvania transportation department is fully satisfied that the above statement is correct."

The same remark will apply to the freight service. In 1888 twelve miles an hour was considered the highest speed limit for a freight train, and J. J. Turner, when superintendent of the Indianapolis division of the Panhandle, was the first to increase the speed of freight trains in this section, scheduling a train at sixteen miles an hour between Indianapolis and Columbus. Competitors soon took similar action and increased the speed of the fast freights to eighteen miles an hour, then to twenty miles, which was the maximum for through freight trains for several years, but with the better track and better locomotives some of the roads are scheduling freight trains at twenty-three to twenty-five miles an hour, using the schedules of passenger trains during the seventies and eighties.

Every day we find paper being used for new purposes. Now jackets are made of it to support those weak spines that hitherto have been held in position by heavy plaster jackets. In view of the contrast in weight we can easily believe the claims of its inventor that "it is the thinnest, lightest and strongest spinal support ever invented."

LIVE BY QUEER WORK.

GAINING A LIVELIHOOD IN ORIGINAL WAYS.

Odd Vocation of Some Chicagoans—The Strangest Is That Developed by a Woman "Funeral Inspector"—A College Boy's Novel Business—A Professional "Cheerer."

Some Chicago people earn their living in queer ways, says the Times-Herald. There is a man in the city who makes a good income monthly by turning out especially artistic sofa pillows. Another man will clear your kitchen of rats and mice for a small sum, working in precisely the same manner as the sewer rat-catchers of Paris and other large cities. Kenwood housewives are well acquainted with a bright young fellow who washes dogs and takes regular care of birds and other pets, and Oak Park has a masculine resident who goes from door to door collecting defective gloves, which he afterward carries to the small shanty which is home to him, cleans, mends and returns. He is said to be actually saving money, despite the fact that his charges are considerably lower than those charged by the downtown stores.

Nor are Chicago women less enterprising than the men in the way of doing odd work. One south side woman writes sermons for a living, another furnishes "original" papers to be read before clubs and bright rhymes for menu cards and quotation parties. There is another woman in town who is a practical miner. Another Chicago woman conducts a commission business on South Water street.

But the oddest occupation unearthed yet is followed and was invented by a woman. It is that of a sort of funeral inspector and assistant. When her services are required she goes to the house of mourning, makes the shroud when desired to do so, gives orders for flowers, arranges them, takes messages to the friends and relatives of the household, bids people to the services, buys or hires the mourning garments, alters them if necessary, arranges the rooms for the funeral, talks matters over with the minister and the undertaker, sees that the wishes of the family are carried out, and, in a word, stands between the afflicted people and the world at large in a thousand ways and performs a thousand small but highly appreciated services. The funeral over, she takes the flowers to be photographed, remains in the house until the family returns, nurses any ailing member of it, cares for the children, prepares a meal if necessary, stays to this meal if requested, and in many ways helps along the dragging machinery of life. When affairs have assumed somewhat of their normal appearance and course she quietly departs. Another branch of her work is the assisting at weddings or large private gatherings of any kind.

When a wedding is in course of preparation she arrives early in the day, or perhaps two days previous to the great event, and again takes charge of all the countless small details so trying to the mistress of the house. She it is who sees that the bouquet is in readiness for the bride, that her trunk is properly packed and everything that should go in it put in place, and that all arrangements for the comfort and convenience of the guests are completed. She it is who interviews the bridegroom and makes sure that the ring is forthcoming; she it is who critically superintends the bride's toilet at the final moment, in order that her calm attention and unflurried inspection may insure perfection of detail. She it is who sees to the serving of refreshments, the caring for wraps and topcoats, and the dreaded "clearing up" when the festivities are over.

Two people, a man and a woman, the former a college youth, follow in Chicago the down-east avocation of "professional entertainer." The college boy is in such incessant demand for "stag" and mixed parties that his studies suffer occasionally. The statement that he is "the life of" every gathering he attends is his recommendation. He also superintends all the necessary arrangements for the affair. He is held responsible for the enjoyment and entertainment of the guests, and is treated as such himself. The college boy is paying his way through college by his work.

There is but one professional "cheerer" so far as known, in Chicago. This is a young girl who, when plentifully blessed with the world's goods, tried to help others by visiting them in trouble and trying to bring sunshine to them. Later, when hard times came to her own family, a friend suggested that she turn her talent for consolation and cheer to monetary account. The experiment has been a decided success. In New York more than a dozen men and women do this work regularly.

In the top of a tall building on State street is a small office in which a man works busily all day long, making plaster casts of hands, feet heads, and so on. For women with pretty members to have them perpetuated in plaster, always supposing that marble is beyond her pocket-book's capacity, has been a society fad for some time. This man acted upon the idea, and has lifted himself well above want by means of it.

Over in the Bohemian district lives a man who is growing rich by painting pictures for the use of beggars. Day after day he works on, painting away at explosion scenes, fires, battlefields, and other gory and startling happenings which have supposedly reduced the bearers of the pictures to beggary and want.

In a big Wabash avenue building may be found a woman who earns her bread and butter by means of a kind of leather work never done in America except by herself. It is a German method, a combination of repousse work, hammering and photography.

On the west side is a man who carts bodies from the morgue to the medical colleges for a living, and Chicago has the only woman in America to make colored medical drawings within her gates.

And so it goes on; the list of queer avocations followed in Chicago might well be indefinitely extended, for the people who are forced to think out new ways to earn a livelihood are exceedingly numerous.

SPINNING SILK FROM SPIDERS.

Science Robs the Wily Insect of Its Delicate Web.

The prize of $5,000, offered by the Manufacturers' Union of England to the inventor of any perfect process for utilizing the web of a common spider, has been awarded to M. Cachot, an eminent chemist of France.

The spider, unlike the silkworm, is wild and warlike. Its short mandibles are armed with fangs through which a deadly poison flows. It is a gourmand, demanding large supplies of animal food and plenty of water. It is the hardest of all insects to manage. Despite all, these drawbacks science has conquered the little fiend and compelled it to pay tribute to genius.

M. Cachot recently invited a company of manufacturers to inspect the workings of his process. They were ushered into a damp, dimly lighted room, inhabited by hundreds of large Madagascar spiders clinging to the side walls and upon the rafters. The only food required by these curious creatures is a diet of insects, house flies and small living things of all sorts. They catch the victim, and, while trying to imprison their prey, send out their most valuable webbing. It is very strong, and permits of being turned off readily.

In the centre of the room stands a frame filled with bobbins worked by a dynamo. The spider is allowed one or two turns around the fly and then the web issuing from its abdomen is caught by a delicate hook, fastened to the bobbin and wound off as fast as the spider produces it. One spider will spin in a week sufficient web to fill a bobbin as large as a peanut. As long as it is generously fed it will continue to create its thread until it dies. The color of the web is a pale gray, and takes all dyes readily.

For experimental purposes, a little of the spider web was woven into a cloth. It yielded a fabric very silky in touch and as fine as the best of Oriental products. It is possible that the wonderfully delicate silks of the ancients were of spider web, as with all of the increased facilities and knowledge of modern times, they have never been duplicated. The robes that Cleopatra boasted she could draw through an earring were probably made of this finest of all known materials. The start has been made. The development will be watched with interest.—Textile American.

Coal Dust a Dangerous Element.

An instance of the ignition of coal dust by the sun's rays is reported in the Gluckauf, a German authority. It appears that the surface works of the Maybach colliery, near Friedrichstahl, in the a district, are chiefly of iron; and on certain girders the floating dust, due to the tipping of coal on to the jigging screens, becomes, in course of time, deposited in a layer more than an inch thick. On a workman burning his hand, while repairing a pipe running through the corrugated iron forming one of the south walls, the official inquiry showed that the layer of coal dust had been formed along the whole length of the wall, and although the dust contained a proportion of pulverized rock, the metal plates heated by the sun had ignited it, the layer of white ash on the top proving that it had burned for a considerable period. The circumstances affords fresh proof of the ease with which coal dust may be brought to ignition, also a possible explanation of fires at similar surface works.—Boston Transcript.

Value of Sugar in Muscular Effort.

Persons who take violent muscular exercise are greatly benefited by the use of sugar or pure candies. Tourists who climb high altitudes crave sweet, and are greatly benefited by it. The value of sugar as a part of the diet of soldiers has been clearly determined. It is said that after violent muscular exertion the quantity of sugar in the blood is greatly reduced, but that energy is rapidly regained by eating pure candy or other good sweets.—The Lancet.

CHILTON COUNTY CALL.

H. W. RYDING, Editor & Publisher.

Published every Friday at Thorsby, Alabama.

Subscription price, $1.00 per year in advance.

Entered at the postoffice at Thorsby, Ala., as second-class matter.

When the farmer goes into business and politics he gets cheated out of both money and sense.

It does not matter how much money there is in the country, for if we import more than we export all our money will finally go abroad.

No doubt Mark Hanna will claim credit for the republican victory in Bessemer yesterday.—Age-Herald.

If Mark Hanna bought McKinley and made him president, if he raised the price of wheat last fall and bought the Ohio populists at their late convention, the little victory in Bessemer the other day is not worth mentioning.

Perhaps the administration and the gold democrats will think it proper to send the federal troops to Hazelton, Pa., that more peaceable and industrious workmen may be shot down in cold blood for daring to ask that their wages be increased.—Age-Herald.

Hypocrite!! Have you forgotten how the silver people in the Colorado silver mines treated their workmen last fall? But papers of your stamp never said a word about that. You know, besides, that the unfortunate miners were neither peaceable nor industrious when the calamity happened.

If it is proper to exclude religion for the public schools, it is just as proper to exclude politics. If it is proper that ministers of the gospel should not take an active part in partisan politics, it is just as proper that the educators of the young should not do so. Why should a professor inflict his political views and opinions on his students? The proper thing for him to do is to impartially teach them the history of their country and in the light of this history leave it to each one to choose his own politics. If the young man loves his country, he can be relied upon, irrespective of his politics, to do nothing that will involve his country in shame and dishonor.

President Andrews has decided to sever his connection with Brown University. This is proper. Young men of all political persuasions attend the University and each has a much right to his political opinions as the other and has not come there to be made a political convert by the president. The action of the trustees in asking for his resignation has been denounced as an act of intolerance on the part of the gold standard people. This is cant and hypocrisy. The populists in Kansas, where they are in power, have dismissed the republican president and professors of the State Agricultural college and in their stead appointed populists who are expected to make populism and socialism a part of the course of study. Is there any man who for a moment imagines that an advocate of the gold standard would for one day retain his position in President Andrews' new University where, we understand, the tenets of 16 to 1 will be a special feature? If there is such a one, that man does not know the spirit of the times. Intolerance is abroad in the land. It is not confined to any party or set of men. He who has the power, be he rich or poor, capitalist or laborer, learned or unlearned, wise or unwise, exercises the power in his own interest and to the detriment of others when he profits thereby.

The shooting of the striking miners at Hazelton, Pa., was a very unfortunate affair. While we do not, by any means, defend the action of the sheriff, we must not forget that these poor people were not shot down because they asked for better wages, as some people try to make it appear. It would be better to tell the truth about the sad affair. This country has been said to be the land of liberty, and the miners accordingly had a right to strike, but according to the same right anybody and everybody had a right to work if they saw fit, and no one should interfere with the rights of the other. The striking miners were on their way to intimidate those who were working, but had they a right to do so? Evidently not, for those who work ought to have the same privilege as those who do not. But we are satisfied that no intimidation would have been resorted to, nor any shooting have occurred, had it not been for the inflammatory speeches of Debs and others like him. Nor does the blame of the shooting rest entirely upon the sheriff and his deputies. The blame rests partly upon Debs and his kind, who have inflamed the passions of the strikers beyond control. There are hundreds of newspapers all over the country which openly or covertly incite the workingmen to redress their wrongs with bullets, and when their works bear fruit they put on a sanctimonious face and heave a hypocritical sigh over the wickedness of the money power. These papers must bear a part of the blame, for the shooting was but a logical result of their work, because if one party in a controversy uses force the other will do so, too.

THE STRIKE SETTLED,

At Least as Far as Four States Are Concerned.

The great miners' strike which was declared on July 4 was brought to an end Saturday evening, so far at least as western Pennsylvania, Ohio, Indiana and West Virginia are concerned, by the action of the interstate convention of miners, which has been in session at Columbus, Ohio, since Wednesday. After a day of voting and wrangling the convention adopted a resolution accepting the proposition of the Pittsburg operators. The vote was 495 for and 397 against accepting the terms of settlement, and 11 votes were not cast. The delegates from Illinois, who had 250 votes, were unanimously against a settlement. Indiana and West Virginia voted solidly to accept the operators' proposition, but there were scattering votes among the Ohio and Pittsburg delegates against it. The resolution adopted is as follows:

Resolved, That we, the miners of Pennsylvania, West Virginia, Ohio, Indiana and Illinois, in convention assembled, do hereby agree to accept the proposition recommended by our national executive committee, viz.: 65 cents in Pittsburg district, all places in above named States, where a relative price can be obtained, to resume work and contribute liberally to the miners who do not receive the advance, where the fight must be continued to a bitter finish.

Resolved, That the national officers, executive board and district presidents act as an advisory board for the purpose of providing ways and means for the carrying on the strike where necessary, provided, however, that no district resume work for ten days for the purpose of giving miners in other districts time to confer with their operators and get the price, if possible.

The Illinois miners will be called in convention at Springfield, Sept. 19, to determine what shall be done in that State. Some of the Illinois delegates are very bitter in their denunciation of the action of the convention since they claim their interests have not been given due consideration.

A resolution was adopted denouncing the action of the deputies in firing into the crowd of strikers at Hazleton, Pa.

ENFORCING THE OLD RULES.

Chinese Must Re-Enter at the Port of Their Departure.

F. D. Heustis, the new customs collector of the Puget Sound district, who took office last week, has made a new ruling in the matter of admitting Chinese laborers. He has refused admittance to to seven Chinese who arrived from Victoria, B. C., on the ground that they had departed from other ports when leaving this country. Until fifteen months ago the requirement was enforced that Chinese must re-enter at the port of departure, but during the past year compliance with this rule has not been required from Chinese immigrants owing to a precedent established by the treasury department in the case of the Strathnevis immigrants, when immigrants were admitted regardless of the port of departure. As a result many Chinese succeeded in entering when they could not have made a satisfactory showing at the port from which they had departed.

Collector Heustis' return to the former rule has called forth a storm of protests from interested Chinese residents of the Pacific coast.

The action of the new collector will probably decrease the wholesale entering of Chinese through Port Townsend, Wash., and that district, nearly 1,200 having been entered there during the past six months.

The Governor's Proclamation.

On account of the horrible slaughter Friday afternoon at Lattimer, in the coal region, Governor Hastings at Harrisburg, Pa., Saturday night issued a proclamation commanding all persons engaged in riotous demonstrations and unlawful conduct threatening the peace and dignity of the commonwealth of Pennsylvania to disperse forthwith to their respective places of abode, warning them that persistence in violence or unlawful assemblage will compel such use of the military as may be necessary to enforce obedience to the laws and the maintenance of good order.

Reaches the Gulf.

The Kansas City, Pittsburg & Gulf Railroad is through to the gulf. The interesting event occurred at 3 o'clock Saturday, says a Beaumont, Texas, dispatch. the people living along the line of the road are exuberant and happy.

APPALLING DISASTER.

COLORADO CROWNS THE RECORD OF RAILROAD HORRORS.

Trains Collide, an Explosion Follows and Thirty are Dead and Nearly Two Hundred Wounded—Many of the Victims Buried Alive.

The worst wreck in the history of the State of Colorado occurred at 12:25 Friday morning on the track of the Denver & Rio Grande and the Colorado Midland railroads, one and a half miles west of Newcastle. After 12 hours incessant work by the wrecking crews in cleaning away the debris and rescuing the bodies of those who perished it is yet impossible to secure more than an estimate of the loss of life and not even those known to be dead have been identified. Many of the unfortunates never will be known and it is possible that the number killed will always be in doubt. The best information obtainable shows that fully thirty persons are believed to have perished while 185 were taken from the wreck suffering from serious injuries.

The wreck was caused by a head-end collision between a Denver & Rio Grande passenger train running 40 miles an hour and a special Colorado stock train running at a speed of probably 30 miles. So terrific was the concussion that both engines, baggage and express cars, smoker and day coaches and two stock cars were totally demolished and the tracks torn up for rods in both directions. To add to the horror of the scene the wreckage caught fire from the explosion of a gas tank on the passenger train and burned so rapidly that many passengers pinned beneath the debris were burned to death before help could reach them. The general opinion as to the cause of the wreck seems to be that Conductor Burbank, of the Midland special, anticipating the time of the passenger, undertook to "steal a station" and beat the passenger into Newcastle. Burbank escaped uninjured and upon orders from Commissioner Clarke has been placed under arrest by the sheriff. Midland Engineer Ostranger is missing and a thorough search all about his engine failed to reveal a vestige of his corpse.

Mr. and Mrs. E. H. Strause, who live a quarter of a mile from the scene, say that when the two trains met the shock literally hurled them out of bed.

A relief train was sent to the scene and the more seriously wounded were sent to the company's hospital at Salida.

General Superintendent Staple, of the Denver & Rio Grande, happened to be in the vicinity of the disaster and soon reached the scene, taking charge of the work and removing the bodies. Ten bodies were found in the ruins. The charred remains of two women, apparently clasped in each others' arms, were found. Their heads and lower limbs were burned off. In the dress bosom of one was found a lady's gold watch, upon which was inscribed "From Mother to Mamie."

Telegrams inquiring for friends and relatives were received from all parts of the country Friday.

Frank P. Mannix, a newspaper man of Victor, Colo., who was in the smoker and escaped with some painful bruises, said Friday:

"Words fail to express the horror of the scenes. The crash came unknown to anybody. Suddenly all was darkness and confusion. The air was filled with cinders, splinters and heated gases. Then flames darted up on every side. The screams are simply indescribable. The flames were in a sense a God-send, for with their aid the windows were located, even though passengers had to jump through burning flames."

The accident occurred at the worst possible point. Two minutes' running and they would have avoided the wreck, as each engineer could have seen the approach of the other train. The trains collided on a curve or bend around a mountain, and there was no opportunity to avoid the wreck or even to slack their speed. The surviving train men say the trains were not running fast, but the facts seem to be that both the passenger and freight were going at full speed—about twenty miles on hour for the passenger and ten or twelve for the freight.

Spain Dismayed by Cuban Success.

The excitement caused by the capture by the Cuban insurgents of Victoria de Las Tunas, continues at Madrid. The imparcial describes it as a catastrophe for Spain. In other articles the importance of the insurgents' success is noted. The authorities are convinced that an expedition is about to sail with the object of speedily effecting the capture of the place.

Dropped Dead in a Hotel.

John Carpenter, former secretary of the Democratic State campaign committee, and for years in the circuit court clerk's office, dropped dead Saturday in the Grand Hotel at Bessemer, Ala. He was aged 35 years. The cause of death was heart failure.

Happenings of General Interest to Our Homefolks.

J. Brice was in Clanton last Monday.

The work on the depot is progressing rapidly.

Nels Peterson's carpenter shop is nearing completion.

Axel Langville is clearing his lot preparatory to building a house on the same.

Thorsby's public school begins next Monday at 9 o'clock in the morning.

When you go to Clanton take your dinner at Thornton's.

When C. A. Peterson, of La Cross, Wis., came to Thorsby last summer, he had to take medicine every day if he valued his life. Now he has "thrown physic to the dogs" and lives without medicines.

Services next Sunday at 10:30 a. m. Rev. S. E. Hedberg. Text, Luke 4:28-30. At 7:30 p. m., Prof. H. W. Ryding. Text, Timothy 2:19-21.

Swinford, Greene Collins, and Honeycutt were in Clanton last Monday in the interest of the Strasburg school.

Mr. F. A. Carlson, of Apple River, Wis., is a guest at hotel Concordia. He has come to enjoy the benefits of our glorious climate.

Three brothers, sons of W. A. Lee, Messrs. Kane and Dyer arrived from Lucile, W. Va., last Sunday afternoon by team. Mr. Dyer expects to return home in a few days after having looked over the country.

A scheme is on foot to organize a company and build and run a canning factory next year so that our people may have a market for their garden products at their very doors. The capital stock would be $10,000 at $10 a share. Stock would be offered to all those who have bought land of the association. The stockholders would, of course receive the best prices for their products and besides all that the business brings. The Call would be pleased to hear from non-resident land owners on this subject.

If you wish to preserve your sweet potatoes until next spring, handle them carefully when digging. so that they do not get bruised, for if they do, they will rot. Select a high place where you wish to keep the potatoes, cover with dry sand or earth, put a roof over them and dig a ditch around the place to keep the water away.

A Colorado Train Robbery.

News has just reached Denver that the Gulf passenger train No. 1 was held up and robbed at Twin Mountain, Friday night, at 11:30 by two masked men. The two men got on the blind baggage at Folsom and when nearing Twin Mountain they climbed over the tender of the engine, and covering the engineer and fireman, ordered them to stop when they reached the road crossing. At Twin Mountain two men were stationed at the road crossing with four horses and as soon as the train stopped they began to shoot their revolvers and to intimidate the passengers. Two men entered the express car and blew open the safe. It is not known how much was secured, but it is estimated at from $5,000 to $15,000. Immediately on receiving the news at Folsom, a posse was organized and started in pursuit. A posse also started from Trinidad, at 2 a. m. The railroad company has offered a reward of $500 for the capture of the robbers.

Twenty Thousand People in Distress.

An appeal setting forth the fact that great suffering exists among the starving miners, of whom there are 4,500 in Jackson county, O., with families aggregating 20,000 persons, has been issued by the mayor and signed by prominent citizens of Wellston, O. The appeal asks for contributions, local citizens having exhausted their m

Treasurer and Cash Gone.

Warrants charging embezzlement have been issued for the arrest of Charles M. Charnley, for 15 years treasurer of the Presbyterian board of aid for colleges and academies, Chicago. He can not be found. The American Surety Co. caused the warrants to be issued and allege that Mr. Charnley has confessed to a shortage of $50,000, trust funds contributed for educational institutions having been used in speculation on the board of trade.

Sympathy From Texas.

Mr. W. D. Mahon, president of the Amalgamated Association of Street Railway Employes at Galveston, Texas, sent the following telegram to Mr. Ratchford, president of the united mine workers at Columbus, O., Saturday night: "Organized labor resents the Pennsylvania outrage with the last man. I am at your command."

Asks an Audience.

Gen. Stewart L. Woodford, United States minister at San Sebastian, has applied for an audience with the queen in order that he might present his credentials.

THORSBY IS THE CENTER OF ANOTHER SUCCESSFUL SETTLEMENT.

Thrifty Farmers and Artisans from the North Are Developing a Rich Country.

Below is a letter written by Mr. W. H. Skaggs to the Chicago Inter Ocean of August 20, 1897, which speaks for itself. Mr. Skaggs is commissioned by the Southern and Northwestern Industrial Association, of Chicago, to put before the people of the North and West the advantages the South offers the homeseeker and the capitalist. These people can be relied upon to recommend nothing but strictly legitimate enterprises.

THORSBY, Ala., August 16.—Special Correspondence.—Fifty miles south of Birmingham, on the main line of the Louisville & Nashville railroad, is a colony, which has been established largely through the liberal and progressive policy of the Louisville & Nashville railroad company. The name of this place is Thorsby. It is in Chilton county, and this county is in Central Alabama.

Chilton county is on the divide between the mineral belt of North Alabama and the cotton belt of South Alabama. Latitude 33 degrees is about the dividing line between the two geographical, geological, and, I may say, political and industrial divisions of this state. North of this line the county is mountainous, well watered, and in general elevation is about 750 feet. There are fertile valleys and plateaus; most of the lands are red clay; there are extensive deposits of coal, iron, and other minerals, and many new manufacturing towns have been built within the past fifteen years. Cotton is raised in North Alabama but more attention is given to grain, fruits, and vegetables. The white people are in the majority in North Alabama, and there is greater progress in industrial lines and greater independence in politics than in South Alabama.

The country south of Chilton county is known, in a general way, as the Black Belt, so called from the color of the soil and the number of negroes who live in that section. The Black Belt is a prairie country, agriculture is the prevailing industry, and cotton is the principal product. There are no minerals which have been developed in South Alabama and manufacturing has not been developed to any great extent. Immigration has not made such progress in South Alabama as it has in North Alabama, and there is less political independence in the southern than in the northern section of the state.

Extensive pine forests are found in Chilton county and the lumber business is one of the leading industries. Only a small portion of the land is under cultivation. The soils vary from the fertile brown and red loam lands to the sterile. The products are cotton, corn, oats, rye, and tobacco. Latterly some attention has been given to the cultivation of rice, and fruits and vegetables are given special attention by new settlers from the Northwest. The white people are largely in the majority, notwithstanding the county is adjacent to the Black Belt.

The Concordia Land and Improvement association is the name of the company which has undertaken to establish a colony at Thorsby. T. T. Thorson is at the head of this enterprise and the results so far attained are due largely to his efforts. Mr. Thorson and his associates in this enterprise are from Minnesota, where formerly engaged in farming and stock raising. With their families, they have moved to the new colony and are active in all legitimate efforts toward the advancement of the enterprise and aiding the newcomers.

Thorsby is situated on a plateau of about 790 feet altitude. The island is rolling and there are no swamps or malaria. There is water in abundance and of good quality. Building material is very cheap. Forests of long-leaf yellow pine are near by, and saw mills in the immediate vicinity furnish lumber at low figures.

This colony was established hardly two years ago, when there was not a house on the land, and the whole tract was in pine, oak, and hickory timber. Today there are upward of 150 buildings and others are in course of construction. The houses are substantial structures and above the average of the county. A substantial hotel has been completed and a two story school house is one of the attractive features. The school has been well organized and a capable educator is in charge.

The new settlers are Americans and Scandinavians from the Northwestern states. They are industrious and thrifty. I did not see an idle man about the place. Everybody is at work, and no one seems to be waiting for something to turn up. The newcomers object to the thriftless habits of the negroes, and there is not a "colored person" living or employed in the settlement.

It has been the policy of Mr. Thorson and his associates to find employment for every newcomer. I conferred with a number of intelligent people during the past eighteen months. I am of the opinion that many readers of the Inter Ocean will be interested in the voluntary declarations of these settlers.

Gus Rosenberg, of Eau Claire, Wis., located at Thorsby in April, 1896. He is a carpenter, and states that he has found steady work since he came here. He claims to make $2 per day, and, on account of the low cost of living, he has been able to save from his wages sufficient to buy a ten-acre tract of land and build a house. His health is greatly improved, and he is delighted with the climate and the land.

Charles A. Peterson, of La Crosse, Wis., is a painter and a very intelligent man. He has not found expensive work at Thorsby, but has been able to make a living and is well pleased.

L. M. Pearson of Minnesota, A. M. Johnson of Waseca, Minn., and R. H. Rierson of Emmet county, Iowa, are among the number who make favorable reports of this locality and are well pleased.

A. Malmgren, of Estherville, Iowa, came here last May. He bought a ten-acre tract of land, on which he has just completed a nice two-story dwelling and a substantial barn. He has also acquired another tract, of forty acres, and thinks this is a very desirable section of the country.

E. F. Mead, of Mankato, Minn., said he had been building a home during the winter months—a time when he could do nothing for himself in the North. Mr. Mead is a carpenter by trade.

I talked with many more new settlers, and heard only good reports. Every one is pleased with the soil and the climate, and I did not find a man who is without work and who has not been able to build a home.

There are other locations in Alabama with quite as many natural advantages as Thorsby. Indeed, there are sections which perhaps have greater advantages, but I doubt if any colonization scheme meets with greater success than this. The absence of speculation and the manifest disposition to deal frankly, coupled with the character of the settlers, the energy, thrift, intelligence, and integrity of the whole population, warrant the opinion that this will soon be one of the most successful colonies of the South.

Capt. P. Sid Jones, who is in charge of the immigration department of the Louisville and Nashville railroad company, was active in promoting the Thorsby settlement. Captain Jones came South several years ago, and has been influential in attracting attention to the advantages of the South. His office is in Birmingham, Ala., but he is now in charge of the Louisville and Nashville exhibit at the Tennessee Centennial.

The Louisville and Nashville railroad is very popular in the South. It is an extensive system, under liberal and progressive management. Its policy has been to build up every section traversed by its system. The encouragement of thrifty home-seekers looking for new locations in the South is part of the broad policy of the Louisville and Nashville railroad.

"Garden Spots of the South" is the name of an interesting publication by the Louisville and Nashville Railroad company. It contains a large map and a great of valuable information. Every person who expects to locate in the South or desires information about this section, would do well to write to C. P. Atmore, general passenger agent, Louisville, Ky., or Sid Jones, Birmingham, Ala.

A MUNICIPAL FARM.

A Successful Experiment in Agriculture by the City of Macon.

As a demonstration of the profit there may be in a city farm, attention is called to the city of Macon, Ga. From the facts as set forth in the Macon Telegraph there are few little farms in Georgia that are more profitable. The farm covers sixty acres and is planted this season in a single crop—oats.

All the land inclosed by the mile track is planted in the cereal, and some twenty or so acres in addition are under cultivation. The crop this season is nearly ready to cut and something like 2500 bushels will be the result. These oats would cost the city not less than $750 if they had to be bought.

This is not all, for two cuttings of hay will be made from the same land, which W. Lee Ellis, who is in charge, estimates will produce something like 3500 bales, which would cost the municipality easily $3000.

The city has more stock to feed than is generally considered. Taking the fire department, the sanitary squad, the street force and all, not less than fifty mules and horses must be fed by the city, and all this provender, raised under Farmer Lee's supervision, is a direct saving.

Mr. Ellis, in speaking of the matter, says: "The cost of operating the farm is practically nothing, except for labor needed in plowing, planting and harvesting. The stock must be kept anyway, and, with the number needed to do the city's work, all that is necessary in the cultivation of crops we raise can be done when the animals would be idle if not thus employed. We use all the fertilizer made by the city stock. Outside of that we have spent this year just $40 for the commercial article."

From a measured acre of the city land last year there was cut at a single cutting 5400 pounds of fine hay. This was after a forty-bushel crop of oats had been harvested, and early enough to make certain another cutting of hay before frost.

Up to the time that Mr. Ellis began to cultivate the city's farming land it had been the custom to rent it out for $5 an acre. Its annual product is now estimated at over $60 an acre."

HOUSE BUILDING

Is the order of the day in Thorsby. We are now prepared to keep up with the procession. Our new planing mill, which has recently been put in, and is now run in connection with our saw mill, enables us to furnish all kinds of lumber for building purposes. Our prices are more reasonable than those of others, and, being prepared to turn out an order on short notice, we can save the builder a large amount of inconvenience and expenses. By buying at home you have no freight to pay and you are helping aglong home industries. We also are prepared to ship lumber by the car load or in small quantities.

Charged With Abducting a Young Girl.

John Shaw, a young married man, of Bristol, Tenn., was bound over to court and sent to jail Saturday on a charge of abducting Lizzie Osborne, a pretty seventeen-year-old girl. Miss Osborne has been missing from her home for ten days, and her parents have searched for her in vain. Shaw declines to say what has become of the girl, and her whereabouts is a mystery, which the officers have been unable to solve.

THE FARM AND GARDEN.

ITEMS OF INTEREST ON AGRICULTURAL TOPICS.

CRACKED WHEAT FOR YOUNG CHICKENS.

Some cracked wheat should be given to chickens even before they are a week old. It is the best exercise their digestive organs can have. Whole wheat will be eaten when the chickens are ten days or two weeks' old, and should always form a part of their ration. It is especially valuable to make them feather quickly, the grain containing just the kind of material necessary for feather production. Where wheat is largely grown, fowls find enough scattered grains about barns or stacks, so that young chickens hatched in midsummer will become full feathered before winter, and will make early spring layers.

TARRING SHEEPS' NOSES.

During hot weather sheep are apt to be troubled by the fly which deposits eggs in their noses, and afterwards hatches the maggot which burrows in their heads and often proves fatal. Sheep are much excited when they find this fly, running with their nose close to the ground, and rubbing it into any loose soil they may find. Tarring the nose is the best preventive and always effective if taken in time. It is easily done by leaving tar in the field and throwing a handful of salt over it. In their eagerness to get the salt, the sheep will thoroughly coat their noses with tar. It should be renewed so long as warm weather lasts, for the tar will gradually wear off and cease to be a protection

OATS AND PEAS FOR SOILING.

Excepting clover there is no better soiling crop than a mixture of oats and peas cut green. It can be sown much earlier than corn, and will be in condition long before corn is ready to cut for green fodder. The pea vines also make it a better ration than green corn at its best, as they supply the nitrogenous element in which corn is deficient. But as the main soliing crop corn will always have the preference, as more can be grown of it per acre than of the peas and oats. By sowing successively until the middle of May, oats and peas can be kept in best condition for soiling until corn fodder has got into tassel. But the latest sown oats and peas should all be used for green fodder as the excess of nitrogen in the soil will make the late oats rust and the late peas mildew so that they cannot be saved for grain. But if there is more of them than can be fed green, the corn and peas make excellent silage if put up just as the grain is beginning to form.

RAISING HAWTHORNS FROM SEED.

Gather the fruit when ripe, and place where the pulp surrounding the seed will soften, but not ferment and heat. Then mix pulp and seed with an equal bulk of pure sand, working over the heap until both are thoroughly intermingled. Put all into boxes with good drainage, and on the north side of some building, or where the box will be in the shade, bank up and cover over with soil. The box and seed may remain in this position until the autumn of the next year, then the seed may be taken out and sown in shallow drills, covering one to two inches deep, dropping a seed every two inches if sown in single drills, or about the same distance apart if sown in broad drills or beds.

As Hawthorn seeds do not usually grow until the second season after sowing, it is always preferable to keep them in a position where water can be given when needed in dry weather, than to sow them fresh and run the risk of having them injured by drouth the following summer. When only a small quantity is to be sown, they may be placed in the seed bed as soon as the pulp is softened, and the bed kept heavily mulched during the ensuing summer, the mulching to be removed in the spring of the second. The main thing to be observed is to keep them moist and cool until the time arrives for their germination. When the seedlings are one year old, they should be taken up and transplanted into nursery rows, as usually practiced with other kinds of stock.—New England Homestead.

REMOVING CORN TASSELS.

We have never believed that it would pay to detassel corn in order to save the plant vigor and strength required to perfect the male blossom. It would in the first place involve too much labor, and we could never see that the stalks from which tassels had been removed were any more prolific than others. What used to be known as topping corn, which means cutting off all above the ear, is a certain injury to the crop. It used to be done to let the sun reach the ear. But the ear need all the foliage that the stalk was deprived of in order to perfect its grain. Besides, it has long been recognized that these thin toppings of corn have far less sweetness and nutrition than has the larger part of the stalk below them. At earing time the richest part of the stalk will be the middle, and as close to the ear as possible. Give a cow a cornstalk and she will always begin in the middle, eating both ways till she comes to less nutrition, and casting out the butt and top ends as not suited to her taste.—Boston Cultivator.

FRUIT TREES ON ROCKY LAND.

Whether fruit trees will succeed if planted on land too full of large stones to be profitably worked must depend on the amount of mineral fertility it contains. In any event, even if you have to supply potash and phosphate after the trees get into bearing, the rough land will probably pay as well in growing fruit as in anything else. The rocks, you say, will prevent you from making regular rows; but as you could not cultivate anyway, this does not matter. You can at least give each tree plenty of room and sunlight, which is what most closely planted orchards lack. The finest fruit can always be grown on apple trees that stand apart, with plenty of room to stretch their limbs in every direction. If well fertilized and in rich soil, such trees grow very large though they come late into bearing. If your trees have too little soil, this will probably make them bear early, and with plenty of mineral fertilizers, an orchard planted as you propose ought always to be prolific. By using straw or other substance as a mulch, the grass near the trees may be kept down, and this, which in your case is a necessity, will be really better than plowing the orchard, as is generally done.—American Cultivator.

PREPARE NOW FOR WINTERING BEES.

While some may think November or December is early enough to prepare bees for winter, many of our best apiarists that are the most successful in wintering prepare their colonies early in the season, writes O. J. Lowrey, of Vermont. Three things are very essential to wintering bees well: 1, Good stores; 2, good strong colonies of bees; 3, proper temperature. While the two points first named are the most essential, the last should not be overlooked.

Good honey, well ripened and capped, may be the best winter food, but if the bees should store something with the honey, as they sometimes do during a honey drouth, like honeydew, or cider from apple pomace or decaying fruit, bees consuming such stores are pretty sure to show signs of disease during long confinement. This can only be remedied by a cleansing fly, which we cannot with certainty depend upon during our winter months. Proper precaution during the early part of September, by looking over the brood combs of each colony and making a careful estimate of the number of pounds of honey in each hive and supplying all colonies that are short of twenty-five pounds of good honey with feed to make up that weight or its equivalent, will go some way in keeping bees from picking up improper food in the fall, when flowers are not secreting honey, and will be helpful in wintering our bees.

I have found that sugar syrup made from granulated sugar and fed early is equal if not superior to honey in wintering my bees. I have noticed colonies setting side by side in early spring; while having their first fly, those wintered upon sugar syrup seemed free from disease; those wintered entirely upon honey showed more or less dysentery. This having come to my notice nearly every spring when my bees have had long confinement, I must concede a preference for sugar syrup as a food for wintering bees when properly made and fed. Some may say that twenty-five pounds of honey is more than necessary to winter a colony of bees. If wintered in a good cellar or winter repository, this may be true, but as it takes a large amount of food in the early spring to feed the early raised bees, and the weather in our northern climate is fickle, it is very necessary that every colony be well supplied with food the fall previous.

As soon as the white honey harvest is passed (the fore part of August in this part of Vermont), is none too soon to know that all colonies have good prolific queens. Bees raised in August and September are the best bees for wintering, possessing more vitality than those raised earlier or later in the season. Therefore, all colonies should be looked over early to see that all have plenty of brood in all stages of growth. This is the brood that produces the bees to winter the colony and build it up the following spring. If for any reason a colony does not have a prolific queen at the end of the honey flow, such queens should be replaced by good ones, so the colony can build up before cool weather sets in. If bees have been neglected in the above respect, all colonies should be looked over the fore part of September, and weak colonies should be united, that all may be strong before winter sets in. All colonies being deficient in stores for wintering should be fed early enough so the feed may be thoroughly ripened and capped during warm weather.

FARM AND GARDEN NOTES.

Cockerels kept until November bring no more money than if sold for broilers in midsummer, but they keep on eating just the same.

Yearling turkey hens are not so apt to die on their nests while setting; invite them to make their nests about the barn by giving them suitable places. Young broods stand the chilly weather bad, and should not come off before the 1st of May.

The adoption of iron-clad rules by which the ground is harrowed or rolled just so often each year without much regard to the condition of the ground or the prevailing weather, can hardly be called intelligent farming. In one season the soil may be put into condition with less than half the labor required in another season. People should cultivate good judgment and use it in deciding these practical questions.

The grain bin and corn crib need something more in cleaning than simply to throw out any refuse left over. There is always liability of mold from last year, and it would be well to whitewash these receptacles for grain, both inside and outside, floor and sides, adding a little carbolic acid to the whitewash. In fact, if two or more coatings of whitewash are given they will be better than a single application.

It is difficult to cure a horse of cribbing. If only just begun, tie him in a stall where there is no manger and no projecting edge which he can grasp with his teeth. Feed him in a box, which must be removed directly after each meal. If confirmed in the habit, buckle a strap one and a half inches wide tight around his neck, near the head, allowing room for him to breathe while his head is in a natural position only.

In our anxiety to speed the plow when the ground is in good order after a rain we are apt to neglect harrowing just at the right time, thereby losing moisture and money. The big holes in the plowed ground should first be stopped, the soil stirred frequently, and particularly after every rain the entire surface should be broken. We have no right to complain of the soil drying out until we do all we can to save the moistnre we get.

The currant worm does immense damage to current bushes every year, and unless kept down will soon put an end to the crop. The remedy for the currant worm is white hellebore, an ounce of the powder being dissolved in two gallons of water, applied with a fine sprinkler. The mixture will also destroy slugs on rose bushes. The substance used is very poisonous, and should be kept in some place where no mistake can be made with it by any member of the family.

If we place some earth in a vessel and shake it up well the finer portions will go to the bottom, leaving the clods on top. A deep running harrow shakes the soil up and brings the clods to the surface where they can be acted upon by roller and drag. The smoothing harrow is all right in its place, but the straight spiketooth, or better yet, the springtooth, will go beyond its depth and lay a subsurface foundation for the others to build upon.

Toad Showers.

Every summer there are telegraphic reports of toads and rainfalls in one grand and happy combination. We are asked to believe that a cyclone drew the waters of some lake or river or swamp up to the clouds, taking the toads along, although toads are not known to frequent such waters, or any waters for that matter, except very small and shallow pools. Then we are asked to believe that the toads, once in the clouds, live comfortably until they desire to return to earth. We are further asked to believe that the law of gravitation is then suspended in their cases, so that they may drop lightly to their native land, and proceed at once to hop about merrily, living happy ever afterward. A fall of hundreds of feet does not even ruffle their tempers.

Now, is not this overdoing the toad shower business! Why not let the yarn rest one season, giving the toads under the rail fences and in various nooks and corners credit for sense enough to come out in force at times to enjoy a passing shower?

But the delusion is well anchored in the popular minds; and there are many who will go to the end of the days believing that toads do fall from the skies, and that the sun do move.—Atlanta Journal.

Telegraph Instrument that Prints.

When it becomes possible to step into a telegraph office and send a message by means of a machine like a typewriter, telegraphy will be somewhat simplified. There is a new invention which prints a message on a sheet of paper six inches wide. It works after the fashion of the typewriter. It has been known and used for some time, but has hitherto been so slow that it attracted very little attention. Recent improvements have added amazingly to the speed and it now transmits 2,200 words an hour, besides keeping a perfect record of the message. A large number of these instruments are being put into use and their success is so far assured that capitalists are seeking them as investments.—The Ledger.

THREE BIRDS IN A BATTLE.

A Fierce Aerial Combat With a Fish for the Prize.

A man sat on the sands at Capron Inlet, opposite Fort Pierce, Ala., and admired the graceful flight of an osprey. About fifty yards above the blue water the bird wheeled on widespread pinions, directing his course by motion of his tail and curves of the wing. Presently he balanced himself, the wings shut on the body, and he plunged into a long swell, and rose with a fish in his talons. With a scream of exultation he shook himself free of moisture, like a dog, and circled to regain sufficient altitude to clear the woods.

But a fishing eagle, twice the osprey's weight, had seen the performance, and answered the scream. He mounted to strike, and the osprey, burdened as he was, gave up the contest, and dropped the fish. With a swing the eagle turned and caught the fish and then flew low to regain the blasted pine and feast.

Then came another scene and a dim spot detached itself from a cloud and moved straight on the scene of action. It was a bald eagle that was coming.

The fisher heard the cry of battle, and knew he was not lost if the bald eagle should strike him with a swoop. Hastily he turned and flew almost directly upward, still holding his prize. The osprey soared backed with shrill whistlings, as if he mocked the efforts of the robber.

The bald eagle screamed again, and was answered by the fisher. On came the assailant like an arrow from the bow. The fisher still moved upward, hoping to gain a position where he might fight on even terms.

Presently the bald eagle curved the forward edge of his great vans and started downward. The fisher dropped his mullet and turned upside down in midair, with beak and talons ready. The osprey caught the mullet and sailed homeward.

The two great birds came together with a sound distinctly heard below, though they must have been half a mile in the air. Feathers flew as if a pillow had been torn open in a strong breeze. As the two birds fell it could be seen that the talons of the bald eagle straddled the body of the gray, and were buried at the roots of the wings. The gray's beak tore at the throat of the bald and his claws were busy tearing like the jaws of a wolf fighting a dog. Each eagle beat the other with his wings. They tumbled over and over, slantingly, to the sea.

As they touched the water each broke its hold and made for the shore. The gray fell in the edge of the woods, The other landed on a tree, nearly fell, and then leaned against the tree for support as it sat in the crotch.—New York Times.

Toads Waylay Bees.

"I found out something last night that makes me feel silly, and I've learned a little lesson in natural history that I shall not soon forget," said S. V. Hall. "Every night," explained Mr. Hall, "when I have gone out about sundown to shut the hen house, I have noticed a large toad sitting in front of one of my hives of bees, the one nearest the walk, and I was careful not to molest him because I have always protected toads on my place on account of their usefulness in destroying troublesome insects. I stopped to watch and I soon learned all about it. The hive, under which they burrowed in cool retirement in the day time and in front of which they took up sentinel positions in the early evening, stood on the ground with only a board between it and the sod. The board projected in front of the hive about three inches, so as to afford the bees a convenient place for alighting. While I watched the bees arriving home last night, heavily laden with honey, I saw those two toads shoot out their long, slim, slimy tongues and capture every bee. I did not wait to see them eat many before I killed them both. I dissected one and found his stomach full of bees whole and others in various stages of digestion. I estimated that those winking, blinking toads have been devouring fifty or sixty a day. I had supposed the bees' stings would protect them from such a fate."—Buffalo Courier-Record.

To Exterminate Insects.

A noted bacteriologist has lately conceived the plan of exterminating all bothersome insects by inoculating them with some disease peculiarly fatal to their respective species. The plan was suggested by the successful results obtained by experiments in ridding fields of grain from chinch bugs. Mosquitoes, which are believed to convey malaria from the swamps to the human system, would exist no more. Flies, which are not as good scavengers as was once supposed, and for whose loss improved sanitary measures would more than compensate, would no longer amble over the heads and noses of would-be nappers. There is a pathogenic germ which could be cultivated in tubes, as consumption bacilli are now propagated, which would sweep millions of the latter from existence. Bugs, gnats, and all insects which ruin grain and fruit are to be the subject of bacteriological experiment.—Chicago-Times Herald.

ROOF OF THE WORLD.

The Vast, Lone and Desolate Plain of the Pamirs.

Just over the mountain wall from Chitral lies the vast, lone and desolate plain of the Pamirs. "Going northeastward from Wakhan, where dwell stout warriors and good hunters, and travelling by a road which ascends for three whole days together, you come to an exceeding high mountain, than which there is said to be none higher in the world. Here also between two mountains is a great lake, and running over the plain is a very fine river. The plain is twelve days' journey in length, and is called Pamere. Onward the road leads to Kashgar, which is tributary to the Great Khan." Such was Marco Polo's account of the "Roof of the World," and it tallies well with all men known to-day of that forbidding region. It is about 120 miles by 250 miles in extent, and is a region of broad valleys, each three or four miles wide. Most of the country is bare, but parts of it in the summer yield good grass, on which the Kirghis nomads pasture their flocks, the "wandering Kirghizzes, who come on shaggy ponies from Pamere." Besides the valleys there are huge bare mountains rising more than 20,000 feet above the sea, while the bottoms of the valleys are at an altitude of from 13,000 to 15,000 feet.

Winter begins in August and ends in May, and the temperature is often from 15 to 20 degrees below zero. The latter half of June and the first two weeks of July contain the only really warm weather. Heavy frosts begin with the first of August.

The only resident population of the Pamirs are the wandering Kirghis. Of these there are in the whoie region not more than a hundred families, with five or six persons in a family. They live in tents, and for their living depend entirely upon their flocks. They come down from the mountains to the nearest towns occasionally to buy flour and grain, and to sell their cattle and hides. As a rule they are well clad and robust, prosperous-looking men. A few of them carry firearms, which they use for shooting game for food. They are a friendly, amiable people, well disposed towards the British, but regard the Chinese as the real lords of the world. In religion they are Mahometans. They have no temples or mosques, but pray at sunset looking toward the West.

A Mine's Remarkable History.

Probably there is not a mine in the country which can show such extreme variations in the price at which it is held as the Diamond mine, near Helena. It was sold last year to a Scotch syndicate for $1,800,000. Fifteen years ago Richard Lockey, of Helena, bought the mine for ninety cents. Mr. Lockey did not make the difference between these two sums. The property which he bought for ninety cents he sold for $8,000, and thought he was making a good bargain.

The Diamond mine has a peculiar history. It was discovered and located about thirty years ago by David E. Folsom, of White Sulphur Springs, and Charles W. Cooke. Shortly after locating it they sold it to Capt. Lewis and James Reece, of Pittsburg, who set up a small stamp mill, but did not make a success of it. The capitalists left, and the mine was neglected and abandoned, taxes became delinquent, the assessor's validation of the property was small, and the delinquent tax due was only ninety cents. Richard Lockey happened to be in Radersburg when he observed the Diamond mine listed for sale. He had never seen the property, but he paid the ninety cents and secured possession of it. Nothing was done in the mine for a number of years.

Then Tommy Cooney took a bond on it, paid $8,000 to Mr. Lockey and took the property. Several partners were associated with Mr. Cooney, but there was no success. Finally John S. Miller bought out all other interests and afterward sold out to the Scottish syndicate. There is now on the property the largest and most improved gold mill in Montana.—(Butte, Montana) dispatch to the St. Louis Globe Democrat.

From Sheep to Clothes.

An interesting experiment has just taken place at Selkirk, Scotland, when a suit of clothes was produced from raw material in under eight hours. Two sheep were shorn in the morning, the wool was scoured, dyed, carded and spun in one establishment in two hours and twenty minutes; the warping, wefting, milling and finishing occupied three hours and fifteen minutes at another while the making up took two hours and twenty minutes, and the suit was worn on the afternoon of the day on which the wool was clipped. A similar experiment was made some sixty years ago at Ettrick Mills, when the wool was spun on the old hand-jennies and woven on hand looms. At that time jacket and vest were completed in sixteen hours, and in those days it was deemed a remarkable performance.—Boston Transcript.

The present population of Australia is estimated at about 4,000,000.

A New York student of political economy and social science says: "Let us agree that the sum each of us may hold shall be limited to $2,000,000." We are not disposed to quarrel over a little thing like that; but such an agreement would be sure to work great hardship to many of the newspaper boys.

A New York clergyman thinks he has found a Biblical rebuke to flirting in Proverbs x., 10: "He that winketh with the eyes causes sorrow." But how about "she" that winketh? And what proof is there that this text wasn't aimed at the soda fountain?

It is announced that Minister Woodford will wear full military uniform while in Spain. This evidently is done for the purpose of overawing the Duke of Veragua in case he should make trouble about Tom Palmer's relief fund of $1.67.

That Everlasting Irritating Itch.

That describes Tetter, Eczema and other skin diseases. 50 cents will cure them - stop the itch at once. 50 cents pays for a box of Tetterine at drug stores or postpaid for 50 cents in stamps from J. T. Shuptrine, Savannah, Ga.

The Emporia (Kan.) Republican thus sets an erring contemporary right: "We deny the allegation made by an envious exchange that the Emporia fire department was burned out while the firemen were playing 'seven-up.' The game was 'high-five.'" Let the truth of history be preserved.

Montgomery Ward & Co.

We call the reader's attention to the advertisement of Montgomery Ward & Co., of Chicago, which appears in our display columns. Montgomery Ward & Co., are the originators of the mail order system of doing business, and have the largest business of its character in the world. They employ 1,000 clerks, own the buildings they occupy, carry a stock of goods representing over $1,000,000 in money, and receive from 6,000 to 16,000 letters and orders every day. They sell everything one can wear or use, and everything is sold on the guarantee that it will be found as represented, or the purchaser can exchange for other goods, or have his money refunded, as he prefers.

Knowing the high character of the firm, we have no hesitancy in saying that what they promise to do, they will do, and that they are thoroughly reliable in every way.

London has an area of 688 square miles. Greater New York will have an area of 359 square miles.

Deafness Cannot Be Cured

by local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube gets inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed Deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever. Nine cases out of ten are caused by catarrh, which is nothing but an inflamed condition of the mucous surfaces.

We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that cannot be cured by Hall's Catarrh Cure. Send for circulars, free.

NOTES AND COMMENTS.

New Jersey spent $5,337,557.42 for educational purposes last year—about $2 for each man, woman and child in the State. Of the amount $3,029,777.91 was for the salaries of the teachers.

According to a writer in The Independent, only four of the States of the Union use officially the term Commonwealth, these being Massachusetts, Pennsylvania, Virginia, and Kentucky.

That army chaplaincies continue to be very alluring to the clerical mind is indicated by the fact that nearly three hundred ministers applied to the Federal Government for appointment to a single vacancy that recently occurred.

In India hoarding is the universal method of providing for the future, and one authority says that the stores of the natives in the shape of coin and ornaments amount to as much as $1,250,000,000.

Seattle, in the new State of Washington, is seeing its great opportunity in the excitement over the Klondike gold discoveries, and is availing itself of it. Enthusiastic citizens predict a population of a hundred thousand for the town before the close of 1898.

A Californian with a wooden leg has started for the Alaska gold fields, and proposes to tramp over the Chilkoot Pass alone. Well, he is fifty per cent. better off than many who will make the trip, opines the Chicago Times-Herald. He has only one foot to freeze.

In the United States the yield of cotton is worth about 400 millions dollars, hay 430, dairy products 250, poultry and eggs 560, and we export more or less of everything but the latter. We eat all our eggs and chickens at home, and then call for more from abroad.

The Galveston News notes as a singular fact in view of its State's immense herds of cattle, that Texas imports from other States much of the butter it uses. Some of its citizens are now laboring to procure the establishment of creameries and cheese factories there.

A sinister prediction comes from Vienna. Professor Falb announces that on November 13, 1899, a comet will strike the earth. The calculations of the meteorologist are not yet sufficiently complete to inform the world whether the violence of the shock will reduce the planet to dust, or whether it will be enveloped in an atmosphere of poisonous gas, which will kill all living beings.

In Shelbyville, Ind., the other day, a constable who called to serve a writ upon a widow was scalded with a kettleful of hot water, and ran away so rapidly that he entirely forgot that he had suffered for twenty years with chronic rheumatism which would scarcely permit him to walk. The hot water cure seems to be effective, but it may be a little too severe for the average sufferer.

Hans Wiseman, a famous Nebraska pioneer, discounts the ordinary dime novel hero, for he is said to have killed in the course of his life 500 or more Indians. He now lives near Harrington, Neb., and is about 80 years old, but he is still hale and hearty. About thirty-five years ago, when Wiseman was serving in the army, the Indians murdered his five children, and for years no red man dared come within range of Wiseman's rifle.

The Atlanta Constitution is responsible for the statement that duelling became a dead letter in Georgia because the farmers of the State suffered so much that they banded together against it and stamped it out. Their barn doors and window shutters were seriously wounded by the duellists, who never would pay for repairs, and many fine Georgia cows were slain by the stray shots of the dangerous combatants. The real sufferers could stand it no longer and they kicked.

Baltimore's Board of Health has issued orders that will stop the mad-dog craze. It commands the police to apply a ligature above the bite and "then try to suck the poison from the wound with the mouth, care being taken, of course, that your own lips are not chapped or cut." This, declares the New York Press, will put an end effectively to the mania peculiar to policeman to shoot every dog as mad which may be tortured into biting somebody.

The wives of three well known citizens of Fort Scott, Kan.—for the first time in the history of the State—have been drawn to serve upon the jury. Unless the court excuses them, they will be obliged to deliberate with the other talesmen regarding testimony which may not be pleasant for them to hear. Under the law of Kansas, all taxpayers who are electors are eligible for jury service. The women there vote in municipal elections. Jury service is certainly not one of the most desirable results of the agitation for women's rights.

Says the San Francisco Chronicle: Massachusetts people who wish to see birds protected are much exercised over the failure of the authorities to enforce the recent law making it an offense to use certain kinds of feathers for millinery purposes. If the Police Commissioners do their duty, then no woman will dare to go out with feathers of any kind in her hat, unless it be the plumage of ducks or geese; nor will any dealer consent to sell birds or feathers. The enforcement of the measure will probably result in some humorous incidents in court, for the experts are divided in regard to the legality of the statute.

In the opinion of the Boston Traveler there is coming a day when the canned fruit industry will cease to be an enormous moneymaking enterprise, and the few who are now beginning to see the future of a business dealing with dried fruits will be multi-millionaires. And the best of it will be that the profit of it will not be wholly with the dealers. Dried fruit sells at about half the price that canned fruit commands, and it will go five times farther. When such a reason will not appeal to a housekeeper the fact that it is superior to canned goods on account of the modern processes will make some impression. In California they have learned to prepare prunes so well that large quantities are shipped to France, the home of the prune, while California raisins have practically driven foreign raisins out of the market, and thousands of pounds of apricots and pears go to Europe.

A remarkable feature of Queen Victoria's reign is the great number of wars, "little and big," that have marked its progress. Scarcely a twelve-month has passed without finding a war in some part of the world. Here is an interesting list of the principal campaigns: Afghan war, 1838-40; first Chinese war, 1841; Sikh war, 1845-6; Kaffir war, 1856; second war with China, second Afghan war, 1849, second Sikh war, 1848-49; Burmese war, 1850; second Kaffir war, 1851-52; second Burmese war, 1852-53; Crimea, 1854; third war with China, 1856-58; Indian mutiny, 1857; Maori war, 1860-61; more wars with China, 1860 and 1862; second Maori war, 1863-66; Ashantee war, 1864; war in Bootan, 1864; Abyssinian war, 1867-68; war with Bazotees, 1868; third Maori war, 1868-69; war with Looshasis, 1871; Zulu war, 1878-79; third Afghan war, 1878-80; war in Basutoland, 1879-81; Transvaal war, 1879-81; Egyptian war, 1882; Zanzibar, 1890; Matabele wars, 1894 and 1896; Chitral campaign, 1896; third Ashantee campaign, 1896; second Soudan campaign, 1896.

"There is a strong sentiment in our part of the State for a division of California so as to give Southern California seperate Statehood," said J. N. Hazard, of Los Angeles, Cal., recently. "This desire arises from no friction or jealousies between the two ends of the Commonwealth, and least of all is it based on any scheme to give the politicians additional spoils from the public crib. It isn't political greed or the outgrowth of ill-feeling, but arises purely from economic necessities. In the southern part we feel the need of a State government of our own. We have in reality but little in common with the northern end. Our interests are quite as distinct from that section as they are from Oregon, and we are financially and industrially as independent as Oregon. We have also have a new population that is distinct from the population of Northern California as it is from New York. For these and other reasons we aspire to Statehood. There is plenty of territory for two prosperous and powerful States, and I think the division is certain to come about."

Typewriting in Chinese.

Dr. Sheffield, a missionary at Tung Chow, has invented a Chinese typewriter machine, which possesses many remarkable qualifications. He made the model himself, but sent the parts to a factory in Connecticut, where they were made in metal and put together. The instrument is a great success, and will relieve both the foreigners and the native Chinese from the necessity of using a paint brush and a pot of ink in conducting the correspondence. The characters, about 4,000 in number, are on the edges of wheels about one foot in diameter. It requires twenty to thirty wheels to carry all the letters; and the operator must strike two keys to make an impression. The first key turns the wheel and the second stops it at the letter wanted, which is brought down upon the paper by an ingenious device. The machine is very complicated, but Dr. Sheffield expects to make many improvements in the way of simplicity. The difficulty of his task and the wonder of his invention may be recognized when it is known that there are 18,000 characters in the Chinese language, each one of them representing a distinct word. There are between 4,000 and 5,000 in common use, which he has selected and placep upon his typewriter. The newspaper vocabulary of China involves fully that number of characters.

Lightning Liberated a Canary Bird.

Lightning sometimes plays queer freaks, as when it melted the wire from which hung a Berwick canary's cage, the cage falling to the floor and liberating the bird, which was not hurt a bit.—Lewiston Evening Journal.

BUCKINGHAM'S DYE

For the Whiskers, Mustache, and Eyebrows.

In one preparation. Easy to apply at home. Colors brown or black. The Gentlemen's favorite, because satisfactory.

CANCER CURED AT HOME; send stamp for book. Dr. J. B. Harris & Co., Pike Building, Cincinnati, Ohio.

ARKANSAS LADIES DON'T LIE.

Mrs Martha A Johnson

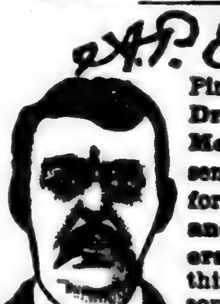
Malvern, Ark., says: Have used Dr. M. A. Simmons Liver Medicine 10 years, and find it a great deal better than "Zeilin's Regulator" and "Black Draught." It has been of great benefit to my Daughter and Niece during their monthly troubles for Obstructed Menstruation. There should be no home without it.

The Turn of Life.

The cessation of the menses usually occurs between the ages of forty and fifty. Great irregularity takes place in the periodic discharges for some time before the final cessation, the female usually experiencing sudden flashes of heat, fullness in the head, headache and other evidences of constitutional disturbance. The nervous system sympathetically responds, and there is great irritability and melancholy, the patient is discouraged and has a sense of fullness or suffocation.

At no time in her life does a woman need more constant care and watchful tenderness, nor has more need for a remedy to invigorate and strengthen her. The bowels should be kept regular with Dr. M. A. Simmons Liver Medicine, and if Dr. Simmons Squaw Vine Wine is used during the whole of this critical period, it will invigorate and enrich her blood, soothe and strengthen her nerves and thus relieve the suffering and enable her to pass safely through the dangers, prolong her life and afford her strength and joy in her declining years.

A. P. Ewton



Pine Bluff, Ark., writes: Dr. M. A. Simmons Liver Medicine has been a God send to myself and family for 20 years. It cures Chills and Fevers, Bilious Fevers, Sick Headache. I think there is no comparison between it and "Black Draught" and "Zeilin's Liver Regulator."

Fullness of Blood in Head.

Where there is great determination of blood to the head, the blood-vessels of the brain become greatly congested, and there exists flushed face, giddiness, especially on stooping, and throbbing pain in the head, increased by movement. It may be caused by living too freely; too late rising in the morning, combined with an inactive life. Menstrual derangements in females will often occasion it. Dr. Simmons Squaw Vine Wine is especially made for this, and it cures.

O. C. WASHING.. ..MACHINE

GREATEST IMPROVEMENT in WASHERS in 20 YEARS. PENDULUM Saves 50 per cent. of labor. Can be operated standing or sitting. No more work than rocking a cradle. NO BACK-ACHE with this machine. If dealers in your place don't handle them YET write us and get one at Wholesale PRICE.

A MOUNTAIN THAT SINGS

MUSICAL PERFORMANCES OF ONE OF THE PEAKS OF HAWAII.

Belief of the Superstitious Natives—Caused by a Commingling of the Sounds of the Breakers, Surf and Storm Echoing Among Crags and Dales.

If Hawaii is annexed to this country, says the Washington Star, the United States will possess a mountain that sings. Remarkable as this statement may seem, it is literally a fact. Mt. Tantalus, just outside of Honolulu, can be made to sing any song or run any score in the whole musical repertoire. The natives attribute it all to the ghosts of departed warriors said to inhabit the fastnesses round about, but science has found the real explanation. Nevertheless, the native attribution is interesting, and well worth consideration before the more prosaic explanation forces itself upon one.

Six miles out of Honolulu the precipitous cliffs of Mt. Pali rise 2000 feet above the sea. About 200 feet up is a ledge which gives a clear drop of more than 1000 feet. From this comes the name of Pali, or precipice. Here, in ancient Hawaiian history, the great fighting chief Kamehameha I. penned in the vanquished forces of his arch enemies, Kanaapule and Kalama, forcing them from field to field and crag to crag in a terrible mountain fight. Standing upon this fatal crag, the remnants of the defeated bands, finding that no quarter would be given, and seeing no means of escape, leaped over the precipice. They were dashed to pieces on the rocks and debris below. Hundreds lay in that terrible leap of death.

To the east of Pali is the mountain called Tantalus. The top of it is ruined like a dreamland, and even the most staid nature will thrill and be awed by its sweetness and melancholy. It is at nighttime only when the plaintive and strange sounds are heard which fall upon the startled auper like "lamentations in the wind," strange screams of death." At times they are loud and boisterous, like midnight revels, and again they soften into a complete wail. These voices which moan and scream and sob about in the night winds are believed by superstitious natives to be the spirits of the warriors whose mangled bodies lay at the foot of Pali after that dreadful leap, and whose names are still unappeased.

To destroy this pretty illusion is almost barbarous. Still, these sounds so reverently listened to by the Oahu natives can be caused by nothing more than the ocean breakers beating on the windward shore, and the plaintive cadence of the calmer surf below, alternating with the angry and wilder soughing of the storm above, echoing among the dales and crags of the lofty mountain. The feeling of the presence of human spirits about you cannot be shaken off, and the weird song of terror as of human voices cannot be hushed or translated into their sounds by even a strong mind. On a dark night a sensitive and superstitious mind could not endure with comfort the hideous forebodings of the scene.

Now, if two persons whose voices chord should sing from one of the heights it will be found that the mountain will catch up the song and take it from cliff to cliff, carrying it off into the distance in one direction and bringing it back in another, until a perfect round is obtained. Then, if the two suddenly cease their "leading" song, the mountains will go on singing it for quite a long time. The same song is being repeated in all directions, the first part making a complete circle and being followed by the middle and the last part, which come around later. It might be a few seconds, it might be a few minutes, for the singer forgets to count the ticks as the chant of this weird air, cut loose from human lungs, reverberates alone through the broken chasm and riven rocks as of spirits circling their way among the glades and crags of this singing mountain. It is a long and tedious climb to Tantalus, but, once there, the lingering visitor will never regret or forget its romance and the melancholy cadence of its winds.

This spot abounds in curiosities. Not far away is a large and strange salt mine. It is completely shut in from the ocean by a circle of hills about 700 feet high, which girdle it. The tide rises and falls in the lake as it does in the big ocean miles away. Though there is no perceptible funnel or other connection with the ocean, these tidal conditions indicate a subterranean channel underneath the mountains to the sea. Great quantities of salt were once made at this lake. That industry is dead now.

What the Boy Saw.

The bright boy's mother is cultivating his bump of observation. "Now, Johnny," holding up a picture card, "shut your eyes and tell me what you saw on this card." "A cow, a barn, a horse," rattled off the bright boy, glibly. "What else?" "Nothin'!" "Oh, yes; think now, what did you see behind the cow?" referring to the trees in the background. A moment's reflection. "Her tail," shouted Johnny exultantly.—Chautauqua Assembly Herald.

TOOK ROUGH ON RATS.

Sensational Suicide of a Prominent Woman in Tampa.

One of the most tragic suicides ever known in Florida occurred at Tampa Friday morning. Mrs. Lamont, widow of a prominent citizen of that place, took three doses of rough on rats and died a few hours later. Before dying she attempted to force her ten-year-old daughter to take some of the poison, but the latter refused. The victim lived alone with her two sons, aged seven and twelve, and her little daughter. No reason is assigned for the rash act, and the affair caused great excitement.

Mrs. Lamont is the third of the same family to die an unnatural death, and predictions have frequently been made that the entire family would sooner or later meet tragic deaths. Six years ago her husband was shot and killed in his own house. Tom Swayne, a cousin, being suspected of the crime was tried and sentenced to be hanged. The night before the execution Swayne broke jail and remained at large for some time. A large reward was offered for his capture, dead or alive, and he was located by a detective, who shot him through a window while eating his supper, and took the body to Tampa and claimed the reward.

The suicide was about thirty years of age.

GEORGIA—TENNESSEE.

Boundary Line Between the Two States in Dispute.

There is now said to be grave doubt whether Chattanooga is in Georgia or Tennessee. Facts seem to justify the statement, and a boundary dispute between Georgia and Tennessee seems imminent. The true boundary line between these States is the 35th parallel of north latitude, and this was located by the survey of 1818 on a rock about two feet high and two feet broad on a mountain one mile and twenty-eight poles from the south bank of the Tennessee river.

The survey was made jointly by agents of Georgia and Tennessee, Jas. Camack, mathematician, representing Georgia, and James S. Gaines acting for Tennessee. The stone which they chose to mark the 35th parallel had these words engraved on it: "June 1, 1818, Var. 6 3-4 east, qr." On the south side this: "Geo. 35 North, J. Camack, qr." It will be noticed that the variation of the compass was 6 3-4 degrees east. This introduces the element of uncertainty in the survey. It is believed by experts at Atlanta, Ga., that an accurate survey will establish the boundary a mile north of Lookout Mountain, increasing Georgia's territory and her population about 100,000.

BELLE MEMPHIS.

Goes Down in the Mississippi, Near Chester, Ill.—Passengers and Crew Saved.

The Memphis Commercial Appeal Thursday morning had the following special:

St. Louis, Mo., Sept. 8.—News of the sinking of the Anchor Line steamer Belle Memphis this evening, near Crane's island, in the Mississippi river, just below Chester, Ill., has been received here by General Manager Gus C. Meissonnier through the following telegram:

"Chester, Ill., Sept. 8.—Captain Gus C. Meissonnier, General Manager Anchor Line, St. Louis: Belle Memphis sunk at Crane's island at 6:30 tonight, in 9 feet of water at head and 7½ feet at stern. Break 40 feet long through bottom. Will send passengers forward on Bluff City.

"R. C. McCoy."

In speaking of the wreck Captain Meissonnier said:

"There were about 100 passengers on board, many of them St. Louis people, all of whom got off without accident."

The Belle Memphis was built in 1880, and was worth from $50,000 to $60,000, and was insured for about half her value. From the damage to her bottom it is thought she will be a total loss.

Coffin Pardoned by Wire.

Francis A. Coffin, Michigan City, Ind., received a telegraphic pardon from President McKinley Friday night sent from Somerset, Pa., and signed by Attorney-General McKenna. He left the prison Saturday morning and started for Chicago to join his wife, who has lived here with relatives since his incarceration. Coffin was looking for a pardon, but not by wire nor at such a late hour in the night. Coffin told the prison authorities that he did not know what he would do in the future. Coffin was sentenced one year ago to a term of eight years' imprisonment for wrecking the Indianapolis National Bank. His pardon is unconditional.

Breach of Promise.

The New York World Saturday published the following: Al Smith, sporting man, was arrested Friday as the defendant in a $5,000 suit for breach of promise of marriage. The plaintiff is Miss Agnes Black a music teacher of Long Island City.

THE PHILOSOPHER AND THE WORLD

Life is tall
And its days drag dreary,
When Death comes,
It finds us weary;
Glad to lie
With our limbs laid straightly
Free and shut
That were tired so lately;
Flesh and its fleshness
Under sod;
Soul's meek mentness
Gone to God.

Life is a toil
And its days drag dreary;
But, oh, toil's sweet
When your eyes shine, dear!
Tired am I
At the day's dusk closes,
Tired—but to rest
In your soul love's-roses.
Were I only
Under sod,
I would be lonely
Up with God.
—Post Wheeler, in New York Press.

HUMOROUS.

"He's the most modest man I ever knew." "Yes, he won't even tell the naked truth."

"Where shall we go?" She (on her second ride)—That I think I shall have to leave entirely to my wheel.

Lena—Did Tom put his arm around you last night? Ethel—Of course. Did you think I'd put it round for him?

"When you told her father of your trouble, did he offer to help you out?" "I should say so! It took about a minute!"

Gertrude—Now, she wants that considered strictly confidential!! Emma—Oh, yes!! I shall be very careful to whom I tell it.

Ferguson—What is the composition of Roquefort cheese? Upton—Roquefort cheese is not a composition; it is a decomposition."

"Miss Flyte, do you think Miss Giggle is laughing at me?" "I can't say, Mr. Softleigh. She often laughs at almost nothing."

Mrs. Henpeck—What makes you talk so much in your sleep, Joseph? Henpeck—Great Scott, Maria!! It's the only chance I ever get.

Chully—I'm afraid I must be going, Miss Madway. My head aches terribly. Miss Madway—Oh, don't let a little thing like that upset you.

Mrs. Homespun (indignantly)—Here's an article says that in Formosa a wife costs five dollars. Mr. Homespun—Well, a good wife is worth it!!

"It is authentically stated that the Prince of Wales has changed the style of his hat since the jubilee." "My! my! what a time of it he must have had!"

"What do you mean, sir, by saying that I know nothing about the rules of base ball?" "You're an umpire, aren't you? And a professional umpire, at that."

"They tell me, Grimly, that your daughter sings with great expression." "Greatest expression you ever saw. Her own mother can't recognize her face when she's singing at her best."

"Paw," asked Tommy, who had been reading headlines, "what does 'charges of bad faith' mean?" "Oh, —er—I dunno," answered Mr. Figg absently. "Another one of those heresy trials, I guess."

"How did you come out with that piece of statuary?" asked the sculptor's friend. "Not so well as I expected. The city accepted it without a murmur, and I got scarcely a column of advertisement out of it."

"You told me this horse had won half a dozen matches against some of the best horses in the country. He can't trot a mile in six minutes to save him." "It was in plowing matches that he took the prizes, sir."

"Do you think you are expert enough to take dictation from that author?" asked one typewriter of another. "I guess so. If I find I'm falling behind, I tell him it was because I got interested in the story."

Old Gent (to beggar whom he has given a cent)—Now, my man, what shall you do with that coin? Beggar—Well, I hardly know, guv'nor, whether to purchase an annuity or invest in railway stocks. What do you advise?

Citizen (visiting Suburbs at Lonesomehurst)—Why, what does that reversed flag mean? Suburbs—That is where Commuter lives. It is a signal we have here—a signal of distress, and means: "Cook has left. All invitations out for dinner declared off until further notice!"

Ought to Have Kept Her Home.

Farmer Nubbins (shouting across the garden fence to his next-door neighbor)—Hey, there! What are you burying in that hole?

Neighbor—Oh, I'm just replanting some of my garden seeds.

Nubbins—Garden seeds, eh? Looks to me mighty like one of my hens.

Neighbor—That's all right. The seeds are inside of her.—New York World.

Plain Preferred.

"Dolly, dear," asked the infatuated young man, "would you rather I gave you a plain bracelet or one with a pendant to it?"

"I guess I'll take it plain," said the unsubtle. "The last feller I had, by the way, gimme a diamond ring with a string to it."—Cincinnati Enquirer.

SOUTHWARD THE STAR OF EMPIRE TAKES ITS WAY.

VOL. I. NO. 25. THORSBY, ALA., FRIDAY, SEPTEMBER 24, 1897. $1.00 PER YEAR.

EVERYBODY

GOING SOUTH!

The tide of immigration is rapidly turning towards the South. The West and the Northwest has had its day, and the antiquature advice of Horace Greely "go west young man; go west!" has been superseded by the more timely advice of Chauncey Depew and others, "go South young man, go South."

Shrewd investors have observed that the South is on the dawn of a new era of peace and prosperity, and are rapidly investing their wealth where sound judgment assures them that values are increasing. Every section in the South has taken on new life, and through the coming in of new capital a new impetus has been given to the developement of the rich resource so abundantly lavished upon the South by a kind providence.

Especially is the case so with the state of Alabama and its centrally located fruit and agricultural lands. Say nothing about its immense mineral fields.

THORSBY, Chilton county, Alabama,

The Ideal Northern Colony,

Located on the famous Chilton plateau is an index to the largest and most prosperous settlements of its days and is a voucher for what capital and labor, combined, will accomplish.

The Concordia Land and Improvement Association, give the following advice to home seekers.

1st, locate on a main line with good shipping facilities.
2nd, locate on an altitude that will insure you good health.
3rd, locate where good water is obtainable.
4th, locate where a few acres of fruits and vegetables will bring you a good living.
5th, locate where you can raise corn, small grain and all kinds of grasses to the capacity of any other state in the Union.
6th, locate where you have a ready market for all products raised.
7th, locate where you will have the benefit of a settlement with churches, schools, and good society, so that your family will feel at home.

Please notice the following and see if Thorsby will do for you:

THORSBY

Is located on the main line of the great Louisville & Nashville Railroad, which directly combines the Gulf with the whole Northern Territory.

THORSBY

Is located on an altitude of 800 feet above sea level, and consequently has an excellent climate, not too hot in summer nor too cold in winter.

THORSBY

Is located where good, pure freestone water is obtainable at a depth from 25 to 40 feet, besides being well watered with springs and creeks.

THORSBY

Is located where farm land can be had in connection with fruit land, and a stranger will be surprised to see its corn and oat fields. If you doubt this, or any other statement, please write the undersigned and you will be referred to people living in nearly every state of the Union who have had the opportunity to see our crops.

THORSBY

Is located 48 miles each way, north and south, from the great mining and manufacturing center, Birmingham, with its 68,000 people, and the Capital City of Alabama, Montgomery, to which points daily shipments are now being made from here.

THORSBY

Is located where 140 Northern families have already cast their lot, and about one-half of them are now on the grounds. Two church organizations and the Thorsby School Society, besides other social circles, are the results of our seventeen months' faithful work towards making Thorsby a success.

For general information and printed matter please write us, and we will give it prompt attention.

GROWTH OF THE SOUTH.

New Industries Projected or Established the Past Week.

Though the fall season has not fairly opened yet, southern correspondents report a large increase in trade. The demand for all manufactured products is active, and the mills that closed down during the dull season to curtail production have nearly all resumed operations.

The iron market is strong and sales are increasing with advancing prices. The Tennessee Coal, Iron and Railroad Company have advanced sebedule prices on pig iron 25 cents per ton and report a $50,000 sale of pig iron. Southern iron is in active demand and the outlook is very encouraging.

The lumber and textile industries show a corresponding increase in business, and some cotton mill companies, though running day and night, are still behind with orders.

Among the new industries reported for the week are the following: An electric light plant at Terrell, Tex.; flouring mills at Concord, N. C., and New Market, Va.; the American Mining and Exploration company, capital $200,000, at New Orleans, La.; the Mott Petroleum company, capital $150,000, Charleston, W. Va.; the Southwestern Production company, capital $30,000, Parkersburg, W. Va., to develop oil and gas property, and a knitting mill at Bronwood, Ga. Woodworking plants will be established at Crestview, Fla.; Louisville and Uniontion, Ky.; Earlybranch and Sumter, S. C.; Trimble, Tenn.; Lewisville, Tex., and East Radford, Va.—Tradesman (Chattanooga, Tenn).

GEN. AVERY PASSES AWAY.

Death Caused by a Fall Which Resulted in Paralysis.

General Isaac W. Avery, a prominent Georgian, died Wednesday afternoon at his home in Edgewood, a suburb of Atlanta, from the effects of a fall which he sustained the night before.

Isaac Wheeler Avery was born at St. Augustine, Fla., May 2, 1837. His father traced his lineage to the English kings.

In 1861 he aided in the capture of Fort Pulaski, and volunteered as a private in the first company of the war in the Eighth Georgia regiment, and served to the end of the struggle.

He was in the Bull Run battle and was successively promoted to the rank of captain, major, lieutenant colonel and colonel of cavalry in the west, commanding a brigade the last year.

Just before the surrender he was made brevet brigadier general, but in the excitement and turmoil of the closing days failed to receive his commission. In the opinion of military men, however, he was entitled to that rank, and during the last years of his life he was known as General Avery, although with characteristic modesty he never claimed the title.

DEATH LIST GROWS.

Loss of Life in Santa Fe Wreck Was Frightful.

Twelve known dead, one missing and probably incinerated and fourteen injured, two of whom will likely die, is the record of the terrible head-end collision on the Santa Fe so far as known.

The first lists were mixed because of the confusion attending the wreck. It is not positively known that the list given is complete, as it is believed that several were burned to death and and nothing left by which they could be recognized.

The bodies of eleven were found in the debris, three burned beyond recognition.

Nothing could be found of the remains of Wells-Fargo Express Messenger J. F. C. Sauer. A handfull of charred bones taken from the wreck, however, are supposed to be his. Near them were found his watch.

GRAVES WILL BE MARKED.

Confederates Who Died In Northern Prisons to Receive Recognition.

The preliminary arrangements toward marking the graves of confederate soldiers who are buried from northern prisons have been made by a joint committee from Lee camp, the Daughters of the Confederacy and the Sons of Veterans, at Richmond, Va.

At a meeting of this body Thursday night a sub-committee was appointed to select the places at which monuments shall be erected.

SWEETES' LITTLE FELLER.

Sweetes' little feller—
  Everybody knows;
Dunno what ter call him,
  But he mighty like a rose!

Lookin' at his mammy
  Wid eyes so shiny-blue,
Make you think dat heaven
  Is comin' clost ter you!

When he's dar a-sleepin'
  In his little place,
Think I see de angels
  Lookin' through the lace.

When the dark is fallin'—
  When de shadders creep,
Den dey comes on tip-toe
  Ter kiss him in his sleep.

Sweetes' little feller—
  Everybody knows;
Dunno what ter call him,
  But he mighty like a rose!
—FRANK L. STANTON.

Mistaken Identity

Sorren Qvist was the pastor of the little village church of Vellby, in Jutland. He was a man of excellent moral character, generous, hospitable and diligent in the performance of his sacred duties; but he was a man of constitutionally violent temper—a scourge to his household and a humiliation to himself.

He was a widower, with two children—a daughter, who kept house for him, and a son, holding an officer's commission in the amy.

At Ingvorstrup, a village not far from Vellby, dwelt a cattle farmer. Morten Burns, who was in ill-repute with his neighbors. The man paid court to the pastor's daughter, but his suit was rejected by both parent and child.

Morten Burns had a poor brother named Niels, who was a shiftless and lazy fellow, and withal quarrelsome. Soren Qvist, needing a farm hand, hired this scapegrace brother of the man who hated him. Niels Burns was constantly provoking the pastor's naturally irritable temper by his indolence and impudence.

Their relations as master and servant culminated in the mysterious disappearance which is the basis of a celebrated tragedy. Niels had been sent to dig a piece of ground in the pastor's garden; but the pastor found him not digging, but leisurely resting on his spade and cracking nuts which he had plucked.

The pastor scolded him angrily. The man retorted that it was no business of his to dig in the garden, at which Soren struck him twice in the face, and the man, throwing down the spade, retaliated. Thereupon the old pastor lost all self-control, and seizing the spade, he dealt the farm hand several blows with it.

Niels Burns fell to the earth like one dead, but when his master, in great alarm, raised him up, he broke away, leaped through the garden hedge, and made off into the neighboring wood. From that time he was seen no more.

Before long Morten Burns, the rich brother of the missing farm-hand, was hinting around the village that the parson had killed Niels and hidden his body. These rumors and insinuations passed from mouth to mouth, and as the farm-hand had disappeared the suspicion began to grow that the pastor had guilty knowledge of his end.

Finally Morten Burns appeared before the District Magistrate with three witnesses and charged the pastor with the murder of his brother. Two of these were a widow named Karsten and her daughter Else, who had been witnesses of the final struggle between the clergyman and the farm hand.

The third witness was a cottager named Larsen. On the night of the day following Niels Burns's disappearance he was returning home very late from Tolstrup, and was passing along the footpath which flanked the pastor's garden, when he heard the sound of some one digging.

Seeing that it was clear moonlight, he determined to find out who it was that was working in the garden at that late hour. He slipped off his wooden shoes, climbed up the hedge and parted the tops of the hazel bushes. Then he saw the pastor, in a green dressing gown and with a white nightcap on his head, busied in levelling the earth with a spade; but more than this he did not see, for the pastor turned suddenly around, as if some sound had struck his ear, and Larsen, being afraid of detection, let himself down and ran away.

Thereupon the pastor's garden was searched under the direction of the Magistrate. The pastor welcomed the searching party and called his farm servants to aid. He was confident that they would find nothing to confirm the accusation against him. The man Larsen was asked to point out the place where he had seen the pastor digging in the moonlight. He pointed to a heap of cabbage stalks and refuse.

They had not dug long when one of them cried out: "Heaven preserve us!" and as all present crowded to look a hat was visible above the earth.

"That is Niels's hat," cried Morten.

"I know it well. Here is a security we shall find him. Dig away!" he shouted with fierce energy, and was almost as eagerly obeyed.

Soon an arm appeared and in a few minutes the entire corpse was disinterred. There seemed to be no doubt that it was the missing man. The face could not be recognized, for the features had been destroyed by blows: but all his clothes, even unto his shirt with his name on it, were identified by his fellow servants.

There was no alternative but to arrest the pastor on the spot. He most willingly surrendered himself, merely protesting his innocence. "Appearances are against me," he said; "surely this must be the work of Satan and his ministry; but He still lives who will at his pleasure make my innocence manifest. Take me to prison. In solitude and in chains I will await what He in His wisdom shall decree."

The pastor was arrested and taken to jail. Next day the preliminary judicial examination was held. Two farm servants and a dairy maid, all in the employ of the accused pastor, testified that on the day of the murder they had been sitting near the open window in the servants' room and had heard the pastor and the man Niels quarrelling until they came to blows.

They added that they had twice before heard the pastor threaten Niels with his life. The dairy maid deposed that on the night when Larsen saw the pastor in the garden she was lying awake in bed and heard the door leading from the passage into the garden creak, and that when she rose and peeped out she saw the pastor in his dressing gown and nightcap go out nto the garden. What he did there she saw not; but about an hour afterward she again heard the creaking of the door.

When asked what he had to say in his defense the pastor replied solemnly: "So help me God, I will say nothing but the truth. I struck deceased with the spade, but not otherwise than that he was able to run away from me and out of the garden. What became of him afterward or how he came to be buried in my garden, I know not.

"As for the evidence of Larsen and the dairymaid, who say they saw me in the garden in the night, it is either a foul lie or a hellish delusion. I have no one on earth to speak in my defense."

When, some weeks later, the trial came on two more witnesses were produced. They declared that on the oft-mentioned night they were proceeding along the road which runs from the pastor's garden to the wood when they met a man carrying a sack on his back, who passed them and walked in the direction of the garden. His face they could not see, inasmuch as it was concealed by the overhanging sack, but as the moon was shining on his back they could plainly descry that he was clad in a pale-green coat and a white nightcap. He disappeared near the pastor's garden hedge.

No sooner did the pastor hear the evidence of the witnesses to this effect than his face turned an ashy hue and he cried out in a faltering voice: "I am fainting," and was so prostrated in body that he had to be taken back to prison.

There, after a period of severe suffering, to the intense astonishment of every one, he made to his friend, the District Magistrate, who had first arrested him, the following strange confession:

"From my childhood, as far back as I can remember, I have ever been passionate, quarrelsome and proud, impatient of contradiction and ever ready with a blow. Yet have I seldom let the sun go down on my wrath, nor have I borne ill will to any one. When but a lad I slew in anger a dog which one day ate my dinner which I had left in his way. When, as a student, I went on foreign travel, I entered on slight provocation into a broil with a German youth in Leipsic, challenged him, and gave him a wound that endangered his life."

After a pause of anguish he continued: "I will now confess the crime which no doubt I have committed, but of which I am, nevertheless, not fully conscious. That I struck the unhappy man with the spade I knew full well, and have already confessed, whether it were with the flat side or with the sharp edge I could not in my passion discern; that he fell down and afterward again rose and ran away—that is all that I know to a surety. What follows—heaven help me!—four witnesses have seen, namely, that I fetched the corpse from the wood and buried it, and that this must be substantially true I am obliged to believe, and I will tell you wherefore.

"Three or four times in my life that I know of, it has happened to me to walk in my sleep. The last time—about nine years ago—I was next day to preach a funeral sermon over the remains of a man who had unexpectedly met with a frightful death. I was at a loss for a text, when the words of a wise man among the ancient Greeks suddenly occurred to me: 'Call no man happy until he be in his grave.'

"To use the words of a heathen for the text of a Christian discourse was not, methought, seemly, but I then remembered that the same thought, expressed in well nigh the same terms, was to be met somewhere in the Apocrypha. I sought and sought, but could not find the passage. It was late; I was wearied by much previous labor; I therefore went to bed and soon fell asleep. Greatly did I marvel the next morning when on arising and seating myself at my writing desk I saw before me, written in my own handwriting on a piece of paper: 'Let no man be deemed happy before his end cometh.' (Syrach., xi., 34.)

"Mark now—when the two witnesses this morning delivered their evidence before the Court, then my previous sleep-walkings suddenly flashed across me, and I likewise recalled that in the morning after the night during which the corpse must have been buried, I had been surprised to see my dressing-gown lying on the floor just inside the door, whereas it was always my custom to hang it on a chair at my bedside.

"The unhappy victim of my unbridled passion must in all likelihood have fallen down dead in the wood, and I must, in my sleepwalking, have followed him thither. Yes—the Lord have mercy!—so it was, so it must have been."

On the following day sentence of death was passed upon the prisoner—a sentence which many felt was severe, but not Soren Qvist. He longed, he said, for death, and he maintained his strength of mind to the last, and from the scaffold he addressed to the bystanders a discourse of much power, which he had composed in prison during his last days. Then he was beheaded.

One and twenty years after Pastor Soren Qvist of Vellby had been accused, tried, condemned and executed for the murder of his serving-man, an old beggarman applied for alms to the people of Aalsoe, the parish adjoining Vellby.

Suspicions were aroused by the exact likeness the beggarman wore to Morten Burns of Ingvorstrup, who had lately died, and also by the curious and anxious inquiries the man made concerning events long past.

The pastor of Aalsoe, who had buried Morten Burns, took the vagabond to his parsonage, and there the fellow, all unconscious of the portentous nature of the admission, acknowledged that he was Niels Burns, the very man for whose supposed murder the pastor had suffered the shameful death of a criminal.

The truth may be summed up briefly. Morten had nursed a mortal hatred of Soren Qvist from the time he refused him his daughter and had determined on revenge. It was he who compelled Niels to take service with the pastor; he had spurred him on to his repeated offences, in the expectation that violence would result, owing to the pastor's hasty temper, and had carefully nursed the feud which arose between master and man. Niels told him daily all that took place.

On leaving the garden on that fatal day he had run over to Ingvorstrup to acquaint his brother with what had happened.

Morten shut him up in a private room that no one might see him.

Shortly after midnight, when the old village was asleep, the two brothers went to a place where the roads crossed each other, and where two days previously, according to the custom of that time, a suicide had been buried—a young man of about Niels's age and stature. By the light of a lantern, in spite of Niels's reluctance and remonstrance, they dug up the corpse and took it into Morten's house.

Niels was made to strip and don a suit of Morten's, and the corpse was clad, piece by piece, in Niels's cast-off clothes, even to the very earring. Then Morten battered the dead face with a spade and hid it in a sack until the next night, when they carried it into the wood near Vellby parsonage and buried it.

"And now," said the vengeful Morten to his brother, "you go your way. Here is a purse with $100—make for the frontier, and never set foot on Danish soil again."

Niels did as he was commanded and enlisted for a soldier, suffered great hardships, lost a limb and finally returned to his native place a mere wreck.

This true story is still the foremost cause celebre of Danish jurisprudence. —Louisville Commercial.

Zulu "Bobbies."

The Zulu, once the brave warrior of South Africa, is now South Africa's policeman. There are 250 of him under the command of a white chief inspector and five white sub-inspectors. These two hundred and fifty policemen have to keep in order 175,000 people, all but 1,200 of them natives, and to patrol 9,000 square miles of territory. The policemen who are fathers of marriageable daughters have an advantage over the plain citizens, in that they may demand of suitors thirty cows, while the ordinary citizen may claim only ten for his daughters.

To bore a hole half way through the sole of a shoe is said to prevent its squeaking. The reason assigned for the cure is that the air between the layers of leather is released by the boring.

THE FARM AND GARDEN.

ITEMS OF INTEREST ON AGRICULTURAL TOPICS.

A Bit of Valuable Fertilizer—Use Business Methods—Graining Cows in Summer—Hoed Crops on Sod, Etc., Etc.

A BIT OF VALUABLE FERTILIZER.

If you wish to make a bit of valuable fertilizer and, at the same time, help to keep the premises tidy, take a barrel, place a layer of unleached wood ashes at the bottom, and drop in the beef and hog bones as they are collecting, covering each layer with ashes, until the barrel is nearly full. Then fill up with ashes and keep the contents of the barrel wet. Do not bleach the bones nor allow the mass to freeze. When the bones are dissolved you have a good fertilizer.

USE BUSINESS METHODS.

One great drawback to successful farming is the lack of business methods. If a man will study the characteristics of his soil and climate and grow such crops as are best adapted to prevailing conditions; if he will be methodical and give as much attention to details as is necessary in almost any other line of business, he will succeed, if the elements of success are within him. There's much in the man and in the way he goes at a thing.—The Epitomist.

GRAPE SHIELDS.

A good protection for grapes is a screen of mosquito netting fastened to a movable wooden frame made to suit the shape of the vine. The netting of cotton threads will, with care, last two years. Wire mosquito netting will stand the wear and tear of many years. Those who cultivate grapes extensively will find this method far less laborious than hand bagging. In a hot climate screens of flimsiest cheese cloth are more convenient, as they are more durable and cheaper, but in the colder States, unless it is of the thinnest kind manufactured, it will shade and thus injure vine and leaves.—New England Homestead.

GRAINING COWS IN SUMMER.

During the late hot months cows at pasture will be benefited by a grain feed, which may preferably be given at noon when the heat is greatest. In early morning and at evening cows will graze and fill themselves with grass. But it is not so plentiful or so succulent as it is earlier. It is this deficiency in succulence of grass that often causes farmers to begin feeding their fodder corn even before it gets into tassel. Such corn will furnish succulence, but nothing else of value. It ought always to be supplemented by liberal feed of grain, wheat bran or middlings, or of other nutrition capable of producing milk. When thus fed the corn fodder, even if poor in nutritive value, serves an important purpose in making the grain ration digest more easily.

HOED CROPS ON SOD.

So far as possible the farmer ought to have sod land on which to grow all hoed crops. He cannot usually make nearly enough manure to fertilize all that he wants to plant to corn or potatoes. If there is a sod to be rotting during the summer a moderate dressing of commercial fertilizers will insure as great success as he could usually depend upon with a dressing of manure on land that has been naked through the winter. Possibly the sod may not equal in value the plant nutrition furnished by a dressing of stable manure, but the sod will be more sure to rot if the season be dry, and thus make up in availability what it lacks in fertilizing power. If the sod be mainly of clover, the fertility it will add to the soil will be as great as is given with most manure dressings, especially if applied just before the land is plowed.

INJURY FROM OVER PRUNING.

Most of our American varieties of grapes are very strong growers, and will not bear the severe pruning to which German and French vineyardists subject their vines. We plant our vines farther apart than do European vintners, and must leave proportionally more wood. As the vines grow older it is generally found necessary to take out alternate vines so as to let each vine occupy twice the trellis space originally allotted to it. Vines thus treated are much less liable to mildew. At the same time some root pruning is advisable by cultivating more deeply and keeping the roots of the vines where they will be less affected by sudden changes of temperature that usually precede attacks of mildew and grape rot.

TESTING NEW VARIETIES.

In a communication in the "Rural New Yorker," J. J. H. Gregory emphasizes the importance of soil and climate on tests of new varieties. He thinks that the experiment stations in reporting results should give information as to these particulars. He also adds: As varieties that do first rate on one kind of soil fail to give satisfaction on another of a different character, doubtless more or less of this great number of condemned varieties would have proved themselves to be acquisitions on other soils. Would not, therefore, the institution of a system of interchange of seedlings between stations where soils are different be a step in progress along the lines of a wise economy, and likely to result to the advantage of the great public?

MUCK LACKS FERTILITY.

Many people still think that black mucky soil must necessarily be very rich. But the fact that it remains without fermentation shows either that it has either little nitrogenous value, or that it is so saturated with water that it has become sour. Yet we have known many city people buy black muck from swamps to pot flowers in, and pay twenty-five to fifty cents per bushel basket for it, when dry earth from the side of the road, with much less vegetable matter, would be much better. Most muck, especially from swamps, lacks mineral fertility. It is easy to handle and to work in, and this is what makes it popular. But it needs both ammonia and potash to give the best results.

GRAIN CHEAPER THAN HAY.

It is undoubtedly a serious loss to have so much of the hay crop injured by excessive rains, as has been the case the present year. Yet this may be in part made an advantage to farmers if it turns their attention to grain as a cheaper source of nutrition than even the best hay can be. More than this, if given with enough hay or straw or cornstalks to distend the stomach, grain is better feed, because more easily digested. In the coarser fodder so much of the nutrition goes to sustain animal heat or the processes of digestion, that comparatively little is left to make flesh or milk or fats. The knowledge that some grain with hay makes cheaper nutrition is not half so widely extended as it ought to be. If it were, there would be a better demand for grain and it would sell at better prices.—Boston Cultivator.

PROTECTING AGAINST FROSTS.

In spite of the fact that the season was exceptionally late last spring, and, logically, the beginning of winter ought also to be delayed, frost may come early, and if it does the damage will be greater than usual, because the cool weather has prevented the rapid maturity of crops. There may be garden vegetables, or some valuable seed crops, that can profitably be protected, even at quite a little expense and trouble.

The smoke smudge or blanket is possibly the most effective and the cheapest. Any materiel that will burn slowly and give off a good smoke can be used. When a frost is suspected, place thermometers in several parts of the field or garden and watch them closely. Arrange piles of the combustible material around the edges at intervals of two rods. Torches made by dipping wads of tow into pine tar, old campaign torches, or anything of the kind, will be found very effective. Light those on the windward side, and if the breeze is not too brisk the smoke will settle over the field and prevent frost injury, even though the temperature goes several degrees below freezing point. Straw, damaged hay, cobs, bark, drift, brush, old berry canes, dry weeds, can be disposed of in this way, and thus answer a useful purpose. Spraying the crops heavily with water serves as a frost preventive, and where it can be done economically should be tried.

While those measures are effective to a certain extent, care should always be taken when planting, either in fall or spring, to put those crops easily injured by frost on high ground, or at least on land where there is good air drainage. The cold layers of the atmosphere, being heaviest, settle to the lowest places, just as water from heavy rains runs into sloughs, creeks and rivers, hence these portions of the surface are coldest and are frosted first. If the surface of the farm is such that there is a good circulation of air, the danger is reduced to the minimum. Consequently do not plant tall crops, like corn or orchards, across the mouths of gorges or deep valleys. The air is governed by the same laws as water, and will run out of the depressions if it has a chance. It is best to plant tender fruits and vegetables on the upper portion of hillsides, where there is little probability of the air remaining stationary for any considerable length of time. Remember this the coming autumn when setting strawberry fields and planting orchards, and do not forget it next spring when doing the same kind of work.—American Agriculturist.

The French method of administering castor oil to their ailing children is characteristic. The oil is poured into a pan over a moderate fire, an egg broken into it and the mixture well stirred. The omelette thus made is served with a little salt, sugar or a spoonful of currant jelly.

GOSSIP FOR THE FAIR SEX.

Items of Interest on Feminine Topics.

A Pretty Fashion—A Course in Millinery—The Tandem Chill—A Novelty in Gloves, Etc., Etc.

A PRETTY FASHION.

The wearing of natural flowers in the hair is a pretty and rather romantic style of ornament for young women. A rich red rose in the dark tresses of a brunette woman is an exceedingly attractive addition to the evening coiffure, and a dainty blonde may wear soft roses and white ones, and look picturesque from the contact.

A COURSE IN MILLINERY.

A large number of bright young women have taken a course in millinery and dressmaking, with a special eye to providing themselves with dainty head gear and costumes. As a rule very creditable work is done by these amateurs, most of whom owe success to the fact that they are enthusiastic to learn and always on the lookout for new ideas.

THE TANDEM CHILL.

"I should think they'd be afraid of the tandem chill," exclaimed a Washington woman as a tandem wheel whirled past.

"It's a new nervous disease, you know. The first rider sees something ahead that frightens her, and the nervous sensation is communicated by psychology to the rear rider, and from him to the machine, and the result is that all three get a nervous chill, and a collapse is certain. I read about it in a New York paper the other day. Really, it is one of those new diseases, and doctors are puzzling over it."—Chautauqua Assembly Herald.

A NOVELTY IN GLOVES.

A decided novelty in lacing gloves has just been introduced. The idea is unique. It consists of imported jewels instead of the conventional hooks, the lacing effect remaining the same as usual. The formation of the fastener is of the regulation hook order. The selection includes topaz, amethyst, garnet, emerald, turquoise and ruby stones, which are firmly set. The kid gloves on which these jewels are applied show different shades of light and dark red, blacks, modes, tans, whites, blues, greens, grays, heliotropes and pearls.

These fancy conceits may be had either in suedes or glaces. Harmonious contrasting combinations are effected in several directions, the jewels, embroidery and trimming corresponding.

MARY KYLE DALLAS.

Mary Kyle Dallas, the authoress, died a few days ago of paralysis at her home in New York City, where she lived with her three sisters. Mrs. Dallas was born in Philadelphia and was sixty years old. She was the daughter of Joseph Kyle, a portrait painter of talent, and the widow of David Dallas, also an artist. She wrote poetry at the age of fourteen and short stories at seventeen. Her last effort, a short story published in one of the magazines, was "A Stocking Full of Gold." Mrs. Dallas was a member of Sorosis and of the Woman's Press Club, and was widely known in literary and artistic circles.

A PRETTY SASH OF TAFFETA.

A very pretty sash is made of blue taffeta silk. The ends are rounded at the bottom and it is finished all around with an inch-wide taffeta ribbon, with fancy edges gathered on one edge like a ruffle. These two long ends are gathered into a blue taffeta girdle, with a pointed front and little fulled in hems on both sides in the back. The girdle is made firm with five short whalebones, the two in the back about three inches, the one in front two and the two on the sides one inch deep. This is worn with a blue and green India silk skirt with three little ruffles on the bottom edged with lace and arranged so as to form large scallops. The body is of blue chiffon, accordion plaited and draped with lace drawn down in a point in the back and outlined with seed pearls

DUST COATS.

Driving or dust coats have now become important accessories of a woman's wardrobe. They are not inexpensive trifles, and they do not in any way resemble their sisters of long ago—the linen duster. In the end, however, they pay for themselves, as they are the means of saving many light frocks. They are light and do not crush the gowns. The smartest coats are built of black taffeta silk and India silk. The necks are finished by a full ruche of lace, and lace is arranged about the shoulders in a bertha-like effect. We are approaching the season of weddings. At a recent English wedding the bridesmaids were sheer

adds: As varieties that do first rate on one kind of soil fail to give satisfaction on another of a different character, doubtless more or less of this great number of condemned varieties would have proved themselves to be acquisitions on other soils. Would not, therefore, the institution of a system of interchange of seedlings between stations where soils are different be a step in progress along the lines of a wise economy, and likely to result to the advantage of the great public?

MUCK LACKS FERTILITY.

Many people still think that black, mucky soil must necessarily be very rich. But the fact that it remains without fermentation shows either that it has either little nitrogenous value, or that it is so saturated with water that it has become sour. Yet we have known many city people buy black muck from swamps to pot flowers in, and pay twenty-five to fifty cents per bushel basket for it, when dry earth from the side of the road, with much less vegetable matter, would be much better. Most muck, especially from swamps, lacks mineral fertility. It is easy to handle and to work in, and this is what makes it popular. But it needs both ammonia and potash to give the best results.

GRAIN CHEAPER THAN HAY.

It is undoubtedly a serious loss to have so much of the hay crop injured by excessive rains, as has been the case the present year. Yet this may be in part made an advantage to farmers if it turns their attention to grain as a cheaper source of nutrition than even the best hay can be. More than this, if given with enough hay or straw or cornstalks to distend the stomach, grain is better feed, because more easily digested. In the coarser fodder so much of the nutrition goes to sustain animal heat or the processes of digestion, that comparatively little is left to make flesh or milk or fats. The knowledge that some grain with hay makes cheaper nutrition is not half so widely extended as it ought to be. If it were, there would be a better demand for grain and it would sell at better prices.—Boston Cultivator.

PROTECTING AGAINST FROSTS.

In spite of the fact that the season was exceptionally late last spring, and, logically, the beginning of winter ought also to be delayed, frost may come early, and if it does the damage will be greater than usual, because the cool weather has prevented the rapid maturity of crops. There may be garden vegetables, or some valuable seed crops, that can profitably be protected, even at quite a little expense and trouble.

The smoke smudge or blanket is possibly the most effective and the cheapest. Any materiel that will burn slowly and give off a good smoke can be used. When a frost is suspected, place thermometers in several parts of the field or garden and watch them closely. Arrange piles of the combustible material around the edges at intervals of two rods. Torches made by dipping wads of tow into pine tar, old campaign torches, or anything of the kind, will be found very effective. Light those on the windward side, and if the breeze is not too brisk the smoke will settle over the field and prevent frost injury, even though the temperature goes several degrees below freezing point. Straw, damaged hay, cobs, bark, drift, brush, old berry canes, dry weeds, can be disposed of in this way, and thus answer a useful purpose. Spraying the crops heavily with water serves as a frost preventive, and where it can be done economically should be tried.

While those measures are effective to a certain extent, care should always be taken when planting, either in fall or spring, to put those crops easily injured by frost on high ground, or at least on land where there is good air drainage. The cold layers of the atmosphere, being heaviest, settle to the lowest places, just as water from heavy rains runs into sloughs, creeks and rivers, hence these portions of the surface are coldest and are frosted first. If the surface of the farm is such that there is a good circulation of air, the danger is reduced to the minimum. Consequently do not plant tall crops, like corn or orchards, across the mouths of gorges or deep valleys. The air is governed by the same laws as water, and will run out of the depressions if it has a chance. It is best to plant tender fruits and vegetables on the upper portion of hillsides, where there is little probability of the air remaining stationary for any considerable length of time. Remember this the coming autumn when setting strawberry fields and planting orchards, and do not forget it next spring when doing the same kind of work.—American Agriculturist.

The French method of administering castor oil to their ailing children is characteristic. The oil is poured into a pan over a moderate fire, an egg broken into it and the mixture well stirred. The omelette thus made is served with a little salt, sugar or a spoonful of currant jelly.

GOSSIP FOR THE FAIR SEX.

Items of Interest on Feminine Topics.

A Pretty Fashion—A Course in Millinery.—The Tandem Chill—A Novelty in Gloves, Etc., Etc.

A PRETTY FASHION.

The wearing of natural flowers in the hair is a pretty and rather romantic style of ornament for young women. A rich red rose in the dark tresses of a brunette woman is an exceedingly attractive addition to the evening coiffure, and a dainty blonde may wear soft roses and white ones, and look picturesque from the contact.

A COURSE IN MILLINERY.

A large number of bright young women have taken a course in millinery and dressmaking, with a special eye to providing themselves with dainty head gear and costumes. As a rule very creditable work is done by these amateurs, most of whom owe success to the fact that they are enthusiastic to learn and always on the lookout for new ideas.

THE TANDEM CHILL.

"I should think they'd be afraid of the tandem chill," exclaimed a Washington woman as a tandem wheel whirled past.

"It's a new nervous disease, you know. The first rider sees something ahead that frightens her, and the nervous sensation is communicated by psychology to the rear rider, and from him to the machine, and the result is that all three get a nervous chill, and a collapse is certain. I read about it in a New York paper the other day. Really, it is one of those new diseases, and doctors are puzzling over it."—Chautauqua Assembly Herald.

A NOVELTY IN GLOVES.

A decided novelty in lacing gloves has just been introduced. The idea is unique. It consists of imported jewels instead of the conventional hooks, the lacing effect remaining the same as usual. The formation of the fastener is of the regulation hook order. The selection includes topaz, amethyst, garnet, emerald, turquoise and ruby stones, which are firmly set. The kid gloves on which these jewels are applied show different shades of light and dark red, blacks, modes, tans, whites, blues, greens, grays, heliotropes and pearls.

These fancy conceits may be had either in suedes or glaces. Harmonious contrasting combinations are effected in several directions, the jewels, embroidery and trimming corresponding.

MARY KYLE DALLAS.

Mary Kyle Dallas, the authoress, died a few days ago of paralysis at her home in New York City, where she lived with her three sisters. Mrs. Dallas was born in Philadelphia and was sixty years old. She was the daughter of Joseph Kyle, a portrait painter of talent, and the widow of David Dallas, also an artist. She wrote poetry at the age of fourteen and short stories at seventeen. Her last effort, a short story published in one of the magazines, was "A Stocking Full of Gold." Mrs. Dallas was a member of Sorosis and of the Woman's Press Club, and was widely known in literary and artistic circles.

A PRETTY SASH OF TAFFETA.

A very pretty sash is made of blue taffeta silk. The ends are rounded at the bottom and it is finished all around with an inch-wide taffeta ribbon, with fancy edges gathered on one edge like a ruffle. These two long ends are gathered into a blue taffeta girdle, with a pointed front and little fulled in hems on both sides in the back. The girdle is made firm with five short whalebones, the two in the back about three inches, the one in front two and the two on the sides one inch deep. This is worn with a blue and green India silk skirt with three little ruffles on the bottom edged with lace and arranged so as to form large scallops. The body is of blue chiffon, accordion plaited and draped with lace drawn down in a point in the back and outlined with seed pearls

DUST COATS.

Driving or dust coats have now become important accessories of a woman's wardrobe. They are not inexpensive trifles, and they do not in any way resemble their sisters of long ago—the linen duster. In the end, however, they pay for themselves, as they are the means of saving many light frocks. They are light and do not crush the gowns. The smartest coats are built of black taffeta silk and India silk. The necks are finished by a full ruche of lace, and lace is arranged about the shoulders in a bertha-like effect. We are approaching the season of weddings. At a recent English wedding the bridesmaids were sheer organdie dresses of white ground sprinkled with different flowers. There were two with heliotrope, two with rosebuds and two with violets, each carrying a bouquet of the flowers printed upon the gown. The bride carried no bouquet—only a sprig of orange blossoms. The organdie costumes with the flower decorations are quite new, and they are very effective. A charming girl, one of the early September brides, has selected a wedding gown of white organdie built on Victorian lines. The knot will be tied at noon, and she will wear a poke bonnet. About the shoulders of the frock will be arranged a fine old lace shawl draped like a fichu, caught where it ties in front with a spray of orange blossoms.—Chicago Times-Herald.

FIRST OF PROFESSIONAL BEAUTIES.

Professional beauties were introduced, so to speak, into English society about twenty-five years ago by Mrs. Cornwallis West, then a bride. She was the daughter of Lady Olivia Fitzpatrick, and is described as the daintiest, the prettiest, yet withal the wildest, creature who ever bewildered a great many admirers by native Irish charm of appearance and manner and bright mother wit. Very slim and small, with lissom figure, her hair was dark, with gleams of brightness; and her eyes, deeply mysterious, dark as they were, could flash like fire or be of melting beauty. She was as brilliant to look at as she was to listen to, and wherever she was there was always a crowd collected together. One of her adorers compared her to a dragon-fly because of her elusive, dazzling whiteness. It is encouraging to know when she is celebrating her silver wedding she is as charming as ever and as well-beloved. The secret of her continued attraction is said to be not only sweetness within but also gaiety without—an admirable recipe for beauty and youth, by the way.—New York Journal.

WOMEN AS LIBRARIANS.

One who has made a thorough investigation of the subject says that of the 700 members of the American Library Association the large majority are women. There are various reasons why this calling is pre-eminently a woman's. The bump of order seems to be much more developed in a woman than it does in the sterner sex. The work requires patience and promptness, two virtues which men possess in a high degree, and does not require hard physical labor. They are not exposed to the same unpleasant influences and the liability of discourteous treatment that fall so often to the share of the women in the mercantile world. Besides all this, she comes in contact with a more intellectual and cultivated class of people, and in this one profession there is really no salaried discrimination on account of her sex, for she receives an adequate compensation. This has been demonstrated practically by the fact that as the more important positions become vacant, even though previously filled by men, or new ones created, women have almost invariably received the appointments.

WOMEN RENT COLLECTORS.

Rent collecting is a business at which women in England have been working quietly for a number of years. It was Miss Octavia Hill who first employed women to inspect tenements for the poor and collect the rent. In this she was aided and abetted by Ruskin. There is a fitness on the part of women for this work that may well appeal to landlords in this country as well as England. Women are the principal occupants of the tenement houses and the woman collector is able to understand their needs better than a man. She is also, in nine cases out of ten, able to locate cupboards, shelves and other needed improvements to better advantage for the desirability of a flat than a male inspector. There are no eyes sharper than a woman's to ferret out dirt and disreputable practices. All this, of course, presupposes that the owner of rentable property wishes to do the fair thing by his tenants and to keep a decent class of people in his tenements. The testimony of a woman collector in England who "learned her trade" under Miss Hill, is of value in this connection. She says: "At the end of my time with Miss Octavia Hill, I was recommended to the management of a private property, and I have now three different properties under my charge. One was in a terrible state when I took it over, and in a hopelessly insanitary condition—in fact, it was on the point of being condemned. Well, I took the houses in hand, and they were thoroughly set in order, and made fit for human beings. Before, they had been but little better than animals' lairs. I got rid of the worst of the tenants, and took the greatest care in examining the antecedents of the new lot, and now we are not only paying off the mortgages, but the rental of the property has increased twenty pounds a week.—New York Commercial Advertiser.

THE QUEEN REGENT OF SPAIN AND HER CHILDREN.

The Queen Regent and her children, and particularly the little King, are the elect, as the French say, the chief source of attraction in the place. What possible piece of brio-a-brac, to the antiquarian American taste, can compare with this royalty, this living kind of brio-a-brac, which sums up in itself all the romance of history and all the romance of the fairy tales! I cannot say that my personal relations with the royalties was intimate, yet I saw them often, and to good advantage. I had the honor to assist at a reception they gave to the local authorities and the officers in garrison. The royal personages sat in chairs upon a slightly-raised platform, at the end of a long, handsome room in the municipal palace. Behind were the two chief governors of the household, in gorgeous regalia. At the right were the officers of the royal mounted escort, holding their fine, white-plumed helmets in their hands; at the left were the ladies-in-waiting; chiefly, or all, elderly and plain. We advanced decorously in single file, and all bowed in turn. There was one bow to the Queen Regent, another to King Alphonsito, whose little legs, dangling from the seat of the crimson satin-covered chair, by no means reached the floor, and a third to the two princesses. The Princess de Asturias was but little more than fourteen, and the Princess Maria Teresa than twelve. They were sweet and childlike, the elder more sedate, the younger more arch and natural. The latter recognized, in the defile, some acquaintance, an elderly officer, and gave him, in a half-shy, half-frank way, a smile that showed charming white teeth. It was the prettiest incident of the reception. The King seemed thoughtful or tired; he is espiegle, has sometimes the look of a little elf. They say he likes to pull the buttons off the coats of his attendants.—Scribner's Magazine.

FASHION NOTES.

There is no silk that stands dyeing better than taffetas.

All shades of blue retain their hold on popular favor.

Cream lace-edged veils are much worn with sailor hats.

The check skirt seems as much in vogue now as in the spring.

Sun-plaited skirts frequently show lining and material plaited together.

Cabbage green, ruby, new butter and vanilla are a few of the favorite tints of the season.

Golden-brown and robins' egg blue are used in combination on many of the new French hats.

Ribbons of velvet and satin have usurped the place of mohair braids, so much in vogue of late.

Black neckgear in every variety of shape, in fact, is said to be just now the caper with modish Parisiennes.

Silk mull is modish for full collars and long sashes, and is particularly pretty with tinted soft batiste costumes.

Negligee underwaists for warm weather are of flexible woven stuffs. Strong, lightweight corsets are of canvas and of satin.

Frocks for demi-evening wear are of green, blue, gray or violet silk, with insertions of renaissance lace and rows of black velvet ribbon.

The ground of an elegant embossed foulard is white; the design an arbesque in green, red or blue satin, traversed by a small white satin pattern.

One of the "newest novelties" is gray-leather walking shoes. Occasionally these boast red heels, and if the feet are small and pretty the effect produced is decidedly quaint and pleasing.

An exquisite frock is of silver-gray Swiss, dotted in white and made over a slip of gray lace taffeta. Girdle and collarette are of cerise and gray changeable louisine ribbon, with a white gauze edge.

The art of cooking has advanced materially since the days when our ancestors buried their meats in the ground and built the fire above; baked their cakes among the glowing embers and utilized the services of trained dogs to turn the roasting spit upon which the succulent joint was hung. But even with aluminum kitchen utensils, chafing dishes, basting pans, portable ranges, and all, there is still something left to be accomplished. What is wanted in this hurrying, bustling epoch is food condensation. The blood-producing and life-sustaining properties of a first-class dinner—soup, fish, entrees, roast, game, dessert, etc.—should be concentrated in the form of a minute capsule, capable of being swallowed instanter, and digested at leisure. Then, instead of wasting time in eating dinner, we could take it as a pill and go about our business without delay.

A Check for Perspiration.

To check profuse perspiration steep one pound of oak bark in two quarts of boiling water for half an hour; strain and bottle for use. When desired for use, take two-thirds of a cup of it, with two teaspoonsful of powdered borax and three of powdered starch in a basin of hot water and bathe the parts in it. Warts are frequently removed by applications of baking soda moistened.

NOTES AND COMMENTS.

Dr. Jordon, of Stanford University, says that the only way to save the seal herd is to prohibit pelagic sealing.

Some $400,000 of world's fair money still remains to be distributed among the stockholders at Chicago. It has been tied up by litigation.

According to the Indianapolis News the board of public work of that place recently made a proposition to the council that "we put our heads together and build a wooden pavement this fall."

England's Cinque Ports, now nearly all high and dry, may become harbors again. The sea, which for centuries had been receding from Rye and Winchilsea, is returning and is fast eating into the land.

One of the students at the Chautauqua cooking school is a middle aged man. "I am a widower," he explained when he entered. "I must either get married or take a course in cooking, and I prefer the latter."

A deaf and dumb congress is about to be held in London. Some of the newspapers are complaining that no list of speakers has yet been announced. It is probable, however, that "all hands" will carry on conversation even if no formal addresses are to be made.

Talk about Klondike! That country isn't "in it" with our farmers. They will get over $500,000,000 more for their crops this year than last, from present indications. That's more gold than the whole of Alaska will yield in years. And our farmers are getting it right here without leaving "all the comforts of home."

There is a nervous anxiety among some people to discover a new name for the Anglo-Saxon subjects of the queen. One genius has hit upon "Anglicander" as suitable to inhabitants of the British Isles and of the colonies alike. It is not probable that any Englishman or Australian will yearn to call himself an "Anglicander."

The Yashima, the new Japanese battle-ship built in England, is the fastest vessel of the kind afloat, and it is claimed from the showing made on her trial trip that she is one of the greatest fighting machines ever built. She is 372 feet long, with 73 feet beam and 26.3 feet draught, and has 12,400 tons displacement. She has the very best armour, ranging in thickness from 18 to 14 inches.

The rapid rise of the land about Hudson Bay is said to be the most remarkable gradual upheaval of an extensive region ever known. Driftwood-covered beaches are now twenty to sixty or seventy feet above the water, new islands have appeared, and many channels and all the old harbors have become too shallow for ships. At the present rate this shallow bay will disappear in a few centuries, adding a vast area of dry land or salt marsh to British territory in America.

Street railroads, says Municipal Affairs, are owned and operated by thirty-three cities of England and Scotland, by some cities in Germany, Switzerland, Holland and of the Australian colonies; by Toronto and in a measure by New Orleans. Municipal ownership, is, therefore, no new or over-radical thing. It is feasible and practicable. It must be at least reasonably successful, and it cannot be attended with any greater political evils than the no more universal municipal ownership of docks, ferries, bridges, markets and the water supply.

There have been three British wars with Afghanistan during the Victorian sixty years, and the news from the Khyber Pass seems ominous of another. One of the earliest military tragedies of the Queen's reign was the appalling massacre of McNaghten's command in one of the passes leading southward from Cabul into India. Over 16,000 men, women and children, retreating from the Afghan capital under pledges of a peaceful journey to India, were overtaken in the pass by the ferocious tribesmen and massacred within a few hours. One man only survived the slaughter, and he badly wounded, crawled slowly on to Jellalabad to tell the horrible story.

The indications are now that the current agricultural year will prove a great one for the farmers. In almost every line—especially in cotton, rice, corn, wheat, peas and potatoes—the yield promises to be full and the market better than for some years. Added to this is the fact that the farmers are less in debt than they have been for a quarter of a century. The proceeds from their crops, therefore, will go into their pockets or to swell their savings bank accounts, and not to satisfy mortgages and liens and open accounts for provisions and supplies. The farmers have been learning and practicing close economy during the past two or three years, and they find it profitable.

Can nothing be done to save the old landmarks of American history? The stately old mansion of the Van Rensselaer family in Albany, N. Y., was sold a few days ago in pursuance of an interlocutory judgment, and will be torn down to make room for an ice-house. It is one of the oldest dwelling houses in America, having been built somewhere between 1620 and 1642. It was at the old well in the rear of this mansion that Schuckburg wrote the famous old national song, "Yankee Doodle." And it was here that General Abercombie and his staff had their headquarters. It was also for some time the residence of Lafayette and the scene of those stories of love, romance and war in which the old Van Rensselaer mansion was a central figure.

Both in point of efficiency and economy and in the health of the convict North Carolina's experiment in the employment of convicts in road building is said to have been very satisfactory. A surprising discovery is that it costs less, by about six cents a day per convict, to maintain the prisoners when at work on the roads than when confined in jail, the basis of the calculation being the returns from eighty counties. Being offered certain inducements in the way of rewards or the shortening of the term of imprisonment if they remain at their posts and faithfully discharge their duties, the convicts are employed on the roads much as hired labor would be, under the control of a foreman without any guard. They are even allowed to remain at their homes from Saturday night till Monday morning. The result of this astonishing experiment, which has been in operation for a year, has been, according to Professor Holmes, secretary of the Road Association of North Carolina, that "not a convict has attempted to escape." It is also officially reported that as laborers the convicts have been "much more efficient than the labor which can be hired at ordinary prices." In addition, this public punishment of criminals is believed to act as a sufficient deterrent on evil doers.

The military and naval weakness of Great Britain in this jubilee year has found a Jeremiah in Sir Charles Dilke. He has not been silenced by the spectacular greatness of the British fleet—by the miles of floating fortresses, the leagues of dashing squadrons, which pointed a moral and adorned a tale of Spithead. Indeed, he revels in a fine pessimism of present doubt and future anxiety and invites disquieting examinations into the real defences of the Empire. He has discovered on a Parliamentary return, furnished at his request, that the claimed equality of England with France and Russia in sea power exists on paper alone, and that by next year even this mythical satisfaction must go whistling down the wind. The pregnant reasons of England's existing weakness are to be found, he writes, in the want of battle ships and cruisers, or the absence of that "preparedness," as he styles it, which would enable her in the first few weeks of war to blockade the home ports of her enemies, protect her trade routes, strengthen and garrison the coaling and supplying stations and send to the fleet reserves of men which do not now exist. He believes that the Empire is fatuously denying dangers that threaten—and if immediate steps are not taken the friendliness of the country may invite attack that will be disastrous.

An extensive inquiry into European crop conditions conducted by the Orange Judd syndicate of agricultural papers, reinforced by late returns by cable, indicates that the food crop situation abroad is grave. Commercial estimates of Europe's (including England's) needs of wheat imports range all the way from 300,000,000 to 400,000,000 bushels. The returns indicate that Europe's wheat crops for 1895-4-3 were about 1,500,000,000 bushels. In the famine year of 1891 the crop was only 1,200,000,000. The impression is gaining ground that Europe's wheat crop this year is even less than in 1891. If so, she must not only import her usual supply of wheat, but 300,000,000 bushels more on top of that. But this is not the worst of it. Europe usually produces as much rye as she does wheat. This season the rye crop cannot exceed 875,000,000 bushels. Of potatoes she produces, in ordinary seasons, twice as many bushels as she does of wheat. This year it is estimated that only about 1,850,000,000 bushels of potatoes will be harvested. No part of the world apparently has any considerable surplus of cereals except the United States and Canada. The potato crop in these countries is found to be about 25 per cent. less than last year, and may be still smaller. The United States has no potatoes for export. If prices go high enough the United States can spare 240,000,000 bushels of wheat, 300,000,000 bushels of corn, 100,000,000 bushels of oats, and 100,000,000 bushels of rye. This would be the largest export ever made of American grain. It is just about enough to offset Europe's need of wheat and rye. There seems to be no source for Europe to draw upon for her enormous shortage in potatoes.

The color most in vogue at the moment is gray. It is decidedly chic when combined with mauves of a pinkish tendency—primrose and buttercup yellows or dull reds.

The average height of the Scotch is about five feet ten inches.

CHILTON COUNTY CALL

H. W. RYDING, Editor & Publisher.

Published every Friday at Thorsby, Alabama.

Subscription price, $1.00 per year in advance.

Entered at the postoffice at Thorsby, Ala., as second-class matter.

MAKE the best out of life and life will always give you its best.

IT is the happy man that prospers. The sour and discontented can never hope to succeed.

"Do unto others as you wish others to do unto you" is usually applied to the other fellow.

MANY a man gives his whole life to the service of the devil and then expects to sneak into heaven on his death-bed.

MUCH abuse has been heaped upon Ex-Senator Ingalls because he said that the decalogue had no place in politics. The abuse conclusively proved the truthfulness of the assertion.

OF course, if all reports be true, Mr. Bryan believes in free transportation.—Sheffield Reaper.

For himself, yes, but not for the other fellow.

LOOK out for the professional bonus-hunter, the glib-tongued rascal, and the fellow who is intimate with everybody and everything. The first will steal your money, the second your good common sense, and the third will publish to the world what you tell him in secret.

SINCE the Thorsby Call has changed hands it contains more business if not so much grammatical boast. Thorsby is a thriving settlement of 140 Northern families who believe in business and education, and have already established schools and built churches. Here's to the success of Thorsby and The Call.—Sheffield Reaper.

IT is truthfully said: "Beware of the man who says he wouldn't tell a lie." A great deal of evil would be prevented if men would also beware of the professional reform shrieker, who shouts reform only to hide his own selfishness and very often downright wickedness and rascality.

THE unexpected often happens. President Andrews reconsidered his resignation from the presidency of Brown University. Perhaps he realized that this country doesn't need a university where partisan politics has a place in the curriculum. The professor is known as an able educator and his latest action also speaks well for his good common sense. The politicians and newspapers will give all necessary instruction in politics.

THE gold bugs who last year promised better prices for cotton if Bryan was defeated put their man McKinley in power by false pretenses. In some cases to obtain things under false pretense means a term in the penitentiary.—Age-Herald.

You don't say anything about our good friend Bryan advising farmers to sell their wheat immediately if McKinley should be elected.

THIS is the way the Banner proceeds to do us up: "While the republican paper at Thorsby, The Call, last week was expatiating upon its knowledge of 'business law,' a printers' supply warehouse was at Thorsby boxing up, to return to the warehouse, a press, etc., which had been bought but not paid for. For the benefit of the Call, which seems to be enjoying McKinley prosperity, we give the information that the elementary principle of 'business law' is to pay for what you buy. When the Call has learned this its opinions on 'business law' may be of greater value."

Why the Banner should get so vicious we cannot imagine, unless we ascribe it to the natural perversity of the professional reformer who accounts nobody honest but himself. We thought, however, that the Banner man might have been misinformed about that transaction, and so sent him a note calling his attention to the villainous and libelous statement and telling him that we had no more to do with the press than he, and asking him, as becomes a gentleman, te make honorable amends in the next issue of the Banner, for the defamatory statement about us. This is what he answered:

Dear Sir—Replying to yours of yesterday's date I beg to say you must have mistaken some other paper for the Banner. The Banner is not in the habit of publishing "villainous and libelous statements," and on careful perusal I can find no reference to you whatever. Yours, etc.

If it isn't villainous to deprive a man of his good name and business reputation, then the world must have been turned upside down lately. His letter convicts him of deliberate falsehood or else, what is more than likely, he has no more conception of what is right and wrong than the man in the moon.

DEFIES THE WEATHER.

PERILS OF AN INDIAN MAIL CARRIER IN THE NORTHWEST.

Five Times John Beargrease, a Chippewa, Was Believed to Have Perished in Storms, but He Always Got the Mail Through Safely.

There is probably no man in the government's employ who takes the chances that John Beargrease, the Indian mail carrier does, in his efforts to get the United States mail through on scheduled time. For years Beargrease, who is a full-blooded Chippewa, has carried the mail between Two Harbors and Grand Mar , Minn., sometimes going as far as ny Lake City and Koochiching on the Canadian border, a distance of 200 miles by water and through a wild and unbroken country. John does not assume his duties as mail carrier until after the close of navigation each year. In the summer the mail is carried by the lake steamers.

No matter what the state of the weather is or the condition of the lake or roads, John is always ready to start when the sacks are given to him. In the face of a raging blizzard or when the waves are rolling ten or twenty feet high on Lake Superior he will start on his voyage along the north shore from Two Harbors to Grand Marais. Time and again he has been reported to have been lost in a blizzard or a heavy wind storm, but just when every one had given up hope of ever seeing him again he has always turned up with the mail.

Late in the fall and during the winter of 1896 Beargrease made a number of perilous trips. He was reported lost no fewer than five times. Just before last Thanksgiving day he left Grand Marais for Two Harbors. The trip before ice has formed is made in a rowboat on Lake Superior. At the time Beargrease started a heavy wind was blowing, snow was falling, and Lake Superior was in a fury. He would not wait for milder weather, however. Stepping into his boat he grasped the oars and pulled out to sea. People stood on the beach for hours watching the little boat buffeted here and there. Soon the snow began to fall, and it was not long before a blizzard was on. All trace of the little boat and its occupant was lost, and Beargrease was given up as lost. Day after day went by and no tidings of the mail from the north shore were received at Two Harbors. Knowing John's habits well, the postoffice authorities were sure that he had started. After waiting until they thought there was no chance of hearing from him word was sent to Washington that Beargrease and the mail had gone to the bottom of Lake Superior. The news was telegraphed from here to all parts of the United States. The next day John turned up at the postoffice and deposited his sack of mail.

After the blizzard had started John lost track of the shore; in fact, he could not see a rod in any direction. Soon one of his oars broke and he lost control of the boat. Then he threw the mail sack under a seat in the stern where there was a little cubby hole, and stretched himself out full length in the bottom of the boat and waited for what might come. Soaked to the skin in icy cold water, he expected every moment to be plunged into the freezing waters of Lake Superior. Suddenly he felt the boat lifted in the air and found that it had been thrown on the beach. He scrambled out, snatching the mail bag as he went, and a moment later the boat was again swept away to sea.

Beargrease took in his surroundings and struck off into the woods for a settler's cabin, where food and shelter could be obtained. It was six miles from where the boat had been thrown on the beach and thirty miles from his starting point. When he arrived there he was exhausted. He rested for twenty-four hours, got his clothing dried out, and obtained food enough to last him a week. He then started out and tramped through the woods to Two Harbors. His trail through the woods was a narrow one, and for almost the entire distance he had to make his way through deep snow. He spent the nights in shacks built along the trail by sportsmen. One night he spent perched in a tree to escape the wolves, which howled around its base. Seven days after leaving the cabin he arrived in Two Harbors and delivered the mail.

John did not leave Two Harbors again until the lake was frozen over. About the first of January he started with his toboggan and dog team on his 200-mile ride. The weather is always treacherous, but when he left it looked favorable. Before he was out more than a day, however, one of Minnesota's worst blizzards set in. It continued for three days, and in many places the snow was piled up to the second-story windows of houses in Duluth. What the storm must have been out on the lake can only be imagined. Then, again, it was extremely cold. Thermometers registered thirty below zero. A cold, biting, northeast wind was blowing, and the snow, striking a person in the face, burned like fire. No one thought John could survive the storm, but in twenty days he delivered the mail at Grand Marais. He did not come out so well this time as before. One hand, his nose, and one foot were frozen.

He says he had not been out of Two Harbors long before the storm was upon him. He saw at once that it was going to be a bad one. Unhitching the dogs, he set the toboggan on its side to the wind. Then he scraped up the snow and banked it around the toboggan to hold it as firm as possible. He pulled out his blankets and some provisions and spread them on the ice on the lee side of the toboggan. Calling his dogs, four in number, he made them lie down and covered them over with a blanket. The dogs knew what was coming. They had been out in a blizzard before. Then John wrapped himself up in a blanket and lay himself down beside them.

Here Beargrease and the dogs lay for two whole days and part of another, buried under a mantle of snow that had fallen upon them. All were on short rations. Very sparingly Beargrease dealt out the raw salt pork he had to all hands. The dogs, although they were probably very hungry, never whimpered. They seemed to understand. When the storm was over they were up and off again, but their troubles were not over. The heavy wind had broken the ice in many places, and it was piled up from ten to thirty feet high. In other places the snow had drifted so that it was impossible for the dogs to get through it. This made it necessary for them to go a great deal out of their way. After being out nineteen days—the last one with only a little dry corn meal to eat, the last of his supplies—John began to lose his strength. His feet had been frozen, and he felt that his left hand and nose soon would be. Drawing his blanket around him, he shouted once or twice to the dogs and laid himself down—he thought to die.

The dogs, too, had begun to lag, but John's shouts seemed to put new courage and energy into them. They started out faster than ever, and bright and early the next morning stopped in front of the little grocery store at Grand Marais, where the postoffice is.

John was lifted from the toboggan and restoratives were administered, for the poor fellow was nearly gone. Three or four hours more in the cold biting wind would have finished him. He pulled through, however, and three weeks later started for Two Harbors, and enjoyed a comparatively comfortable trip. Although getting along in years, John still evinces a desire to carry Uncle Sam's mail, and says he will report for duty the 1st of next November and take up his duties for the winter.—New York Sun.

EYES NOT NECESSARY.

Certain Creatures Enabled to See Through Sensitive Skins.

Eyes are popularly considered to be quite necessary to sight, but this is an error, if we are to believe Dr. Nagel, a recent German experimenter. Many creatures without eyes can see; at least they can distinguish perfectly well between light and darkness and even between different degrees of light. This is the lowest degree of seeing, to be sure, but still it is really sight, and differs scarcely more from the vision of some insects that possess eyes than this does from our own clear sight.

Creatures that see without eyes see by means of their skins. All skins, says Dr. Nagel, are potential eyes; that is, they are sensitive to light. In animals that have eyes the sensitiveness has been highly localized and greatly increased—so that man, for instance, has a retina very sensitive to light, and an expanse of ordinary skin which possesses a sensitiveness to light so slight that it is hardly conscious of it. Yet his skin is sensitive in some degree, as it is proved by the fact that it sunburns—that is, light may cause a disturbance in the pigment of the skin just as it does in that of the eye. In the eye the disturbance is accompanied by a nervous change, which sends a telegraphic message along the optic nerve to the brain. In the skin, too, there are nerves, and there are messages also, but their tidings imprint no image on the mind; they simply express discomfort—cry out "sunburn."

But in many eyeless creatures the lack of eyes is in part made up by increased sensitiveness of the whole skin surface to light. Darwin long ago noticed that earthworms, although they have no eyes, will suddenly withdraw into their holes at the approach of a lighted candle. Some creatures seem most sensitive to sudden diminution. If a number of oysters, kept in a vessel together, are found to be open, they will shut all at once if a dark object comes between them and the light. Another bivalve, called psammodia, has long, whitish transparent tubes which protude from the sand in which it lies buried. If these are suddenly illuminated they contract, and the brighter the light the greater the contraction. If a number of them be carried into direct sunlight they hasten to bury themselves in the sand; or, if there is no sand, they move restlessly to and fro in the water until they are exhausted.—Boston Journal.

Providing Them Practice.

Keedick—How wonderful are the ways of nature.

Fosdick—In what respect?

Keedick—It brings along the green-apple season just when the young doctors are being graduated.—Judge.

RATES, by the day, $1.00.
by the week, $4.00,

IN THE LOCAL FIELD.

Happenings of General Interest to Our Homefolks.

"49:40 or fight," 16 to 1 or bust.

W. Braley was in Jemison last Thursday.

Mr. Dyr left last Thuesday for his home in Lucile, W. Va.

Nels Peterson has harvested his crop of tobacco.

Is it only a mere coincidence that the word "boys" rhymes with "noise?"

The work on the depot is steadily going on.

Axel Langville is building a cottage. It will be inclosed in a few days.

Iver Husby has moved into his new house.

Services next Sunday at 10:30 in the morning and 7:30 in the evening.

School began last Monday with a very good attendance the first day.

A scaffold tumbled down at the depot last Monday. No one was seriously hurt.

Where there are mosquitoes there is malaria. There are no mosquitoes in Thorsby, and there is no malaria, either.

People died by the score in the North last summer. Not one death was recorded in the South from prostration by heat.

Born to Mr. and Mrs. C. A. Peterson a bouncing baby girl, Tuesday, Sept. 14. Mother and child are doing well and the father is as happy as a lark.

There will be no more services held by Prof. H. W. Ryding. He has a little too much other work to attend to, and must, therefore, discontinue this part of his work.

Charles W. Taylor, of Montgomery, editor and publisher of the Illustrated South, was in town last Friday.

A representative of the Shelby Iron Works gave Thorsby a visit last Tuesday. He contracted with J. Bill for 6,000 bushels of charcoal a month.

Dr. Berg, of Sacred Heart, Minn., was a guest of Mr. Rierson the firs t part of the week.

A Ladies' Sewing Society was organized last Thursday. The first meeting was held at the home of Mrs. J. E. Hedberg. The Society is to meet every week.

Prosperity struck J. Brice hard last week. He made a contract with the Shelby Iron Works to furnish them 6,000 bushels of charcoal each month. As prosperity has so many names now, would somebody please tell what kind this is?

If you intend to go South don't go to a colony that was started yesterday or at best day before yesterday. Everything is chaos in a new colony. Thorsby is the place where you will find a settled and organized community, with schools and church organizations.

CARD OF THANKS.

We wish hereby to express and extend our most cordial thanks to Mrs. T. T. Thorson and Mrs. J. F. Peterson for their kind services rendered us at the birth of our daughter.

MR. AND MRS. C. A. PETERSON.

DIAZ AGAINST LYNCHING.

An Inquiry to Be Instituted and Guilty Parties Punished.

Advices from City of Mexico state that orders have been given to investigate the lynching of Arroyo.

President Diaz has decided that the inquiry be most rigorous and that the guilty parties be severely punished, as he feels that the act was a reproach to the nation, which has taken pride in the fact that lynch law has been unknown in Mexico.

Twenty-odd men arrested are still in custody and formal papers are being drawn up in their cases.

LIGHT SENTENCE FOR REED.

Gets Three Years in the Pen for Murder of Halstead.

C. R. Reed, slayer of L. W. Halstead, was found guilty at Macon, Ga., Thursday of voluntary manslaughter and sentenced to three years in the penitentiary.

In fixing the sentence Judge Felton approved the verdict and said the case was such as to merit a light sentence.

The judge's charge was careful and impartial, and dwelt at considerable length on the point of voluntary manslaughter.

FIRM FAILS FOR MILLION.

Willard & Co., Bankers and Brokers, Were On Wrong Side of Market.

James R. Willard, Elmer Dwiggings and J. Dwiggings, who compose the firm of J. R. Willard & Co., bankers and brokers, with offices in New York, Buffalo, Washington, Philadelphia and Montreal, have assigned to James Sterbuck, with preference for $20,000 to William H. Osterhout.

No statement of the condition of the firm is yet obtainable, but it is estimated that their liabilities will reach $1,000,000.

THORSBY IS THE CENTER OF ANOTHER SUCCESSFUL SETTLEMENT.

Thrifty Farmers and Artisans from the North Are Developing a Rich Country.

Below is a letter written by Mr. W. H. Skaggs to the Chicago Inter Ocean of August 20, 1897, which speaks for itself. Mr. Skaggs is commissioned by the Southern and Northwestern Industrial Association, of Chicago, to put before the people of the North and West the advantages the South offers the homeseeker and the capitalist. These people can be relied upon to recommend nothing but strictly legitimate enterprises.

THORSBY, Ala., August 16.—Special Correspondence.—Fifty miles south of Birmingham, on the main line of the Louisville & Nashville railroad, is a colony, which has been established largely through the liberal and progressive policy of the Louisville & Nashville railroad company. The name of this place is Thorsby. It is in Chilton county, and this county is in Central Alabama.

Chilton county is on the divide between the mineral belt of North Alabama and the cotton belt of South Alabama. Latitude 33 degrees is about the dividing line between the two geographical, geological, and, I may say, political and industrial divisions of this state. North of this line the county is mountainous, well watered, and in general elevation is about 750 feet. There are fertile valleys and plateaus; most of the lands are red clay; there are extensive deposits of coal, iron, and other minerals, and many new manufacturing towns have been built within the past fifteen years. Cotton is raised in North Alabama but more attention is given to grain, fruits, and vegetables. The white people are in the majority in North Alabama, and there is greater progress in industrial lines and greater independence in politics than in South Alabama.

The country south of Chilton county is known, in a general way, as the Black Belt, so called from the color of the soil and the number of negroes who live in that section. The Black Belt is a prairie country, agriculture is the prevailing industry, and cotton is the principal product. There are no minerals which have been developed in South Alabama and manufacturing has not been developed to any great extent. Immigration has not made such progress in South Alabama as it has in North Alabama, and there is less political independence in the southern than in the northern section of the state.

Extensive pine forests are found in Chilton county and the lumber business is one of the leading industries. Only a small portion of the land is under cultivation. The soils vary from the fertile brown and red loam lands to the sterile. The products are cotton, corn, oats, rye, and tobacco. Latterly some attention has been given to the cultivation of rice, and fruits and vegetables are given special attention by new settlers from the Northwest. The white people are largely in the majority, notwithstanding the county is adjacent to the Black Belt.

The Concordia Land and Improvement association is the name of the company which has undertaken to establish a colony at Thorsby. T. T. Thorson is at the head of this enterprise and the results so far attained are due largely to his efforts. Mr. Thorson and his associates in this enterprise are from Minnesota, where formerly engaged in farming and stock raising. With their families, they have moved to the new colony and are active in all legitimate efforts toward the advancement of the enterprise and aiding the newcomers.

Thorsby is situated on a plateau of about 790 feet altitude. The island is rolling and there are no swamps or malaria. There is water in abundance and of good quality. Building material is very cheap. Forests of long-leaf yellow pine are near by, and saw mills in the immediate vicinity furnish lumber at low figures.

This colony was established hardly two years ago, when there was not a house on the land, and the whole tract was in pine, oak, and hickory timber. Today there are upward of 150 buildings and others are in course of construction. The houses are substantial structures and above the average of the county. A substantial hotel has been completed and a two story school house is one of the attractive features. The school has been well organized and a capable educator is in charge.

The new settlers are Americans and Scandinavians from the Northwestern states. They are industrious and thrifty. I did not see an idle man about the place. Everybody is at work, and no one seems to be waiting for something to turn up. The newcomers object to the thriftless habits of the negroes, and there is not a "colored person" living or employed in the settlement.

It has been the policy of Mr. Thorson and his associates to find employment for every newcomer. I conferred with a number of intelligent people during the past eighteen months. I am of the opinion that many readers of the Inter Ocean will be interested in the voluntary declarations of these settlers.

Gus Rosenberg, of Eau Claire, Wis., located at Thorsby in April, 1896. He is a carpenter, and states that he has found steady work since he came here. He claims to make $2 per day, and, on account of the low cost of living, he has been able to save from his wages sufficient to buy a ten-acre tract of land and build a house. His health is greatly improved, and he is delighted with the climate and the land.

Charles A. Peterson, of La Crosse, Wis., is a painter and a very intelligent man. He has not found expensive work at Thorsby, but has been able to make a living and is well pleased.

L. M. Pearson of Minnesota, A. M. Johnson of Waseca, Minn., and R. H. Rierson of Emmet county, Iowa, are among the number who make favorable reports of this locality and are well pleased.

A. Malmgren, of Estherville, Iowa, came here last May. He bought a ten-acre tract of land, on which he has just completed a nice two-story dwelling and a substantial barn. He has also acquired another tract, of forty acres, and thinks this is a very desirable section of the country.

E. F. Mead, of Mankato, Minn., said he had been building a home during the winter months—a time when he could do nothing for himself in the North. Mr. Mead is a carpenter by trade.

I talked with many more new settlers, and heard only good reports. Every one is pleased with the soil and the climate, and I did not find a man who is without work and who has not been able to build a home.

There are other locations in Alabama with quite as many natural advantages as Thorsby. Indeed, there are sections which, perhaps have greater advantages, but I doubt if any colonization scheme meets with greater success than this. The absence of speculation and the manifest disposition to deal frankly, coupled with the character of the settlers, the energy, thrift, intelligence, and integrity of the whole population, warrant the opinion that this will soon be one of the most successful colonies of the South.

Capt. P. Sid Jones, who is in charge of the immigration department of the Louisville and Nashville railroad company, was active in promoting the Thorsby settlement. Captain Jones came South several years ago, and has been influential in attracting attention to the advantages of the South. His office is in Birmingham, Ala., but he is now in charge of the Louisville and Nashville exhibit at the Tennessee Centennial.

The Louisville and Nashville railroad is very popular in the South. It is an extensive system, under liberal and progressive management. Its policy has been to build up every section traversed by its system. The encouragement of thrifty home-seekers looking for new locations in the South is part of the broad policy of the Louisville and Nashville railroad.

"Garden Spots of the South" is the name of an interesting publication by the Louisville and Nashville Railroad company. It contains a large map and a great of valuable information. Every person who expects to locate in the South or desires information about this section, would do well to write to C. P. Atmore, general passenger agent, Louisville, Ky., or Sid Jones, Birmingham, Ala.

WILLIAM H. SKAGGS.

ONE MORE VICTIM

Of the Disastrously Fatal Gas Explosion in Cygnet, O.

Fred Snyder, justice of the peace, died at Cygnet, O., from injuries received at the gas explosion in the town several days ago.

This makes six deaths, and three others, Carl Gibbons, LaFayette Sutton and Herbert Stevens, are dying.

Harry Stevens had both legs crushed so that amputation was necessary.

MILLIONS FOR PENSIONS.

Report From Interior Department Give Year's Figures.

The annual report of the auditor of the interior department at Washington shows that the annual amount paid for pensions during the past year was $140,477,637.

The payments on pensions account for the fiscal year 1896 was $128,722,127, and for the fiscal year 1895 $140,556,641; 1894, $138,119,551, and for 1893, $154,552,214.

The cost of the service last year was $3.99 per $1,000; for 1896, $4.07; for 1895, $4; for 1894, $3.77, and for 1893, $4.35.

MASTER CAR PAINTERS MEET.

The Association Elects Officers For Coming Year.

The Master Car and Locomotive Painters' Association of the United States and Canada, in session at Old Point Comfort, Thursday, elected the following officers: President, C. E. Copp, Lawrence, Mass.; vice president, H. G. Masters, Chicago; secretary and treasurer, Robert McKeon, Kent, Ohio. No other business of public interest was transacted.

GAGE BUSY ON REPORT.

He Requests Earlier Responses From the Bureau Chiefs.

A Washington dispatch says: Secretary Gage is at work on his annual report. He had instructed the bureau chiefs to make their individual reports a month or six weeks earlier than has been customary in the past. That of Comptroller Tracewell, which was the first to be submitted, was laid before the secretary Wednesday.

Food Is Higher In Spain.

Advices from Madrid state that the price of all kinds of food is rising steadily, owing to the growing depreciation of silver and of paper currency.

HOUSE BUILDING

Is the order of the day in Thorsby. We are now prepared to keep up with the procession. Our new planing mill, which has recently been put in, and is now run in connection with our saw mill, enables us to furnish all kinds of lumber for building purposes. Our prices are more reasonable than those of others, and, being prepared to turn out an order on short notice, we can save the builder a large amount of inconvenience and expenses. By buying at home you have no freight to pay and you are helping agiong home industries. We also are prepared to ship lumber by the car load or in small quantities.

THORSBY LUMBER CO.
THORSBY, ALA.

LANGVILLE & SON,
General Blacksmiths
and
Wagon Makers.
Prices reasonable and first-class workmanship.

RECEPTION TO THE PRESIDENT.

Citizens of Somerset, Pa., Give Him an Enthusiastic Welcome.

President McKinley was given a public reception at Somerset, Pa., Thursday evening. The crowd present numbered nearly 3,000, and as many people gathered in front of the Ensley residence, where the presidential party were serenaded.

President McKinley appeared on the porch, and in a five minutes' talk thanked the band and the crowd for the serenade, and then introduced Governor Lloyd Lowndes, of Maryland, who was to spend the night as the guest of Mr. Abner McKinley. The governor spoke in a happy vein for ten minutes.

PIONEER PROSPECTORS.

ADVENTURES OF THE FIRST YUKON GOLD MINERS.

A Party of Seventy-two, Including "Seattle Nell," Almost Starved in the Midst of Their Useless Wealth—Rescued by the Thetis.

The present gold fever in Alaska reminds Lieutenant Edward Simpson, who is in charge of the Baltimore branch of the hydrographic office of the United States Navy, of an early experience to which he was a party. He was an officer on the Thetis when she rescued seventy-two stranded miners and their gold on the coast of Alaska in 1889.

Previous to 1889 a miner named "California Pete" had left Juneau, on the southern coast of Alaska, and gone over land to the headwaters of the Yukon river. In the course of time Pete did not return, and rumors floated among the miners of Juneau that Pete had "struck it rich." Seventy-two miners and Seattle Nell decided that what was "good enough" for California Pete would also suit them, and they decided to follow his trail and strike out for fortune.

Juneau originally consisted of a settlement of seven Indians, but upon the discovery of gold the population included, as a miners' newspaper stated, "3000 men and seventy odd women." It was from this field that the seventy-two miners and Seattle Nell started into the bleak north. They were ten days on a steamer, which worked its way through the islands and narrow waters to the foot of Chilcoot pass. Here they shouldered their supplies and scant mining implements and statrted through the divide. Seattle Nell had taken along several kegs of alcohol, with which she intended to mix brown sugar and water and sell it as whisky. The miners carried no liquors themselves, as they did not want any fighting, and, though Nell was welcome, her alcohol was not. The beast of burden stumbled in the divide, and Nell's alcohol rolled down a precipice and was lost. The way she stormed about it was a caution.

After two days' tramping the prospectors were out of the pass and at the headwaters of the Yukon river. Here they took canoes and ran down with the current, after many spills in the rapids, to Forty Mile creek, which is the centre of the recent discoveries. They had arranged that a steamer was to travel the 1,500 miles up the river when the season opened, and take home those who wished to go by the water route. When the vessel arrived at Forty Mile creek the men had met with little luck, they had no money, and the vessel left them behind. Afterward every man out of the seventy-two had found at least $800 worth of the yellow metal, others had $1,500, some had $2,000 and one had $3,000.

Their wealth was useless, however, in the Alaskan wilderness, as there was no food to buy and supplies were running short. If they had been put on short rations the food would have been consumed six months before the next steamer was due. Starvation stared them in the face. It was almost impossible to go up the stream against the rapids, and then attempt Chilcoot Pass in the winter season. The seventy-two and Seattle Nell decided to drift with the Yukon river 1,500 miles to its mouth at St. Michael, where a vessel stopped at rare intervals, and the few Indians at the place did not see any one from civilization for six months or a year.

By rare good luck the United States steamer Thetis was returning from the Arctic sea, whither she had been sent to look for a lost whaler. She stopped off St. Michael to land a native interpreter. And this was just five days after the miners had arrived at the settlement. As a boat put off from the Thetis the occupants were startled to hear a rattle of revolvers, the boom of guns and pandemonium generally at sleepy St. Michael. The seventy-two stranded men had seen the Stars and Stripes and were frantic in their efforts to attract attention. The men begged to be taken back to civilization. The captain of the Thetis sent three officers ashore to see if they were really in need. The seventy-two men met in a room twenty-five feet square. The uniformed officers were given seats. After much coughing and nudging of one another, the uncouth, but big-hearted, committee succeeded in stating their difficulties. They were not used to standing up and making addresses. All the men were taken aboard and shipped as seamen for their rations.

As Seattle Nell was a woman, she could not be taken aboard a United States man-of-war, and she was left in the wilderness with the Indian settlement, to wait months for a steamer. Aboard the ship the miners did not know a rope, but, if it was shown to them and it had to be pulled, it was manned with a will. They were big and strong, but on the first day out a gale prostrated them with seasickness. California Pete was found lying on deck unable to get up or even smile, and when an officer summoned him he could only raise his hat as respectful recognition. They placed their gold in charge of the ship's paymaster and refused receipts. When the Thetis landed them at Sitka the men wanted to pay for the passage, but this was not permitted, and then they desired to entertain the whole ship's company, but the Thetis had to proceed south. —Baltimore American.

The Japanese Language.

The Japanese language is a combination of the tongue of the ancient inhabitants of the island, and is, therefore, unlike other languages. Literature was introduced into Japan from China with the religion of Buddha, but the words of pronunciation have been so softened to fit the melodious Japanese tongue that the Japanese cannot understand the Chinese, nor the Chinese the Japanese. As a large proportion of the Chinese characters are used, it is not difficult for the Chinese and Japanese to communicate by writing. The difficulty of learning to write the Japanese language is very great, as, in addition to the Japanese alphabet, some 15,000 to 20,000 Chinese characters must be memorized, and the eye and hand trained to distinguish and delineate them. An American started the first newspaper, in 1871, with 1,200 characters, but was compelled to increase them, and now uses 12,000. In the printing office each compositor sits at the desk, with the letters of the Japanese alphabet within his reach, while boys bring the Chinese characters from their numerous places for him to set up. The Japanese literature is rich in works of fiction, fables, legends and poetry, and as they are generally written in Japanese, they are largely read by the common people.—Trenton (N. J.) American.

NEW CAVE IN INDIANA.

Exploring Party Has Gone More Than a Mile Into It.

From New Middleton, Harrison Co., Ind., comes the story of a new cave of wonderful beauty which has just been discovered. The first explorers report that they could hear voices in the cave, but were unable to locate the direction from which they came, and this story has revived the tradition that pigmies once inhabited the Marengo cave, about twenty miles distant.

The country under which the cave lies is full of basin-like depressions, as if the land had sunk, but immense forest trees growing in these basins show that the terrestrial disturbance took place a long time ago. Men clearing away a fallen tree on the farm of Henry Fleiss, near New Middleton, discovered the new cave entrance at the foot of a low hill. A current of air came from the cavern, and this suggested to them that there was probably water in it, but an exploration of the first apartment of the cave showed it to be perfectly dry, with a brisk current of air flowing through it. In one side was an opening about two feet wide. Passing through this the exploring party found themselves at the head of a flight of thirty-two well worn steps, which had the appearance of having been cut by man. From this room a second flight of thirty-two steps led to a still lower level. These steps were so worn as to be almost perpendicular, and the descent had to be made with the aid of a rope.

The exploring party traveled on a descending grade of about fifty degrees for more than a mile, when they came to an abrupt precipice. Up to this point the cavern had been as dry as an ordinary cellar, but at the top of the precipice a noise like the roaring of a cataract could be heard. Plummets were let down over the precipice at various points, and the bottom was found to be forty feet down. The ceiling was low at this point, but there was room enough to rig a tackle, so the party descended. On this next level the cave was found to widen and played beautiful stalactites, which reflected the colors of the rainbow as they glowed in the light of the torches. Every word uttered was re-echoed many times. A pretty little stream ran through the stalagmites with a faint ripple. A water snake, several kinds of eyeless fish and a toad were the only life found.

This part of the cave has been explored for nearly half a mile. There are thought to be lateral exits among the hills and these will be hunted for as soon as possible. There are also supposed to be other passages of the cave leading from the second level, which are now covered with debris. These also will be explored.

Two Ways of Digging Gold.

The Klondike boomers boast that $2,000,000 worth of gold has been taken out of that district within a couple of years though they admit that it was at the expense of much labor and incredible hardships upon the part of those who secured the treasure. Kansas has lifted more than $30,000,000 worth of mortgages within the same period and spent many other millions in improvements, and without any universal hardships or extraordinary privations, which shows that the agricultural area of the Sunflower State is infinitely more productive than the mining regions of the Yukon valley.—Kansas City Star.

FOR OUR YOUNG FOLKS.

WHAT THE CLOCK SAID.

"Tick," the clock says, "tick, tick, tick!
What you have to do, do quick.
Time is gliding fast away.
Let us act and act today.

"When your mother speaks, obey.
Do not loiter, do not stay;
Wait not for another tick—
What you have to do, do quick."

CHIMES OF NORMANDY.

Do you want to hear the chimes of Normandy? If you do, all you need is a heavy silver spoon and a piece of string. Tie the string at its center around the handle of the spoon, leaving the ends three or four feet long. Now wind the ends around your two forefingers near the first joint and then thrust your fingers in your ears. Bend over and allow the tablespoon to knock against the wall or the door or a chair and you will be surprised at the really beautiful imitation of church chimes which you will hear.

AMUSING A SQUIRREL.

A sportsman contributor to St. Nicholas tells how he amused a squirrel. He began to whistle an air when in a twinkling the little fellow sat up, leaned its head to one side and listened. A moment after he had scrambled down the trunk, and when within a few yards, sat up and listened again. Pretty soon he jumped upon the pile of rails on which I was, came within four feet of me, sat up, made an umbrella of his bushy tail and looked straight at me, his little eyes beaming with pleasure. Then I changed the tune, and, chut! away he skipped.

SMALLEST DOGS IN THE WORLD.

Over in Japan, where the people are fond of everything in miniature, the smallest breed of dogs in the world has its home. They belong to the family of spaniels, and are black and white or yellow and white in color, and the smaller they are the more money they will bring. A pup of one year weighing five pounds is worth $200. If the breeder is fortunate enough to raise a spaniel weighing only three pounds or less he can get almost any price he wants for it. Sales have been made to the sum of $500. One of these queer little dogs can easily lie on a man's hand or find a comfortable nook for sleeping in a bootleg. They are very delicate and tender and they have to be watched and cared for like a baby. If given proper attention they will sometimes live to the age of ten years.

SPIDERS AS WEATHER PROPHETS.

One of the best of weather prophets is the spider. If there happens to be a web in the secluded corner of the porch watch it carefully for a few days or weeks and the spider will unfailingly predict the coming of storms.

When a high wind or a heavy rain threatens the spider may be seen taking in sail with great energy—that is, shortening the rope filaments that sustain the web structure. If the storm is to be unusually severe or of long duration the ropes are strengthened as well as shortened, the better to resist the onset of the elements. Not until pleasant weather is again close at hand will the ropes be lengthened as before. On the contrary, when you see the spider running out the slender filaments, it is certain that calm, fine weather has set in, whose duration may be measured by their elongation.

Every twenty-four hours the spider makes some alteration in its web to suit the weather. If these changes are made toward evening, just before sunset, a fine, clear night may be safely counted upon. When the spider sits quiet and dull in the middle of its web, rain is not far off. If it be active, however, and continues so during a shower, then it will be of brief duration, and sunshine will follow. These various indications may be witnessed and studied to the best advantage in the open air. But you need not always go outdoors to watch the spider barometer. There are few houses where the crafty creature does not find an obscure corner wherein to swing its signboard: "Flies taken in and done for here." Watch these places, and when you see the spiders coming out on the walls more freely than usual you may be sure that rain is near.

AN OSTRICH AND A HOT POTATO.

For odd appetites the goat and the ostrich stand supreme, with the ostrich just a step ahead. And yet an ostrich finds trouble in swallowing a hot potato. A South African writer tells an amusing story of greed and how it was punished. He says:

These ostriches were a source of endless trouble to us. They grew rapidly and developed great kicking powers, until they became sometimes positively dangerous, the dogs and the Kaffirs coming in for most of their attentions. Their appetite was insatiable. We used to make large quantities of biltong, or sun-dried meat, and there were usually dozens of strips of it hanging on rheims slung from wagon to wagon, and these were always objects of attention on the part of the ostriches. It was most amusing to see one trying to swallow a strip a yard long and two inches thick, just as a chicken struggles with a worm that is a little too big for it. Once we had to drag a huge strip out of one of the bird's throats to save it from choking.

But it was the culinary department that interested them most. They would always attack the Kaffirs bringing the viands from the "kitchen" to the tent, and sometimes were so pertinacious that the boy would get frightened and throw the dish away and bolt, and we would lose the best part of our dinner. They would even come into the tent and snatch things off the table, and we would take it out of them by smothering a dainty morsel with salt and cayenne pepper; but after awhile they seemed to flourish on it.

One day, however, we got the laugh on our side. Dinner was preparing and one of the birds was investigating the pots around the fire. A great pot of huge potatoes took his fancy, and he incontinently seized and swallowed a red-hot tuber as big as a large pomegranate. He danced, he jumped, he kicked, he twisted his neck about almost into knots, he flapped his wings and waggled his tail, he ran amuck, knocking things down and banging himself up against the wagons and stone walls, and at last tore away into the veld at twenty miles an hour until he was out of sight, and did not appear again for a couple of hours.

Every morning soon after sunrise these birds would indulge in a dance. They would rush away into the veld for about a mile; and then suddenly stop and commence waltzing round and round in the most ridiculous fashion, often till they dropped. I never could understand the meaning of this performance. It might be mere gamboling, but if so it must be nearly the only case of young birds playing, as so many young animals do.

Kittens in the Church Organ.

The more devout of the parishioners of St. Mary's Catholic church, Forty-sixth street, Lawrenceville, who attended vespers on Sunday evening, had a special musical treat in store for them.

As Mrs. Charles Mitchell, the organist, took her seat at the organ and began to play one of the vesperal hymns a strange quartet responded, not in the solemn tones of the Gregorian chant, but "Mew, mew, mew."

The whole choir were dumbfounded. There were no feline musicians in sight, still the mewing kept time to the strains of the organ. In a few minutes a large cat crawled out from beneath the pedals of the organ, much to the dismay of the organist, as she had her feet on the pedals at the time, and the glaring fire in the eyes of the ferocious feline mother in a way explained who the new musicians were.

However, no effort was made to find them until after vespers, but then the search was made under the direction of Father Tobin. Deep in the bowels of the organ were found four little kittens only about four hours old. They could not have been any older, as they surely were not there while high mass was sung and played in the morning. The mother was allowed to return to her young, who were not disturbed, as they were comfortably quartered in the $4,500 organ.

The Word "Hoodlum."

The old proof-reader was holding forth upon the question of typographical errors and their occasional influence on posterity. "The word 'hoodlum' is an instance of this," he said as he knocked the ashes out of his pipe. Out in San Francisco twenty five years ago there was a notorious character named Muldoon, who was the leader of a gang of young ruffians. They were a terror to the community, about as tough a lot of citizens as you could find on the coast. A reporter who had been assigned to a story in which they had figured, undertook to coin a word designated the gang. He reversed the name of the leader, and referred to them as 'Noodlums.' The compositor mistook the 'n' for an 'h,' and as hoodlums the word passed the proof-reader. And now 'hoodlum' is a recognized word, and will probably survive."—Philadelphia Record.

Candy for Klondyke.

In Portland, Oregon, a public school teacher has caught the Klondyke fever, but by the advice of an old "forty-niner" she is taking rather an unusual supply. He advises her to take up a load of candies, cigars and nuts, rather than to try any other way of making money or a living there. He recalls the visit of a woman with such a cargo to a California camp, and says that she cleared $1,000 between Saturday and Monday.

Big Bridges.

The following table gives the lengths of the principal bridges in various countries: Tay, Great Britain, 9,690 feet; Forth, Great Britain, 5,552 feet; Moerdyck, Holland, 4,820 feet; Volga, Russia, 4,715 feet; Weichsel, Germany, 4,346 feet; Theon, Germany, 4,172 feet; Grandes (Elbe) States, 3,580 feet. The greatest single span of the Forth bridge is 1,725 feet; and of the East River (Brooklyn) bridge, 1,601 feet between the towers.

RAM'S HORN BLASTS.

Warning Notes Calling the Wicked to Repentance.

CONFIDENCE is the tie of friendship.

Game worth catching, must be hunted.

Idleness digs the graves of manhood.

The prayerless overdraw on the bank of mercy every day.

The man who walks with God, does not travel in a circle.

There are too many people who only try to be good on Sunday.

The man who walks with God, does not make a crooked path.

The treasure that is laid up in heaven first does good on earth.

The shepherd who feeds the lambs well, will not lose the old sheep.

When God turns the X rays of his light on a white lie, it it jet black.

A dancing Christian is never shod with the preparation of the gospel of peace.

There is a kind of religion that thaws out in January and freezes up in July.

The superintendent of every Sabbath school should either look happy or die in the attempt.

Shrinkage in spiritual life is not growth, and yet there are people who seem to think so.

The armor of God covers only that part of the body exposed when we are facing the enemy.

The man who has true faith, will sooner or later have as good a chance to prove it as Daniel had.

If we would get where God can trust us to handle money, we would never have an empty pocketbook.

The life of the Christian who does not love his Bible, is never marked by close resemblance to Christ.

It should be the aim of the Christian to so live that the windows of heaven will always be right over his head.

When a man who gives nothing prays for the conversion of the world, he is clubbing a pine tree for apples.

There is joy in heaven over one sinner that repenteth, even though he has been a member of the church for years.

Some people seem to have an idea that dropping a nickel in the church basket now and then, will nickel-plate their sin.

FIREPLACES OF SNOW.

Winter Life in Northern Latitudes Has Some Singular Features.

At the first glance snow does not look like a very promising material for a fireplace, and yet I think I am not mistaken in saying that every winter there are hundreds of fires built in fireplaces made of this substance, says a writer in Lippincott's Magazine. This is less surprising when we stop to think that in the part of America where this is done the temperature outdoors during the winter months seldom rises as high as zero and frequently falls as low as 40 or 50 degrees below.

About the end of January, or when the sun again appears above the horizon, many families at the two Eskimo villages near Point Barrow, in Alaska, leave their winter houses and travel inland seventy-five or 100 miles to hunt reindeer along the upper waters of the large rivers that flow into the Arctic ocean east of the Point. Here they encamp in large, comfortable snow houses, usually dug out in a solid snowdrift. Like all Eskimo winter houses, these are entered by means of a long, low tunnel, and opening out of one side of this tunnel there is a fireplace built of snow slabs.

I never had a chance to go out to the rivers with the deer hunters, but one winter there was a snow fireplace built in the Cape Smyth village, near our station.

A young man and his wife moved down from Point Barrow after winter had set in, and, as there was no accommodation for them in any of the permanent wooden houses, they built themselves a small hut from blocks of snow and roofed it over with sailcloth. I made them a visit one afternoon and found the house pretty cold and uncomfortable, in spite of the large stone lamp that was burning all the time. The entrance tunnel was about ten feet long; at the left hand as you entered, and close to the door, was the fireplace. This was about two and a half feet square and neatly built of slabs of snow, with a smoke hole at the top and a stick across at the proper height to hang a pot on. When the first fire is built in such a fireplace, there is considerable melting of the snow, but as soon as the fire is allowed to go out this freezes to a herd glaze of ice, which afterward melts only a very little. These fireplaces are used only for cooking, as the Eskimos rely wholly on the oil lamps for warming the dwelling.

It is said that the filibustering steamer Laurada may be sold at auction. Here's a chance for Weyler to strike a blow for Spain by bidding her in.

What is the affinity between chewing gum and bicycling? If a count were taken it would be shown that seven out of ten bicyclists chew gum while on their wheels. Does it give vigor to the muscles of the legs, or does it prevent thirst? Here are questions for the scientist.

Swearing Won't Help It.

Swearing may make a fire burn, or it may make a dull hand hustle, but it won't help Rheumatism, or Ringworm. If you use Tetterine, it will make you comfortable and save swearing. 50 cents at drug stores, or by mail for 50 cents in stamps from J. T. Shuptrine, Savannah, Ga.

Piso's Cure cured me of a Throat and Lung trouble of three years' standing.—E. Gard, Huntington, Ind., Nov. 12, 1895.

Fits permanently cured. No fits or nervousness after first day's use of Dr. Kline's Great Nerve Restorer. $2 trial bottle and treatise free. Dr. R. H. Kline, Ltd., 931 Arch St., Phila., Pa.

IT IS TRUE

That Hood's Sarsaparilla cures when all other medicines fail to do any good whatever. Being peculiar in combination, proportion and process, Hood's Sarsaparilla possesses peculiar curative power. It absolutely and permanently cures all diseases originating in or promoted by impure blood. Remember

Hood's Sarsaparilla

Is the best—in fact the One True Blood Purifier.

Hood's Pills the best family cathartic and liver stimulant. 25c.

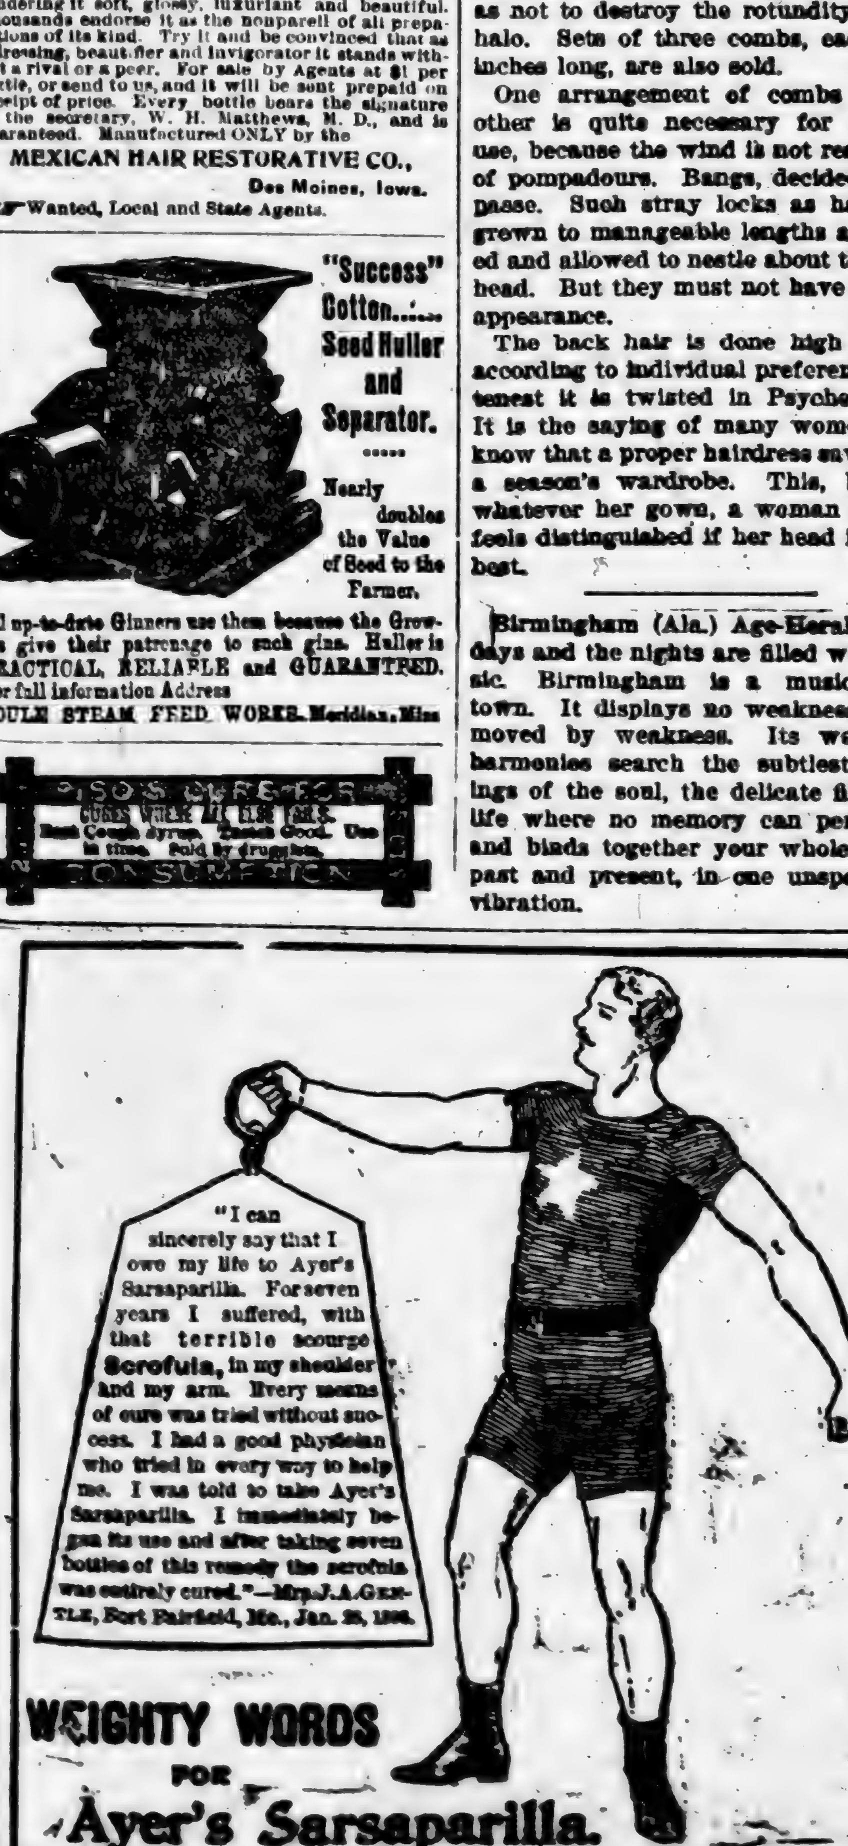
PISO'S CURE FOR CURES WHERE ALL ELSE FAILS. Best Cough Syrup. Tastes Good. Use in time. Sold by druggists. CONSUMPTION



"I can sincerely say that I owe my life to Ayer's Sarsaparilla. For seven years I suffered, with that terrible scourge **Scrofula**, in my shoulder and my arm. Every means of cure was tried without success. I had a good physician who tried in every way to help me. I was told to take Ayer's Sarsaparilla. I immediately began its use and after taking seven bottles of this remedy the scrofula was entirely cured."—Mrs. J. A. GENTLE, Fort Fairfield, Me., Jan. 28, 1896.

WEIGHTY WORDS FOR Ayer's Sarsaparilla.

There is more Catarrh in this section of the country than all other diseases put together, and until the last few years was supposed to be incurable. For a great many years doctors pronounced it a local disease and prescribed local remedies, and by constantly failing to cure with local treatment, pronounced it incurable. Science has proven catarrh to be a constitutional disease and therefore requires constitutional treatment. Hall's Catarrh Cure, manufactured by F. J. Cheney & Co., Toledo, Ohio, is the only constitutional cure on the market. It is taken internally in doses from 10 drops to a teaspoonful. It acts directly on the blood and mucous surfaces of the system. They offer one hundred dollars for any case it fails to cure. Send for circulars and testimonials. Address F. J. CHENEY & Co., Toledo, O.

Sold by Druggists, 75c.

Hall's Family Pills are the best.

THE CANTILEVER BICYCLE.

Mr. Nickall Pedersen, a Dane, Claims It's Just the Thing.

The accompanying illustration is from a photograph of the Cantilever bicycle, one of the latest novelties in cycle construction, and its inventor, Mr. Nickall Pedersen. One of the features wherein this machine differs materially from the ordinary bicycle is the weight. Cantilevers range in weight from the nine-pound racer to a wheel for rough use, which weighs fourteen pounds.

PEDERSEN AND HIS BICYCLE.

The construction is the outcome of the inventor's desire to secure a perfect seat. Mr. Nickall Pedersen is a Dane, residing in England, and he has been a wheelman for twenty years. His idea was to enjoy the comfort of a hammock on a bicycle, which he accomplished by the use of silk strings on which the saddle rests.

The front forks are attached to the rest of the frame by a pivot connection at the top and by a strong pivot hinge at the point shown in the cut just where the lower part of the frame joining with the crank hanger goes up to a point near the top of the front wheel. This connection gives the machine a sensitive steering device.

Side Combs.

Side combs never were worn so much. And never were they so long. Some resemble the combs which extend from ear to ear which are worn by children. The material is shell or imitation. But they must be put in carefully (outside the strands over the roll) in such a way as not to destroy the rotundity of the halo. Sets of three combs, each four inches long, are also sold.

One arrangement of combs or another is quite necessary for outdoor use, because the wind is not respectful of pompadours. Bangs, decidedly, are passe. Such stray locks as have not grown to manageable lengths are curled and allowed to nestle about the forehead. But they must not have a fixed appearance.

The back hair is done high or low according to individual preference. Oftenest it is twisted in Psyche effect. It is the saying of many women who know that a proper hairdress saves half a season's wardrobe. This, because whatever her gown, a woman always feels distinguished if her head is at its best.

Birmingham (Ala.) Age-Herald: The days and the nights are filled with music. Birmingham is a music-loving town. It displays no weakness to be moved by weakness. Its wondrous harmonies search the subtlest windings of the soul, the delicate fibers of life where no memory can penetrate, and binds together your whole being, past and present, in one unspeakable vibration.

MARKETING IN PARIS.

People Buy in Homeopathic Quantities in Many Different Places.

As it is more and more the tendency among Americans to select some specialty of profession, the same proclivity is displayed in Paris in a rude way among provision dealers. The butcher sells only beef, mutton and lamb. The tripier has sole claim to the head, brains, liver, heart, feet, etc. If one wishes fowl he must go to the fruitier, and there are others who have the monopoly of game. If two men hire a room in the same building the goods of one cannot be like those of his neighbor. With this brief suggestion of the divisions it is easy to see that marketing becomes something more than giving an order over a telephone wire.

The streets in the morning are quite filled with women making their daily purchases. Nearly every woman carries a basket or net bag. Since fruit and vegetables seldom have paper, the latter discloses much of her bill of fare. Being obliged to go to each store, she generally carries her groceries. But they may be delivered by a boy who balances a flat basket on his head and often reads a newspaper on the way. He would make a good messenger boy! The greater part of trading is done outside the store at low counters, or with street venders. To their carts is attached a harness which either monsieur or madame slips over the shoulders. The women's voices, as they call their wares, are fearfully vibrant and heavy. Those must have been terrible sounds given by the starving market women when they attacked the palace at Versailles. The loud cry of one, advertising her goods makes the stranger shudder.

Other women, in contrast to these, are those who sell fish in the great wholesale markets. They are rich. They wear a bonnet with real lace, and true diamonds glitter on their unclean, odorous hands. Their dress is of excellent material covered with a white apron.

The baker, with a suit of white, is patronized for bread, at least by nearly every family in Paris. It is found in all shapes and varieties. Just before it is taken from the oven steam is turned in upon it, giving it a very brown crust. It is said that France has been famed for its bread since the seventeenth century. It seems very possible, if one were to judge the date of the make from the hardness of its crust! The French breakfast consists of a roll and a cup of coffee.

The workmen, who have twelve hours a day of labor, take a roll or two for the second meal as well, with a supplement at "the seller of wines." Children at play eat bread as "young America" eats candy and chews gum. Passers-by carry bread, without a wrapping, under the arm or in work aprons, or a child measures his length with a long, narrow stick of it. A partial loaf has often with it one thick slice added to make the weight exact. But it must be a fastidious person who insists on having his bread done up in paper.

Traffic on the Great Lakes.

Five years ago there was not a vessel on these lakes that displaced 5,000 tons when floating on the St. Mary's river. To-day there are not fewer than twenty high-powered steel screw stermers which displace about 8,500 tons on the same draft of water. This represents, says Cassier's Magazine, an average increase in the carrying capacity of no less than 70 per cent., and the percentage increase in register tonnage is still higher. Steel cargo steamers, 415 feet in length and 48 feet in breadth, are now being constructed.

These dimensions are greater than those of the average modern ocean steamer, though several British cargo steamers are about 100 feet longer and their depth and draft of water is much greater. The carrying capacity of this new lake fleet will equal 3,500,000 tons of ore, transported from the head of Lake Superior to Lake Erie in one season of navigation.

It is well known that the number of vessel passages through the St. Mary's canal is much larger than the number of vessel passages through the Suez canal per annum, the number of such passages being as follows: Suez canal, 3,434 steamers; Soo canal, 17,956. The tonnage of the former is 8,448,246, and of the latter, 16,806,781 tons. Thus, it is seen that the tonnage passing the Soo canal during only seven months of a year is 99 per cent. greater than the tonnage passing the Egyptian canal in twelve months.

Bicycles, With or Without.

In future the purchaser of the alluring wheel will probably be asked whether he will take it "with or without." This inquiry will mean: "Will you take it with our accessions, our saddle, pedals, tire and handle-bar? Or shall we sell it to you without, leaving you to add the X tires, the Y saddle and the Z handle-bar?"

In the shop of a St. Petersburg watchmaker a human-faced clock is on view—the only one of its kind. The hands are pivoted on its nose and any messages that may be spoken into its ears are repeated by phonograph through its mouth.

A MOTHER'S EFFORT.

Mother Sees Her Daughter in a Pitiful Condition, but Manages to Rescue Her.

From the New Era, Greensburg, Ind.

The St. Paul correspondent for the *New Era* recently had an item regarding the case of Mabel Stevens, who had just recovered from a serious illness of rheumatism and nervous trouble, and was able to be out for the first time in three months. The letter stated that it was a very bad case and her recovery was considered such a surprise to the neighbors that it created considerable gossip.

Being anxious to learn the absolute facts in the case, a special reporter was sent to have a talk with the girl and her parents. They were not at home, however, being some distance away. A message was sent to Mr. Stevens, asking him to write up a full history of the case, and a few days ago the following letter was received from Mrs. Stevens:

"St. Paul, Ind., Jan. 20, 1897.

Editors *New Era*, Greensburg, Ind.

"Dear Sirs: Your kind letter received and I am glad to have the opportunity to tell you about the sickness and recovery of Mabel. We don't want any newspaper notoriety, but in a case like this where a few words of what I have to say may mean recovery for some child, I feel it my duty to tell you of her case.

"Two years ago this winter Mabel began complaining of pains in her limbs, principally in her lower limbs. She was going to school, and had to walk about three quarters of a mile each day, going through all kinds of weather. She was thirteen years old and doing so well in her studies that I disliked to take her from school but we had to do it.

"For several months she was confined to the house, and she grew pale and dwindled down to almost nothing. Her legs and arms were drawn up and her appearance was pitiful. Several doctors had attended her, but it seemed that none of them did her any good. They advised us to take her to the springs, but times were so hard we could not afford it, although we finally managed to get her to the Martinsville baths. Here she grew suddenly weaker, and it seemed that she could not stand it, but she became better, and it seemed that she was being benefited, but she suddenly grew worse, and we had to bring her home.

"She lingered along, and last winter became worse again, and was afflicted with a nervous trouble almost like the St. Vitus' dance. For some time we thought she would die, and the physicians gave her up. When she was at her worst a neighbor came in with a box of Dr. Williams' Pink Pills for Pale People and wanted us to try them as they were advertised to be good for such cases, and her daughter had used them for nervousness with such good results that she thought they might help Mabel.

"We tried them. The first box helped her some, and after she had taken three boxes she was able to sit up in bed. When she had finished a half dozen boxes she was able to be out and about. She has taken about nine boxes altogether now, and she is as well as ever, and going to school every day, having started in again three weeks ago. Her cure was undoubtedly due to these pills."

(Signed) Mrs. Amanda Stevens."

Dr. Williams' Pink Pills for Pale People contain, in a condensed form, all the elements necessary to give new life and richness to the blood and restore shattered nerves. They are an unfailing specific for such diseases as locomotor ataxia, partial paralysis, St. Vitus' dance, sciatica, neuralgia, rheumatism, nervous headache, the after effect of la grippe, palpitation of the heart, pale and sallow complexions, all forms of weakness either in male or female. The Pink Pills are sold by all dealers, or will be sent post paid on receipt of price, 50 cents a box, or six boxes for $2.50—(they are never sold in bulk or by the 100) by addressing Dr. Williams' Medicine Co., Schenectady, N. Y.

Write us 1st How long you have used or sold Dr. Simmons Squaw Vine Wine. 2nd State Diseases it cured. 3d Give names of those it cured. 4th State the difference between its strength and action and the strength and action of McElree's Wine of Cardui. On receipt of letter enclosing recently taken Photograph we will send you a $1.00 Bottle Squaw Vine Wine (FREE).

PROPOSITION 2.

LIVER MEDICINE CERTIFICATES.

Write us 1st How long you have known, used or sold Dr. M. A. Simmons Liver Medicine. 2nd State Diseases it cured. 3d Give names of those cured. 4th State the difference between its strength and action and the strength and action of J. H. Zeilin & Co.'s "Liver Regulator" and the Chattanooga Medicine Co.'s "Black Draught," both of which contain Woody Bulbs of Roots and Stems of Herbs, and have sold at about 6 cents per package, and should not retail at over 10 cents if consumers are not imposed upon, while Dr. M. A. Simmons Liver Medicine, made from the purest and most carefully selected Drugs, regardless of cost, with the Bulbs of the Roots and Stems of the Herbs by our secret process extracted and thrown away, cannot be sold at less than 25 cents. The reason of the difference is this:

On June 30th, 1893, the Supreme Court enjoined J. H. Zeilin & Co. from manufacturing and selling medicine under the name of "Dr. Simmons' Liver Medicine."

Zeilin's answer to our bill said, the medicine was designed as "cheap negro medicine for the negroes of the Mississippi Valley." And Zeilin's manager testified in the case, and Zeilin's advertisements said "that all the Liver Medicine they make is made by the same formula." What more conclusive evidence could there be that all their Liver Medicine is "cheap negro medicine"?

Again, the United States Court, in the Zeilin case at Knoxville, Tenn., enjoined the old proprietors of the article now called "Black Draught" from perpetrating fraud by using the words constituting our trade name, and "Black Draught" was not known till after 1876; yet they falsely advertise that it was established in 1840, and filch our trade by allowing their customers to untruthfully represent it as the same as our genuine article, they giving color of truth to the deception by publishing the picture of a Dr. Simmons on their wrapper, thereby associating their article with our Dr. M. A. Simmons' Liver Medicine, which he established in 1840, and every package of which has borne his picture since 1840.

On receipt of letter enclosing a recently taken Photograph we will mail you a $1.00 Package Liver Medicine (FREE).

McMILLAN-LEE CO., Wholesale Grocers, Birmingham, Ala.

THE FAREWELL DAYS.

There's a murmur in the maples, a whisper in the vines,
A subtle sense of sorrow in the shadow of the pines;
And the dream in music flowing has the echo of a sigh,
And ripples: "Summer's going. Goodby—goodby!"

The lily seems to languish, the rose is ghostly white;
The golden sunflower droops and dreams through the enchanted night;
The wind is singing round the eaves, and over with a sigh
That thrills and stills the listening leaves, it sings, "Goodby—goodby!"

"Goodby," the valleys echo; "Goodby," the hills repeat;
"Goodby," from dainted meadows, from gardens violet-sweet;
And bells in dells of twilight, beneath a misty sky,
Seem singing in their ringing: "Goodby—goodby!"

And all the hills sing: "Linger!" and all the valleys: "Stay!"
And all the gardens: "Rest thee here on jeweled beds of Hay!"
But a sigh is thrilling—filling the earth and weeping sky;
And love, with lips unwilling, kisses "Goodby—goodby!"

—F. L. Stanton, in Atlanta Constitution.

A WAVERING CHOICE.

BY JENNY WREN.

Alone in a large, comfortably, but somewhat sparsely, furnished room sat a young and beautiful girl.

Somehow she and her surroundings did not seem in accord. The carpet on the floor was somewhat worn; the paintings on the wall gave no evidence of a master's touch; the upholstery was gaudy, rather than refined.

But the girl herself was attired in the latest fashion. Her dress was at once quiet and elegant, and but that she wore no hat, and leaned back the little head heavily on the cushions of her chair, you would not readily have imagined that this room and the one adjoining made the only home Irene Hutton and her widowed mother could boast.

Nor would one suppose that on this very morning, in the small, white hands which lay in such seeming listlessness in her lap, was the momentous scale which should decide the question of her whole future.

It was the old, old question, after all—love versus money—and alternately it balanced with her thought. She looked about the room, and her lip curled.

"Sentiment under these conditions!" was her mental reflection. "And what else could Harry offer me? What would his life and mine become in the ceaseless struggle to make both ends meet? Have I not seen enough of this wretched, genteel poverty? Poor mother! All goes that I may make a creditable appearance before the world; and now no wonder she thinks it hard that, after the long struggle to gain me a proper footing in the matrimonial market, I look coldly upon the first presentable bid. What matters it that the man is older than my father would have been? What matters it that I can never love him? I should wear diamonds; I should ride in my carriage. The dear mother would once more be happy, and only Harry and I would be miserable. Harry and I! Two paupers! What voice have we in the world? None—none!"

And then, with all a woman's inconsistency, down went the scale in favor of money, and down went the little head in the hands which figuratively held it, in a great burst of sobs.

"You mean you've decided to give me up, Irene?"

No one could dream the speaker, Henry Armstrong, could look so grave or speak so sternly, as when, a few hours later, standing in the same room where Irene had fought her fight, he thus addressed her.

His eyes, blue as heaven, seemed fitted only for laughter; his mouth, though it was marked by no lines of weakness, held wonderful sweetness in its corners.

He was a man, young and handsome, well calculated to win and hold a woman's love; and yet the love of the one woman in the world which was precious to him was slipping from his grasp.

"I can't help it, Harry," she answered, wearily. "I am selling myself—you and I both know that; but it must be done, dear. I haven't a cent in the world to bring you, and, poor as I am, I love luxury, Harry; and it would break my heart to see you grow old and gray in trying to make the income, not enough for one, answer the needs of two."

"But we are both young, Irene. With the incentive of your love I will soon double my income. Besides, one of these days I shall have plenty—you know that."

"Dead men's shoes, Harry. We don't either of us want to count on that, and there's no reason why your Uncle Richard shouldn't outlive you. Besides, he may change his mind about making you his heir. It's very strange, rich as he is, he won't allow you a penny now, and as to the incentive of my love, dear, it's only in romance that it has the desired money-making effect."

The girl's words were harder than her heart; but her listener could not look into its depths to discover the bitter ache which lent them their seeming coldness, and his own love and misery made them the more difficult to bear.

"It all comes to this, then—that you throw me over?" he said.

And somehow the question, quiet as it was, held such repression of feeling that Irene looked up, startled.

"Oh, Harry, don't be too hard on me! Don't doubt that my love was true—is yet—though my heart is breaking!"

"Your heart!" he echoed.

And then he laughed, but such laughter! It was more painful than any demonstration of grief.

"Do stones break" he went on, "You have worn your mask well. Until tonight I never dreamed what lay beneath it. I wish you all joy in your new life! I shall doubtless live to congratulate myself that you tore off the mask in time. You have given me a cure for my folly, though for the moment it hurts. But the girl I loved is dead. In you I do not recognize her. Therefore I can say to you, not to her—goodby."

He bowed and left her, heedless of, or unhearing, the one choked utterance of his name, which was her sole reply.

Six years later, Harry Armstrong, little changed in outward seeming, paced up and down the deck of a steamer, three days out from Liverpool.

The weather had been stormy, and the passengers for the most part had been confined to their staterooms.

Only today a few of the ladies had ventured upon deck. One of these braver ones was seated at the extreme end of the ship, and around her was playing a little child—a lovely boy, four years of age.

"A young widow," thought Mr. Armstrong, stealing a cursory glance at the slender figure draped in heavy black.

A thick, blue veil quite concealed her face, and usually indifferent as he was to women, he felt a strange curiosity to see her lift it.

When he passed a second time he extended his hand to the child.

"Would you like a walk, my little man?" he asked.

The boy ran to him.

"May I take him, madam?" he inquired, courteously lifting his hat; but if he hoped to hear her voice he was disappointed.

She bowed assent. He could not know that underneath the veil great tears were rolling down her cheeks.

The child was little more than a baby, his hair hanging over his shoulders in flaxen curls, but all his prattle was of "mamma."

"Where is papa?" questioned Armstrong.

Up went the little finger heavenward, while a solemn look stole over the baby-face.

"As I thought," reflected the man, and he felt a singular satisfaction in having his suspicion verified. "I will hear her voice at least," he determined, and he walked back to where she sat. "Your little boy and I have become great friends," he said. "I am fond of children, and he has promised me we shall have many walks together."

"You are very kind," was the simple answer.

But Armstrong, as he heard it, grew deathly pale.

"Irene!" he said, as though the name burst involuntarily from his lips.

She instantly threw back her veil, but all trace of tears had disappeared, and only a smile was on her lovely lips as she extended toward him her hand.

"You won't refuse to shake hands with me," she said, sweetly. "I recognized you at once, Mr. Armstrong, and I also recognized that, on the narrow confines of the ship, avoidance of each other would be impossible. Here, at least, we may be friends?"

Not for six years—not since the moment he had left this woman's presence—had Harry Armstrong's heart beat as madly as in this hour; but her composure helped his.

He let his fingers close over hers with no warmer pressure than in unexpectedly meeting any chance acquaintance; but the warmth had gone from his tone, as he replied:

"Friends always, I trust. Six years have changed you very little, Mrs. Bacon."

A red flush rose to her cheeks as he spoke her name, and she answered hurriedly, as though some embarrassment possessed her.

"So my rival is dead," mused Armstrong, when he found himself again alone. "And the old madness is upon me. We both stand now on equal ground at least. Does she know? I wonder! Has she heard that one year after the day she jilted me I came into my fortune? Not a long waiting would it have been for either of us. Perhaps, as John Bacon's widow, she will endeavor again to inveigle me into believing her true. Ah, one lesson such as I have had lasts a man a lifetime. And yet—oh, God, why can I not forget her? Before I knew who she was the old attraction drew me toward her. After I leave this ship I pray that we may never meet again."

Perhaps because Harry Armstrong really was so earnest in this prayer he concluded he must make the most of the present. Perhaps it was the old story of the candle and the moth, but certain it was that day after day found him beside his old love.

They never spoke of the past. They never resurrected the dead. Their hands never met even in a "good morning." Yet they laughed and talked as though each did not feel the mad heart-beats every instant they were together.

It was the last day out. Irene and Harry were alone, the child playing at their feet, when a lady approached them, leaning on the arm of her maid, pale and wan from recent illness.

"I concluded the air might do me good," she said, languidly, as Irene quickly arose and assisted her to a chair, then turned and presented her to Mr. Armstrong.

"You are my little boy's friend," said the stranger, extending her hand gracefully. "He has talked so much of you—and Miss Hutton tells me you are an old friend of her own."

From one to the other Harry Armstrong looked in blank surprise.

He stammered some reply illy according with his usual ease, then, standing before Irene, he offered her his arm.

"Will you take a turn on deck with me, Miss Hutton?" he said, emphasizing her name.

She rose instantly. They walked to the other end of the ship, when he paused and confronted her.

"Irene, now tell me what it all means," he said.

"Only that I am Miss Hutton still. I—I saw your mistake and encouraged it, hoping you might never know the truth. My mother died and I was penniless. I am companion to the lady to whom I just presented you and governess to the little boy."

"Why did you not marry?"

"You have no right to question me."

"I assume the right, and, by the heavens above, you shall answer me."

"I—I could not. Oh, this is cruel, Mr. Armstrong! Yet perhaps I deserve that you should know the truth. I could not perjure myself at God's altar. Loving one man, I could not swear to love and honor another. I chose poverty, loneliness and my own self-respect."

"And the man you loved—you have ceased to love him?"

She made no answer, but her head bowed lower, and he could see the great tears rolling silently down her face.

"Suppose he could offer you today little more than he offered you then, Irene, what would your answer be?"

"Harry, Harry, don't mock me," she cried. "You cannot know the emptiness of my life or you would not hold out to me the semblance of its rich fullness. I deserve my fate. Let me accept it."

"Only in accepting me, Irene. Ah, my darling, it was your true self I loved, after all. You strove to wear the mask and could not. Heaven has indeed been kind to us, my love. I came on this ship a lonely, desolate man, though fortune has smiled upon me, and I can offer you, Irene, a home worthy of you. The old days of toil and struggle have ended; but after all they were the rich days, dear—rich in hope and rich in love. I have been poor ever since in all that makes life's real wealth—until tonight. Irene, you have loved me always?"

And over the wide ocean the winds swept and whispered answer. "Always."

And into two human souls crept perfect peace.—Saturday Night.

St. Elias Has Defeated Famous Climbers.

Four important attacks have already been made on the Elias peak: Lieutenant Schawaka's in 1885, which attained a height of 7200 feet via the southwest flank. This was futile enough to stir the blood of all good members of the Alpine club, for Elias is 18,000 feet high—not therefore among the very first giants, but grisly enough because of its Arctic condition. An Englishman named Topham went the Lieutenant 4000 feet better in 1891, and in 1893 Mr. Russell tried the northwest slope. The first effort failed, but next year he came back to the same starting point, and had climbed about 14,500 feet, when the weather suddenly thickened and the avalanches thrust him back. It is this northwest route that the Prince Luigi Amadeo, Duke of Abruzzi, and his comrades will probably take. On his staff, which includes four experienced Alpine guides and some Americans, is Vittoria Sella, the fearless Italian mountain climber; he takes with him a camera, with which he does wonderful work in reproducing impressive scenes at great altitudes, and in giving wonderfully faithful representations of the glaciers and their action on the earth crust.—Scribner's

Now is the time to secure a "foot-hold" in Thorsby, where you will from the start enjoy the benefit of such privileges that only a colony like Thorsby can offer to Home-seekers. . . . . .

ON OCTOBER 5TH AND 19TH

You can buy one-half rate EXCURSION TICKET, one way or round trip, to Thorsby, Ala Should your Depot Agent not be posted, call for a ticket to Strasburg, Ala., which is the old station, only 1-2 mile south of Thorsby.

A WORD TO THE HOME-SEEKER WITH MODERATE MEANS.

(a) Suppose you have a home in some Northern village or town, suppose this home has cost you $600 and you have it all paid for, suppose you have one or two hundred dollars in the bank or invested in some other safe way, and a job that brings you $40 per month. Very well! To you we will say, stay where you are and keep on, earn your monthly salary and invest your surplus money in a vineyard at Thorsby on the installment plan. In course of two or three years you will have it all paid for and have used only a little surplus money at the time of purchase and $10 per month after that.

For cost and gain of a vineyard three years old we refer you to table below.

(b) Suppose you have a home worth $500 to $800 and have it all paid for, and, like so many thousand of people nowadays, are out of employment; suppose you have a family to support, and for that reason are obliged to incumber your home. To you we will say—sell for $300 or more at first opportunity, and buy a vineyard in Thorsby on the installment plan; you can meet your obligations and have a little surplus money for improving balance, 8 acres of your vineyard, and raise enough sweet potatoes, sugar-cane and vegetables of various kinds to support your family until you realize the income from the grapes.

(c) Suppose you are a renter of a farm in the North and have tried for years to lay up enough money to buy you a home of your own, how have you succeeded? You have our sympathy, and besides, we will urge you to settle your mind on one thing. Turn all into money you can and seek a home in the South, where you will find life worth living, and can in the course of a few years have a farm of your own in the midst of your own people and enjoy the benefit of the best climate on earth, in a section of a country where you can raise any products used to in the North in larger quantities and at higher prices, where you can work every working day in the year and where a Northern town offers you a Home Market for all your products.

Send for our improved Farm List and you will be sure to find something better than what you have at present. Very respectfully,

THE CONCORDIA LAND AND IMPROVEMENT ASS'N.,
THORSBY, Chilton County, Ala.

The Expense and Income of a Vineyard after Three Years.

10 acres fruit land with 1000 grape-vines planted	$400 00
Fencing	30 00
Cultivating two acres, $6.50 per acre, for three years	39 00
Trellis for two acres—second year.	50 00
	$519 00
The income 3d year, 1000 vines at 25 lbs. per vine at 3c per lb.	$750 00
Deduct Expenses	519 00
Net Gain	$231 00

besides your vineyard is paid for and the income will increase the older the vines, and nothing has been allowed for the eight acres, which will easy feed a family the year round.

See what a Grape Grower here says of his Scuppernong Grapes:

Four years ago I started one acre (50) vines of Scuppernong grapes and they have from the start proved to be easier raised than any other fruit in the South. What persuaded me to plant this fruit was the results from a few older vines in this neighborhood and especially one that had no care whatever and bore grapes fifteen years without missing a year, and is still healthy and bearing. On one single vine this year, I picked first one bushel for table use and preserves and out of what was left on this vine was manufactured 21½ gallons fine wine, which sells in the market at $1.50 per gallon.

I am now living near Jemison, 3 miles from Thorsby, and after a winery and canning factory are once located at Thorsby, I shall consider my vineyard worth as much as any 160 acre wheat and corn farm. I am a native from the North and extend all thrifty people a hearty welcome.

P. W. SILSBEE.

Jemison, Ala., October 1, 1896.

DUN'S WEEKLY REVIEW.

GOLD IMPORTS HAVE BEGUN DIRECT FROM ENGLAND AND FRANCE.

Wheat Has Gained a Fraction for the Week---Wool Sales at Boston Have Decreased---A Decrease of Failures, both in the United States and Canada.

R. G. Dun & Co.'s weekly review of trade said in its issue Saturday:

Gold imports have begun direct from England and from France, besides the arrival of $4,000,000 at San Francisco from Australia for wheat exported. The gold received there and received from England amounts to $6,500,000 in two days and the advance of its rates by the Bank of England to 2½ per cent. seems unlikely to check the movement, in view of heavy merchandise balances due to this country and a rise in the rate of interest here. The August excess of merchandise and specie exports over imports was not far from $42,000,000 and the September excess will even be larger, unless shipments of gold are considerable. Merchandise exports from New York in three weeks of September have been 15.3 per cent over last year's and imports 13.7 per cent less and like changes on the whole trade for the month would result in net exports of $53,000,000 merchandise, besides silver.

Produce markets have been uncertain, closing a fraction higher for both wheat and corn, while the decline in cotton continues. With 8½ paid for spot at the end of the month of August, cotton has declined 1½c, or 18 per cent., in less than four weeks, in spite of a remarkable revival of manufacture. Fever in some Southern cities has not been largely influential and the main factor has been a general impression that estimates are as misleading as they were when the yield was the greatest on record.

The corn estimate most credited by the trade is only 1,750,000,000, but is coupled with figures tending to show a surplus from the lost crop of 4,000,000 bushels over ordinary consumption. Were this quite believed the price would not be rising, although exports continue heavy, in three weeks 9,927,849 bushels against 6,150,187 last year. Wheat has gained a fraction for the week, while Atlantic exports, flour included, for the week have been 12,498,181 bushels, against 6,183,743 last year. Western receipts exceeds last year's and foreign estimates now agreed in making the probable requirements from this country over 100,000,000 bushels greater than last year. The official ending of the Western coal strike adds many thousand men to the working force in the mines and other in other bituminous coal. The anthracite coal strike has substantially ended, and no extensive labor disturbance is threatened. The output of coke is now 125,000 tons and the price is also advanced.

Some branches of the iron and steel industry are clearly no longer able to keep up with their new orders. Others are very fully employed for some months ahead and with all the demand is increasing. Heavy buying has raised Bessemer pig at Pittsburg to $10.50 and grey forge to $9.50, with actual sales of 1,000 tons Southern pig in the Mahoning valley for $8.75 at Birmingham. Billets are quoted at $16.25 and $23 has been refused for wire rods. The structural work is behind orders, tin plate mills are hindered by failure to get sheet bars delivered fast enough, plate and sheet mills find heavy demand everywhere and bars are in great demand for cars at the West, with vastly improved demand and a shade better prices, at least. The average of iron and steel products from the lowest point is 8.2 per cent.

Wool sales at Boston have decreased ½, but manufacturers are still unable to find profits in goods with wool at present prices. Reported sales of wool are more than double those of the most prosperous years, but rise in prices renders the future more doubtful, except for manufacturers having heavy supplies laid in. The cotton mills are doing a large business, although recent buying of goods has naturally decreased of the recent rush.

Failures for the week have been 209 in the United States, against 215 last year, and 28 in Canada, against 30 last year.

A man is always looking for a new brand of smoking tobacco, and a woman for a better style of cooking-stove.

LOVE'S MISSION.

Love is the centre and circumference,
The cause and aim of all things; 'tis the key
To sorrow and joy, and the recompense
For all the ills that have been or may be.

Love is the crown that glorifies, the curse
That brands and burdens; it is life and death;
It is the great law of the universe;
And nothing can exist without its breath.

Love is the impulse which directs the world,
And all things know it and obey its power;
Man, in the maelstrom of his passions whirled;
The bee, that takes the pollen to the flower.

The earth, uplifting her bare pulsing breast
To fervent kisses of the wooing sun;
Each but obeys creative's love's behest
Which everywhere instinctively is done.

Love is the only thing that pays for birth,
Or makes death welcome. Oh, dear God, above
This beautiful but sad perplexing earth,
Pity the souls that know—or know not—love.

ELLA WHEELER WILCOX.

UNCLE JUDSON'S CRUST.

A dapper little man, with a silky yellow mustache which curled up jauntily at the ends, came out and closed the door softly behind him.

"Mr. Hardacre says he will see you in a few minutes. Will you be seated?" and the little man turned and began to rustle the papers on his desk as if he were very busy indeed.

Willis Everett dropped down in a chair close to the railing, fussed with his hat and watched for Judson Hardacre's door to open. He thought it was a rather cold reception for an uncle to give his nephew, and yet his mother had warned him what to expect.

"Your uncle Judson," she had said, "is very much devoted to his business. He has never in his life had time to give to his friends, and people say that he is crusty and hard-hearted, but I am sure that my brother Judson has as kind a heart as any man living, if only you can reach it."

Willis had come to his uncle as a last resort. He had just finished his junior year in college, and he knew that the completion of his own course would depend on his earnings during the summer. His father had been able to supply him with money, although not so liberally as he really needed for the first three years of his college life, but hard times had ruined his business, and it was all he could do to pay rent and grocers' bills, not to mention the provision of clothing for the younger children.

"I want to see you finish up with your class," he had said to Willis, "but it is out of the question for me to furnish the money. You will have to get out and see what you can do for yourself."

And Willis had tried his best to get a position. But he found that he was compelled to compete in this struggle for an opportunity to make a living with men older and more experienced than himself, who knew better what the employers required. One man said he would take Willis on trial, but he couldn't pay him anything for a few months; another said he had a position, but he wished to give it to a man who intended to remain with him permanently and work up in the business. And so they all put him off, and now he was watching for the door of his uncle's private office to open.

He had not seen his uncle in several years. He remembered the last meeting without any exuberance of pleasure. Uncle Judson had called on his mother one afternoon, and he had come in warm and excited from a tennis game.

"What's that thing you have got in your hand?" his uncle asked, after his mother had presented him.

"Why, a tennis racquet."

"Sarah, can't you teach your children to go into better business than dwaddling around in white trousers with a toy bat?"

Even as Willis thought of it now, he felt his cheeks tingle with mingled mortification and anger.

"Mr. Hardacre is ready to see you," said the dapper little man.

Willis slipped quietly into the private office. He saw his uncle sitting at a handsome roll-top desk and glaring at him from under his shaggy gray brows. He had a square, lean face, with a determined chin and his hair was coarse and gray.

"Well, sir."

"I am in search of work," said Willis, somewhat faltering; "father can't supply me with money for my last year in college and unless I can earn it I can't go."

"That's just what I told your mother before she married Everett. Now that he has got a family of boys he can't educate 'em. But she wouldn't listen to any of my advice."

The hot blood surged into Willis' face. He couldn't bear this reference to his hard-working, noble-minded father, who had sacrificed everything in order that his boys might have their schooling.

"My father has done the best he could," Willis said, hotly, "and I can't listen to anything against him. If you have nothing I can do"—and Willis turned and started toward the door with his shoulders thrown back.

"There, there," said his uncle, with the trace of a grim smile curling his lips; "we'll let that drop. You say you want work—what can you do?"

"I'm just out of college," Willis said, "and I'll have to do 'most anything I can get to do."

"I suppose you are well up in tennis and football and leaping the pole, and all that sort of thing."

"Yes, sir," responded Willis, tempted again to turn and leave the room.

"Well, I don't happen to have any of those things in my business. You know, I am engaged in the manufacture and sale of lumber. It's very prosaic—you can't wear white trousers—might get soiled."

Willis kept his temper, although every one of his uncle's words stung him to the quick.

"I understand all that," he said, "and I am willing to do anything from wood-sawing up that will enable me to save a little money."

"Wood-sawing, eh?" said Judson Hardacre, and the grim smile again curled his lips. "Let me see your hands."

Willis held out his hands—they were certainly rather small and white, although tennis playing had worn a few hard callouses on the right palm.

"I thought so," said Uncle Judson: "tennis hands, eh?"

"They may be soft now, but I assure you, Uncle Judson, I am not afraid of any kind of work which will help me finish my course."

At the sound of the unfamiliar words, "Uncle Judson," Judson Hardacre glanced up sharply, and then he said rather more gruffly than before:

"Well, I'll take you at your word. Times are dull, and I haven't much of anything else besides chopping and sawing."

Judson Hardacre pressed a button and a tall, quiet man with a pen thrust behind his ear stepped in to the room.

"Calkins, this is Willis Everett. He will go to work to-morrow morning at the Edwardsburg mill at $30 a month. He will board at the company's hotel. Have him report to Matthews. Let me know each week how he is doing."

"I'm very much obliged to you—" Willis faltered, hardly realizing that at last he had found a job.

"Don't thank me yet," said his uncle, almost gruffly; "you may not want to after you have been working for awhile."

Willis went home in high spirits.

"Mother, mother," he called; "I've got a job at last—and a job from Uncle Judson, too."

That afternoon Willis packed his satchel and took the train down the valley for Edwardsburg, where the Hardacre mills were located. It was about twenty-five miles from home, and he had never been in the place except on his bicycle, and he hardly knew where the mills were located. But he found them easily enough, and with them the foreman, Matthews—a big, red-faced, stoop-shouldered giant with a voice like a foghorn, Matthews read the letter, and then glanced at Willis keenly and half contemptuously, Willis thought.

"Well," he said; "be on hand at 7 o'clock to-morrow morning and I'll put you to work."

Willis found a place in the company's boarding house—a single bunk in an attic room with four other men. The walls were dingy, the floor was covered with coarse matting and the bedding did not look any too clean. One little cobwebby window commanded a view of a vast heap of sawdust and slabs. Supper was served on a long table covered with oilcloth, and the tea was brought in by men waiters who laughed and joked one another. The workmen came in with their sleeves rolled up, and ate almost in silence.

In the morning Willis was set to loading slabs from the waste pile into a box car which stood on a siding near at hand. One man handed them down from the pile, a second tossed them into the car and a third corded them up. Willis was given the easiest job—that of piling—but he was compelled to keep up with the other two. The slivers stuck into his soft palms and the jagged bark bruised his arms. Besides that it was a hot June day without a breath of air stirring in the car. For an hour or two he stood it pretty well, but before noon he began to feel that he should drop in his tracks, but he was determined never to give up. He was a cog in the machinery of the big mill, and he proposed to do his duty until he broke down. Never was sweeter music than the sound of the noon whistle. He wearily dumped the last slab and staggered into the dining-room of the boarding house. At first he was too tired to eat, but he managed to wash away some dinner, and by 1 o'clock he felt better. But he knew he never could last through the long afternoon at the same work, and it was with a deep feeling of relief that he heard Matthews order his crew from the car-loading to the sawdust chutes. Here he was required to stand knee-deep in soft sawdust at the end of the chute, where the waste of the mill came blowing out in a dusty cloud, and shovel for dear life to keep himself from being buried. It was hot, wearing work, and by the time the afternoon was finished Willis was thoroughly discouraged.

But he was naturally vigorous of body, and, although his uncle had made fun of his tennis and football he knew now how much good strength they had added to his muscles. He awakened the next morning lame in every joint and with his hands almost raw with blisters.

"But I'll stick to it," he said, gritting his teeth; "I've got to get through college next year."

That day he was paired with a big, red-bearded Scotchman, and they were assigned to the work of trimming up some timbers with a long cross-cut saw. For a few hours Willis bent bravely back and forth. It was fearfully hard work, particularly because he did not understand the science of getting the greatest results from the least effort. Toward noon the big Scotchman, who had been watching him keenly, found that the saw would need filing. Willis never felt more grateful for anything in his life, and in the afternoon he was enough rested to continue the work.

And so it went on, day after day. Before the end of the second week Willis grew somewhat hardened, and although the work was still very hard, he did not grow painfully exhausted. He also found that the other men were good-hearted, kindly fellows and always ready to help him where they could. Before the middle of July Matthews, the big foreman, had given him the place of checker and scaler in the temporary absence of the regular checker. This was much easier work, and Willis did it with a quickness and thoroughness and kept his accounts so accurately that Matthews more than once grunted his satisfaction.

About this time Willis saw his uncle for the first time. Judson Hardacre came around with the superintendent, examining the work of the mill, and he must have seen Willis as he stood with his pad and pencil where the lumber shot from the whirring saws, but he gave no sign of recognition. It hurt Willis' sensitive nature, but he only set his teeth the harder.

"I'm making the money," he said to himself, "and I'm going back to college."

None of the men knew that he was Judson Hardacre's nephew. He had said nothing about it, preferring to stand on his own merits, and his uncle had been equally silent.

About the middle of September Willis resigned his job, much to the regret of the big foreman, who had come to like the clever, prompt young man.

"When you try to get a job somewhere else," he said, "just let me know and I'll give you a good recommendation."

It was said in a blunt, honest way, and no praise that Willis ever had received had sounded so sweet in his ears.

"By the way, Everett," said Matthews, as he paid over the last salary check, "Mr. Hardacre wished me to ask you to call and see him as soon as you get back to town."

Willis wondered why his uncle should care to have anything to do with him, but he called the next afternoon. He had grown brown of face and his hands were calloused and muscular. When he came in Judge Hardacre said, gruffly

"Well, how much money have you saved this Summer?"

"Nearly $75."

"Is that enough to take you through college?"

"No, sir; but I shall start with it. Father thinks he can help me toward the end of the year."

"How did you like your work?"

"Parts of it I liked very well, Uncle Judson, but it was too hard for me at first."

At the words, "Uncle Judson;" Judson Hardacre looked up sharply. It was not at all usual for any one to address him as a relative, and somehow the hard lines of his face softened and his shoulders shook a little, as if he were laughing somewhere inside.

"Well, my boy," he said, "you've showed yourself pretty plucky this summer. You've got the genuine Hardacre blood in you. Let me tell you, I've watched you a good deal more closely than you thought, and I like you, sir. Yes, I like you."

He held out one hand, and Willis, flushing red and then paling again with surprise and pleasure, grasped it warmly.

"Let's be friends," said the old man; I haven't many of 'em, and I need a good one," and his voice took on a half-pitiful tone. Then he changed the subject.

"Here's a check for $400. Get your last year of schooling and don't scrimp on the expenses. If you need more let me know. And when you get through come back here. I've got a good place for you in my office, where you will have a chance to work up."

Willis stammered his thanks and stumbled, half-dazed, toward the door way. His uppermost thought at that moment was:

"How happy my father will be."

As he reached the door his Uncle Judson called after him:

"And, say just go ahead and play all the tennis and football you want to."

Uncle Judson's crust was broken.

CURIOUS CUSTOMS AND MANNERS

Some Very Odd Practices That Are Observed in Different Lands.

It is lawful for any person to kill a grave robber in China the instant he is caught in the act.

Japanese workmen wear both in their caps and on their necks an inscription stating their business and the name of their employers.

The Chinese Government levies a regular tax on beggars and in turn gives them the privilege of begging in a certain district.

In Albania the men wear petticoats and the women trousers. The women do all the work and the men do all the heavy standing round.

Once every twenty years the ceremony of "Comparing the Standards" is gone through with in England. A part of the wall of the House of Commons is torn away, and the two originals of weight and measure, a small cube of platinum weighing exactly sixteen ounces and a bronze yardstick carefully adjusted to thirty-six inches are taken out and compared with the same thing used in the Government Office of Weights and Measures. These comparisons are made in the presence of a company of gentlemen appointed for the purpose, among whom is the president of the Board of Trade. When the important ceremony is over and the weights are found to be accurately adjusted, the two precious pieces are again walled up, not to be disturbed again for twenty years. The last time they were taken out was in April, 1892, so it will be 1912 before they will be wanted again. Similarly at Washington, a standard bronze yard is let into the foundation walls of the Senate wing of the Capitol.

In German countries the "Dutch treat" prevails, and if a gentleman invites you to dine with him at a restaurant he expects you to pay for what you eat.

In Greece they make two five-drachma bills by tearing one ten in two.

In Arabia they clean their teeth with a "tooth-stick"—a piece of root with the end frayed into a brush. Abraham was the first man to use the tooth-stick, according to the tradition.

In Russia a person must pass an examination to show that he has good command of the machine before he is allowed to ride a bicycle. Even then he must supply his machine in several places with a big tag bearing his number, as if it were a public cab. Moreover he must pay fees to the government for his fun.

In Germany if a traveller stays more than a month in a town the local authorities make him pay a tax.

In Paris a house-owner must pay a tax on every window in his house.

Let Us be Broad.

A difference of opinion exists, more or less, when all questions are considered, between all men. And disagreements are apt to be the result, leading ultimately to dissensions. Let us try to avoid it.

Let us be patient. Let us not be too dogmatic in our opinions, for fear we may be guilty of that of which we may accuse others—of erring. Let us appeal to reason and be patient with others when they do not admit its logic. A man seldom if ever comprehends his error at once; nor as quickly admits it. But if you are not dogmatic, the truth in what you have said may, and probably will, occur to him afterwards.

And when discussing with others do not be sensitive. Put a kind interpretation on what is said; and if you cannot give it such a construction as that, then feel a compassion for the man and do not hold him responsible. Treat him as one who is seeking the truth but embarrassed by prejudices. If both are charitable both will grow stronger and both will learn.—Patriot's Bulletin.

Son of a Siamese Twin.

W. L. Bunker, of Milan, Kan., who is said to have raised the largest wheat crop in Sumner County, is a son of one of the famous Siamese twins. When the twins had become rich they settled in North Carolina, bought two large plantations adjoining each other, and married two sisters. They divided their time between the two places, spending a day and a night on each alternately.

About 1880, ten or twelve years after the death of the twins, two of their boys came West and settled near Milan, where they still live.

W. L. Bunker has a large farm well stocked and fenced, and is wealthier than the average Kansas farmer. He is proud of his lineage, though he seldom mentions it. He is now about forty years old, and says he remembers well how the twins went about from one plantation to the other. He has a family of several children, and the home suggests a quiet refinement not often surrounds in the country place.

The Last Bugle-Call.

The St. Louis Globe-Democrat has discovered that the last summons to battle in the Civil War was a bugle-call to charge, given by Nathaniel Sisson on the field of Appomattox.

Mr. Sisson enlisted when the war broke out, and at its close was a bugler under Custer. His regiment was in the saddle before day on the eventful eighth day of April, and began to skirmish with the enemy. An hour later they reached the position from which the memorable call to charge was blown.

The next moment two of General Gordon's aids rode out in advance of the column. One of them carried a towel fastened to a musket. General Gordon stated afterward that the towel was soiled and ragged; but, old and torn as it was, it carried a message of peace to the whole country.

General Custer, seeing this flag of truce, halted his charging column, and rode alone to the tent of the Confederate General. When he came out he said to General Kapehart, uncovering his head, "General Lee is treating for capitulation."

The war was over.

The men nearest to him caught the quiet words and burst into a frenzied cheer. They were men who had fought bravely, but who thanked God now that the war was ended. The cheer swept down the valley, and the hills shook with the shout—which meant peace.

Let us hope that Nathaniel Sisson's bugle-call to battle on that April morning was the last that shall ever summon brother to charge against brother in this land of ours.—Youth's Companion.

A Wonderful Pump.

A pump built for the stamp mills of the Calumet & Hecla Company is considered one of the most marvelous pieces of mechanism ever put together. Without crowding in the least and with as much apparent ease as one would work an ordinary cistern pump, this great engine delivers 2,500,000 gallons of water in twenty-four consecutive hours, and does this continuously. It is almost noiseless, so perfect is the adjustment; indeed, persons standing just outside of the building can scarcely hear its beating. Standing inside by the great pit from which the water is drawn almost the only sound is the in-rush of the water as the pump lifts more than a thousand gallons at every stroke. This immense piece of machinery is engaged in supplying water to the works, where 5,000 tons per day of conglomerate rock are pulverized into sand, fine enough to be swept away by the rush of water. The nicety of adjustment may be imagined from the fact that the current of water lifts and sweeps away the sand, but does not disturb the copper that settles to the bottom of the pans.

The Chilkoot Indian Packers.

"At Dyea is a small trading post, kept by a white man, around which is gathered a village of Indians or Siwash, belonging to the Chilkoot tribe. They are by no means ill-looking people. The men are strong and well-formed; the women (naturally, when one considers their mode of life) are inferior to the men in good looks. These women have a habit of painting their faces uniformally black with a mixture of soot and grease, a covering which is said to prevent snow-blindness in the winter and to be a protection in summer against the mosquitoes. Some have only the upper part of their faces painted, and the black part terminates in a straight line, giving the effect of a half mask. At the time of our arrival the Indians were engaged very busily in catching and drying small fish. This fish is very oily, and when dried can be lighted at one end and used as a candle; and for this purpose it is stored away against the long winter night."—Outing.

A Cow With a Wooden Leg.

Director-General E. C. Lewis, of the Tennessee Centennial, who owns a farm at Sycamore, Tenn., had a very valuable Jersey cow that in some way or other broke her left hind leg. Because of certain feelings of sentiment, he was very loath to shoot her if it could possibly be avoided.

Major Lewis called in a surgeon and had the leg amputated, and then a carpenter carefully fitted a wooden leg to the stump. It healed readily, and in a very short time the cow could get around as well as any animal on the place.

Peggy lived for several years after losing her leg and died only a month ago. She would, when things did not go just right, stand on her three good legs and kick everything within reach with her artificial member.

The South as a Coffee Field.

Mr. J. C. Huffman, of Eighty-eight, this county, has just harvested and roasted some coffee which was grown on his farm near that place, and says it is better than the best. He secured the seed from parties in Garrard County, and planted it according to directions sent with the coffee, and says he can raise it as easily as anything that grows on the farm. He says he can produce it for 2 cents a pound, and will put in a good crop of it next year.—Glasgow (Ky.) News.

THE FARM AND GARDEN.

ITEMS OF INTEREST ON AGRICULTURAL TOPICS.

Timothy on Sandy Soil—To Keep Ferns Healthy—Bees and Fruit Trees, Etc., Etc.

TIMOTHY ON SANDY SOIL.

Timothy grass is often sown on sandy soil, not because it is specially adapted to it, but because sandy soil is not easily seeded with anything and timothy, which can be sown late in summer and all through the fall, succeeds rather better than the grasses and clovers sown in spring. All sandy soils are deficient in mineral plant food. Timothy does not require much, either of phosphate or potash, until its seeds begin to form. It does not need one-quarter as much of these minerals or of lime as does clover, and as its roots run near the surface, it is manured chiefly by the ammonia gathered by falling rains in their passage through the air. When once seeded with timothy, the grass will remain in sandy soil until it is starved out, and mosses take its place.

TO KEEP FERNS HEALTHY.

To keep ferns and palms in good order it is necessary to give them plenty of water. Rubber trees require a great deal of moisture. These plants should not be given cold water. The water should be warmed to about the temperature of the room. The leaves of indoor plants should be washed once a week. There is no better place to do this than the bath tub. Let the cold and warm water run until the right temperature is reached. Set the plants in the tub and water them with the tepid water, finishing off with a sponge bath from the water in the tub. Then let the water off, allow the pots to drain and wipe and restore to their places. Such treatment will keep indoor plants in excellent condition.

BEES AND FRUIT TREES.

At one of the experiment stations, says the Florida Times-Union, it was decided to try an experiment to determine the value of bees to fruit trees. Two peach trees were removed to a greenhouse and a colony of bees was moved in and the trees were forced to bloom at midwinter. One of the trees was so protected as to prevent the bees from getting to it, while they were allowed free access to the other. During the time of bloom the bees worked industriously on the flowers of the tree to which access was had. As the season advanced, the fruit on both trees set and grew without appreciable difference until stoning period, when the fruit dropped from the tree that the bees had been kept away from, while that on which they had fed held its fruit until ripe.

CROWDING THE FOWLS.

Two points in favor of egg production are food and sleep. If the fowls are crowded at night they will not rest, hence the poultry-house that contains more fowls than the number for which it is adapted is a very expensive building. Too much economy of space is a fault frequently found. The tendency is to allow too much food and too little room. The feeding of grain in summer is detrimental, because it creates heat or is stored as fat. Even when meat is given every ounce of fat should be removed. When the roosts are arranged they should be low and as near the floor as possible. If near the roof of the house the heat is excessive at night, as the sun warms a low building in summer beyond the degree when it should be comfortable; and as heat rises, the warmest place is near the roof, an overcrowded house being almost a death-trap to the fowls.

CAULIFLOWER.

Cauliflower, the aristocratic cousin germain of the plebeian cabbage, is a delicious vegetable and one appreciated by many who cannot digest the coarser cabbage. It is more difficult to grow than cabbage, and advertises its aristocratic breeding by a good many whims and eccentricities. The seed is usually started in a cold frame about a month before the time to set the plants. It is too late to start seeds now, of course, but those who have a few growing may be glad to learn that mulching is advocated as a valuable aid in securing the moisture which is essential to a good growth. For, like celery, the cauliflower is "a hard drinker." It wants moisture above and below, and when it is about to "flower" it must have water or it will quite refuse to do its duty by the expectant consumer. One or two thorough drenchings are necessary at this time, and unless it rains at an opportune moment, the cistern must be called into use.

Many fail with cauliflower because of not being aware of the above, and from not understanding that the cauliflower, unlike the cabbage, thrives best on commercial instead of barnyard manures. A most excellent formula for a commercial fertiliser requires 200 lbs of bone dust, 60 pounds of nitrate of soda and 60 pounds of

The Last Bugle-Call.

The St. Louis Globe-Democrat has discovered that the last summons to battle in the Civil War was a bugle-call to charge, given by Nathaniel Sisson on the field of Appomattox.

Mr. Sisson enlisted when the war broke out, and at its close was a bugler under Custer. His regiment was in the saddle before day on the eventful eighth day of April, and began to skirmish with the enemy. An hour later they reached the position from which the memorable call to charge was blown.

CROWDING THE FOWLS.

Two points in favor of egg production are food and sleep. If the fowls are crowded at night they will not rest, hence the poultry-house that contains more fowls than the number for which it is adapted is a very expensive building. Too much economy of space is a fault frequently found. The tendency is to allow too much food and too little room. The feeding of grain in summer is detrimental, because it creates heat or is stored as fat. Even when meat is given every ounce of fat should be removed. When the roosts are arranged they should be low and as near the floor as possible. If near the roof of the house the heat is excessive at night, as the sun warms a low building in summer beyond the degree when it should be comfortable; and as heat rises, the warmest place is near the roof, an overcrowded house being almost a death-trap to the fowls.

CAULIFLOWER.

Cauliflower, the aristocratic cousin germain of the plebeian cabbage, is a delicious vegetable and one appreciated by many who cannot digest the coarser cabbage. It is more difficult to grow than cabbage, and advertises its aristocratic breeding by a good many whims and eccentricities. The seed is usually started in a cold frame about a month before the time to set the plants. It is too late to start seeds now, of course, but those who have a few growing may be glad to learn that mulching is advocated as a valuable aid in securing the moisture which is essential to a good growth. For, like celery, the cauliflower is "a hard drinker." It wants moisture above and below, and when it is about to "flower" it must have water or it will quite refuse to do its duty by the expectant consumer. One or two thorough drenchings are necessary at this time, and unless it rains at an opportune moment, the cistern must be called into use.

Many fail with cauliflower because of not being aware of the above, and from not understanding that the cauliflower, unlike the cabbage, thrives best on commercial instead of barnyard manures. A most excellent formula for a commercial fertilizer requires 200 lbs of bone dust, 60 pounds of nitrate of soda and 60 pounds of kainit or its equivalent in other potash salts.

This is sufficient for one-third of an acre and is to be applied as a top dressing and worked into the soil before applying the mulch. If only a few plants, a couple of hundred or so are raised, give about two ounces of the fertilising compound to a plant. Cultivation for both cauliflower and cabbage should be shallow.

No one need go without either of these vegetables if these simple directions for their culture are followed.

HOW TO START WITH HOGS.

We have received numerous inquiries from young breeders throughout the country of late asking our advice as to the advisability of starting the business, and how they shall go about it to build up a herd. This is a subject upon which we do not wish to give advice, for the reason that very much of the success of the swine breeding business depends upon the adaptibility of the breeder to the business. Where one breedr will succeed and make money out of the business, another, under like conditions, will totally fail, and this is, perhaps, wholly due to his liking of the business or his judgment in carrying on the business. We do not know of any time in the history of pure bred swine breeding when there was so favorable an opportunity for young men to work into the business. But it must be done in a careful, judicious way, and expansion must come with maturing judgment. There is a constantly increasing demand for the best sort of pigs that experienced breeders can raise, and we think that the demand for them will not decrease for many years to come. Our first advice would be to all who wish to enter the business to post themselves up well as to the details—not only as to the proper handling and management of the old and the young stock, but as to the breeding of popular families, and getting into line with such stuff as there will likely be a demand for. There would be just as much reason in a manufacturer loading up his warehouse with a lot of goods for which he anticipated a demand after awhile, but for which there was no present call, as there is for a breeder to raise uncalled for stuff. A breeder must produce just such things as the buyer wants, and if the taste of the buyer changes year after year the breeder must change with him. It is all right in sentiment to educate the buyers up to what you have to sell—if you can do it, but many have found this process up-hill work.—Prairie Farmer.

POULTRY NOTES.

Low roosts are what you want.

Young ducks will beat broilers.

Bantams would interest the boys.

When the chicks are out burn the old nests.

The poultry business is very far from overdone.

If you have poor, sandy land, put poultry on it.

There is an increasing demand for pure-bred fowls.

Have a good, strong male bird, and one not akin to the hens.

Red cedar boughs are recommended for hen's nests to prevent lice.

Don't ship poultry in a coup that is so low that the birds cannot stand up in it.

A tablespoonful of lime water in each pint of drinking water is a good remedy for bowel diseases.

Buy eggs of responsible breeders in setting time. It is bad business to buy of irresponsible parties.

A double-walled house, the space filled with chaff or straw, makes a warm, egg-producing place in winter.

Don't feed corn steadily for egg production, whatever anybody may say. It is contrary to both reason and science.

Many farmers who have kept chickens all their lives need to study the business, almost from the beginning, to make a success, for they have paid no attention to it.

The farmer doe not supply half the eggs used; they are furnished by city and suburban residents and those who have a few acres and make a specialty of poultry raising.

Small flocks in small runs do best. A city resident can obtain better results from a small flock in the back yard than can a farmer with the same flock on his unlimited range.

There would be more demand and better sale for turkeys all the year through if they were grown more with a view to compact body, meat and fat, than for large size and coarse structure.

Poultry of all kinds is easily digested, and has less tendency to create heat than fat pork, and the farmer who has care for the health of his family will get out of the old table customs.

No one breed of poultry has all the good qualities. The best layers are not the best mothers, and the best table fowls are not the ones which supply the largest quantity of meat. If we get a good layer it will probably be a good setter. If we seek an all purpose breed like the Plymouth Rocks or Wyandottes we shall not find them exceeding in any one particular.

FOR THE YOUNG FOLKS.

HARD WORDS TO SPELL.

Stand up, ye spellers, now and spell—
Spell phenakistoscope and knell;
Or take some simple word as chilly
Or gauger or the garden lily.
To spell such words as syllogism
And lachrymose and synchronism
And Pentateuch and saccharine,
Apocrypha and celandine,
Jejune and homeopathy,
Paralysis and chloroform,
Rhinoceros and pachyderm,
Metempsychosis, gherkins, basque
Is certainly no easy task.
Kaleidoscope and Tennessee
Kamchatka and dispensary,
Diphthong and erysipelas,
And etiquette and sassafras,
Infallible and ptyalism,
Allopathy and rheumatism
And cataclysm and beleaguer,
Twelfth, eighteenth, rendezvous, intriguer,
And hosts of other words all found
On English and on classic ground.
Thus Bering straits and Michaelmas,
Thermopylæ, jalap, Havana,
Cinquefoil and ipsecacuanha,
And Rappahannock, Shenandoah,
And Schuylkill and a thousand more
Are words some prime good spellers miss
In dictionary lands like this.
Nor need one think himself a scroyle
If some of these his efforts foil,
Nor deem himself undone forever
To miss the name of either river—
The Dnieper, Seine or Guadalquivir.

MINERAL FOUND ONLY IN ICELAND.

The existence of a clear, crystal-like mineral, which when looked through produces two images of a single object, is one of the curiosities of science. It is stranger still that the only known supply of this double refracting spar is found in Iceland, and is controlled by the Danish government. The mine is located on the east coast of Iceland, about four miles from the trading-station of Eskifjord, on a mountainous slope 350 feet above the sea-level. This mineral is used largely in optical instruments, polarization apparatus, and the like, and as the supply of the mined mineral has been exhausted, the mines having been closed for some years, the Danish government has recently leased the mine to its former owner. The London News says that a pound of this mineral is worth about $27.

GREETINGS.

The Arabians shake hands six or eight times. Once is not enough. If, however, they be persons of distinction, they embrace and kiss one another several times, and also kiss their own hands. In Turkey the salute is to place the hand upon the breast and bow, which is both graceful and appropriate.

In Burma, when a man meets a woman, he puts his nose and his mouth close to her cheek and draws a long breath, as if inhaling a delicious perfume. He does not kiss her cheek, strange to say. A man is greeted in exactly the same way.

In the greater part of Germany it is considered an act of politeness, not of gallantry, for a man to kiss a woman's hand. In Italy that privilege is allowed only to near relatives, while in Russia it is extended to kissing the forehead.

The men of Continental Europe have a custom that would seem queer, not to say laughable, here. They greet one another with a kiss, if they be friends, not on the cheek, but right on the lips.

UNFORTUNATE INTERRUPTION.

Willie was asleep and Dan was lonely. Willie is the minister's son, Dan is his dog. It was Sunday morning and every one was at church but these two friends. It was warm and sunny, and they could hear the good preaching, for their house was next door to the church.

"Dan," said Willie, "it is better here than in church, for you can hear every word, and don't get prickles down your back, as you do when you have to sit up straight."

In some way, while Willie was listening he fell asleep.

Dan kissed him on the nose, but when Willie went to sleep he went to sleep to stay, and did not mind trifles. So Dan sat down with the funniest look of care on his wise, black face, and with one ear ready for outside noises.

Now the minister had for his subject, "Daniel." This was the name he always gave Dan when he was teaching him to sit up and beg, and other tricks. While the dog sat thinking, the name "Daniel" fell in his ready ear. Dan at once ran into the church through the vestry door. He stood on his hind legs, with his forepaws drooping close beside the minister, who did not see him, but the congregation did. When the minister shouted "Daniel" again, the sharp barks said, "Yes, sir," as plainly as Dan could answer.

The minister started back, looked around, and saw the funny little picture; then he wondered what he should do next, but just then through the vestry came Willie. His face was rosy from sleep, and he looked a little frightened. He walked straight toward his father, and took Dan in his arms, and said:

"Please 'scuse Dan, papa. I went asleep and he runned away."

Then he walked out with Dan looking back on the smiling congregation. The preacher ended his sermon on Daniel as best he could; but then he made a resolve, if he ever preached again on the prophet Daniel, he would remember to tie up his dog.

THE USEFUL GIRAFFE.

"On the road," said the old showman, "we always used to look to the giraffe to supply us with apples. He was a tremendous big giraffe, about eighteen feet high, and he could reach almost any tree in the orchard; all we had to do was to drive him up alongside the fence.

"The giraffe keeper's particular friend in the circus was the driver of the band wagon, a man named Billy Gabsly; and whenever we came to an apple orchard the keeper always used to see that his friend Bill was well supplied. The giraffe's place in the line on the road was just ahead of the band wagon and whenever Bill came along and saw the giraffe at work, why, he'd just haul up and wait for his share, which he was sure to get, for the giraffe had been taught to hand up apples to the man on the high seat till the man told him to stop.

"At the ends the band chariot swept upward with a great curve. At the rear end, away up in the air, was the bass drum; at the forward end, just under the back of the driver's seat, was the big brass horn. The man that played the bass horn in our band could probably get more thunder out of that massive instrument than any other man that ever played one, and he was proud of it, of course. But he was too powerful to suit the driver of the band wagon. Bill liked music as well as anybody, and if anything, he liked the bass horn a little better than any other instrument; but he didn't like quite so much of it as he got in the band wagon. He was driving a twenty-horse team, and he was just as proud of his driving as the bass horn player was of his playing; and he used to say that the vibrations of the wagon at that end caused by the heavy blasts of the horn, shook the wagon so much that he couldn't do his driving justice, and he asked the bass horn player to let up a little on parades, but of course he never did.

"One day, late in summer, when we came to an orchard of beautiful red apples, the keeper of the giraffe at once set the animal at work, and when the band wagon came along, Bill halted, as he always did, to get his share. It was a still, drowsy day, the jolting had been just enough to keep the flies off and the whole band was scattered along the band wagon asleep, from the bass drummer up at the other end with his head resting on his arms on the great drum in front of him, down along the whole length of the wagon to the front seat, where, with one or two others, under the overarching rear edge of the driver's seat sat the big horn player, the great horn beside him, the bell opening upward under the edge of the driver's seat, like a rain water cask under the eaves of a house. Driver Bill leaned over back and dropped the first apple that the giraffe handed him into the mouth of the big horn, and he kept on dropping them there as fast as the giraffe handed them up. Altogether he must have dropped into the big horn about a peck of apples, and the jolting of the wagon after that wedged 'em in pretty tight. We were making a long jump that day; no day show, and no parade that day at all.

"That night when the bass horn player tried to sound his horn it wouldn't sound, and people missed it. You can't do without the oomphah, oomphah, oomphah of the big bass horn any more than you can without the sharp notes of the E-flat cornet, and folks began looking over toward the band to see what was the matter, and when they saw what the bass horn player was doing they called the attention of others and pretty soon the whole audience was looking over that way. They saw the leader leading, and everybody but the bass horn player playing as usual. The bass horn player was trying to play, pushing in keys and valves and blowing himself red in the face, but making no sound at all. But suddenly there shot out of the mouth of the great instrument, like a ball out of a roman candle, a single big red apple. Then all of a sudden the big horn began roaring and rumbling and spouting red apples like fireworks.

"Even the clown laughed, and it was fifteen minutes before the audience got quieted down enough so that the show could go on.

"Of course, the old man had to know all about it, and the upshot of it all was that driver Bill was sent back to the tiger cage, and the driver of the tiger cage was promoted to the band wagon. And after that the bass horn player used to play louder than ever. When he blew oomphah, oomphah, oomphah, now, the forward end of the heavy band wagon would surge and sway like a light carriage does when you pounce on the seat."

Duck farming has increased greatly in the last few years because it is profitable.

THE JOKERS' BUDGET.

THE BEST PROOF.

Your daughter, I fancy, plays as a master.

Mother—She became engaged at the piano.

BIKE DEFINITION.

"What is a labor of love?"

"Walking a damaged wheel back over ten miles of desolate and rocky road."

HER VIEW OF IT.

"She has gained some rather unpleasant notoriety, hasn't she?"

"Oh, I don't think she regards any notoriety as unpleasant."

KISSING ETIQUETTE.

Miss Spinster—"I think it very impolite for a gentleman to throw a kiss to a lady."

Miss Flippant—"So do I. He should deliver it in person."

AUTOBIOGRAPHICAL.

The self-made man was speaking. He said: "My father was a raiser of hogs. There was a large family of us—"and then his voice was drowned by the applause.

A CAREFUL JUDGE.

Wilton—Do you agree with David that all men are liars?

Wilby—How can I tell? Just think of the number of men that I never saw!

A CYCLE LACONIC.

Blonde—Oh, I guess one wheel is as good as another.

Brunette (proudly and with emphasis, after a glance from wheel to wheel)—Better.

LITTLE PITCHERS.

"Daddy, can whiskey talk?

"No, of course not."

"Then why did Aunt Maria say it was telling on you more and more?"

THE UTILITY OF ATHLETICS.

Benton—What's the use of all this athletic business in college life, anyhow?

Fenton—It makes the graduates who can pass the mental examination eligible for the police force.

PARADOXICAL.

Mrs. Swellington—Are you sure this is the fashion?

Modiste—Oui, madame! Ze ver' latest.

Mrs. Swellington (still doubtful)—Queer! It looks well and feels comfortable.

THREE DAYS NEEDED.

"It takes my wife three days to go to a picnic."

"How's that?"

"She takes a day to get ready, a day to go and a day to get over it."

THE REAL TEST.

A New York girl is receiving compliments galore for having killed one of the biggest bears ever slain in the Dead River region of Maine. The true test of a woman's courage is not a bear, but a mouse.

NO NEWS.

Mrs. Gabb—"Yes, my daughter appears to have married very happily. Her husband has not wealth, it must be admitted, but he has family."

Mrs. Gadd—"Yes, I heard he was a widower with six children."

HIS ENGLISH.

"I thought you told me your English cousin was such a plain spoken man—that he always called a spade a spade."

"Well?"

"Well, I find he doesn't. He calls it a spyde."

A RANK OFFENSE.

"May we have the pleasure of your company this evening, Colonel?" she asked.

The Colonel drew himself up haughtily and replied with every evidence of offended dignity:

"Madam, I command a regiment."

A LOVER OF BOOKS.

Philanthropist—"What brought you to this place, my man?"

Convict—"It was all along of a fondness for books."

Philanthropist—"Ah, literary character."

Convict—"Pocketbooks, for instance."

ANOTHER BICYCLE SYMPTOM.

Bloomer—Bicycle eyes are the latest.

Sprocket—Hadn't heard of them.

Indeed? The eyes bulge out from the head and are owned by people who never ride bicycles, but who dodge them.

GENTLE REPROOF.

"Just think of how fond the old lady is of going to a funeral, and how few there have been."

"I know it. It's gotten so now that whenever she meets a man over seventy she looks at him reproachfully."

NOT RICH ENOUGH.

Stranger (after an examination)—Well, doctor, what do you think? have I got the gout?

Great Physician—Hem! Er—what is your income?

Stranger—Twelve hundred a year.

Great Physician—No, you've got a sore foot.

NATURAL CAUSE.

"What was the cause of his losing?"

"She burned some of his letters."

CHILTON COUNTY CALL.

H. W. BYDING, Editor & Publisher.

Published every Friday at Thorsby, Alabama.

Subscription price, $1.00 per year in advance.

Entered at the postoffice at Thorsby, Ala., as second-class matter.

No people has a better government than it deserves.

Yellow fever news is good enough some papers in the absence of war or "rumors of wars."

Hurrah for Thorsby! the cleanest and healthiest place in the United States!

No one has ever died in Chilton county from yellow fever. The fever simply can't exist here. People in Chilton county feel as secure from the fever as they do in Minnesota. There is no scare or fright here.

When the negro by his vote elects a presidentof the United States, then is the time for him to clamor for office, but until then he should remain in the shadowy retreat of political oblivion, where he by nature belongs in a white man's country.

Sheriff Martin and his deputies should be punished to the full extent of the law for shooting and killing the striking coal miners. It would teach some other people a much needed lesson.

No man was ever found to build his home in a swamp in the Northern States, but why should anybody come and do so in the South? Come and settle in Thorsby, and you need fear nothing. We have the purest air that ever was made.

We have not written anything about yellow fever being in a few of the coast towns any more than we would write about yellow fever being in Cuba or China, because it has not troubled us in the least, and, what is more, it never will.

Let Alabama get to the front by adopting a new constitution. Nothing would build her up quicker than that. Let the newspapers agitate this question and not be so mortally afraid to say something about it. Does somebody have a string around their necks?

When the people wake up to the fact that all political parties are imperfect, but that in every party there are good men who earnestly wish and work for the welfare of their common country, the professional politician will lose his job and we will have rest and peace and plenty, and a happy and prosperous people.

The Clay County Advance has reduced its size considerably, but contains, none the less, as much, if not more, interesting home matter than before. It complains of want of co-operation by the good people of Clay county. Perhaps if the Advance quits writing about both Bryan, Hanna and McKinley, and lets a more cheerful tone pervade its columns, things would "turn up" all right in a short time.

Things that never can thrive in Thorsby: Yellow fever, malaria, chills, ague, consumption, pneumonia, rheumatism, typhoid, diptheria, scarlet fever and a host of other diseases. There is no stagnant water in or around Thorsby. The drainage is ideally perfect. The atmosphere changes every hour, so that there is always a generous supply of fresh and pure air.

More people die in the Northwestern States from consumption in one year than from yellow fever in the South in twenty years. Then add diphtheria, croup, chicken pox, whooping cough, pneumonia, typhoid and scarlet fever, chills, ague, rheumatism, etc., but that's natural and nobody ever says anything about that, because it belongs to and is the exclusive property of the North. But if all these diseases raged in the South, O what a shout there would go up!

What is the matter now? Every article of manufactured goods has advanced away up. The price of cotton has gone tumbling down. What is the cause of this? Is it over-production? You know it cannot be attributed to over-production. All the supply of the old cotton is exhausted. The present crop is short. And still the price is low. We have been placed upon a gold basis, and surely confidence has been restored. Some wind-jamming gold bug ought to be able to give a satisfactory explanation for the low price of cotton.—Sentinel.

Now let us be cool about it and have some one explain why the price of wheat has doubled under just exactly similar circumstances.

LATE TELEGRAPH ITEMS.

DRUNAMI, THE KING OF BENIN, SENT TO A SLAVE SETTLEMENT.

Cubans in Need of Quinine—A Missing Chilean Identified—A Convicted Murderer Gone Mad—An English Village Destroyed by Fire—A Typhoid Epidemic.

Peace in Uruguay.

A cablegram received at the State department from United States Minister Stewart, at Montevideo, announces the proclamation of the president, there. It is announced that the insurrection is at an end.

A Typhoid Epidemic.

There is an alarming outbreak of typhoid fever at Maidstone, Kent, London, due to the drainage polluting the water. There are 520 cases and additional doctors and nurses have been requested.

Dr. Potter Accepts.

Rev. Eliphalet Nott Potter, D. D. L. L. D., formerly president of Union College in Schenectady, N. Y., has accepted the presidency of the Cosmopolitan Educational University extension.

Filibustering Expedition Captured.

A Floridian from Cuba reports that a recent filibustering expedition for the island was captured and that nineteen men on the vessel were slain by Spaniards. He adds that Havana is now suffering from a beef famine.

An English Village Burned.

More than half the village of Ravenstone, London, near Newport Pagnell, Buckinghamshire, has been destroyed by fire. The flames consumed forty thatched cottages with barns, etc., leaving 150 people homeless.

Illinois Coal Strike.

The striking coal miners at Strator, Ill., Friday voted to demand 68 cents per ton gross weight. The operators have refused to pay this price and Friday's vote means that the miners of the north Illinois district will probably remain idle all winter.

Killed in a Runaway Accident.

Horses driven to a wagon in which John Trafford and family were riding, ran away near Coy, Ark., Thursday. The fourteen-year-old daughter, Edna, was killed, and both Mr. and Mrs. Trafford fatally injured.

Sent Up for Scalping.

Stephen Murray, of Atlantic City, N. J., was convicted Friday in the Atlantic county court, at May's Landing, of scalping tickets and selling passing of the Pennsylvania railroad and sentenced to imprisonment for three months and to pay a fine of $100 and costs.

Hanged for Criminal Assault.

Sylvanus Johnson was hanged at Key West, Fla., at 11:32 o'clock last Thursday, for assault. The hangman bungled the execution, the knot slipping under the chin. Johnson struggled violently for ten minutes and was still alive at the end of twenty-five minutes. He confessed his crime, professed conversion and died forgiving and blessing his enemies. An orderly crowd witnessed the execution.

Arkansas Forest Fires.

Fr day night the city of Little Rock, Ark., was enveloped in dense smoke, caused by forest fires which have been burning fiercely for the past ten days in Hill township, north of the city. Much damage has been done by the fire, including the destruction of a large sawmill. The fire is within four miles of town and is plainly visible after dark.

J. E. Lallande Killed.

A special to the Commercial-Appeal from Birmingham, Ala., says: J. E. Lallande, of Birmingham, junior member of the firm of Dunn & Lalland, Bros., well known contractors, was shot and killed at Tuscaloosa Friday evening, about dark, by A. Stone King, another contractor, over a trivial joke. Lallande was about 40 years old and a native of New Iberia, La. He was a widower with several children. Both his firm and Stone King's have extensive grading contracts on the Mobile & Ohio railroad extension.

Sent to a Slave Settlement.

Drunami, the King of Benin, who has been on trial at Benin City since August last with a number of his leading chiefs, concerned in the massacre of an unarmed expedition by British Consul Phillips, has been condemned to be transported to Callabar a slave settlement on British West Africa. Three of the King's chiefs were previously sentenced. Two of them were shot and ther bodies displayed hanging in the streets for twenty-four hours. The third of these chiefs escaped a similar fate by committing suicide.

A Convicted Murderer Gone Mad.

Ed Staffleback, one of the notorious family of murderers in the Galena, Kas., mining district, has gone stark mad, for fear of lynching at the hands of a mob. He was convicted of murder in the first degree for the killing of Frank Galbraith, one of the several persons supposed to have been murdered by the Staffelbacks. The constant talk of lynching, heard in connection with the searching of deserted mine-shafts at Galena, Friday, for bodies of other victims, has caused him to become a raving maniac. He is confined in a straight jacket.

Killed Three and Injured Ten Other Men.

A special to the Louisville Post from Owensboro, Ky., says: The sawmill boiler of E. D. Dez, three miles from Livermare, blew up Thursday morning. Three men were killed and ten injured. Cold water run into the boiler caused the accident. The mill was totally wrecked. John Goodwin and Henry Salee are the names of two of the men killed, but the other names could not be learned, as Livermore is fifteen miles from Louisville and is not reached by telegraph or telephone lines from Owensboro. The accident was a terrible one and caused great excitement in the neighborhood where it occurred.

A Missing Chilean Indentified.

In 1894 J. H. Conkell, of Canton, O., a monument builder, disappeared from Leetonia, that State. As he had over $300 in his possession the supposition was that he had been murdered for the money. A grave digger named Waterman was arrested on suspicion and held three months. A new-made grave was opened and found to be empty. Recently Robert Graham, of Cleveland, O., was at Marietta, Ga., and recognized a marble worker named J. H. Connell as the missing Chilean. After much evasion he has finally confessed his identity. He was in bad health when he was in Leetonia, there was a depression in business, and he was apprehensive of financial failure. He had been in good circumstances and married in an excellent family, and could not stand the humiliation of disaster, and under a spell of gloom and despondency he concluded to come south, recuperate his health and finances and then return and set himself right. Since then he realized that he has made a false step, and regretted it, and if he could recall it he would not do it over again. He felt that during his absence his wife's wealthy relatives would not allow his family to suffer. After this confession he telegraphed his wife of his whereabouts. He states that he has done no criminal act, and there was no unpleasantness at home, and he can go back there without fear of arrest. He says he will send for his family and live in Marietta. If this cannot be arranged he will later return to Canton and resume his old business, which he voluntarily left. Mr. J. H. Conkell is a gentleman about fifty-four year of age.

Business Section of a Town Burned.

Fire originated in the Hutchinson Feather Renovating Factory at East Lake, Ala., about 12 o'clock Thursday and in a short while the business portion of the little town was in ashes. A defective flue was the cause. The post-office, Odd Fellows' and Pythian halls, Heely Guards' armory, several stores and a number of residences were soon reduced to ashes. The buildings were of frame and very close to one another. The Birmingham fire department was summoned, but before the five miles could be covered the fire had burned out. The losses were as follows: Calvin McFall, $1,500; E. B. Burch, $1,600; Finch Brothers, $1,500; O. McCann, $1,000; Birmingham Building and Loan Association, $800; Dr. J. H. Heacock, $500; Mrs. A. L. Craker, $6,000 on store, $1,200 on goods and $1,200 on building; Heely Guards, $1,200; Crossland Grover $1,100; Hollings North, $600; Noble building, $600. Other losses make the whole loss $20,850, with about $3,000 insurance.

A West Virginia Failure.

A special to the Cincinnati Commercial Tribune, Saturday, from Martinsburg, W. Va., says: "The Martinsburg Improvement, Loan and Building Association has failed, with a loss to stockholders of $80,000. The only hope of the stockholders is that the association will realize on its loans to the Brooklyn Brass Works and the Auburn Wagon Company, aggregating $80,000. These industries are now being operated by receivers. The association was organized to boom the town, in 1882, and since then $200,000 has been sunk and two banks and a dozen wealthy men broken. The town's business is severely shocked and more failures are expected. Many poor people lose their savings in the failure."

Seventeen Men Crushed To Death.

News was received at El Paso, Tex., last Saturday night that the San Pedro mine, in the Carrilytos group, twelve miles from El Paso, in Mexico, caved in Saturday, killing seventeen men, who were at work in the mine at the time. The unfortunates, says the report, were buried alive under thirty feet of rock and dirt. The San Pedro is one of the oldest mines in the group and rich with silver. It is the property of the wealthy Carrilytos Company, the principal stockholders of which reside in New York. President Terry, of the Rio Grande, Sierra Madre & Pacific road, and J. Higgins, both of New York, are stockholders. If the mine was not timbered the Mexican government would impose a heavy fine on the company on account of the wholesale killing.

by the week, $4.00.

LOCAL LINKS.

Work on the depot is going ahead.

J. F. Peterson was in Birmingham last Monday.

Services next Sunday at 10:30 a. m. and 7:30 p. m.

S. P. Pearson is making ready to build in a short time.

There will be a big "lot" of charcoal made in Thorsby this year.

S. P. Pearson and family arrived from Two Harbors, Minn., last week.

J. Bice has a contract for twelve thousand bushels of charcoal a month, and not six thousand.

J. Bill and J. Brice, in last week's Call, is one man. But neither of those names are correct—it is J. Bice.

T. T. Thorson was in Nashville, Tenn., last week taking in the Tennessee Centennial Exposition. He reports that Alabama has the finest display of fruit of all the States represented.

In another column will be found the ad of the Weekly Montgomery Advertiser. Besides being the cheapest in the South, it is also one of the best papers in the South, conservative and patriotic.

Some correspondents to the Concordia Land and Improvement Association have got it into their heads that there is yellow fever in St. Louis and that one cannot travel to or from Thorsby without being quarantined. Those are childish fears. There is no fever in St. Louis and people can travel freely between Thorsby and the North.

Launched the Bismarck.

A new cruiser was launched at Kiel, Germany Saturday and was christened Furst Bismarck by Countess Wilhelm von Bismarck, wife of the second son of the great chancellor, in the presence of other members of Prince Bismarck's family, who were invited by command of Emperor William. Admiral von Tirpitz, the secretary of the navy, made a speech during the ceremonies of the launching of the cruiser, in which he said: "This ship shall bear the name of the greatest statesman of the century, a name inseparably bound up in the restoration of the empire, at the sound of which the hearts of all Germans, even of those beyond the seas, beat the higher.

A Lucky Prisoner.

W. F. Karron, now imprisoned in the county jail at San Francisco, charged with embezzlement, has fallen heir to a quarter of a million dollars. James Karron, the prisoner's uncle, who was a prominent mining operator of Montana, died last week at Austin, Iowa, leaving property valued at $500,000, to be equally divided between his two nephews. One of these is the prisoner, W. F. Karron, the other L. Karron, a barber in Sioux City, Iowa. No other surviving relatives are known to exist. The San Francisco heir was formerly business manager of the California Commerce, a souvenir magazine.

Yellow Fever on Board.

The British ship Cape York, Capt. Mitchell, arrived at Port Townsend, Wn., last Saturday morning, sixty-four days from Panama. While lying at the latter port there were several cases of yellow fever and two deaths aboard ship. She cleared for Port Townsend without being disinfected or fumigated. On arrival at Port Townsend she was ordered to Diamond Point, the United States quarantine station, where both ship and crew will be detained two weeks for fumigation and disinfection. On her release from quarantine she will load wheat at Tacoma for the United Kingdom.

Fitzsimmons Will Not Fight Corbett.

Bob Fitzsimmons, who was in Trenton, N. J., last Saturday night, stated that he had no intention of giving Corbett another fight. Martin Julian backed up the champion in this, and added that Corbett must defeat Maher, Goddard and the other fistic lights before Fitzsimmons would give him a fight.

The Chosen Friends.

The supreme court of Chosen Friends at Louisville, Ky., Friday morning selected Baltimore as the next place of meeting, and fixed the date for the third Tuesday in September, the committee having reported favorably on the amendment to have biennial meetings. The session will adjourn Saturday.

Sentenced to the Penitentiary.

Minnie Beckbridge, a negress, at Brenham, Tex., Thursday, was found guilty of having sprinkled "Rough on Rats" in a neighbor's mustard green and bean patch, and was given eight years in the penitentiary.

Bancroft Dead.

Bancroft, the well-known magician, died at the Riverside infirmary at Charleston, S. C., Saturday morning, of typhus fever.

Insurgents Failed.

A dispatch from Canea, Crete, dated last Saturday, says: "The insurgents attacked Scanani, near Candia. After two hours' fighting they retired."

Insurgents Failed.

A dispatch from Canea, Crete, dated last Saturday, says: "The insurgents attacked Scanani, near Candia. After two hours' fighting they retired."

STATE TOPICS.

Late News Items of General Interest to Alabamians.

RECOMMEND IMPEACHMENT.

At Florence the grand jury rendered a sensational report Friday evening, recommending the impeachment of Sheriff Carson for drunkenness in office, and giving a gentle warning to the road commissioners for several beats that the roads must be worked better.

BIG FIRE AT EAST LAKE.

College Station, near East Lake, is in ashes. The entire business portion was destroyed by fire Thursday afternoon. Twenty-one frame buildings went up in the flames in the remarkably short time of a few minutes. The total loss is estimated at more than $20,000, largely covered by insurance.

PUT UP THE BARS.

The existence of a case of yellow fever in Atlanta caused Captain M. H. Amerine, State quarantine officer, to institute a rigid quarantine against that city Friday. The order went into effect at sunrise, and the regulations are the same as those applied to New Orleans and other infected districts.

IN SEARCH OF GOLD.

Col. I. B. Stone, Greer Mason, John Freeman, Schuyler Harris, J. F. Walker, P. B. Laidlow and George Ragsdale compose a party that has left Athens for Arizona, where they will seek gold. The party had made considerable preparation for the trip, and has ample equipments for prospecting.

ROASTED.

A negro woman named Duncan locked her three small children in her dwelling near Coosada last Friday night and went to a party. Fire broke out at midnight and burned the house to the ground. The children were roasted under the bed, where they had crawled, seeking protection. The woman is guilty of murder under the law of Alabama.

SHORTAGE PROMPTLY PAID.

In the examination of Commissioner Culver's books last week a shortage of $5,000 was discovered, which was promptly paid by Mr. Culver. The commissioner explains that the shortage was due to errors appearing in his vouchers, caused by the continued illness of his chief clerk, Donald Sessions, who died last month, his assistant not being able to keep up with all the work.

PRESIDENTIAL APPOINTMENTS.

The president has made the following appointments for this State:

Leander Bryson, marshal for the Middle district of Alabama; James O. Leftwitch, colored, receiver of public money at Montgomery; Robert Barbour, register of the land office at Montgomery; Judge Steele, register at Huntsville, and H. V. Cashin, colored, receiver of public money at Huntsville.

DEMAND FOR PIG IRON.

It is given out that Alabama furnaces have sold pig iron up to January 1 next year.

As a result a number of orders are being accepted for delivery after that date. Such conditions have not prevailed in this section in many months, and the activity of the pig iron market is the subject of much comment.

Fifteen furnaces are in blast in the Birmingham district, and two others are ready for the torch. Heavy shipments of pig iron are reported.

TAX ASSESSOR SHORT

Assistant Examiner Foster has found another former tax assessor almost $3,400 short in his settlements with the State and county. Mr. Hugh J. Stephenson, of Colbert, is the unfortunate, but, according to the special report, his delinquency appears to be the result of an accident rather than of a deliberate intention to wrong the State. He is now arranging to pay the State the full amount he is due. It will take his home and all that he possesses to pay up, it is stated, but he promises that the State shall not lose a cent by him.

FIVE MINERS ENTOMBED.

Slope No. 2 of the mines at Belle Ellen is on fire, and considerable damage has already been done. Five men are beyond the names, and are thought to be dead. They are miners who were cut off by the names before they could be rescued. They are: Hubbard Foley and Herman Garner, white; Frank James, Henry Reeves and William Fairfax, colored. There may be others, but these are known to be cut off. The men are undoubtedly dead, as the fire has been raging some time. One of the State mine inspectors went to the scene, and at his advice the entrance was closed to prevent the ingress of air to feed the flames. It is the intention of the fire fighters to pump water into the slope.

NEW COUNTY SUPERINTENDENTS.

Hon. John O. Turner, State Superintendent of Education, has officially announced the following appointments of county superintendents, which will take effect on December 1:

Barbour county, Charles S. McDowell, Jr., Clayton; Chambers county, W. G. Jarrel, LaFayette; Choctaw county, O. L. Gray, Butler; Greene county, John G. Apsey, Eutaw; Hale county, J. A. Ellerbee, Greensboro; Jefferson county, I. W. McAdory, Birmingham; Macon county, A. B. Paine, Tuskegee; Madison county, J. D. Humphrey, Huntsville; Montgomery county, John J. Hunter, Montgomery; Perry county, J. D. Cross, Marion; Pickens county, O. A. Chappell, Dillburg; Talladega county, J. B. Graham, Talladega; Washington county, T. C. Bowline, Leroy.

A CONTRACTOR KILLED.

J. G. Lallande was shot and killed by A. Stoneking at Tuskaloosa Friday. The cause of the shooting seems to face him Stoneking drew his pistol and fired once, the ball striking Lallande in the abdomen, who immediately sank to the floor in a dying condition. Stoneking was immediately arrested and taken to jail. Lallande was junior member of the contracting firm of Dunn & Lallande of Birmingham, who are grading the Mobile and Ohio Railroad. Stoneking was also a contractor.

Collection of Torquoise.

Probably the finest collection of cut turquoise ever sent in one shipment rom American mines left Santa Fe, N. M., Friday for New York by Wells-Fargo Express. There were twenty-five stones, aggregating in weight 110 carats, and four gems which weighed respectively 31, 32, 35 and 52 carats. The latter, a pear-shaped stone, is valued at $2,800. It is said that this is the largest display of American turquoises ever made. The stones are of a light sky blue, and much harder than the ordinary turquoise. The mines are in southern New Mexico, but their exact location is kept a profound secret.

Murder and Suicide.

A Shelbyville, Ind., special of Friday, to the Cincinnati Times-Star, says: "The town of Flint Rock, Ind., was thrown into a state of excitement to-day by the report that Wesley Nading, a well known and wealthy citizen, had shot and killed his wife and then fired a bullet into his own brain. He is a live, but cannot recover. Nading was of a despondent nature, and at times would become temporarily deranged, on which occasions he would grow jealous of his wife and threaten her life.

An East India Railway Horror.

Recent advices from the scene of the wreck of the bridge of the Bungalore-Mysore railroad, near Maddur, India, indicates that one hundred and fifty persons were killed and fourteen injured. Seventy persons succeeded in making their escape. Most of those killed and injured were natives. The train, which was crossing the bridge at a considerable rate of speed, has been entirely submerged.

The Wife in Russia.

"This is a curious custom you Americans have of referring to your wives by their husbands' names," observed Glanvock Kaplon, an intelligent Russian traveler. "I suppose the American holds his wife in as high esteem as the Russian holds his, but if at home I should speak of my better half as Mrs. Kaplon my friends would at once conclude that my domestic relations were not as pleasant as they should be, and that I was thinking of a legal separation. When I first heard an American speak of his wife as Mrs. Jones, for example, I felt almost like presuming on my acquaintance by intruding into his private affairs and asking him what the trouble was at home. Yet I soon learned that the custom was universal over here, but still I cannot get used to it. 'My wife' is the plain, blunt way I speak in Russia of the lady who, I suppose, I would have to call Mrs. Kaplon in polite society in America. In some of the more fashionable circles of St. Petersburg this American social custom has been adopted, though I was told by a prominent government official not long ago that the Czar disapproved of it."—St. Louis Republic

Colored residents of Alton, Ill., insist on their children attending the same schools as the whites, and as a result relations between the races is growing more and more strained.

Three big expeditions landed in Cuba during the present month. They were the most important that had been dispatched since last winter, and great joy prevailed at the Cuban headquarters when the news arrived that they had eluded the Spanish, who appeared at one time to have been on their track.

VILLAGE OF BAINBRIDGE O., ALMOST DESTROYED BY FIRE.

Two Prominent Business Men Lose Their Lives by an Explosion--Block of Business Houses and Handsome Residences Burned to the Ground.

The village of Bainbridge, O., was the scene of one of the most disastrous conflagrations Thursday afternoon that ever occurred in that county. An entire square, containing most of the prominent business houses, several handsome residences and the Methodist church, was entirely destroyed, and two prominent business men lost their lives in an explosion which occurred in a drug store.

The fire was started in a barn by two little boys, who were playing with lighted matches. The flames spread rapidly, and communicated with the main building. Owing to the limited means at hand for fighting the fire, it passed all bounds and became uncontrollable. In the midst of the excitement a terrible explosion occurred in the drug store of W. P. Beardsley. Mr. Beardsley, while endeavoring to save some of his property, lost his life in the ruins. His brother-in-law, Thomas Higgins, who went to his rescue, was unable to get out, and was burned to death, while several others were more or less injured, but none fatally.

There was a stiff breeze blowing, which fanned the flames to greater fury, and getting a fresh start from the burning oils and chemicals in the wrecked drug store, the fire leaped from house to house.

A message was sent to Waverly and to Chillicothe asking for aid, and both fire departments promptly responded. The special trains with the engines did not arrive until three hours later the first alarm was given. The efforts of the firemen were given to prevent the spread of the fire. The flames were soon under control.

The excitement was awful. Men, women and children were reduced to the verge of despair as they saw their possessions feeding the greedy flames, and Thursday night scores of people were homeless. The estimated loss is $50,000.

HOUSE BUILDING

Is the order of the day in Thorsby. We are now prepared to keep up with the procession. Our new planing mill, which has recently been put in, and is now run in connection with our saw mill, enables us to furnish all kinds of lumber for building purposes. Our prices are more reasonable than those of others, and, being prepared to turn out an order on short notice, we can save the builder a large amount of inconvenience and expenses. By buying at home you have no freight to pay and you are helping agiong home industries. We also are prepared to ship lumber by the car load or in small quantities.

Flannel Shirt Club—Visiting Household Managers—A Mistaken Idea—The Coming Sleeve.

"FLANNEL SHIRT CLUB."

The Countess of Strafford is at the head of an organization known as the Flannel Shirt Club. The aim of the society is to seek out the shirtless and supply them with warm garments.

"VISITING HOUSEHOLD MANAGERS."

Two ingenious women hit upon a unique profession. They called themselves "visiting household managers," their duty being to take care of homes during the owners' absence and have them in apple-pie order when they return. They have had charge of many big mansions, and once upon a time they had to call the attention of the Board of Health to the awful condition of one aristocratic domicile.—New York Journal.

A MISTAKEN IDEA.

Soap is not the enemy to the complexion which many people consider it. It is infinitely better for the skin than the dirt which will collect in the pores after a warm and dusty day with much wheeling or traveling. Olive oil soap is always the best for the face, but it should be thoroughly rinsed off after using. The hands are better for bathing the face than a cloth or sponge, and the motion should be rotary and upward rather than downward. Discretion can be used with soap, as with other things, for too much of it will dry the skin.—Philadelphia Record.

SUITABLENESS IN DRESS.

The woman who wishes to look her best must never blindly follow any and every new caprice of fashion, but must aim to adapt fashion to her own special requirements. The French understand this art to perfection, and realize that the woman of forty in an old-fashioned gown and thin, badly dressed hair looks passe, while her friend of forty-five in smart array and hair well dressed is young in her every movement. Her stylish gown swishes about her with an air of distinction; she stands and walks with an erect carriage, and sits with her skirts sweeping the floor beside her instead of flouncing down on her back breadths.—Woman's Home Companion.

WOMEN PIANO TUNERS.

A new profession for women seems to be open in piano tuning. This business pays well and offers many inducements to women. The learning of it involves neither great expense nor prolonged study. This takes it for granted that the student has a good musical ear, without which a tuner is a failure. The instruments of the trade are few and inepensive. The work requires the exercise of some bodily strength, and no woman not possessed of considerable vigor and a certain mechanical knack should start in. Given these capabilities and a little business instinct into the bargain any ambitious young woman should have no trouble competing with the men, who now monopolize the field.

THE COMING SLEEVE.

Fashion shows a tendency toward plain sleeves, but not those without any fullness whatever, as a few gathers or plaits are necessary even when there is an epaulet.

Another sleeve has a short circular puff at the top, and from there to the wrist a close plain fit. The tucked sleeves are continued for thin materials, but not for heavy winter goods.

Elbow sleeves are only seen on teagowns and negligee sacques of a picturesque style. All street and many evening sleeves are cut long, but not in points over the hands.

Lace ruffles soften the hands, hence their high favor. Coats will have sleeves of a moderate fullness mounted in shallow plaits and fitting closely over the forearm.

SOCIETY AND STORIES.

Not every woman can combine society and literature as gracefully as Mollie Elliot Sewell has managed to do. She lives in Washington, and is a great favorite in society and club circles. She is a member of several clubs, most private in their character, the objects of which are advancement in literature and art. Miss Sewell always suggests the illustrations for her stories, and her own work with the crayon is not to be despised. It is in arranging dinner tables and the general decoration of rooms for social gatherings that her artistic skill best shows itself, however. She is famous for her unique disposal of the pretty trifles that are so useful in setting forth a dining-room or boudoir tastefully, and when there is a function of any particular kind in connection with one of her clubs, she is always chosen to superintend the decorations. The story that made her famous was published some ten or twelve years ago in Lippincott's Magazine. Its title was "Maid Marian."

WOMAN AND THE CAMERA.

Miss Frances Benjamin Johnston, the photographic artist, writes, in the Ladies' Home Journal, on "What a Woman Can Do With a Camera," telling the requisites for artistic and financial success in the pursuit of photography as a profession. "It is a profession," she strongly contends, "that should appeal particularly to women, and in it there are great opportunities for a good paying business—but only under very well-defined conditions. The prime requisites—as summed up in my mind after long experience and thought—are these: The woman who makes photography profitable must have, as to personal qualities, good common sense, unlimited patience to carry her through endless failures, equally unlimited tact, good taste, a quick eye, a talent for detail, and a genius for hard work. In addition, she needs training, experience, some capital, and a field to exploit. This may seem, at first glance, an appalling list, but it is incomplete rather than exaggerated; although to an energetic, ambitious woman, with even ordinary opportunities, success is always possible, and hard, intelligent and conscientious work seldom fails to develop small beginnings into large results.

"Good work should command good prices, and the wise woman will place a paying value upon her best efforts. It is a mistaken business policy to try and build up trade by doing something badly cheaper than somebody else. As to your personal attitude, be businesslike in all your methods; cultivate tact, an affable manner, and an unfailing courtesy. It costs nothing but a little self-control and determination to be patient and good-natured under most circumstances. A pleasant, obliging and businesslike bearing will often prove the most important part of a clever woman's capital."

A FAVORITE OF THE QUEEN.

It may be a trifle cutting to English society to note the continued fondness of Queen Victoria for Mrs. Joseph Chamberlain of England.

Mrs. Chamberlain was Miss Endicott, of Salem, Mass., a daughter of President Cleveland's first secretary of war, a charming woman—gracious, modest, and sweet, and it is only a tribute to her majesty's discrimination that this predilection has come about. During the recent jubilee many duties fell upon Mrs. Chamberlain. Her distinguished husband is secretary of state for the colonies of Great Britain, and as his wife, Mrs. Chamberlain, had to "name" the wives of the colonial prime ministers to the queen, i. e., present them on each and every occasion that these dames participated in any function over which the queen presided.

She did it literally to the queen's taste. Her "savoir faire" and self-possession acquired in Washington were so admirably fitted to the task that her majesty is said to have much modified her notions of the etiquette prevailing at the White House. Mrs. Chamberlain has received the jubilee gold medal, reserved for members of the reigning house and of foreign sovereign families. It may seem singular that the maiden from Salem, Mass., where sober and staid the girls are reared, should have been the first to break down the barriers that hedge about royalty, but witchery was ever out of Salem, and Mrs. Endicott-Chamberlain bears it in its better elements. Certainly the first American woman to remove insular prejudices against daughters of Uncle Sam deserves the gold medal, and if the coterie of American girls who have gone into English circles, close to royalty, do not leaven the lump of English insularity and self-complacency we shall miss a long, and what we now regard, a shrewd guess.—Lewiston Journal.

FASHION NOTES.

All silks are made soft and thin dress fabrics.

White and gray felt hats promise to be popular forms of millinery.

Toques are again considered more stylish for full dress than hats, except for very young ladies.

Some novelties in lingerie show trimmings of lace with tiny lines of color running through it.

Small bustles are noticeable, they are necessary to produce a good effect with soft and thin dress fabrics.

Little silver-bound books, marked "Golf Records," are seen dangling from the modish girl's chatelaine.

All silks are made soft and silent. Stiff and noisy linings have been suppressed, flexibility and softness is now the rule of fashions.

And now the fichu is supplanted by the long net scarf that is worn twisted twice around the throat and ending in a large bow and flowing ends.

To be deemed absolutely au fait a woman must wear two veils, and neither one of them must look as though it were pinned on with any view to neatness.

White roses make a pretty garniture for the summer. An effective hat is of white rice straw, trimmed with a large bunch of these flowers and a knot of black velvet.

Earrings are undoubtedly to be revived, and some women have gone so far as to set their approval on the very unbecoming hoop affairs that only gypsies wear well.

Mohair, nun's veiling and canvas are ideal fabrics to tide one over from summer to winter, and in the new reds, blues and greens, charming costumes may be made from them.

Nearly all the silk, canvas and light wool gowns have the linings separate from the dress fabric. The under skirt is made in exactly the same shape as the outer one, only a little less full.

Lined veils are a novelty this season. Black lined with white or the reverse are favorite combinations. A season or so ago an attempt was made to line veils with colors, but it was not received with favor.

Many beautiful combinations of color are noted in transparent gowns. Canary-yellow, lilac and Parma violet gray and pink, marine blue over glossy black or another shade of blue brown over blue and gold, blue over pink and green, green over green in glossy effects.

Wide ties of soft, white mull, batiste and muslin have been revived, and are dainty bits of summer neckwear. Fine, soft lace is put on the ends of the tie and a full butterfly bow is made under the chin. Fresh young faces look charming with these pretty white finishes to a dainty light gown, and the fashion gives promise of lingering into fall and winter days.

Jackets trimmed a la militaire, with "frogs" of braid draped across the front from throat to the bottom of the jacket, are jaunty and attractive looking, and will be in high favor and fashion for the coming fall and winter. This military effect is especially becoming to a tall, straight, young woman, who rejoices in a willowy, graceful figure and carriage.

The Pecular Amusement of a Little Kentucky Town.

People of the little mountain town of Sharpsburg, Ky., have a peculiar divertissement known as "egg-throwing." Formerly Sharpsburg was the scene of many shootings and cuttings, but the boys amuse themselves now by throwing eggs at one another. The eggs cost but little more than did the 44-calibre cartridges used in their Winchesters, and since they have been throwing eggs nobody has been seriously wounded.

The heaviest battles occur on Saturday night. Jim Strong is the captain of one egg-throwing band and Bill Eversole is the captain of the other. They have about twenty men each. Each man has to provide himself with a dozen eggs, and of course it is to his interest that he buys them where he can get them the cheapest. As no individual expects to be struck by his own eggs, he does not require the dealer to "candle" them. In this way the dealers in country produce here are able to realize at least cost price on their sickest eggs.

Last Saturday night's battle was a glorious one. The moon was shining and the boys lined up for the fray about 9 o'clock. Every member of the two companies was present. The captains did not throw, simply directing the movements of their men. Each man had his full quota of eggs when the battle began. The first volley was thrown by Strong's men, and six men on the Eversole side were struck. Then the Eversoles began to throw eggs, and at their first volley seven Strong men were marked, and one egg carried away the cap of Captain Strong. Then the throwing became indiscriminate, and no attempt at volley work was made.

The sport did not cease until the entire 480 eggs were thrown. Nearly every man had been plastered and the captains were regular omelets from head to foot. It was decided that Strong's men won the fight. The most casual observer passing along the street next morning could have told there had been an egg battle, for the houses, sidewalks, fences, and curbstones were plastered with eggs and shells.—Chicago Record.

Found a Big Pearl in a Clam.

C. H. Underwood, steward of the Rhode Island Yacht Club at Potter's Cove, a day or two ago became possessed of one of the finest pearls ever seen in these parts. Underwood was making a quahaug chowder at the time, and with a chopping knife was cutting up the quahaugs, when the knife came in contact with what he thought was a piece of shell. He made an examination and found a white and lavender pearl. The gem was egg-shaped, of high gloss, and absolutely perfect. In fact, no pearl, so far as known, has ever been found like it. Mr. Underwood showed his find to a friend and on the spot was offered a nigh figure. The finder has opened a million quahaugs, and this is the only pearl above the size of a pinhead that he ever found. Out of curiosity he took it to a jeweller and learned that it was a novelty which could not be duplicated in any of the gem markets in this country. Ira G. Whittier, the jeweler, weighed it, and it tipped his scales at 35½ grains.—Providence Journal.

STATISTICS OF CROPS.

THE EVOLUTION OF A RATIONAL BASIS OF INFORMATION.

Stimulus to the Science in This Country—Work and Reputation of Two Experts—Discrediting of the Government's Reports—Advantage Gained by a Few Speculators.

The development of statistics, which in modern times has become one of the marked characteristics of intellectual nations—being in Germany carried to the height of a science and pervading nearly all their "problems" as an element in their solution—has been chiefly neglected in this country, although of late years a beginning has been made. It would not be surprising if the principal advance in the science in this country should be made through the perceived value of scientifically gathered and prepared statistics to money-making, especially in the field of speculation. Abroad it is the Government which has been the promoter of statistics; in the United States it has been less so, and the Government results have been less perfect, because of the complication of civil service with politics.

Three or four years ago two men—B. W. Snow and E. M. Thoman—who had been employed in the division of statistics of the Department of Agriculture at Washington, having learned all that the Government had to teach them in the way of gathering crop reports and estimating conditions and yield, and having perceived that the Government was handicapped by the burden of politics which lay on all Government endeavor, and that much better results were attainable if the same aims were prosecuted as a private enterprise, went to Chicago, and there separately established themselves as crop statisticians. They utilized what they had learned at Washington, and they added what they saw was lacking to the Government work. They opened large offices, and secured correspondents at every essential point throughout the country—not as many as the Government had, but a better selected and more compact and better organized corps. They adopted classifications and a method only known fully to themselves, for secrecy is one of the accompaniments of their business. Judged by the results, the method is certainly scientific and sound. Their rise in reputation was rapid. The comparatively brief period during which they have been putting out their reports has sufficed to place them in the front rank in their line. They speedily gained the patronage of some of the richest and heaviest dealers and speculators in the country, and their reports are to-day regarded as little less than infallible.

The most significant feature of the business is that each of the statisticians labors and grows rich (such is the report, at all events) with an exceedingly limited number of subscribers. In other words, the enormous expense the statisticians incur in acquiring the vast amount of information necessary from an army of correspondents, and in maintaining a large office force to deal with this mass of communications, is borne by a few men, who find it profitable to bear it and to add large sums for the compensation of the scientists. Just how limited the number of subscribers is is not known to any except the statisticians themselves, and, perhaps, their most confidential employees. It is not known to the subscribers, nor does any one of them know who the other subscribers are. It is, however, known, or at least thoroughly believed, that the number is very small, for upon that fact depends the value of the reports to speculators. If everybody, or any great number, had them, so many would have an equal knowledge that all special advantage would be gone. The subscribers, therefore, are held a "close corporation," and the reports command a high figure. Not an exchange in the country receives them. After the few have seen and acted, then they are published, and if any gleanings are to be had, "very good, you are welcome," say Messrs. Snow and Thoman and their subscribers. One of the statisticians' performances is to parallel the Government reports—that is, knowing the methods employed by the Government, they use the same, and produce in advance of the Government reports almost duplicates of them. These are also for their subscribers, and enable them to anticipate those competitors who have faith in the Government reports, or are unable to command the special service of the experts. The more thorough test to which the Government reports have been subjected since such rivals have risen has led to the discovery—or the belief—that Government is often exceedingly erroneous in its estimates, and in consequence its publications on the crops have been greatly discredited within the last few years. They have been found to differ both as to acreage and crop production, not only with the statisticians and the trade papers, but with the several State reports, and the public has preferred to believe that the Government is wrong. The discrepancy has amounted to as much as 75,000,000 bushels and from 3,000,000 to 5,000,000 million acres, on the wheat crop alone. It may be curious, but it is true, that investors and speculators prefer to take as accurate almost any report rather than the Government's.—New York Post

Children and Wheels.

While bicycling in moderation is one of the best forms of exercise for many adults, particularly the gouty and those who lead sedentary indoor lives, indulgence in it by the young should be hedged about with many precautions. When not overdone, it is probably as beneficial to children as to their elders, but it is less needful, since the young, especially boys, seldom suffer for want of exercise, their outdoor games giving them, as a rule, all they need. But aside from this there is positive danger in the wheel, arising from the proneness of children to compete with adults—to ride too long, too fast and too far.

Wheeling resembles stair-climbing in its nature and effects. No mother would allow her child to run up the steps of the Washington Monument two or three times a day, yet she will let him take his bicycle and race over country roads for miles, his little heart pumping 150 or 200 times a minute, and fondly thinks it is doing him good.

It is just here that the danger lies—the heart is strained, overstrained; it is dilated and then enlarged; it works continuously to its full strength, drawing on all its reserve force, and by the time the child has become a man the heart is permanently tired and may possibly stop short some day without warning.

Children need not be forbidden the use of the bicycle, but parents should see to it that they have properly constructed saddles, and that they do not "scorch," climb steep hills, ride against high winds or ride at all more than a few miles at a stretch. Unfortunately it is these very feats that they are often incited by their elders to perform. There are few more piteous sights, to one who has seen the consequences of such folly, than that of a tiny child on a tiny wheel struggling up a hill after a six-foot father and a seasoned mother.—Youth's Companion.

Bridging the St. Lawrence.

It is a curious and interesting fact that a plan for a bridge across the St. Lawrence River opposite Quebec, which was made upwards of forty years ago, is quite as applicable to present-day ideas as the more recent designs. In fact, with some slight modifications, this plan would work admirably under our present system of bridge building. The difficulties attending an undertaking of this sort may be imagined when it is taken into consideration that the distance across the river from cliff to cliff is 4,800 feet. It was proposed to span this distance by three 1,000-foot sections, with shorter ones at the shore ends. The trussed suspension system was to be employed and the bridge was to have upper and lower decks, the one for wheel and foot traffic and the other for railroad trains. One of the greatest points in undertakings of this sort is the strength of the piers. This was to be secured by foundations built of solid masonry started 150 feet below high-water mark. The masonry was to be carried up to the floor level of the bridge in solid columns. Five cables were to be used and on these the remainder of the structure was to rest. There is little trouble with modern appliances in carrying the foundations of buildings down as far as one chooses; indeed, a bridge recently erected in Australia has piers 180 feet in length and these were carried down through mud and sand to their solid foundations.

The Champion Big Dog.

The largest dog in this country is the property of Wayne Bailey of Rutland, Vt. When weighed the other day he tipped the scales at 267 pounds.

When the animal weighed 244 pounds a prominent dog fancier declared him to be the largest dog in the world. Repeatedly Mr. Bailey has been urged to put Nero on exhibition at the big dog shows, but he has never thought it advisable.

Nero is a handsome half-German and half-English mastiff, fawn brindle in color, his huge head being of a trifle darker shade. He sets up firmly on his legs and is remarkably well proportioned. He is as agile and lively on his feet as a cat, and the other day caught a big rat in his master's barn.

He makes a splendid watchdog, but is withal a kind and affectionate animal. Mr. Bailey bought him at West Rutland when he was six months old. He is now 4 years old. At the time of purchase Nero weighed 162 pounds. The animal is a product of Mr. Winchel's kennels at Fair Haven.

Nero is provided with a strong leather harness, as he cannot wear a collar. The animal stands up from the ground 35 inches and girts 50 inches. The dog's neck is unusually large, measuring 30 inches, and from tip to tip he measures 6 feet 5½ inches.

Who Were Your Ancestors?

There are now twenty-seven societies in the United States, membership in which depends on descent from ancestors who distinguished themselves by coming over to America at an early date, or by being officers in American wars prior to 1801. Most of them are in a flourishing condition. The old aristocratic Cincinnati leads them in age

Giving Away Brides.

Among the novel means by which some people of London subsist is that of giving away brides at the altar. The custom has grown to considerable proportions of late, and a member of a firm of fashionable costumers, in speaking of it recently, said: "You, of course, recognize the fact that in this great city are scores of hard-working girls who are miles away from their relations and who have always been too busy to cultivate many friends. Well, when these girls are about to marry young fellows who are similarly circumstanced the question arises as to who shall give away the bride.

"I can answer that question for them at once, for I have connected with my business an ex-major in the army, a member of an ancient family and a man, too, of unimpeachable character. He is poor, but he dresses well, has beautiful white hair and looks the kindly father to perfection. I introduce him to the bride and bridegroom, and he, for a moderate fee, gives the former away. Sometimes he takes the whole arrangements of a breakfast and so on upon himself, and he is a fine speaker on occasion. He is always a welcome guest with these people afterward."

When a young woman has been requested to break the news of a death to a friend, she feels that she has reached the supreme pinnacle as a comforter.

A Red Handed Murderer.

Tetterine kills the germs of Tetter, Eczema, Salt-Rheum, Ringworm and other skin diseases. Most of these are caused by the existence of infinitesimal anamalculae. Tetterine murders them at once and stops the agonizing itch, then it soothes and heals the skin. At drug stores, or by mail for 50 cents in stamps. J. T. Shuptrine, Savannah, Ga.

Attention is respectfully directed to the advertisement of Messrs. Perryman & Co., Birmingham, Ala., which appears in this issue. This firm manufactures the Enterprise Cotton Mill, which is claimed to be the cheapest, simplest and most practical on the market. If you are thinking of buying a mill, it will no doubt pay you to send for a copy of their descriptive catalogue.

$100 Reward. $100.

The readers of this paper will be pleased to learn that there is at least one dreaded disease that science has been able to cure in all its stages, and that is Catarrh. Hall's Catarrh Cure is the only positive cure now known to the medical fraternity. Catarrh being a constitutional disease, requires a constitutional treatment. Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system, thereby destroying the foundation of the disease, and giving the patient strength by building up the constitution and assisting nature in doing its work. The proprietors have so much faith in its curative powers that they offer One Hundred Dollars for any case that it fails to cure. Send for list of testimonials. Address

Children and Wheels.

While bicycling in moderation is one of the best forms of exercise for many adults, particularly the gouty and those who lead sedentary indoor lives, indulgence in it by the young should be hedged about with many precautions. When not overdone, it is probably as beneficial to children as to their elders, but it is less needful, since the young, especially boys, seldom suffer for want of exercise, their outdoor games giving them, as a rule, all they need. But aside from this there is positive danger in the wheel, arising from the proneness of children to compete with adults—to ride too long, too fast and too far.

Wheeling resembles stair-climbing in its nature and effects. No mother would allow her child to run up the steps of the Washington Monument two or three times a day, yet she will let him take his bicycle and race over country roads for miles, his little heart pumping 150 or 200 times a minute and fondly thinks it is doing him good

It is just here that the danger lies—the heart is strained, overstrained; it is dilated and then enlarged; if works continuously to its full strength, drawing on all its reserve force, and by the time the child has become a man the heart is permanently tired and may possibly stop short some day without warning.

Children need not be forbidden the use of the bicycle, but parents should see to it that they have properly constructed saddles, and that they do not "scorch," climb steep hills, ride against high winds or ride at all more than a few miles at a stretch. Unfortunately it is these very feats that they are often incited by their elders to perform. There are few more piteous sights, to one who has seen the consequences of such folly, than that of a tiny child on a tiny wheel struggling up a hill after a six-foot father and a seasoned mother.—Youth's Companion.

Bridging the St. Lawrence.

It is a curious and interesting fact that a plan for a bridge across the St. Lawrence River opposite Quebec, which was made upwards of forty years ago, is quite as applicable to present-day ideas as the more recent designs. In fact, with some slight modifications, this plan would work admirably under our present system of bridge building. The difficulties attending an undertaking of this sort may be imagined when it is taken into consideration that the distance across the river from cliff to cliff is 4,800 feet. It was proposed to span this distance by three 1,000-foot sections, with shorter ones at the shore ends. The trussed suspension system was to be employed and the bridge was to have upper and lower decks, the one for wheel and foot traffic and the other for railroad trains. One of the greatest points in undertakings of this sort is the strength of the piers. This was to be secured by foundations built of solid masonry started 150 feet below high-water mark. The masonry was to be carried up to the floor level of the bridge in solid columns. Five cables were to be used and on these the remainder of the structure was to rest. There is little trouble with modern appliances in carrying the foundations of buildings down as far as one chooses; indeed, a bridge recently erected in Australia has piers 180 feet in length and these were carried down through mud and sand to their solid foundations.

The Champion Big Dog.

The largest dog in this country is the property of Wayne Bailey of Rutland, Vt. When weighed the other day he tipped the scales at 267 pounds.

When the animal weighed 244 pounds a prominent dog fancier declared him to be the largest dog in the world. Repeatedly Mr. Bailey has been urged to put Nero on exhibition at the big dog shows, but he has never thought it advisable.

Nero is a handsome half-German and half-English mastiff, fawn brindle in color, his huge head being of a trifle darker shade. He sets up firmly on his legs and is remarkably well proportioned. He is as agile and lively on his feet as a cat, and the other day caught a big rat in his master's barn.

He makes a splendid watchdog, but is withal a kind and affectionate animal. Mr. Bailey bought him at West Rutland when he was six months old. He is now 4 years old. At the time of purchase Nero weighed 102 pounds. The animal is a product of Mr. Winchel's kennels at Fair Haven.

Nero is provided with a strong leather harness, as he cannot wear a collar. The animal stands up from the ground 35 inches and girts 50 inches. The dog's neck is unusually large, measuring 30 inches, and from tip to tip he measures 6 feet 5½ inches.

Who Were Your Ancestors?

There are now twenty-seven societies in the United States, membership in which depends on descent from ancestors who distinguished themselves by coming over to America at an early date, or by being officers in American wars prior to 1861. Most of them are in a flourishing condition. The oldest aristocratic Cincinnati leads them in age.

Giving Away Brides.

Among the novel means by which some people of London subsist is that of giving away brides at the altar. The custom has grown to considerable proportions of late, and a member of a firm of fashionable costumers, in speaking of it recently, said: "You, of course, recognize the fact that in this great city are scores of hard-working girls who are miles away from their relations and who have always been too busy to cultivate many friends. Well, when these girls are about to marry young fellows who are similarly circumstanced the question arises as to who shall give away the bride.

"I can answer that question for them at once, for I have connected with my business an ex-major in the army, a member of an ancient family and a man, too, of unimpeachable character. He is poor, but he dresses well, has beautiful white hair and looks the kindly father to perfection. I introduce him to the bride and bridegroom, and he, for a moderate fee, gives the former away. Sometimes he takes the whole arrangements of a breakfast and so on upon himself, and he is a fine speaker on occasion. He is always a welcome guest with these people afterward."

When a young woman has been requested to break the news of a death to a friend, she feels that she has reached the supreme pinnacle as a comforter.

A Red Handed Murderer.

Tetterine kills the germs of Tetter, Eczema, Salt-lheum, Ringworm and other skin diseases. Most of these are caused by the existence of infinitesimal anamalculae. Tetterine murders them at once and stops the agonizing itch, then it soothes and heals the skin. At drug stores, or by mail for 50 cents in stamps. J. T. Shuptrine, Savannah, Ga.

Attention is respectfully directed to the advertisement of Messrs. Perryman & Co., Birmingham, Ala., which appears in this issue. This firm manufactures the Enterprise Cotton Mill, which is claimed to be the cheapest, simplest and most practical on the market. If you are thinking of buying a mill, it will no doubt pay you to send for a copy of their descriptive catalogue.

NOTES AND COMMENTS.

According to the statistics of the United States Bureau of Labor, there are 27,000 married men in New York city who are supported by their wives.

To be "full of prunes" is an expression meant to convey reproach, but California owns up this year to thousands of tons of the crop, and doesn't care who knows it.

The Louisville Times reports that "a frog in Graves County has got into an ordinary jug and cannot be got out." Probably a closer examination will prove that that jug contains a snake instead of a frog.

Travelers in the wilds of Africa will do well to take a plentiful supply of umbrellas with them, according to Prof. Pechuel-Loesche, the German explorer. He says they are the best protection against the wild beasts—tigers and lions especially being afraid of them when suddenly opened.

A plan for connecting South and West Australia by railroad is under consideration. The distance between the ends of their railroad systems is only 553 miles, but the country to be traversed is an arid desert, and reservoirs must be built at twenty-five-mile intervals along the whole line. The cost will be about $10,000,000.

The Boyden Premium of the Franklin Institute, Philadelphia, is to be awarded at the beginning of next year. The premium is $1,000, and it will be given to "any resident of North America who shall determine by experiment whether all rays of light and other physical rays are or are not transmitted with the same velocity."

An English paper carries an advertisement reading: "We hereby publish our intention to repudiate any demands for payment of moneys obtained under any pretense whatsoever by any person whomsoever." Then follows the firm name and address. If debt-paying can be avoided in England by merely inserting an advertisement like that in a paper, conscienceless financiers ought to flourish over there.

The tide of immigration is now at the lowest point since 1882, when the General Government assumed control of the subject. The number of arrivals from all countries for the fiscal year was 230,832, a decrease of one-third from the previous year. Italy still furnishes the largest quota of immigrants, her contribution being over 54,000; Germany supplied 22,500; Austria, 33,000; England, 10,000; Ireland, 28,500; Cuba, 3,500; Armenia, 4,700.

For some years the Government has been bringing over to Alaska from Siberia reindeer for breeding purposes, the idea being to extensively introduce this useful animal throughout our northern territory, both for food and transportation purposes. The herds have thrived, and Commissioner of Education Harris, who has charge of the matter, reports that there should now be 500 deer trained to harness and ready for practical work. The purpose is to furnish the deer for transporting miners' supplies on the Yukon. A reindeer will go three times as far in a day as the mongrel dogs now in use, and they live easily on the moss that grows so abundantly in Alaska, whereas to find feed for the dogs or horses is in itself a serious problem.

There is general interest in the proposed sample road-building by the United States Government at the New York State Agricultural Experiment Station at Geneva. The sample road will be more than 7,000 feet long. About 800 feet will be macadamized in the centre to the width of eight feet, with rolled dirt on either side, this being designed as an improved country road. The remainder, something over a mile, will be macadamized in the centre fourteen feet, with dirt roads on either side. It is now proposed also to lay at least 200 feet of the steel track, which is now attracting so much attention as a possibly efficient and economical road, in sections where stone is scarce and costly. Visitors are cordially invited to witness the operations on Wednesday and Thursday of each week by Gen. Roy Stone, who is in charge.

The shortage this year in the European crop of rye, the cereal largely used abroad for bread and at home for whiskey, is estimated as 300,000,000 bushels, and there is already a considerable demand for American rye for export. Fortunately for American farmers, this year's rye crop is considerably in advance of what it has been, and the crop will exceed, it is computed, 30,000,000 bushels, breaking the record, which was 29,960,000 bushels in 1882. Rye is used extensively in many European countries, particularly in Russia, about half the total rye used in Europe and America being raised in Russia. An enormous quantity of rye, too, is raised in Germany, and a considerable, though smaller, amount in Hungary. Sweden and France are two other European countries which produce a considerable quantity of rye, it being used for bread more extensively there than in the United States.

While Peary, Nansen and Andree have been striving for laurels at the North, the South Pole is not being neglected. A large scientific expedition for the Antarctic Sea has been fitted out in Belgium. Lieut. De Gerlache is its commander. His vessel is a steam whaler, bark-rigged, named the Belgica. The Belgica is a small craft, registering 250 tons, and capable of making seven knots under steam alone. She does not go out for exploration purposes primarily; she is a whaler, and will attend to business as such; but she will convey the Antarctic expedition, land it, succor it if necessary, and bring it home—if all goes well. Her hull is sheathed with ironwood, and she carries a powerful steel ram, or spur, for cutting through ice-floes. The expedition will be provided with the choicest of modern scientific instruments, with suitable clothing, food, snow-shoes and other necessaries for extended journeys over the ice-clad Southern continent. The outfit is modest, but effective. Valuable geographical information concerning this unknown polar region is confidently expected.

Preparations for the exodus to the Klondike are being made by systematically organizing parties in many sections of the country. One of the most notable is a syndicate which has chartered a steamship to make the trip to the Yukon by way of Cape Horn. Tickets for this route will cost $500, and each passenger can take 1,000 pounds of baggage. Three of the crew of the United States revenue cutter Perrr, in Alaskan waters, deserted and started on the 700 mile journey by open sea to St. Michael's. The gold fever is attracting every one within reach of the Yukon country, and it is almost impossible to keep hold of enough men to conduct routine business. Skaguay, a few miles from Dye, is becoming the headquarters of the gold-seekers en route, instead of Dyea. The mountain route from Skaguay to the Upper Yukon is now impassable, but 1,000 men are working to open it. Small numbers of travelers continue to make their difficult way over the pass from Dyea. There are over 5,000 people at Skaguay and Dyea waiting for a chance to move, and there are 5,000 more on the way. Many are returning to Juneau to winter there, having given up getting to Dawson before things are frozen solid.

Eskimo Bows and Arrows.

As every one knows, the Eskimos, with very few exceptions, inhabit a region which is perfectly treeless, or, at any rate, where nothing grows but pines and spruces, whose soft inelastic wood is entirely useless for making bows. They have overcome this difficulty very effectively by fastening along the back of the bow twisted cords of reindeer sinew in such a way that each cord is stretched when the bowstring is released. As far as we know, no other race of savages makes use of this ingenious contrivance. Some tribes of Indians are in the habit of stiffening their bows by "backing" them with strips of sinew, glued on, but the Eskimo backing is made of cords and tied on. As old Martin Frobisher, the first Englishman who ever saw the Eskimos (in 1557), tells us, "Their bowes are of wood of a yard long, sinewed on the back with strong sinewes, not glued too, but fast girded and tyed on."

In some regions the Eskimos, when first visited by white men, were still using bows with a very simple backing, merely twenty or thirty strands of twine running from one end of the bow to the other, twisted together tightly from the middle and tied down to the bow in two or three places. My friends at Point Barrow and along the adjacent coast, however, had gone on improving the bow until it was the best made by Eskimos anywhere.—Appleton's Popular Science Monthly.

Gold in Philadelphia.

The report says: "In order to calculate, with some accuracy, the value of this body of wealth, we cut out blocks of the clay and found, on an average, a cubic foot, as it lies in the ground, weighs 120 pounds, as near as may be. The assay gives seventenths grain, say three cents' worth, to the cubic foot. Assuming the data already given, we get four thousand one hundred and eighty million cubic feet of clay under our streets and houses, in which securely lie one hundred and twenty-six million dollars. And if, as is pretty certain, the corporate limits of the city would afford eight times this bulk of clay, we have more gold than has been brought, according to the statistics, from California and Australia."

Other calculations show that every time a load of clay is hauled out of a cellar enough gold goes with it to pay for the carting, and if the bricks which front our houses could have brought to their surface, in the form of gold leaf, the amount of gold which they contain, we should have a glittering show of two square inches on each brick. A single specimen of zinc proved to be absolutely free from gold.

These investigations proved that, while gold is justly considered one of the rarest metals, it is also one of the most widely diffused, and there are many philosophical reasons to be found in explanation of this apparent paradox.—Appleton's Popular Science Monthly.

The average rent of houses in England is $105 per annum.

There is a vast difference between being able to say prayers that sound fine, and having a broken and contrite heart.

Papa Crumley—"I judge a man, sir, by the company he keeps." Mr. Sulter—"Yes, sir. I hope you will bear in mind that I've been keeping company with your daughter for over two years."—Philadelphia North American.

Pokeleigh—"I met an old scientist today who claims to be able to square a circle." Brokeleigh—"Pshaw, I can do that myself! Just loan me a round dollar and see how quick I'll turn it into a square meal."—New York Journal.

Why is a foreign nobleman who marries an American heiress like a sailor? Because he's a mariner for money.

HAIR RENEWER
does for the hair just what its name says it does—it renews it. Fading, falling, thin locks are stimulated to look fresh and new by its use; nature does the rest.

SOUTH CAROLINA LADIES
DON'T LIE.

Mrs. C. M. Lowan

Inman, S. C., says: I have used Dr. M. A. Simmons Liver Medicine for years, with the best of results for Sleeplessness, Nervousness, Indigestion and Swollen Feet. It cured Miss S. Hammett of a complication of diseases; she says it saved her life. I think it far excels "Zeilin's" and the "Black Draught" medicine.

Falling of the Womb.

The cases of uterine displacement are very numerous and constitute a prolific cause of intense and wide-spread suffering. Its symptoms are bearing-down or dragging sensations, pain or weakness in the back, sometimes a sense of goneness at the pit of the stomach. It may result from too frequent childbearing, wearing garments that compress the waist and abdomen, overlifting, standing on the feet too long, and general debility.

We would strongly urge the use of Dr. Simmons Squaw Vine Wine which will purify and vitalize the blood, give tone and strength to the muscles of the uterus, so that it will be kept in place. To facilitate a quick and complete recovery, we recommend as an injection our Mexican Female Remedy, which will produce the happiest results.

M. A. Rutherford

Walhalla, S. C., writes: I have used Dr. M. A. Simmons Liver Medicine more than 20 years, for Torpid Liver and Dizziness. I take a dose every two weeks and feel all right. I know it is far Superior to "Zeilin's Regulator," in my case.

Womanhood.

The health and well-being of mankind depend upon the physical health and perfection of womanhood. Among the diseases which most impair the female constitution are leucorrhœa, irregular and painful menstruation, falling of the womb, chlorosis, scanty or too profuse menstruation. These diseases can be cured. Dr. Simmons Squaw Vine Wine is a delightful remedy to take, entirely harmless, free from narcotics, purely vegetable and produces no unpleasant after-results. It is unequalled as a uterine tonic and curative agent for all female diseases, as it is impossible for weakness of the uterus and generative organs to exist when it is faithfully and persistently used. Constipation is another bane of woman's life which can be cured by using Dr. M. A. Simmons Liver Medicine.

Are You Thinking of Buying a COTTON SEED MILL?

If so, it will pay you before doing so to investigate the ENTERPRISE MILL

It is the CHEAPEST, the SIMPLEST and most PRACTICABLE mill for plantation use on the market. Its grinding parts are made of tool steel and it are regulated by a steel spring so as to prevent breakage when rocks, nails and other foreign substances are fed in with seed. It is guaranteed to grind cotton seed and to separate meal from hulls. Send for descriptive catalogue.

A GREAT SALMON RUSH.

THE FISH ARE SWARMING UP THE COLUMBIA AND FRASER RIVERS.

A Four-Million-Dollar Catch—How Fish Jammed in a Creek Formed a Natural Bridge—Seine Fishing From the Shore—A Phenominal Year.

Advices from the Fraser and Columbia rivers, as well as from Alaska, indicate that this will be the biggest salmon year within a quarter century, says the Washington Star.

The fish are running upstream literally in swarms; so close do they run in fact, that a canoe paddled over the surface becomes an instrument of death, killing handreds of salmon in its passage. In the upper tributaries of the Fraser the crush is tremendous, and the certain result will be the practical damming up of these narrow mountain torrents with solid masses of dead fish. But, while the waste is expected to be very large, the canning output will also greatly exceed that of previous years.

Dr. Tarleton H. Bean, director of the New York aquarium, who has won both fame and wide experience as a member of the United States fish commission, is authority for the following statement:

"It may confidentially be asserted that British Columbia and Alaska will this year, beat the record with their fish output. The conditions for salmon have rarely been so good, and reports of a mammoth rush upstream come pouring in from the northwest. It is stated that, so tremendous is the influx of fish, that hundreds are actually forced out of the water and into the boats.

"The salmon pack, or canning output in 1891—a good year—for the Fraser river fisheries was 400,464, valued at $2,351,083. With these figures as a basis, it would hardly be an exaggeration to say that these seine fisheries, with their greatly increased facilities and larger number of hands, ought in 1897 to turn out canned fish to the value of about $4,000,000. Statistics are less exactly taken in our Alaskan fisheries, but they also ought to show a marked increase. In addition to all this, it must be remembered that the Indians do a very great deal of privateer fishing. In fact, the aborigines largely subsist on dried fish, the "bucks" netting them and the squaws cleaning and drying.

"The salmon industry is doing wonders for British Columbia. New Westminster, the capital of the fisheries, had in 1881 a population of 3000 souls. Today the population has quadrupled, exceeding 12,000, and this exclusive of Indians and transient laborers. In the fisheries and canning factories over 6000 people are now employed, according to the official reports. These are almost altogether Chinese and Indians. The fishermen—who are paid per fish caught, regardless of weight, about six cents—number in their ranks English, Scotch crofters, Irish, French, Japanese and Indians."

John A. Fraser, R. C. A., the well-known landscape painter, spent many years on his namesake river, while preparing a series of views at the instance of the Canadian government. Asked concerning the fisheries, he said:

"To begin with, boat fishing does not exist for more than a few miles above the delta of the Fraser. Beyond that point all fishing is done from the shore by men and sometimes in exceptional years, with the aid of horses.

The net used differs largely from the seines used in Alaska. I can compare it to nothing better than a huge hammock slung by both ends to a pole. Night is the time for fishing operations. The men arrange among themselves for certain stretches of river. Below the delta line they cast their nets from boats with high, platformed sterns. Further up, the river being unnavigable on account of its fierce current and sunken rocks, they cast from the bank. A good man can catch hundreds daily. Two hundred fish at 6 cents a fish means $12 a day; and that is no unusual wage in the season. Below the delta I have heard of $100 being earned by two men in a single day—or, to be exact, in a single night.

"That 1897 is to be a banner year I have heard from various friends at New Westminster. Strange as it may seem, the canning people are not always elated by banner years. So much salmon drugs the market and even hurts the canning industry.

"Nobody who has not been in the northwest can have any notion of the awful inrush of salmon during a very big year, like the present. On one occasion I crossed a tributary of the Fraser river literally over a bridge made of salmon. The fish were quite dead, and had begun to putrify. Forced from the main stream into the tributary by the terrific legions of upgoing fish behind, they were driven into a long reach where the water grew shallow and the rocky banks very narrow. Here they became an absolute wedge—a jam, like the human one that occurred on the Brooklyn bridge years ago. Not a fish could move forward or backward, and thus imprisoned, as in a vise, and without water, they died by hundreds, under the scorching sun.

"It was quite easy for my Indian driver to take the horse and buggy across this extraordinary natural bridge, while I followed on foot. Judging by the height of the river banks, and the extent of the fish dam, I should say that there was an actual waste of fully 2500 or 3000 fish in that jam. Subsequently I was informed that such jams are by no means uncommon.

"Formerly the Indians did nearly all the canning. Now, however, the Chinese, who are at once cleaner, cheaper and more easily managed, do most of the work.

"The night fishing is very picturesque. You see the dark figures of the fishermen, standing in bold relief against the moonlight. Then high in air whirls the big net, sweeping at the end of its iron-bound pole. Deftly, silently almost, it cuts into the swift current of the Fraser. There is a minute or two of waiting, and then, with a swish and a great scattering of spray, up comes the net, dank and dripping from the river, having described a rapid semi-circle under water. Once more it is whirled across the moonlight, and, this time, keen eyes can see within its meshes the silver scales of the salmon, wriggling and struggling for a freedom that is his no more. Then comes the quick blow of the killing club, and the dead fish is tossed into the creels."

The work of canning, according to Dr. Tarleton H. Bean, and Mr. Fraser, usually lasts about two months. The Chinese can clean about 1000 fish in a day. Sometimes the canners turn out 75,000 cans in twenty-four hours.

HUMOROUS.

The Rescuer—How did you come to fall in? The Rescued—I didn't come to fall in. I came to fish.

She—What do you think of my portrait? He—Sincerely, it is not beautiful, but the likeness is perfect!

Benedict (proudly)—My wife kisses me good-night regularly. Rounder (bitterly)—Women are suspicious creatures, ain't they?

"No, madame, we can't take back that waist; you have worn it." "What if I have? You advertised it as 'changeable silk'."

"Now that you have your new silk umbrella, you can throw that old cotton one away." "Oh, no. I'll save that for a rainy day."

"Hargreaves was somewhat in his cups last night, eh?" "If I were called on to express it, I would say that he was in his kegs."

Mrs. Jones—I saw young Mr. Hobart kissing his mother-in-law very affectionately at the depot today. Mr. Jones—Hum! She was going, was she?

Mrs. Kiver — For mercy's sake, Mary, what are the children quarreling about? Mary—It's only in fun, mem; they be playing they're married.

He—Does it make you nervous when I rock the boat? She—Yes; but I should have remembered that all the —the people who rock boats are not dead yet.

"I have taken a life to save my own." "What do you mean?" "If I hadn't taken that 'Life of Grant' the woman book agent would have talked me to death."

"How did Jones lose his position in the weather bureau?" "Why, he made seven correct predictions out of ten, and they thought he must be depending on guesswork."

Mrs. Youngish—Oh, Bob, what shall I do? Baby is crying because I won't let him pull all the fur off my new muff. Mr. Youngish — Well, that's all right. Give him the cat!

Lovely woman will never be perfectly happy until somebody invents a watch that will run accurately when it is wound up only at irregular intervals about thirteen times a month.

De Bangs—I bought a shirt at this store—can I change it at this counter? Saleslady (somewhat embarrassed)—Well, er, don't you—you think you had better go where you can have more privacy?

"Of course you will write only on one side of the paper," said the professor in the college of journalism to his new pupil. "Yes, sir," replied the pupil, who was willing to learn. "Which side shall I write on?"

"It is a pity," said the minister of foreign affairs, "that we have not a better navy. There is nothing like a first-class fleet to back up a diplomatist." "Correct!" said Abdul Hamid. "A battleship in the hand is worth two ultimatums in the bush."

Mrs. Crimsonbeak (soberly)—Are you sure your fiancee will make a good home body, Eli? Do you think she knows anything about mending, for instance? Cholly Commonstalk—About mending, mother? Why, that is her very strongest point. I saw her mend a busted tire once in just 14 minutes by the watch.

Correct.

Teacher—A rich man dies and leaves a million dollars—one-fifth to his son, one sixth to his daughter, one-seventh to his wife, one-eighth to his brother, and the rest to foreign missions—what does each one get?

Little Willie Brief—A lawyer.—Puck.

THE CHILIAN LEGATION.

JAPAN HAS SIGNED A NEW TREATY WITH MINISTER GANA.

And is Widening the Diplomatic Relations—Other Conventions Are to be Established—Japan's Action Attracts Favorable Attention.

An interesting ceremony occurred at the Chilian legation at 3 o'clock Saturday afternoon when for the first time treaty relations at Washington were established between Chile and Japan.

Minister Gana, of Chile, had been delegated plenipotentiary in behalf of his country and Minister Hoshi, of Japan, for that country. The officials of the two legations were present and after the instrument had been executed there was an exchange of felicitations. The treaty was signed in six duplicates, two in Spanish two in Japanese and two in English. It is an extensive document, providing for peace, amity and commerce, and covering the entire range of relations between the countries, as it is the first and only treaty between them. It differs from the new treaty of Japan with the United States and with other foreign nations, as the latter took up old treaties while this inaugurates relations between the two countries.

With the conclusion of this treaty Japan has extended her modern system of treaties to the United States, Mexico, Peru, Brazil and Chile and is negotiating toward treaties with the other leading South and Central American nations. She also has made treaties with Great Britain, Germany, France, Russia and other leading European nations. The treaties go into effect in 1899, at which time by this comprehensive re-arrangement of her treaties, the relations of Japan and the rest of the world will be placed on a modern and uniform basis.

The action of Japan has attracted the favorable attention of other countries, including the authorities at Washington, who feel that such modern and universal treaties would be of advantage to the United States, some of her treaties being 100 years old and in many respects obsolete. This is true particularly of the treaty between the United States and Spain, most of which relates to the Spanish opposition of Florida-Louisiana.

ARRESTED FOR ROBBING THE MAILS.

Lady and Gentleman Detected in Their Crimes at Galveston, Tex.

Thursday evening August J. Weber, superintendent of the carriers, and Mrs. Pauline L. Keller, general delivery clerk at the postoffice at Galveston, Tex., were arrested on a charge of robbing the mails. Weber was sent to jail in default of $5,000 bail and Mrs. Keller was released on $1,000 bond. F. M. Hamilton and L. S. Wood, postoffice inspectors, worked up the case and lodged the information upon which they were arrested.

There has been a leak in the postoffice there for several months. Money, jewelry and merchandise passing through and coming into the office has failed to reach the address to which it was directed. Messrs. Hamilton and Wood were detailed on the case. Thursday they sent a decoy package containing a silk handkerchief and a pair of gloves from Houston addressed to Miss Bessie Delameter, Galveston. The postoffice detectives discovered that the package was missing. Thursday they searched Mrs. Keller's room and found the gloves and handkerchief in a bureau drawer. In a grate they found a large quantity of letters, wrappers and other mail matter. In the face of her guilt Mrs. Keller broke down and confessed that Weber gave it to her. When Weber saw the detectives interrogating Mrs. Keller he hastily sent a boy to her room to secure the stolen articles, but the detectives had them in their possession. The crimes have extended over quite a period, and the amount stolen cannot be definitely approximated. Weber is about forty years, and was regarded as one of the most reliable and efficient men in the service.

A Monument to Harriet Beecher Stowe.

A cross of Scotch granite, 12 feet high, has been erected over the grave of Harriet Beecher Stowe, at Andover, Mass. It is copied after one in the possession of the Duke of Argyll, which Mrs. Stowe greatly admired while visiting in Scotland. Upon the cross is the inscription, "Tribute of Loving Remembrance. Erected by the Children," and lower down, "1811—Harriet Beecher Stowe—1897." Upon the white granite pedestal is the inscription, "Her Children Rise Up and Call Her Blessed." The grave of Mrs. Stowe is in the private cemetery of the trustees of Phillips Academy. In the same lot are buried her husband and son.

A Chinese Religious Riot.

The conflict occurring between Protestant and Catholic converts at Tuichow, province of Cho Kiang, China, are serious. The British Plenipotentiary abroad has started to quell the disturbance. The authorities blame the American and British authorities for the troubles.

J. F. PETERSON, Sec'y.

Now is the time to secure a "foot-hold" in Thorsby, where you will from the start enjoy the benefit of such privileges that only a colony like Thorsby can offer to Home-seekers . . . . . .

ON OCTOBER 5TH AND 19TH

You can buy one-half rate EXCURSION TICKET, one way or round trip, to Thorsby, Ala Should your Depot Agent not be posted, call for a ticket to Strasburg, Ala., which is the old station, only 1-2 mile south of Thorsby.

A WORD TO THE HOME-SEEKER WITH MODERATE MEANS.

(a) Suppose you have a home in some Northern village or town, suppose this home has cost you $600 and you have it all paid for, suppose you have one or two hundred dollars in the bank or invested in some other safe way, and a job that brings you $40 per month. Very well! To you we will say, stay where you are and keep on, earn your monthly salary and invest your surplus money in a vineyard at Thorsby on the installment plan. In course of two or three years you will have it all paid for and have used only a little surplus money at the time of purchase and $10 per month after that.

For cost and gain of a vineyard three years old we refer you to table below.

(b) Suppose you have a home worth $500 to $500 and have it all paid for, and, like so many thousand of people nowadays, are out of employment; suppose you have a family to support, and for that reason are obliged to incumber your home. To you we will say—sell for $300 or more at first opportunity, and buy a vineyard in Thorsby on the installment plan; you can meet your obligations and have a little surplus money for improving balance, 8 acres of your vineyard, and raise enough sweet potatoes, sugar-cane and vegetables of various kinds to support your family until you realize the income from the grapes.

(c) Suppose you are a renter of a farm in the North and have tried for years to lay up enough money to buy you a home of your own, how have you succeeded? You have our sympathy, and besides, we will urge you to settle your mind on one thing. Turn all into money you can and seek a home in the South, where you will find life worth living, and can in the course of a few years have a farm of your own in the midst of your own people and enjoy the benefit of the best climate on earth, in a section of a country where you can raise any products used to in the North in larger quantities and at higher prices, where you can work every working day in the year and where a Northern town offers you a Home Market for all your products.

Send for our improved Farm List and you will be sure to find something better than what you have at present. Very respectfully,

THE CONCORDIA LAND AND IMPROVEMENT ASS'N.,
THORSBY, Chilton County, Ala.

The Expense and Income of a Vineyard after Three Years.

10 acres fruit land with 1000 grape-vines planted	$400 00
Fencing	30 00
Cultivating two acres, $6.50 per acre, for three years	39 00
Trellis for two acres--second year	50 00
	$519 00
The income 3d year, 1000 vines at 25 lbs. per vine at 3c per lb.	$750 00
Deduct Expenses	519 00
Net Gain	$231 00

besides your vineyard is paid for and the income will increase the older the vines, and nothing has been allowed for the eight acres, which will easy feed a family the year round.

See what a Grape Grower here says of his Scuppernong Grapes:

Four years ago I started one acre (50) vines of Scuppernong grapes and they have from the start proved to be easier raised than any other fruit in the South. What persuaded me to plant this fruit was the results from a few older vines in this neighborhood and especially one that had no care whatever and bore grapes fifteen years without missing a year, and is still healthy and bearing. On one single vine this year, I picked first one bushel for table use and preserves and out of what was left on this vine was manufactured 21½ gallons fine wine, which sells in the market at $1.50 per gallon.

I am now living near Jemison, 3 miles from Thorsby, and after a winery and canning factory are once located at Thorsby, I shall consider my vineyard worth as much as any 160 acre wheat and corn farm. I am a native from the North and extend all thrifty people a hearty welcome.

P. W. SILSBEE.

Jemison, Ala., October 1, 1896.

DUN'S WEEKLY REVIEW.

THE VOLUME OF LEGITIMATE BUSINESS CONTINUES LARGE.

Speculation in Wheat and Corn Has Been Set Back by Bright Crop Prospects---Iron Manufacture Pushed to Further Expansion by Growing Demand.

R. G. Dun & Co.'s weekly review of trade, of Saturday, says:

The failures during the third quarter of 1897, obtained Friday by telegraph, were 2,903, with liabilities of $28,639,261, of which 29 were in banking, with liabilities of $3,387,069; commercial failures 2,874, with liabilities of $25,576,142, an average of only $8,898 each, lower than in any quarter for twenty-three years. The amount of defaulted liabilities is the smallest in any quarter for five years, and in fifteen years only six quarters have shown smaller liabilities. Manufacturing failures 651, with liabilities of $9,431,191, an average of but $14,487 each, and trading 2,164, with liabilities of $12,825,065, an average of but $5,927 each, both smaller in average of liabilities than in any previous year, of which classified records exist.

The volume of legitimate business continues a little larger than in the same month of 1892, for while the great increase of 27.4 per cent. at New York for the week might be supposed to be due to speculative activity in spite of the establishment and growth of the stock exchange clearing house, yet payments through the principal clearing houses outside of New York exceeded those of 1892 by 3 5 per cent. for the week and 2.0 per cent. for September. New York makes settlements for a large part of the country and the daily average, including that city, was in September $206,364,000 against $134,059,000 last year, $133,310,000 in 1894, $122,733,000 in 1893, and $176,327,000 in 1892, so that the gain over the same month in the best of past years is 17.0 per cent.

These evidences of reviving prosperity are the more important because prices for most manufactured products have advanced but moderately and are much below the level of 1892, while speculative markets are all declining with curious unanimity.

Speculation in wheat and corn has been set back by bright crop prospects. A decrease in foreign buying caused weakness. The price of wheat has declined 5c, and of corn nearly 2c for the week.

Turning from speculative markets to productive industry the change in tone is striking. All industries are pushed to increase working force, with occasional rise in rates of wages, by the growing demand. This is largely for replenishment of stocks but dispatches show that the retail trade at nearly all northern points continues to expand and dealers well known that increases of working force and of wages insure a large distribution of goods. Anxious appeals for speedy deliveries disclose more rapid distribution already than had been expected, and in the textile manufactures the works are hindered from taking as liberal orders as they might by doubts of the prices, though having enough to do for some time. The advance in cotton goods has been checked by the decline in material but in the woolen goods the advance in prices has been small compared with the rise in wool, which is helped by stronger prices at London sales. The dealings, mainly speculative, have amounted to 66,501,100 pounds in four weeks, 48,572,200 being domestic but recent sales of very large lots suggest that profit taking may have begun.

Iron manufacture has been pushed to further expansion by growing demand for finished products, which has caused a little further advance in prices, while pig iron is also higher, 25c for Bessemer at Pittsburg, with purchases of thirty thousand tons by one concern, and as much higher for anthracite No. 1, at the East, which was advanced to $10.50 and Southern No. 2, no longer offered below $8 at Birmingham. The average advance in all iron and steel prices, 9.9 per cent. from the lowest point, is still restricted by addition of many furnaces and other works of those in operation.

Failures for the week have been 194 in the United States, against 299 last year, and 34 in Canada against 46 last year.

Men philosophize with you in your distress, but it is the women who console.

HAPPY TIMES.

There's somethin' like a jingle an' a tingle in the air,
Fer the honey's jest a-drippin' from the hives:
The fields are lookin' frosty with the white that blossoms there,
An' the corn crap's jest the biggest of our lives!

Summer's a-goin'—
Needn't beat the drums;
We're bound to have a showin'
When the fall time comes!

There's somethin' like a jingle an' a tingle everywhere,
An' the blue smoke has a meanin' as it curls;
They're tunin' of the fiddle, an' there's music in the air,
An' we'll soon be swinging corners with the girls!

Summer's a-goin'—
Needn't beat the drums;
We're bound to have a showin'
When the fall time comes!

—F. S. STANTON, in Atlanta Constitution.

"ONLY PAULINE."

BY ETTA J. WEBB.

The day was a cheerless one even for November. Perhaps it was for that very reason that the shabby little sitting-room looked so cosy. There was a bright wood fire in the grate diffusing a genial warmth and light. Katherine loved warmth and light, she loved roses, too; not the sweet, wan, fragile kind that overran the old garden in summer, but heavy, rich-scented crimson roses, such as Jack Donelson sent in great handfuls daily. There was a bowl of them now on the piano, making a blot of vivid color against the sombre background.

But it was not Katherine who stood on the hearth rug with fingers interlaced staring moodily into the fire. It was "only" Pauline. The warm glow lent a faint color to her olive cheeks and brought out a certain lustre in her hair that was not there excepting in a strong light. Too, it revealed a lurking bitterness about her mouth and in her eyes. Pauline's thoughts were not pleasant ones. She was feeling at odds with herself and all the world—that disagreeably antagonistic feeling that sets one's moral teeth so sharply on edge.

"Only Pauline!" Long ago—so long ago that it seemed to her sometimes as if it could never have been otherwise—she had become reconciled to the fact that Katherine and Katherine's wishes must always receive first consideration. But then Katherine was so beautiful that the best of everything seemed hers by right. It was not hard to yield to her as to a plainer person or one less charming. Beside, Pauline was not beautiful. Indeed, no one had ever gone so far as to call her good looking. Viewed in the light of Katherine's exceeding loveliness, she was plain even to insignificance. Pretty, vain Mrs. Ward had never been quite able to understand why her two daughters were so unlike.

"Katherine is all Morton," she was wont to say, "but Pauline——"

The sigh and deprecating little shrug were more effective than any mere words could have been in the completion of her meaning.

Pauline had heard the above remark times without number, and had given little heed. But when, one day, her mother made it in the presence of Wilton Eliot, she felt a sudden rush of rebellious feeling that brought tears to her eyes and a choking sensation into her throat. Did it need that to make him fully conscious of her unattractiveness? Surely he could see it without. For the first time in her young life the girl felt that she had not been treated fairly by her mother and Katherine.

It was the thought of this, and not the sunless, chill November day that gave to her face its touch of gloom. So absorbed in reflection was she that she did not hear when the door behind her opened softly and some one came into the room.

"Pauline!"

She turned to confront the slight, boyish-looking young fellow who had just pronounced her name.

"Oh, it's you, Jack!" she said, smiling a little. "I did not hear you come in."

"Your mother said I should find you here. What a nice fire!" He came and stood before her on the hearth rug. "Katherine—is she not at home?" he asked, unhesitatingly.

"No, she has gone to make some calls with Mrs. Westford."

He drew a deep, quivering breath, at which the girl looked sharply up at him.

"I'm afraid you think I'm not very hospitable, Jack. Won't you have a chair?"

"No, thank you. I can't stay long enough for that. Katherine promised to go driving with me this afternoon, but I suppose she forgot," he added, bitterly.

"I suppose so," Pauline answered, slowly.

Her eyes fell beneath his questioning gaze.

"Pauline, tell me!" he cried out suddenly. "Does that man still come here?"

"Do you mean Mr. Eliot? Yes, he still comes here."

A quiver swept his face.

"Will she—do you think—oh, Pauline, is she likely to marry him?"

The girl's hand, hanging among the folds of her gown, was clinched until the knuckles stood out whitely.

"How can I tell?" she answered wearily. "You ought to know Katherine well enough by this time to understand that she will do exactly as she pleases."

"But if she pleases to marry him! I could not bear it—oh, I could not bear it!"

The anguish in the young voice stirred Pauline strangely. She turned and laid her hands upon his shoulders.

"Oh, yes, you could," she said. "It would be hard, but you could."

"Do you think to comfort me by telling me that?" he said, bitterly. "You are very good, Pauline, but you don't understand these things.

He drew her hands from his shoulders and clasped them tightly together.

"No, I suppose I don't—as you understand them," she said, with a touch of sarcasm.

He looked at her in surprise.

"Why, I believe you are out of spirits, too, Pauline! Can it be the weather, do you think?"

"Oh, it must be. The weather is always to blame for everything, isn't it?"

"I think a drive would do us both good. Won't you take pity on me since Katherine has left me in the lurch?"

At any other time Pauline would have been only too glad to enjoy the delightful privilege of a drive behind Jack's handsome bays, but to-day she felt that even in so slight a thing as this she could not bear voluntarily to make herself second to Katherine.

"Thank you, Jack," she answered, gently. "But I'm afraid I'm too dull to make an agreeable companion. I think I'll practise for an hour or so, and see if I can't get into a more comfortable state of mind."

"Well, I won't urge you, Pauline. How dark it has grown within the last hour! There isn't an inch of blue sky to be seen anywhere," he added, glancing from the window as he turned to go.

Pauline accompanied him as far as the door, then came back and seated herself at the piano. She was still there, running over scales with feverish velocity when Katherine came in, flushed and a little tired from walking.

"For goodness' sake, Pauline, do stop that dreadful banging! It is enough to drive one wild! I wonder mamma has patience to endure it," she exclaimed, fretfully.

She went over to the fire, and sinking into a low chair began impatiently to remove her long gloves. Pauline left the piano at once, and came and stood beside her sister.

"Did you not have a pleasant time, Katherine?" she asked.

"No—yes! Has any one been in this afternoon?"

"Jack has."

"Oh, Jack!" Katherine said a little contemptuously. "Any one else?"

"No one."

"Hasn't Mr. Eliot——"

"Why can't you understand, Katherine," Pauline interrupted, sharply, "that 'no one' includes Mr. Eliot the same as every one else?"

Katherine looked up at her tall, young sister, half startled. Pauline was not wont to speak thus to her.

"I think, Katherine," Pauline went swiftly on, "that you ought to feel ashamed to treat Jack Donelson as you do. He is entitled to a little consideration, at least, and when you promise to drive with him of an afternoon and then go deliberately off without a word to make some unnecessary calls, it is not considerate, to say nothing of its being downright rude."

A slow angry flush rose in Katherine's beautiful face.

"Dear me, Pauline," she cried, scornfully, "you are really quite dramatic! Would you mind saying that again a little more slowly? I'm afraid I did not fully understand it."

It was Pauline's turn to blush.

"Be as scornful as you please, Katherine," she said, "but it's true, and you know perfectly well that if it wasn't for Wilton Eliot's money you would never give him a second thought. Why, even Jack would be preferable in that case."

With that she went swiftly out of the room, too angry to trust herself farther with words.

The atmosphere of the house seemed to stifle her. She felt that she must get into the open air. To think, with Pauline was to act always. Five minutes later found her walking rapidly in the direction of the river. It was a dark, swollen flood that crept along between the shelving banks on either side. By-and-by, when the ice had formed on its surface, it would be the scene of many a gay skating frolic. But now, as Pauline stood beside it, watching absently a few fluttering snowflakes fall one by one into the sluggish current, the river seemed to typify her own dark mood.

A step sounded behind her, and she turned to meet the grave, questioning gaze with which Wilton Eliot was regarding her.

"Miss Ward," he began.

"Only Pauline," she corrected, smiling a little bitterly.

"I beg your pardon for having startled you, but I was taking the short cut to the station, and seeing you in the distance, I thought I would stop and say good-by."

"Are you going away then?" Pauline asked in surprise.

"Yes. I find my affairs have been getting into some confusion through my absence or my neglect, and demand my immediate attention. It may be many months before I am in Sterling again."

He scanned her face eagerly.

"I am sure—we all shall miss you," she said, trying to make the words contain the proper amount of polite regret and feeling that she had failed miserably.

"All!" he said. "You?"

"I, of course, Mr. Eliot."

Pauline was getting more and more uncomfortable every instant under that keen gaze. She wished he would go away, and yet——

"But you avoid me on every possible occasion. I never see you when I call. What can I have done, Miss Pauline, to merit your disapproval?"

"You have done nothing, and indeed, Mr. Eliot, I do not avoid you," Pauline said, very earnestly.

"Then it must have been my fancy. Since you have nothing against me, Miss Pauline, you will surely shake hands with me and wish me good luck at the end of my journey?"

He held out his hand, and Pauline could not choose but put hers into it.

Far down the river a trailing line of smoke marked the approach of the train.

"You'll have to hurry," she exclaimed.

"How anxious you are to be rid of me. Well, I shall come again, remember, little Pauline." He looked down into her face with a curious smile. "And now, good-by."

He lifted her hand to his lips, then dropped it and hurried away.

Katherine wondered not a little at her sister's subdued and preoccupied manner that evening. She wondered, too, that Wilton Eliot should have gone away without so much as bidding her good-by, for Pauline had given a matter-of-fact account of her chance meeting with him by the river. But she had no mind to make herself unhappy over it, especally as she had just received a letter from the aunt whose namesake she was which enclosed a generous check and the request to use it in the replenishing of her wardrobe. Katherine's elasticity of temperament was one of the most delightful facts about her.

A week later Sterling, the social portion of it, at least, was startled by the news that Wilton Eliot had lost all his fortune through an unwise speculation. It was Mrs. Westford who brought the news to the Wards. Pauline, who had been for a walk, came in to find her mother and Katherine still in the first bewilderment of their surprise.

"Oh, Pauline, what do you think has happened to Mr. Eliot?" was the exclamation that greeted her as she entered the parlor.

Pauline turned perfectly white, but managed to control herself sufficiently to ask—

"What has happened to him, mamma?"

"He has lost all his money. Did you ever hear of anything so dreadful?" and Mrs. Ward drew a little fluttering sigh of sympathy and condolence. Her relief was so genuine that Pauline felt she must either cry or laugh outright. She chose the latter alternative as being the safest.

"Oh, is that all?" she said.

"Why, you ridiculous child!" screamed Katherine. "What more did you expect? For my part, I can't possibly imagine a worse disaster to befall a man like Wilton Eliot."

"I can—several," said Pauline, who had grown suddenly grave.

"What?" demanded Katherine.

But her sister slipped out of the room without replying.

For several days thereafter Wilton Eliot's misfortune was the theme of conversation in the Ward household—with Katherine and her mother, that is, for Pauline made no mention of the affair and did not care to hear it discussed.

Then the nine days' wonder ceased to be a wonder, and Wilton Eliot dropped out of the minds of everybody apparently.

So a few months glided by. One morning Pauline had been sitting at the piano a long time, playing mechanically, for her thoughts were not on the music before her. Suddenly her hands fell from the keys into her lap and a tear rolled down her cheek, splashing upon her blue gown. At that moment two hands were laid upon her shoulders, and Jack Donelson's voice, vibrating with happiness, sounded in her ear.

"Pauline—Pauline, guess what Katherine has just been saying to me! Katherine, my Katherine now, for she has promised at last to be my wife."

Pauline sprang up with a little joyful cry.

"Oh, Jack, has she really? Oh, I am so glad! Dear, dear Jack, you cannot know how glad I am!"

"Oh, yes, I can," the young fellow said, laughing and coloring, "for I am so glad myself." Then, for the first time he noticed Pauline's tear-wet lashes. "Not crying, Pauline—surely not crying?"

Pauline laughed nervously.

"I don't know but I shall—for joy. Let me go, Jack; I want to find Katherine."

And she rushed out of the room in search of her sister.

Katherine was in the parlor, gazing abstractedly out of the window at the snow-filled street. She turned about as Pauline entered.

"Oh, Katherine, Jack has just told me! He is so happy. Are you?" Pauline threw her arms about her sister, and looked affectionately into her face.

"Of course I am, silly pate! Jack is a dear boy, and with money enough to make one very comfortable. After all, that is the chief consideration."

Pauline's arms fell heavily to her sides.

"O Katherine!" she said.

"There, you needn't look so woebegone. Of course I'm fond of Jack, and I do not doubt we shall make a most devoted couple." And Katherine bent with a softened look in her beautiful eyes to kiss the grave young face.

So it had all come about as Pauline once thought it never could. Jack's happiness—I will not say Katherine's—revealed to her the sad longing of her own heart. Whether Wilton Eliot loved her or not she loved him with all the strength of her nature. As the winter wore into spring she wondered vaguely if his promise to come again would ever be fulfilled, or if in the great crisis through which he had passed he had lost all thought of it—and her. She was glad that the preparations for Katherine's wedding in June took so much of her time, and worked feverishly until even Katherine was compelled to bid her take a rest lest she fall ill. And then came the first sweet month of spring—March, not cold and stormy as was its wont, but warm and bright.

Daily Pauline stole away to walk by the river, where the brown sedge grasses were changing to palest green, and there one sunny morning Wilton Eliot found her.

"You see I have not forgotten my promise," he said, as he took both her hands in his, and looked anxiously down into her suddenly pale face. "What! Not a word of welcome for me? Only tears? Why, Pauline—Pauline!"

Nevertheless he understood her silence better than words. Presently, when he had soothed her into something like composure, he asked—

"Shall you mind marrying a poor man, dear? I am rich no longer except as being rich in your love. Tell me, Pauline!"

"Shall I mind?" she said, "I who have been used to being poor all my life?" Then she laughed her bright, sweet laugh. "It is you who ought to mind marrying so insignificant a person as myself, Mr. Eliot, for to the end of the chapter I shall be "only Pauline."—Waverley Magazine.

Best Time to Sleep.

In view of the many changes which have been rung on the early-to-bed early-to-rise idea, the following opinion from an eminent medical authority ought to be of interest: He takes up the old statement that an hour before midnight is worth two hours after, and gives his opinion as follows: "I had an opportunity to make a study of this subject in my naval service during the late war. On shipboard, as is undoubtedly known to most of you, the ship's company—officers and men alike—stand four-hour watches day and night, and to get the required amount of rest are obliged to get their sleep irregularly; to so arrange it that the same man shall not be obliged to take early or late watches continually, the 'dog-watch' of two hours is interpolated, thus adding to the irregularity. In watching the results for over two years, I could never discover that the watch ,officers and men, were not as fully refreshed by their sleep as were the medical and pay officers, who stand no watch,-and have hours as regular as those of any householder." It seems to make little difference to those who have given careful attention to this subject whether people sleep at one time or another, so that they get a sufficient amount of sleep.—New York Ledger.

Herr Andree's Floats.

An English paper says that Herr Andree took with him some metal "floats." Empty metal boxes which had been tested and found capable of standing a pressure of 20 atmospheres so that they cannot be injured by pack ice. They are painted blue and yellow, and are surmounted by small flags, and will be used for the dispatch of letters from the balloon expedition. Ships have asked to look out for them.

Most Curiously Dressed Man in London.

The Earl of Onslow may certainly claim to be the most quaintly dressed man on the London County Council. Occasionally, in the hot weather, he will turn up in white duck trousers, regulation black frock coat, and deep blue or brilliant pink shirt, with collar to match. Patent leather shoes and scarlet socks, frankly exhibited, round off what women would call a neat and effective tout ensemble.

THE JOKERS' BUDGET.
